Mr. Gladstone has written in reply to the Duke of Argyll's recent severe criticism: "The Duke of Argyll is an old friend, whose attacks I prefer bearing silently. I do not excuse tyranny, but I wish to have the National League dealt with legally, and not by the arbitrary decision of the Viceroy or Chief Secretary for Ireland."

The Theatre Royal at Exeter, England, was burned on the evening of September 5, while it was filled with an audience. The fire started in the scenery, and, although the exits were opened quickly, a number of persons, not less than 140, it is thought, perished. Most of them were in the gallery. Besides these, forty or fifty were badly hurt. Some of the corpses were so badly burned that they were unrecognizable. The chief hindrance to escape was an angle in the stairway which was blockaded when 200 excited people attempted to descend at once.

The Home Secretary made the statement in the House of Commons on September 6 that no official survey of the burned theatre had been made by the Home Office, which had no authority to survey theatres in the provinces. That duty devolved upon the magistrates, who had power to refuse licenses if their demands regarding construction were not complied with. But he said that this calamity showed the necessity of legislation, and the Government intended to deal with the subject.

When the British fleet which is cruising in the Mediterranean arrived at Bougie, Algeria, recently, the officials went aboard the flag-ship to pay their respects to the Duke of Edinburgh, Admiral of the squadron. They were informed that the Duke was in bed, and retired without having seen him. The French press has made angry comment on this indignity.

The French newspapers all declare that the mobilizing experiment is a success, and say that if France had been in such a condition for war in 1870 as she is now, Germany would have found her match.

The French Government has decided to prosecute the *Figaro* for publishing the details of the mobilization scheme, which it had obtained from dishonest employees of the War Department.

The safe in the office of the Crédit Mobilier in Paris was robbed of 125,000 francs September 5 by a clerk, who has been arrested.

The Crown Prince of Germany left England September 3 for the Tyrol, much improved in health. Dr. Mackenzie accompanied him.

While passing through the salons of the palace September 1, the Emperor of Germany stumbled over a slight unevenness in the floor and fell, bruising his left hip and elbow. Great uneasiness was felt for him, but no serious results have followed.

The seventeenth anniversary of the battle of Sedan was celebrated throughout Germany September 2 with great enthusiasm.

It is reported from Berlin that Hans Jaboksen, an American citizen, has been arrested on the island of Alsen, in the Baltic Sea, on a charge of deserting from the German Army in 1878.

King Otto of Bavaria's periods of insanity are becoming less frequent, but their likeness to the late King Ludwig's attacks is becoming stronger, and fear is reported that he will wholly lose his mind.

A semi-official statement was made at St. Petersburg September 6 that the flight of Ayub Khan does not alter the relations between Russia and the Afghans, because the Russian Government had nothing to do with Ayub's flight, and does not feel called upon to concern itself with internal complications. Nor is it likely to cause fresh difficulties between England and Russia, for both Governments, when settling the Russo-Afghan frontiers, adopted a solid ethnographic basis, partly guided by Turcoman and Afghan traditions. The arrangement is a durable one, and was so established that there remains no trace of dissatisfaction nor pretext for ulterior claims on either side.

Ayub Khan after his escape is reported to have gone towards Afghanistan.

A party of Russian capitalists are inspecting the cotton fields of Bokhara, with a view to selecting a suitable site on the line of the projected Samarcand Railway for a cotton mill.

A new Bulgarian Cabinet has been formed, consisting of M. Stambuloff, Prime Minister and Minister of the Interior; M. Stransky, Minister of Foreign Affairs; M. Natchevitch, Minister of Finance; M. Mutkuroff, Minister of War; M. Zhivkoff, Minister of Instruction; M. Stoiloff, Minister of Justice. M. Stambuloff, the Prime Minister, is reported to have said, regarding the proposal of Russia to have a joint Russo-Turkish commission visit Bulgaria and arrange her affairs, that if Gen. Ernroth and Artin Effendi came as private persons, they would be admitted into Bulgaria, but not otherwise, and that Bulgaria would repel any interference in her internal affairs by any Power whatever. The censorship of foreign telegrams continues throughout Bulgaria, and the entry of foreign newspapers into the country is forbidden.

The Bulgarian Government is endeavoring to make a loan of $2,000,000, to be used for railway purposes, in advance of a larger loan which it is expected will be effected if Prince Ferdinand's position is assured.

At the session of the International League of Peace at Geneva September 6, arguments were made for the appointment of a permanent arbitration board for England and America, and the Swiss Federal Council was asked to endeavor to establish a similar tribunal for European nations.

The elections in Holland have resulted in the return of the necessary majority of two-thirds in the Second Chamber in favor of a revision of the Constitution—the question upon which the last Parliament was dissolved.

Señor Margall, a Republican member of the Spanish Cortes, has issued a manifesto wherein he declares that the coalition between the Federal and other branches of the Republican party is broken, and he attributes the evils which are oppressing Spain to over-centralizing. He advocates the theory of Federalism, and points out that the differences of language and literature in the various provinces fully warrant the desire of the people for self-government. He predicts that the provinces will yet attain their wish, not by a purely military conspiracy, but in the way most great changes have always been produced, by great popular revolutions.

The Pope has received home contributions amounting to $50,000 and foreign amounting to $90,000, to be devoted to paying the expenses of his jubilee mass. A number of women of Madrid have organized a series of national Basque games for the purpose of raising funds for a testimonial to the Pope. Hungarian aristocrats are arranging for a great pilgrimage to Rome on the occasion of the jubilee. Five hundred persons have already signified their intention of joining the pilgrimage.

The Chinese Government is reported to have granted to Mr. Wharton Barker of Philadelphia and Eugene de Mitkiewicz and their associates the exclusive right to construct and operate telephone lines at the treaty ports of China for a period of fifty years, and a charter for a Chinese national bank. A company of distinguished Chinamen have arrived at Washington, and with them is "Count" Mitkiewicz, whose previous adventures in business and in society in New York, Baltimore, and Washington have provoked suspicion of the concessions.

It is reported from Honolulu that there is much dissatisfaction among the better class of foreign-born residents with the military dictatorship which has grown up since the revolution of June. The newspapers are forbidden to publish ordinary court proceedings, and not a single journal in Honolulu dared to reprint the comments of American newspapers on the revolt in Hawaii. Business continues dull, owing to a sense of insecurity, and it is said to be generally understood that the new Constitution is not a final settlement of the political troubles.

The political controversy between the Liberal and Clerical parties in Mexico is becoming animated. A Republican journal, the *Monitor Republicano*, declared on September 3 its belief that there is a well formed plan to destroy religious liberty in Mexico, and asserted that the clergy is constantly preaching a crusade against religious tolerance, as enjoined by the Constitution of the country; and that this intolerance is the chief cause of the lack of immigration. These utterances are regarded as expressing the sentiments of the advanced wing of the Liberal party, which is opposed to the slightest concession to the Clericals.

United States Consul Brigham, at Paso del Norte, was struck with a cane by the Mexican Judge Zubia August 31, and he has reported the occurrence to the State Department, and declared that he offered the Judge no indignity. It is regarded as a personal quarrel with which the Government is not concerned.

THE SOCIALIST BUGBEAR.

GREAT pains have been taken by the promoters of the forthcoming Socialist Congress in Germany to organize it in such a way as to avoid incurring penalties under the anti-Socialist laws, and it is therefore to be an open congress —that is, anybody calling himself a Socialist is to be allowed to take part in it, but no delegates to it are to be elected. Even in this seemingly harmless shape, however, it appears to be causing the authorities more or less alarm, and it will probably be closely watched by the police. But why the Germans or anybody else are afraid of Socialists who propose simply to put their schemes into force by legislation, it is hard to see. What harm they can do by meeting, and speaking, and writing, has never been clearly explained. What makes Socialism a term of dread, both in Europe and here, is undoubtedly the large part the French have played in originating and spreading Socialist ideas, and the violence which in France has so often attended Socialist propagandism. But there is no doubt that even in France Socialism has passed or is passing rapidly out of the violent stage. The Government is ceasing to be in the least afraid of it. What made it formidable there under the various monarchies was the danger that it might begin disorders which would end in overthrowing the reigning dynasty. Now that there is no dynasty to overthrow, the police snap their fingers at the Socialists, and bid them "come on." But the Socialists do not come on. They have threatened a great deal under the Republic, and have got up several "demonstrations" for the outcome of which all Europe waited with feverish anxiety. They have always evaporated in loud talk and songs.

In like manner we had a considerable scare about Socialism in this city a year ago, when Henry George started as a Socialist candidate for Mayor—for that is what he really was—and polled an unexpectedly large vote. If he had been elected, too, it would perhaps have done a good deal of mischief by frightening city capitalists and property-owners, and exciting wild expectations among the poor and ignorant and lazy. After his vote was counted, a large number of writers and orators thought that a terrible reorganization of society—or "social liquidation," as the French call it—was at hand. George, too, was immensely elated by the support he received, and incontinently started a weekly paper, and opened his batteries on the Catholic Church and landed property. We all see what has come of it. The Socialist newspapers in this city are apparently all in financial trouble, or are torn by domestic dissensions, and the only converts of note whom George has made are one Catholic priest, Dr. McGlynn, and one Protestant clergyman, Mr. Pentecost. The more he talks, too, apparently, the less impression he makes. His land theory certainly meets with less and less acceptance every day. That is, the few people of intelligence who ever gave it serious attention become every day fewer, even if the sale of his book increases.

The truth is, that it is with Socialists as it is with strikers, the more active and numerous they become, or, in other words, the more they spread themselves, the less formidable they are. Time was when a "general strike" of all the trades in this city, or in the country at large, was talked of as a means of bringing "society" to its knees; and many good people shuddered over it as a possibility. But it was soon discovered that the more people engaged in a strike the nearer it came to the final collapse, or, in other words, that a general strike would be the *reductio ad absurdum* of the whole "labor movement." So, also, the more converts Socialism makes, the less influence it undoubtedly has on the community. As long as the preaching of it is confined to the professors, and writers, and "thinkers," it is presented in a form which has an air of reasonableness and practicability. As soon as the apostles and disciples become at all numerous, and begin to quarrel among themselves, and urge divergent views, and run after side issues, and exhibit different degrees of impatience and hopefulness, and the visionary and the lazy make their way into the more prominent positions, the monstrosity of a social organization of which such people would be the legislators and administrators, is brought home to every intelligent and industrious man, and he turns his attention away from them.

When Socialism is brought near enough to the practical to induce the public to examine it, the public always begins to laugh, and laughter is and will always be a great power in the world. For instance, that favorite plan of having all "instruments of production," land, mines, mills, and machinery, taken possession of by "the State," and worked for the general benefit, may seem now, when discussed in a library or lecture-room, to have something in it worth the attention of the statesman or philanthropist. But when it becomes politics, and the gentlemen come forward who would probably have charge of "the instruments of production" if the scheme were realized, and we picture ourselves in a community in which they would hold all our money and assign us all our daily tasks, we indulge in one hearty guffaw, and turn to our lawful occupations.

MR. GLADSTONE'S LONGEVITY.

ENGLISH politics has now entered on what is, perhaps, the most curious phase in its history. It appears to be all but certain that the Liberals who abstained from voting, or broke away from the followers of Mr. Gladstone, last year, are now prepared to return to their allegiance if the opportunity is afforded them. In other words, it appears to be all but certain that if a general election were to take place now, Mr. Gladstone would be restored to power. Consequently, as the Tories have admitted by their concessions on the Irish Land Bill, the one cardinal point in their policy is that a general election shall not be permitted to take place. The surer they are that the country, if consulted, would send Mr. Gladstone back to office, the more determined they are that it shall not be consulted.

If it be asked what is the use of putting off the evil day, the answer is that by waiting they will probably get rid of Gladstone, and Gladstone is, they flatter themselves, the only man capable of persuading Englishmen to concede home rule to the Irish. If he were to die, they think that the agitation for this particular scheme would subside, or cease to be formidable, and the whole subject might be indefinitely postponed. Consequently, as long as he lives, the constituencies must not have a chance of voting for him. That there is some truth in this there is no denying. There is no other man in the Liberal party capable just now of carrying a scheme of home rule through the House of Commons. One would doubtless arise if Mr. Gladstone were gone, but he would not show himself for some time, or until many changes had taken place in the constitution of the Liberal party. So that the really burning question of English politics today is, how long will Mr. Gladstone live? If he lives five years, and retains his intellectual vigor, home rule is pretty sure to come and the Tories be driven from power for a long period. If he dies before that time, there will be so much confusion in the Liberal ranks that even if the party got back to office, there would probably be no disposition to enter at once on schemes of such magnitude as the creation of a separate legislature for Ireland, and there might be confusion enough to disgust the public for a short period, and give the reorganized Tories a chance for another term of office.

There is very little question now in the minds of most observers that foremost among the persons whom Mr. Gladstone's continued hold on life has disappointed, and is disappointing, is Mr. Chamberlain. We presume it is doubtful, however, whether even he would have ventured to act on the presumption that the veteran's career was near its close but for the fall of Sir Charles Dilke. Dilke in his heyday was a competitor for the Liberal leadership so formidable that, if he had retained his place in public life, Chamberlain would not have thought it prudent to desert Gladstone and try to set up in business on his own account. He would have felt that, with Dilke in the field, it was at least doubtful whether he would stand any chance of the chief place. Of Hartington no candidate is now afraid, because every one knows that Hartington may any day be called up to the House of Lords; and John Morley, though the growth of his influence has been wonderfully rapid, has still too much of the littérateur about him—that is, as the Tory Squire once said of John Stuart Mill, is considered "too clever by half"—to be quite ready for party leadership. He is, moreover, weighted in the race by the fact that he is not, like Chamberlain, a man of independent fortune, something which Englishmen still consider a necessity for the highest places in politics. Consequently, it was not unnatural for Chamberlain to conclude that, if Gladstone could be got rid of, the party would look to him as the only person capable of standing in his shoes. He probably would not have broken with him on home rule, however, if he had thought Gladstone would have stayed in political life after his defeat, or have stayed on earth until now in good working condition.

It is thus no exaggeration to say, therefore, that Mr. Gladstone, by merely living on, is today profoundly disarranging the calculations of all the Conservative politicians. There would be nothing extraordinary in this if he were in office. Louis Napoleon, Bismarck, Cavour, and many other statesmen have long confounded or annoyed their enemies by

continuing to live in the possession of great power. What is peculiar in Mr. Gladstone's case is, that he creates immense political disturbance and uncertainty simply by existing in a private station, and by impressing everybody with the belief that in his seventy-sixth year he still has a future. Nothing quite like this is, we think, to be found in the career of any other prominent public man.

NEW LIGHT ON THE CAPTURE OF MAXIMILIAN.

THE controversy now raging in the Mexican press over the question of Maximilian's capture had its beginning last April, and bids fair, before it is closed, to falsify all the histories. The accepted view, both with Mexican writers like Payno and with blind partisans of the Emperor like Domenech, has been that the besieged troops at Querétaro were basely betrayed by Col. Lopez, one of their commanders and a favorite of Maximilian. The Colonel himself, it is true, passionately declared his innocence, in a letter made public at the time; but he was replied to by the generals of the Imperial Army, who brought against his unsupported assertion such an array of facts, apparently so conclusive, that the matter was considered for ever settled.

Last spring, however, Lopez, who has always been restless under the ignominy popularly attached to his name, appears to have been freed from some mysterious pledge to silence, and published a new letter, roundly denying the charge that he had played the part of a traitor to his chief, and boldly appealing to Gen. Escobedo, the head of the besieging army, for confirmation of his innocence. "You once wrote to me, General," said Lopez, under date of April 29, "that you had not spoken because you, had not been asked to speak; now I ask you, in the name of the truth, and I beseech you for the sake of my honor, as well as your own, to speak." Escobedo was at the time at his estate in Guanajuato, but submitted to an interview with a reporter about the middle of May, in which he substantially upheld Lopez. He declared that Lopez came to him in the night of May 14, 1867, representing himself as an authorized ambassador from Maximilian, and offering, on the part of the latter, a surrender of Querétaro, together with an absolute renunciation of the Mexican crown. The only conditions asked were permission for himself and certain of his generals to depart with an escort to Tuxpam, there to embark for Europe, never to return to Mexico. Escobedo demanded some proof that Lopez was empowered to make such an offer, and was shown letters of Maximilian amply certifying what the secret emissary had said. Thereupon the Liberal General said that his orders were either an unconditional surrender or an assault. Lopez besought him to avoid the bloodshed which would result, and the probable spread of the war over the whole country, but Escobedo remained firm. Lopez asked nothing for himself, neither promotion nor guarantees nor money, but spoke only in behalf of the Emperor, to whom he professed the most unbounded attachment. And after the capture, when Maximilian was a prisoner, and when Lopez sought an interview with the fallen Emperor, Escobedo took pains to ask the latter if it would be agreeable to him to see Lopez, referring to the rumors of treason, and Maximilian distinctly said: "Col. Lopez has not been false to me in the least."

The publication of this interview in the *Diario del Hogar* caused a tremendous sensation. Two of Escobedo's generals of division, Arce and Gallardo, rushed into print to express their incredulity, and to repeat the details of the suspicious conduct of Lopez on the night of the capture, of which they had been eye-witnesses. Escobedo politely replied to them, admitting their perfect honesty, but assuring them that they were mistaken. He also announced that he was preparing a detailed account of the whole matter, which he intended to transmit to the Secretary of War for publication in the *Diario Oficial*. It was expected that this narrative would appear last June; in fact, it is almost certain that it was sent to the Government as long ago as that; but, for some unknown reason, it has not yet been made public.

Meanwhile, several facts of great significance have been brought out in the newspaper discussions, going to show, it is probable, what the real state of the case will be found to be. A captain in the Belgian Guards, one of Maximilian's regiments, reports the general belief of the besieged troops that there was to be a surrender, and that Lopez was acting at the Emperor's orders. There was great surprise, the Captain says, at the cry of treason raised against Lopez: it was the understood thing, the men supposed, that the city was to be surrendered and the safety of Maximilian and his generals secured. On August 21 the *Monitor* published a letter of Maximilian's, which Gen. Escobedo had had photographed and shown to some of his friends. It was written to Lopez three days after the surrender, and besought him to keep a profound secret his errand to Escobedo, lest it might bring a stain upon the Emperor's honor. And Monday's despatches speak of a second letter, even more compromising, in which Maximilian refers to bribes offered to secure his personal safety.

All this points to the conclusion, which we believe will be supported by the official account when published, that the unfortunate Archduke had grown utterly weary of the whole affair, despaired of ultimate success even if temporarily triumphant, repented bitterly of his return after his abdication, and only wished to be well out of the struggle. The negotiations with Escobedo failing, he seems to have adopted the plan of a surrender under the guise of a betrayal, confident that he would soon be at liberty in Vienna. To his surprise, as to that of the whole world, he was soon put on trial for his life. Then he resolved to keep silent about all that had gone before, and to go to his inevitable death like a brave man. Why Lopez has remained quiet all these years, is a mystery. Why Escobedo has never spoken, is still more mysterious. Now that the long silence is to be broken, it may be expected that these points will be cleared up. It seems almost certain that we shall have to add to the other weaknesses of Maximilian a selfish cowardice in the last days of his empire, scarcely atoned for by his unflinching courage when the end finally came

TEACHING WHIST.

ONE of the most curious social phenomena of the year is the success which has attended the attempts to teach whist in classes, both in this city and in Boston, last winter, and during the past summer at some of the watering-places. It has been found, as a matter of fact, that a good whist-player, possessed of fair teaching capacity, has no difficulty in getting pupils enough to make it worth while to treat whist-teaching as a calling. The experiment thus far (which, we may mention, has only been made between ladies) has revealed the fact that the number of people who want to play whist both in summer and winter is very large, and is probably increasing, and also that a very large proportion of those who have been playing the greater part of their lives are really ignorant of what is called scientific or modern whist, as moulded by such great masters as Cavendish and Pole. Then, too, a very large proportion of those who play either the old or the new game, whether to oblige friends by "taking a hand," or to help to pass dull days or dull evenings, suffer year after year from a consciousness of gross incapacity, and consequently from a sense of humiliation, from which they are eager to escape by obtaining competent instruction.

It is often said in general terms that the way to learn to play whist well is to play with good players. This is in part true, but it is mainly delusive. There is, to many people, not much use in seeing what good players do, without knowing the reason why they do it, and this good players are not ready to give, and in fact the rules of the game forbid their giving it while playing. All the direct instruction the unfortunate whist dunce receives while actually playing, he is apt to get only from the contemptuous reproaches of his partner, or the contemptuous silence of his opponents, after each hand. But it is not very profitable to know that you have been playing the part of an ignoramus without knowing how you showed it. In fact, good players play whist for their own pleasure, and never will or can be induced to mingle with their play a little kindly help for beginners or incapables. Their feeling towards them is rarely anything but one of annoyance at their appearance in a rôle for which they have no fitness. Some of the books even contain special directions for acting with stupid partners without any sacrifice of one's own comfort. All this makes a teacher of whist—that is, somebody who will deal tenderly with poor players, tell them why they have blundered, and what they ought to have done but did not do, in a spirit of kindness or even commiseration—wear the air of a ministering angel; and we should venture to predict, therefore, that the most successful teachers will be, as indeed they are now, women.

The reasons for the increasing popularity of whist, and consequently increasing desire to learn it, are not, we think, far to seek. It is not wholly a game of skill, like chess, and therefore does not impose that severe strain on the nerves which makes chess an impossible game in the evening to poor sleepers, especially if they are very fond of it. Moreover, although whist makes a constant

demand on the attention and the memory, it makes it through frequent changes of situation, which keep the faculties on the alert without severely tasking them. It is therefore very welcome to people who suffer from somnolency after dinner, or people who are thrown much together without having anything particular to say to each other, or who are thoroughly familiar with each other's views on everything worth talking about; and, above all, to people who have lost or have never acquired the habit of steady reading, or whose eyesight will not bear books. This class—the class who for one reason or another cannot read books in the evening—is a very large one, and one which newspaper reading is increasing enormously. The newspaper never, or rarely, asks anybody to keep his attention fixed more than a minute or two on one topic, unless by way of narrative; and a man who has read nothing but newspapers for a few years finds, by the time he reaches middle life, that he can neither read a book nor play any game of pure skill. For him whist is a great boon. It keeps him wide awake, and has just chance enough in it to treat him every few minutes to small surprises. It in this somewhat resembles a game common in England—of guessing during a ride or drive what there is at the other side of the next hill—in which the Duke of Wellington used to say he had passed all his military life. That is, you are pretty sure not to be wholly right, but you are also sure never to be very far wrong, and your errors are certain to be excusable enough to be interesting, and even sometimes flattering. The problems whist presents are, indeed, very like those which meet people in the course of a quiet, uneventful life, such as questions of dress, of housekeeping, of farming, or jaunting. They require close attention to and memory for details, some knowledge of character, and just philosophy enough for the chapter of accidents. Whist has none of the mental anxiety or harrowing regrets or self-reproaches of chess. There is always chance enough in it to save one's self-love, but not enough to furnish the wild excitement of poker or baccarat or *rouge et noir*.

Besides the people who cannot read, whist is useful to that other very large class who hate to be alone, and yet when in company have nothing particular to say. Sitting with one's fellow-creatures in silence is always very depressing, and sometimes very awkward. The situation among men is mitigated somewhat by smoking. To be sure, smokers need to talk, but they do not need to talk as much as people who have nothing to do but twirl their thumbs. But smoking is of no value in a company composed in part of women or of non-smokers. There must be some other refuge from sheer vacuity, and whist furnishes it better than any other amusement. Hence, people who shine or think they shine in conversation, often dislike it, or, if they take it up, seldom make good players. It keeps their stories and "good things" out of the market, and, indeed, their mental discursiveness and activity are a positive hindrance to their success. But we doubt if any man, whatever his special powers or accomplishments in other fields might be, has ever become a brilliant whist player without taking great pride in it, and without being ready to sacrifice to it almost any other form of social enjoyment.

THE RUSSIAN REALISTIC NOVELISTS.

NEW French translations from the Russian novelists appear so fast that the Western reader will soon be able to judge of the whole movement. Besides another translation of Tolstoi's 'Power of Darkness' (which includes the variants and is far better done than that by Neyrcud), E. Halpérine—or, as he now signs himself, Halpérine-Kaminsky—has published a French translation of the adaptation of the folk-tale of 'Fool Ivan' (*Ivan Durak*), under the title of 'Ivan l'Imbécile' (Perrier & Cie.), with which are put ten other short stories written for the peasants. Two more volumes that are promised, 'Le Prince Nekhliudoff' and 'Au Bivouac,' will exhaust all of Tolstoi's earlier tales, and nothing will then be left but his articles on education, written in 1862-3, and his 'Moscow Census,' if, indeed, this last has not already appeared. This volume, while open to the charge of making much out of little by the usual artifices of thick paper, very coarse print, and plenty of blank pages, does not mix up the productions of different epochs, as some previous translators have done. A curious question arises about the second story in the book, entitled "Deux Générations" (which is the French for "Two Hussars"), and which deals with a prisoner in the Caucasus; it does not appear in the full and authorized edition of Tolstoi's works. Is it in the first edition, and, if not, whence was it taken? 'My Husband and I,' announced in the London papers, is apparently another translation of what is called 'Katia' ('Family Happiness').

Whether or not the mystical, religious, and socialistic works of Count Tolstoi have any real influence in Russia, their interest to us lies in their being the product of Russian thought, as well as of a great writer, and of revealing to us the curious ways in which the Russian mind works. Even what is allowed to be printed in Russia has little if any circulation among the peasants. There are no bookshops in country villages, few in any but the larger towns; and the colportage and peddling of books and tracts are surrounded with many restrictions and difficulties. In other classes these stories and articles have the success caused by curiosity. The books circulated in manuscript are naturally very limited in number, and find their way only among people who can afford to procure them—among those of the upper class who have a personal or a literary interest in the author, or, as Mr. Kennan shows, an idea that he can be used for revolutionary purposes. Russian society is glad occasionally of a mild spiritual excitement. Such it found in the early part of the century in the Jesuits, Mme. Krüdener, Mme Swetchine, in freemasonry, and in Russian dissenters, as is told in part in 'War and Peace.' Such it found ten years ago in the revivalists, the prayer-meetings, the preaching of a Methodistical English lord whose name escapes us, but who visited Russia regularly for several seasons, and whose title added weight to his prayers and the Pashkoff sect which he helped to found. This phase is described also by Tolstoi in 'Anna Karénin.' Such spiritual excitement it finds in Tolstoi's forbidden manuscripts. Forbidden books are read in Russia chiefly because they *are* forbidden, and Leo Tolstoi's tracts are sought for now in the same way that his namesake Alexis Tolstoi's satirical, witty, and often "improper" poems were fifteen and twenty years ago.

The neglect of a writer like Gontcharoff, who is esteemed in his own country as inferior only to Turgeneff and Tolstoi, and is by many considered their superior, is astonishing. We must reflect, however, that he has written little—three novels, four short stories, and a book of travels, the 'Voyage of the Frigate *Pallas*'—and has rested on his laurels. Though still living, and high in the official hierarchy, though he has pictured characters which are recognized as purely Russian types, though he has given a very expressive word to the Russian language, he is already about forgotten. In his novel 'Oblómoff,' his greatest production (the first part only of which has been translated into French and passed off as the whole work), Gontcharoff represented the thoroughly Russian type of the indolent man, the man who never answers letters, nor replies to disagreeable questions, who puts off everything till to-morrow or a convenient time; and so exactly and carefully was this done that the word *oblomovism* was coined (not by him) to express these characteristics, corresponding, with some slight differences, to what had before been known as "Slavic indolence" (*Slavidnskaya lyén*). To be sure, the name *oblómoff* meant the broken-down man, and the language itself aided. 'Obryff' ('The Gulf'), Gontcharoff's last novel, has been also inadequately translated as 'Marc le Nihiliste;' but even in its curtailed and abridged French form, assisted by Turgeneff's 'Fathers and Sons' and 'Virgin Soil,' and Dostoyevsky's 'Demons' (*Biési*) (in French under the title of 'Les Possédés'), it enables us to understand Russian Nihilism. The four books should, however, be considered together. Now, under the title of 'Simple Histoire' (Perrin & Cie.) Halpérine has translated Gontcharoff's first novel, 'The Usual Story' (*Obyknovénn ayaistória*), which is in many points his best. Nowadays, it is perhaps a story not so common—of the youth from the country, boiling over with poetry and enthusiasm, who gradually subsides into the humdrum official; but such characters still exist, though the spread of Nihilistic feeling has made them rarer. All of Gontcharoff's works, we may remark, except his delightful 'Frigate *Pallas*,' have been conscientiously and well translated into German. The pure style of Gontcharoff, which, of course, cannot be seen from the translations, and in which among recent writers he is approached only by Turgeneff, is perhaps one reason for the admiration with which his books are regarded by Russians.

Dostoyevsky's 'Idiot' deserves neither all the praise nor all the blame bestowed on it by De Vogüé in his interesting preface to the French translation of 'Derély' ('L'Idiot,' Plon), but is a welcome addition to our sources of knowledge of Russian character. If to the novels of Dostoyevsky, Gontcharoff, Turgeneff, and Tolstoi we add those of Pisemsky, especially those translated under the titles of 'Mille Âmes' and 'Les Faiseurs,' written before the emancipation, which describes the financial and commercial activity of later years, we shall learn about all that Russian novels can teach us. The works of these five writers comprise practically the whole of the Russian realistic movement. They have as yet had no successors worthy of being put on a par with the least of them. The 'Idiot' makes us in a measure understand the vagaries of Tolstoi, as well as the reverence paid in Russia to the half-witted. It is a psychological study of a young man afflicted with epilepsy—the malady to which the author was subject—whose mind has been partially developed, but who really is nothing but a grown-up child. But his childish characteristics, his very simplicity, like the simplicity of Shakspere's fools, are wisdom. The book contains many powerful passages—for example, the description of a criminal when he is guillotined; but in one place Dostoyevsky again allowed himself to express his petty jealousy of Turgeneff, whom he had so stupidly and untruly caricatured in 'Demons.'

Correspondence.

A COÖPERATIVE GREEK LEXICON.

To the Editor of The Nation:

Sir: I was greatly interested in the letter of Prof. Hoge in No. 1155 of the *Nation*, calling attention to certain defects of our Greek lexicons. I had noticed some of them in my own reading. Even the special lexicons are much more careful to record the meaning of a word than its construction. To what extent the later editions of the 'Thesaurus' of Stephanus supply this lack, I am not in a position to know; but, from the nature of the case, the maker of a dictionary, if he labors single-handed, is compelled to depend more upon the labors of his predecessors than upon his own reading. It is only by applying the principle of the division of labor that a lack of this kind can be adequately supplied. What is impossible or exceedingly difficult for one man, may be easily accomplished by the united effort of several, particularly where success depends much less upon native ability than upon care and industry.

Since the appearance of Prof. Hoge's letter, I have taken occasion to suggest to several friends and others a remedy for the state of things which he deplores; and, in response to their expressed wish, I here make my suggestion public. It is nothing more than what must have occurred to many others. I assume that there are in the United States at least a hundred persons—teachers and advanced students—who are sufficiently interested in Greek and competent to read it critically. Let some one take the matter in charge, and, after ascertaining who are willing to coöperate, assign to each his part of the work. Let A be put in charge of the verbs beginning with any of the first five letters of the Greek alphabet in Thucydides, and let him read the text carefully, noting and copying out his verbs, and their connection where it differs from the English idiom. Let B do the same thing with the verbs beginning with the next five letters, C with the next five, and so on to the end of the alphabet. When there are variant readings or approved emendations, they should be noted. Five persons could in this way finish Thucydides in one year, and not impose upon themselves a heavy burden. If the number of collaborators should be sufficiently large, a smaller pensum could be taken by each.

A similar apportionment should be made of Xenophon's 'Anabasis,' 'Cyropædia,' and 'Memorabilia'; also of Plato's 'Symposium,' 'Philebus,' 'Politeia,' 'Phædo,' and 'Apology.' Perhaps a smaller number of the works of the last two authors would suffice, or other dialogues of Plato be preferable. For the sake of completeness, a few orations of each of the three or four leading Attic orators ought to be treated in the same way. This reading for verbs chiefly will not, of course, cover the grammatical ground entirely, but it will bring into notice almost every important point. But, *verbum sapienti sat.* Will not some American scholar take hold of this matter, and furnish to students of Greek a supplementary lexicon of the usage of verbs in Attic prose that will be a real κτῆμα ἐς ἀεί? The book need not be very large or very costly.

Athens, O., September 1, 1887.

COMMERCIAL UNION BETWEEN CANADA AND THE UNITED STATES.

To the Editor of The Nation:

Sir: The meeting held in Detroit on the 27th inst. for the discussion of commercial union between the United States and Canada was an occasion of unusual interest, if it prove not, in the event, of historical importance.

Three speakers more unlike in person, in habits of mind, and in methods of expression, and more heartily in accord upon the main object of the meeting, than Mr. Erastus Wiman of New York, Prof. Goldwin Smith of Toronto, and Congressman Butterworth of Ohio, could not well have been chosen. The audience was large, and was composed in the main of young and active business men, who gave a thoughtful and attentive hearing to Mr. Wiman's long, well-written, but not too well delivered address, evidently the composition of a man much in earnest and much in love with his subject. His treatment of the question was too extended and exhaustive to leave much room for the Professor's learned arguments or the politician's telling hits; but each in his different way contributed to fix in the minds of his hearers the impression left by the first speaker of the feasibility of the scheme, and of its immense advantages to both countries.

The bursts of applause which greeted both the free-trade utterances of Prof. Smith and the protectionist theories of Mr. Butterworth, showed that the meeting was divided in sentiment on the general tariff question; but the resolutions calling for commercial union and the obliteration of the customs line between the two countries were unanimously adopted.

There can be no question that this would be a great boon to our protected manufacturers as well as to the commercial and farming classes of both countries; but there is one especial advantage in such a union, which I need not say was not dwelt upon at the meeting, viz., its usefulness as an object-lesson in political economy. If the obliteration of our northern customs wall prove a good thing in practice, why not destroy the southern customs wall which shuts us off from Mexico? And, finally, when our manufacturers discover that new markets and increased orders wait upon the removal of obstructive tariffs, shall we not have free trade?

It is encouraging at least to hear so good a protectionist as Mr. Butterworth railing at "bloated monopolies fostered by a system of legislation useful in its inception, but which has been carried too far"—I quote from memory; but at least I do not err in thinking that the agitation for commercial union may be serviceable in some future agitation for free trade.—Respectfully, Wm. W. Hudson.

Detroit, Mich., August 29, 1887.

OWNERSHIP IN LAND.

To the Editor of The Nation:

Sir: To the simple proposition of "no ownership in land" I have as yet seen no answer. If I own ten vacant city lots that cost me $1,000 each, but which, by increase of population and values, have become worth $10,000 each, I have by foresight or chance added to my property $90,000 less the small sum I have paid for taxes. I build or sell a lot, and the buyer builds a house on the lot worth $20,000, and he is taxed on $30,000, while I continue to hold the other nine lots, paying the comparatively small tax laid on "unimproved" property, and soon my lots sell for $20,000. Now, suppose there were no ownership in land. I build a house on one of these vacant lots. The taxes are assessed and laid as now, according to the necessities of government. My tax on my land or the land I have taken to build my house on is, say, $500. The nine lots are taxed at the same rate, but no one owns them, so no tax is paid. But men come along and say we are to put no money in the lot, only take the use and build, and they build, and thus ten lots begin to pay tax, and $500 tax on each is found to be more than the necessities of government require, and it is reduced to $100 on each. Thus ten men have built ten houses; they have been obliged to put capital in houses only; the State is richer, the individuals building the houses are richer, and only the one man—the speculator—is worse off.

I say nothing about the fact that land is now owned, and that such a change could only be brought about by doing a wrong. I ask, if there were no ownership in land, would not the community be the gainer?—Respectfully yours,

Henry Bartlett.

Poughkeepsie, August 26, 1887.

[Probably not. It is the interest of the community that land should yield the largest possible crops. It is not in accord with human nature or with human experience that cultivators of the soil should take as much pains to make it productive when owned by the State as when owned by themselves. Town-lot ownership is only a small part of the land question, and, being such a small part, we can see no advantage in discussing it separately and hypothetically. —Ed. Nation.]

SECRETARY LAMAR'S DECISION.

To the Editor of The Nation:

Sir: I have read your editorial in the *Nation* of August 25 upon Secretary Lamar's decision restoring to settlement, under the preëmption and homestead laws, the indemnity lands claimed by the Atlantic and Pacific Railroad, with much interest. Its reasoning is clear, direct, and unanswerable, even upon the point with reference to which the *Nation* raises a doubt. The Secretary would have been fully justified in restoring to public entry the immense areas covered by these withdrawals, even if in order to do so he had found it necessary to contravene to some extent the doctrines of "stare decisis." The instance of the legal-tender cases, cited by the *Nation*, in which the Supreme Court of the United States from high considerations reversed its own decisions, is quite conclusive on that point.

But it seems to me that this land decision does not touch the principles either of "stare decisis" or "res adjudicata." These doctrines were developed in the courts, and apply to *cases*. They have nothing to do with questions of general policy, and an executive officer is bound by them only when practically he sits as a court and decides cases. There is a plain distinction between the action of an executive officer in deciding, upon the evidence coming properly before him, a *case* falling within his jurisdiction, and the action of the same officer in determining upon a general line of public policy. To the former the doctrines of "stare decisis" and "res adjudicata" apply; to the latter they do not. If it were not so, and if the head of a great department were to be considered bound *in matters of policy* by the action of his predecessors, popular elections would have very little significance. New executive machinery would have to move in the grooves cut by the old.

Unless the Secretary has *reversed* a *decision* rendered by one of his predecessors during the pendency of the withdrawals, upon some case arising under a particular selection made by the railroad company; unless he has cancelled some patent, recalled the approval of some list, or has otherwise reheard or reviewed a case heard, determined, and finally adjudicated by one of his predecessors, he is entirely beyond the reach of legal criticism, so far as the doctrines we are considering are concerned. Your statement of the decision itself satisfies me that all the rights acquired in the past under the withdrawals have been carefully guarded and saved, so that in this

important action the Secretary has not departed from any principle of law involved in the decisions of his predecessors.

That an executive officer may accept counsel and suggestion from the principles which lie behind "stare decisis" and "res adjudicata," need hardly be asserted. A vacillating policy is always to be condemned. Frequent changes in the policy of the Interior Department, for instance, cannot be made without disturbing important interests. The establishment of Indian and military reservations, their enlargement, reduction, or the removal of the land embraced within them from a state of reservation, are matters of executive policy somewhat similar to the one under discussion, and action taken upon them often affects values. The Secretary is not, however, for that reason to hesitate in recommending an order for creating such reservations when needed, or revoking an order of one of his predecessors on the subject, when the necessity for such reservation has passed away. Whether the time has come for action of this kind in any particular case, is a matter resting solely within that discretion which is the highest trust conferred upon an executive officer, and which cannot be taken away by the salutary and well-established doctrines of "res adjudicata" and "stare decisis." Upon this ground, therefore, I agree with you that "it is within his discretion to revoke the withdrawal, if satisfied that the public interests require such revocation."

Respectfully, S. A. CHAMPION.

LITTLETON, N. H., September 3, 1887.

GRAND ARMY PATRIOTISM.

TO THE EDITOR OF THE NATION:

SIR: "It strikes me" that in certain claims of the G. A. R. there is an element of almost ludicrous incongruity. These men are of the bone and sinew of the country, yet many of them are unable to earn a competence; they entered the army from motives of pure patriotism, yet desire to be paid for their services; these services were of priceless value, but if Congress will grant them eight dollars a month, they will "call it square." Verily, "we the people of the United States" have improved upon the old-time idea of a patriot. Compared with these modern representatives of the species, our old school friend Cincinnatus is nowhere. R. F. F.

KEATS'S NIGHTINGALE.

TO THE EDITOR OF THE NATION:

SIR: If I may venture a word about the "logic" of Keats's "Ode to a Nightingale," I would say that it seems to me very clear Keats makes the individual stand for *mankind* and the bird represent the *type*. For his sorrows are common to all men. He is but one of a race of sufferers depicted in the lines: "Here, where men sit and hear each other groan"; where "gray hairs" are "palsy" shaken; where "youth" grows "pale," and "beauty cannot keep her lustrous eyes." And he indicates, where he recalls "the *sad heart* of Ruth," and speaks of the ancient "emperor," that the race has ever been stricken with heart-achings.

Then, the bird is addressed in some lines, it is true, as the type, but oftener as the individual (to wit, in the first stanzas, and in the last lines of the poem); while it should by no means be forgotten that the Ode is to *a* Nightingale, and not to *the* Nightingale.

The woes of mankind are thus typified in the woes of the individual, who is appealing to the joyous songster representing a joyous type. The unhappy man, of a type, cries out to the happy bird, of a type.

If my understanding of this is correct, Mr. Colvin's "breach of logic," with its unpleasant consequences, is obviously inapposite, and the difficulties which your reviewer and correspondent seek to dispose of are at once swept away.

Very respectfully, S. O. HENRY.

DENVER, COL., August 30, 1887.

DIALECT IN FICTION.

TO THE EDITOR OF THE NATION:

SIR: Can you tell me why of late all our novelists wrap up their sentiment or their sarcasm in the dialect of the uneducated?

Of old, a book was not supposed to be properly ushered into the world without a dedication to some one higher in social position than the writer. Now, the great requisite seems to be a perfect mastery of the speech of those in the lowest ranks of life. There is a disposition in our schools and colleges to give more attention to the English tongue, and to make time for its fuller study by giving up the study of the classics; but in our hours of recreation we are compelled to read the prattle of the nursery, the slang of the college, the ungrammatical English of the shopgirl and the factory hand, the dialect of the creole and the negro, and the reproduction of the imperfect enunciation of the South or of the Plains.

It is true that ideal characters and noble lives may be found among both the "masses" and the "classes"; but it is the character and the life that are admirable, and to which attention should be directed, not the forms of speech that are peculiar to the "masses." Can you not suggest to our writers of fiction that the study of dialect belongs to the philologist, and the use of it to the illiterate? If their pathos and their wit and their wisdom will not be coining into clear and vigorous English, it is counterfeit, and should not be current in our magazines and circulating libraries. M. N. S.

Notes.

THE new Thackeray letters are to be published by Charles Scribner's Sons in a limited large-paper edition of 500 copies, with the portraits, drawings, facsimiles; as well as in an octavo form. The same house announce 'The Science of Thought,' by Prof. Max Müller; a new edition, with portrait, of ex-President Woolsey's 'Religion of the Present and of the Future'; and 'The Bee-Man of Orn, and Other Fanciful Tales,' by Frank R. Stockton.

Harper & Bros. have in press 'Modern Italian Poets,' with translations and portrait illustrations, by W. D. Howells; and a translation of Désiré Charnay's 'Ancient Cities of the New World.'

'Fifty Years of English Song,' namely, during the Victorian era, is the title of a poetical collection by Henry F. Randolph in preparation by A. D. F. Randolph & Co. They will also soon issue in three volumes a luxurious edition of Dean Stanley's 'Historical Memorials of Westminster Abbey.'

Among the art books of the year, Lee & Shepard promise 'A Bunch of Violets,' by Miss Irene E. Jerome of Chicago.

Ticknor & Co., Boston, issue directly 'An Operetta in Profile,' by Czeika. Their fall list includes a number of novels—'Love and Theology,' by Celia Parker Woolley; 'Fools of Nature' (with a slant at Spiritualism); 'Juan and Juanita,' by Frances Courtenay Baylor; 'The Story of an Enthusiast Told by Himself,' by Mrs. C. V. Jamison; and a new edition of 'Geraldine: a Tale of the St. Lawrence,' illustrated for the holiday season. We note also an expurgated Rabelais for the young, 'Three Good Giants,' with Doré's illustrations; 'Under Pine and Palm,' poems by Mrs. Frances L. Mace; 'The Bhagavad Gîtâ,' translated with a commentary by Mohini M. Chatterji; 'Music in the 18th Century,' collected and edited by Henry M. Brooks; 'The New Astronomy,' by Prof. S. P. Langley, illustrated; 'A History of the Secession War,' by Rossiter Johnson, in one volume; 'Sobriquets and Nicknames,' by Alfred R. Frey; the Poetical Works of Walter Scott, edited with especial care and annotated by W. J. Rolfe; and the songs, 'My Old Kentucky Home' and 'The Swanee River,' by Stephen Collins Foster, illustrated and converted into gift-books.

Two novels—'A Village Maid,' by Helen Hays, and 'Inchfawn,' by L. T. Meade—are shortly to be brought out by Thomas Whittaker, along with a treatise on 'The Doctrine of Morality,' by Dr. Fairbairn, Warden of St. Stephen's College.

The fall announcements of W. R. Jenkins include, besides the remaining volumes of 'Les Misérables,' the following: Victor Hugo's 'Hernani'; Alfred de Vigny's 'Cinq-Mars'; 'Contes tirés de Molière,' by A. M. Cotte; 'Mine et Contre-Mine,' by A. Guillet of Cleveland, "the first dramatic composition in French of any importance ever published in America"; and 'Una Notte Bizzarra,' by Antonio Barrili.

We ought to have mentioned last week in connection with our notice of the *Genealogical Queries*, that this publication may be had of Mr. R. H. Tilley, Newport, R. I.

The Dante Society is able to state that the 'Concordance of the Divina Commedia' prepared by Prof. Edward Allen Fay of the National Deaf-Mute College, Washington, is now completed, and will be printed as rapidly as possible. The text followed is Witte's (Berlin, 1862), supplemented by the variants of the editions of Niccolini, Capponi, Borghi, and Becchi. The shorter and commoner pronouns and particles, and the more frequent forms of the verbs *avere* and *essere*, are left unsupplied with context and references, but are all inserted in their proper alphabetical place, with *sovente* attached. The form of the book will be octavo, and the bulk some 800 or 900 pages. The price will be $10, and subscriptions may be sent to Prof. Fay or to Mr. John Woodbury, 10 Tremont St., Boston; abroad to Trübner & Co., London.

One of the publications of the American Economic Association for this year is by Amos G. Warner, and is entitled 'Three Phases of Coöperation in the West.' The "phases" represent the attempts of farmers, of laborers, and of the Mormons to coöperate for various ends. The account of their many failures and few successes is of no especial interest to those who are not students of the subject, and to them only as laying a broader foundation of fact for the conclusions that have been already reached. Most of the enterprises described were nothing more than partnerships of many members, and made no provision for their employees sharing in the profits. The organization of mercantile business under the auspices of the Mormon Church is a phenomenon that deserves attention, and indicates great ability on the part of the Mormon rulers.

'Willem Usselinx' is the title of an extremely elaborate monograph by J. Franklin Jameson, published by the American Historical Association. Mr. Jameson describes his hero as the Lesseps of the seventeenth century, the founder of the Dutch and Swedish West India Companies, and the originator of two of our colonies—that upon the Hudson and that upon the Delaware. Usselinx was undoubtedly a most enthusiastic projector, but his ideas were of the wildest character, and he must be compared with the Lesseps of the Panama, not of the Suez, Canal. As Mr. Jameson shows that Usselinx condemned the

plan of establishing a colony in Virginia, which embraced the region of the Hudson, it seems rather strained to call him the originator of that colony. Nor do we see that he deserves the credit of founding the Dutch West India Company, whatever that credit may be, for the charter was not such as he desired, and there was no novelty then in the idea of forming companies for foreign trade. Usselinx lost all his property very early in life, and spent his remaining years in pressing his absurd schemes upon kings and parliaments, and begging for grants of money to enable him to continue his tiresome labors. His part in the events of the times seems to us, upon Mr. Jameson's own showing, a very small one.

Mr. Edward P. Cheyney of the University of Pennsylvania is the author of an interesting essay upon a most interesting subject—the anti-rent agitation in New York between 1839 and 1846. He shows that the policy of the colonial governments was to establish a landed aristocracy in that State, and gives a list of the vast domains that were held and leased upon semi-feudal tenures. This aristocracy was supported, however, neither by the prestige of antiquity and high birth, nor by the spirit of the laws. The Legislature and the courts, as well as the common people, were not in sympathy with their claims; and although their legal rights were recognized and forcible resistance to them was promptly put down, yet the landlords eventually yielded to public opinion and allowed their tenants to become owners in fee. The subject deserves a broader treatment than Mr. Cheyney has given it, and he might well use his materials in the preparation of a more considerable volume.

'Poor's Manual of Railroads' (H. V. & H. W. Poor) for 1887 has just been issued, and takes the twentieth place in an invaluable series. Its summary shows the total length of track laid up to the close of last year in this country to have been in round numbers 138,000 miles, of which 9,000 were laid in 1886. A cheerful view is taken of the results of the year's transactions in this field. The Inter-State Commerce Act is printed in full.

"Fisherman among Fishermen" is an added title to the many which have attached themselves to the Father of his Country. Mr. George H. Moore of the Lenox Library bestows it in his pleasant preface to a privately printed monograph of fifteen pages, 'Washington as an Angler.' Preface we have called it, but it is formally a letter to President Cleveland, the last President of the Republic's first century, and a lover of angling like the first President. "I trust," concludes Mr. Moore, in happy non-commital phraseology, not exclusive of a second term, "that the beginning of the new era will find as good a fisherman as you are in office." What Mr. Moore has done is to extract from Washington's unpublished diaries for July 30—August 5, 1787, entries of his joining fishing parties near Valley Forge and near Trenton during the recess of the Constitutional Convention. Another extract for November 2, 1789, records his cod-fishing off Portsmouth, N. H. Presumably, as Mr. Moore is a close gleaner, there is nothing more to be learned from Washington himself about his love of the sport, but his companions, it is suggested, may have left some undiscovered relation of his part in the above excursions, all of which (as Lexington was visited on the last) had a grave historic interest for the great captain of the Revolution.

An autobiographic sketch of the adventurer Casanova forms part of the unpublished fragments of his literary remains which M. Uzanne begins editing in *Le Livre* for August. The same writer makes what he calls literary zigzags across the works of Honoré Balzac, two portraits of whom form the decoration of this number. Though less than a decade later in time, there is an extraordinary vulgarization in the second portrait, in which the long hair has been clipped; and one might stamp it Realism and its predecessor Romanticism. M. Uzanne cites a little-known table prepared by Balzac for one of the earlier editions of 'Père Goriot,' in answer to certain critics, enumerating in one class the virtuous and in another the criminal women among the creations of his fancy. Drawing them up "in order of battle," he finds himself "rich" in thirty-six of the former, and "poor" in only twenty of the latter. Of most enduring value is M. Arthur Pougin's paper on the Archives and Library of the Opéra. The Archives contain amid much else a pretty complete assortment of the Opéra's posters from 1803, and the entire archives of the old Comédie Italienne (1716-1802). The Library is of very recent formation, but embraces upwards of 10,000 books and pamphlets and 70,000 engravings; also a collection of the original designs for the 200 operas or ballets executed since 1803—a remarkable source for the study of costume, which has been augmented by acquisitions relating to the seventeenth and eighteenth centuries. Orchestra scores from Lulli to Gluck number 179. The Museum of the Opéra, again, abounds in curious objects—miniature set scenes, busts, autographs, etc., etc.

The well-known traveller, M. Ed. Planchut, contributes to the *Revue Scientifique* for August 20 an interesting study of the native inhabitants of Luzon, the largest and most important of the Philippine Islands. They are divided into two races, the negritos and the savages, altogether comprising some fifteen tribes more or less distinct in type and costume. The negritos, supposed to be the aborigines, are dwarfs, averaging about four and a half feet in height, but are well formed. Huts or villages are unknown among them, but they sleep where night finds them. They appear to be entirely devoid of a religious faculty, having neither idol nor amulet. Their strongest characteristic is their love of freedom. When one of their number dies they attribute it to some evil influence, and avenge the dead by killing some person of another race, and are constantly at war among themselves and with the savages. These differ in most respects from the negritos. Their toes are very far apart, and are used like fingers, they being able to pick up the smallest thing with them. Some have even been seen to descend a tree head foremost, using their hands and feet like a monkey. They have all some idea of a supreme being, one tribe worshipping a god who had two sons and two daughters, from whom descended the human race. They deify such things as the rain, powder, the metals, and certain trees, as well as truth and noble deeds. They have bad spirits also, as darkness, lying, and some diseases; but neither good nor bad have any sacred places. "What need of temples," say they, "for beings who fear neither wind, sun, nor rain?" They chafe under the Spanish yoke, and praise the apes for their cunning, saying, "They do not speak for fear of being obliged to pay taxes."

Poe's tale, 'The Fall of the House of Usher,' is as undramatic as anything can be; but in a recent *chronique théâtrale* of M. Sarcey's, in the Paris *Temps*, a list is given of the plays to be acted at the Théâtre Libre, founded not long ago by a club of theatrical enthusiasts, and on this list we find "La Chute de la maison Usher," conte fantastique adapté au théâtre, d'après Edgar Poë, par MM. Oscar Méténier et Arthur Byl.

'Le Prophète des Montagnes fumeuses, nouvelle américaine d'Egbert Craddoch (*sic*), adaptée de l'anglais par Jane de Vaudelin,' has just been published in Paris by Firmin Didot.

M. J. J. Jusserand has just republished (Paris: Delagrave; Boston: Schoenhof) the essay which appeared in the *Revue des Deux Mondes* for February 1, 'Le Roman au temps de Shakespeare.' The present volume is enlarged and developed from the article in the *Revue* by about one-fourth, and corrected and improved by innumerable little touches throughout. The author tells us that his book contains the substance of the earlier lectures in a course on the history of the English novel before Walter Scott, which he delivered last year at the Collège de France as the substitute for the Professor of Languages and Literatures of Germanic Origin, M. Guillaume Guizot, whom he calls the principal promoter, with M. Taine, of English studies in France. The book is well worth reading for what it contains, and also for the impression made upon a very intelligent Frenchman, remarkably well read in his subject, by the writers and the literary period immediately preceding Shakspere. M. Jusserand has already published two other volumes upon English subjects which have attracted favorable notice—in 1878, when he was only twenty-three years old, 'Le Théâtre en Angleterre depuis le conquête jusqu'aux prédécesseurs immédiates de Shakespeare,' and in 1884, 'Les Anglais au moyen âge; la vie nomade et les routes d'Angleterre au xiie siècle.' He is also charged with the supervision of Hachette's new series of essays upon the great writers of France.

In the August number of the *Educador Práctico Ilustrado* of Mexico, Señor Ezequiel A. Chavez has a descriptive critique of the statue of Cuauhtemoc, the last addition to the sculptured ornaments of the Paseo de la Reforma. Leopards of bronze stand on four sides of the octagonal plot surrounding the pedestal, which is composed of three blocks of the beautiful Puebla marble, narrowing one above the other, and bearing several symbolic figures and inscriptions. The statue itself is of bronze, as faithful a reproduction of Aztec physiognomy and dress as possible. The feathered head-dress of his tribe rests upon the hero's brows; he wears the breastplate of serpent's scales, and a mantle hangs from his left shoulder. His sandals are of gold, and he stands brandishing a dart in his right hand, while in his left he is crushing a document supposed to be a demand for surrender. On the face of the first block of the pedestal are inscribed the words, "To the memory of Cuauhtemoc and the warriors who fought heroically in defence of their country, 1521." The whole has a height of eighteen metres, and must be worthy of a place in the magnificent avenue where the figures of Carlos IV. and Columbus already stand, and where Hidalgo and Morelos are yet to appear. The statue was modelled by M. Noreña and cast by J. Contreras.

—The *Century* for September is substantially a magazine of American history. The Life of Lincoln and the current war papers—in this number the interesting episode of the battle of the Crater at Petersburg—take up their full share of space; and the approaching celebration of the completion of the work of the Convention that framed the Constitution, gives occasion to Mr. J. B. McMaster to sketch the men who were the makers of that instrument, and to outline the conflict of interest and ideas which was fought out in their debates. Besides these papers, the leading article is upon Monticello and Thomas Jefferson, and in the concluding pages of the number are short discussions of some phases of the history and working of the Constitution, in which one contributor argues for further extension of national power over the citizens, such as replacing State by national courts, and the other, Mr. Eggleston, argues, on the other side, the case for local autonomy, especially with reference to such matters as prohibitory and labor legislation. The latter remarks pithily, and the sentence contains his whole thought, that "civil-

izing work must in the main be done locally." The editor in his own person makes the inquiry, What effect would it have had upon the framers of the Constitution if they had known the extent, population, and business of the country to-day? But he puts it only to draw the moral that a nation's work is to legislate for its own times and necessities, and to acknowledge that the course of human events outruns the forecast of the wisest statesmen. The state of our Government to-day affords a singular test of the political intellect, and illustrates in a remarkable way the uncertainty of its previsions. The framers gave the country a mode of government which has proved permanent, but one cannot read their debates without being struck by the unexpected way in which time dealt with many of their fears, precautions, and animosities, both in the speculative and concrete regions of thought.

—*Scribner's* also contributes something to the centenary of the signing of the Constitution. Mr. Moncure D. Conway, who has been engaged on a Life of Edmund Randolph, has discovered the unpublished draft of a National Constitution, which represents Randolph's views of what was best as a scheme for the new government about to be established. It is a document of considerable historical interest, especially as it was worked upon in the Convention, and bears the interlineations and notes then written. The peculiar features it possesses must be looked at in the text, as an abstract is impossible. The more interesting articles in this number, however, are neither historical nor literary, but sketches of travel. There are two of these, one detailing the old story of the passage up the Nile, the other describing some of the hunting grounds in the Shoshone, with episodes of hunters' adventures, and advice about ways and means of sport in that country. The author finds much fault with the Government maps, and also with the slowness of Government exploration in the Yellowstone; the distant danger he sees is, that the Indians might rise and gain these fastnesses, whence they could long wage war and inflict great damage, while the army would be practically ignorant of the country. He gives also, though with modesty, his opinion that the species of bear are not so many as are commonly counted, but that nearly all the bear ranging the Rockies occasionally breed together, and hence arise their varieties. The cinnamon bear he would regard as a coarser and larger brown bear, resulting from a cross between grizzly and brown; and he would account for the silver-tip and roachback in similar ways. The whole paper is of great interest to sportsmen. Of the poetry of the number, less would have been a boon.

—The latest volume of the Archives of Maryland, edited by Dr. Wm. Hand Browne and Miss Harrison, embraces the judicial and testamentary business of the Provincial Court from 1637 to 1650 inclusive, with a gap in the forties. The curious interest of such a record is well indicated in the preface and prefatory notes, where attention is called, for one thing, to the singular absence of crimes of violence, at this epoch before slavery had become general. We have the first known reference to the importation of negroes, in 1642; and the first mention of a sale of them, in 1644. White apprenticeship figures largely, sometimes in fugitive cases or abductions; and the inventory of William Smith's estate in 1638 rates a manservant for two and a half years at £3, and three cows at £24. Roanoke (wampum) was a common currency. The standard, of course, was tobacco, and Elias Beach valued his servant at 500 lbs. In March, 1638, a planter binds himself in 1,000 weight of merchantable tobacco, in case he "the said William Edwin hath precontracted himselfe to any other woman other then mary whitehead spinister." The inventories give a lively sense both of the mode and of the poverty of living. "A piece of a broken Harry Angell"—*i. e.*, a coin of Henry VII. or Henry VIII., with the figure of St. Michael on the obverse—is one item. Doubtful assets are "a flich of bacon & a hogg eaten by the souldiers," with "more hoggs in the woods." These seem to belong almost in the category of "debts desperate" (as distinguished from "debts sperate"). Hogs in the woods were responsible for much of the litigation registered in this volume. Books were rare property, and conspicuous for the number of them is the inventory of one Adams's estate in 1642, with its "one testament, one small book of presidents, two small books in French, one book of dispute concerning religion."

—The executor of John Lewger put in his claim for an allowance of thirty pounds of tobacco "for hottwaters &c. spent at his buriall"—the said hot waters being, presumably, something stronger than "beareager" (analogue of *vine*gar). One finds not a few such odd or quaint words in very arbitrary orthography. We read of a "heighfer . . . marked with a flower-de-lewis in each yeare." And the succeeding passage is doubly curious, for its phraseology and for its trace of the old legal ascription of total depravity to inanimate objects as well as to brute animals. An inquest on the body of a planter, January 31, 1637, showed that "by the fall of a tree [he] had his bloud bulke broken." "And further the Jurors aforesaid vpon their oath aforesaid say that the said tree moved to the death of the said John Bryant; & therefore find the said tree forfeited to the Lord Proprietor." In the little unpleasantness between J. Cloughton, mariner, and A. Cotton, the former averred of the latter that he "did vse these or the like words, that if he (innuendo the said Anthony Cotton) had pleased he might have had him (innuendo the said James Cloughton) whippt at virginea." The suit, June 2, 1649, of Robert Robins against Raphe Beane did not prosper, "being for Tob: wch hee alleadged was wonne at Play. This Court doth not thinke fitt to give the plte any releife herein but dismisseth the same." And so we might go on, without touching matters historical in the time of Claiborne.

—Every number of the 'New English Dictionary' will be to Shaksperians worth the cost of the whole work. It will throw a thousand side-lights on Shakspere's language which they have always longed for but could never hope to behold. How much of our vocabulary and its significance can be traced back no further than the great dramatist, will be revealed so clearly that he who runneth may read. Something of this disclosure may be seen in any fraction of the stupendous work. Turning over the first two hundred pages of the first number, it will be ascertained that one hundred and forty-six words are first found in Shakspere, either altogether or in some of their meanings. At this rate our total indebtedness cannot be less than for seven thousand Shaksperian words or meanings. Rome owed only one word to Julius Cæsar. The nature of our debt will be more apparent if we examine some of these hundred and a half of Shaksperian words, all so near the beginning of the alphabet that the last of them is "air." We owe the poet the first use of the word "air" itself in one of its senses as a noun, and in three as a verb or participle. He first said "air-drawn," and "airless." He added a new signification to "airy" and "aerial." Nobody before him had written "aired," and more than a tithe of the verbal gifts now in view were such perfect participles. Well-nigh as many were adverbs. In no previous writer have Dr. Murray's Argus eyes detected "accidentally," nor any of the following — "abjectly," "acutely," "admiringly," "adoptedly," "adversely." How our fathers could exist so long without some of these vocables must move our special wonder. To "absolutely," "accordingly," "actively," and "affectionately" Shakspere added a new sense. It is not a little surprising that the word "abreast" was never printed before the couplet,

> "My soul shall thine keep company to heaven:
> Tarry, sweet soul, for mine, then fly *abreast*."

Of the one hundred and forty-six words and meanings first given us by Shakspere at least two-thirds are of classical origin. Baconians will say that such a gift could not by any possibility come from a man of "small Latin and less Greek." Others will enlarge their ideas of what Ben Jonson meant by "small." The strangest thing seems to be that so few of Shakspere's innovations—not so much as one-fifth—have become obsolete. He gave them not only life but immortality. It is perhaps equally noteworthy that while he was never read so much as to-day, no writer before him (and scarcely one of his contemporaries) cited as authors of words and senses is now read at all, save by special students.

—The question, "Where did Shakspere get his novelties in language?" who can answer? His "accoutred" was in print ten years before any other writer gives us any form of this verb, which it is agreed comes from Latin through French. The noun "accoutrement" was earlier, but only in rare books. In one instance Shakspere is erroneously said to show the earliest specimen of a certain meaning. "Act," as one of the main divisions in a dramatic work, is credited to Shakspere in 1613. But this word is in the Epilogue of "Henry VIII.," which, downward from Dr. Johnson, has not been regarded as Shakspere's work in any line of it. In no one of the Shaksperian dramas as published in the author's lifetime is there any division into "acts" at all. The quarto of the "Merry Wives," published three years after the author's death, shows no acts or scenes. In the first folio, published seven years after his death, the modern separation into parts occurs. It is indicated, however, only by Latin words, as *actus primus, secundus*, etc. Our indisputable Shaksperian debts are too great to need any doubtful additions. In one case, however, Dr. Murray fails to render to Shakspere his due. Regarding Adonis in Greek mythology, his first citation dates from 1765. He forgot this line in "Henry VI.":

> "Thy promises are like Adonis' gardens,"

as well as "Fetch thee straight Adonis," in "Taming the Shrew."

—The August number of *Les Lettres et les Arts* (Charles Scribner's Sons) contains a few pages by M. Ernest Renan which will be added, a note informs us, in future editions of his 'Souvenirs d'enfance et de jeunesse,' to what he says there of his little playmate, Noémi. It is only a fragment in the review, but, read in connection with the chapter to which it belongs, it is one of the most characteristic passages of his recollections. Like all that he writes, its meaning is evanescent, shifting, complicated, opening out dimly seen depths beyond depths of possibilities, which are realities or shadows in turn or at the same time; for, however the presentation of his ideal may sometimes betray him, M. Renan is before everything else a poet and an idealist. The number contains a paper by the editor, M. Frédéric Masson, "Deux romans de Lucien Bonaparte," the latter part of which he devotes to the now forgotten romance, 'La Tribu indienne, ou Édouard et Stellina,' published in two small volumes in 1799 by the brother of the great Napoleon, then twenty-four years old. Lucien had ordered of Prudhon ten designs to illustrate the ten books of his romance. Three of these are given in *Les*

Lettres et les Arts—one, reproduced from the original design of Prudhon, as the frontispiece of the number; the other two, from the engravings of the volumes, on a page side by side. M. Masson gives minute and most interesting details about these rare designs and engravings; about the story itself; about the two charming women to either one of whom the dedication may have been addressed, whom the young author calls "mon Éléonore," and whom M. Masson proves to have been his wife, Catherine or Christine Éléonore Boyer, who died the following year, and not Mme. Récamier, to whom Lucien paid assiduous court during this same year, and to whom he wrote, not without response, certain very youthful and very ardent letters, which her admirers of after years, Chateaubriand and Benjamin Constant, read and wrote about. All this is made very interesting indeed, but it is not one of the "deux romans" of the title. What gives the article its great interest, and also its unity and beauty as a piece of literary work, is the connection M. Masson indicates so lightly and so skilfully of the above with the second marriage of Lucien to Alexandrine de Bleschamps, whom he first knew three years after this period, in 1802. For her sake he dared, unlike his brothers, to brave the anger of the Emperor, and did not hesitate to reject an offered crown, preferring exile and obscurity with her to a throne which she could not share. There is an attractive portrait of Lucien at the head of the paper, and full-page pictures of his first wife and of Mme. Récamier—the last from the well-known painting by Louis David, in the classical undress of the period. This number also contains a paper by Vernon Lee called "Voix maudite," very fantastic in conception, but exasperatingly long and discursive in execution, in which the author forgets at intervals that her Scandinavian musician is not a painter, or a very modern writer of æsthetic English prose; but which, with all its failings, is so nearly good that one would like to lay some blame on a translator, only that it is said to be written in French by the author herself. "Pension d'étrangers" is a Genevese story by M. Édouard Rod, in which this sombre writer is lighter and less pessimistic than usual. The first of M. Pierre de Nolhac's Versailles papers, "Le Grand Trianon," appears—well written and interesting, and fully illustrated with reproductions of contemporary paintings and engravings. The number, like the last, is an unusually good one.

—For some time past Émile Zola has been publishing in *Gil Blas* the new story of his Rougon-Macquart series, 'La Terre.' The conspiracy of silence in regard to it which seems to have extended through the whole Paris press, has suddenly been brought to an end in a violent manifesto, signed by some of the young naturalistic writers who called themselves his disciples. This was published in the *Figaro* for August 18, and reproduced in part by most of the papers of the next day, glad, apparently, to join in the protest without themselves entering too deeply into the mire of the discussion, which naturally has many unsavory details. The manifesto itself would be of less consequence if it were not for the approbation with which it has been received, and the importance given to it by the attention of the most serious of the daily papers. It is a cry of indignation and revolt at the continued aberrations of the "Master"; at the increasing exacerbation of the *note ordurière* in his last work, With a truly Zolaesque brutality of expression, these *lévites déçus* protest against the authority of the high priest of naturalism. They accuse Zola of a lack of artistic sincerity in his latest work; of a failure to observe the realities of which he makes a fantastic picture from second-hand materials and from his own imagination, which they call an "imposture de la littérature véridique"; they reproach him for his "bonshommes de rhétorique zoliste, dénués de complication" and flung, in clumsy masses, into a country half seen through the windows of an express train; for his incrediole indolence in "l'expérimentation personnelle"; for his "documents de pacotille, ramassés par des tiers, pleins d'une enflure hugolique." With all the energy of young writers eager to defend their own work against a possible assimilation with the "irrémédiable dépravation morbide" of the great man whom they have too fervently admired, they end their declaration of revolt with a protest against this "littérature sans noblesse" in the name of their own ambitions, "saines et viriles," of their "adoration, of their profound love, of their supreme respect for art." This is signed by Paul Bonnetain, J. H. Rosny, Lucien Descaves, Paul Margueritte, Gustave Guiches. They are all young writers and young men, the oldest of them not yet thirty and some of them much younger; M. Gustave Guiches published the first of his two really remarkable novels less than a year ago. They all have decided power and promise as writers and a certain amount of literary reputation, not in every case of the most desirable kind in regard to their earlier books, a healthy repentance for which possibly adds to the vigor of their energetic repudiation of the worst tendencies of Zola and his followers, from which all their present work at least is entirely free.

—Zola is always ready to attack any opponent who may present himself, and to assert his own literary inviolability with passion. It will be interesting to hear the thunders he will hurl at his revolted disciples, and at the journalists who have commented upon their manifesto, and who at last have given expression to the general reprobation of his latest work. They have recalled to him that, scarcely ten years ago, when 'L'Assommoir' was appearing in the *Bien Public*, that paper was obliged to break off the publication in the midst of the story, on account of the constantly increasing dissatisfaction of its readers; that though later he found another paper, more free from prejudices, which gave 'Nana' to the end, this very paper has just sacrificed to the resistance of its subscribers a *feuilleton* in course of publication, declaring that what had already appeared and been the cause of such violent protests was veritable rose-water compared to what remained in manuscript, and that it was absolutely impossible to go on with it. It is doubtful whether Zola will draw the desired conclusion that the public, which he has done so much to educate, is becoming more easily shocked by the offences which passed with comparative readiness a few years ago; but the fact seems to be so. Zola delights in subjugating a resisting public. It remains to be seen whether the present revolt will be the occasion for another victory upon his part, or the forerunner of a more healthy and a more truthful naturalism.

LORD SHAFTESBURY.

I.—HIS CHARACTER.

The Life and Work of the Seventh Earl of Shaftesbury, K.G. By Edwin Hodder. 3 vols. Cassell & Co.

"One who wears a coronet—and prays."

THIS line of Cowper's eulogizes and satirizes the one Peer who lent the dignity of rank to the early Evangelical revival; it paints, also, the last English nobleman who will be termed by others, as he was by himself, "an Evangelical of the Evangelicals."

Lord Shaftesbury, in spirit no less than in fact, "wore a coronet." He "possesses," writes an observer in 1838, "the palest, purest, stateliest exterior of any man you will see in a month's perambulation of Westminster. It would be difficult to imagine a more complete *beau-idéal* of aristocracy. I believe his character quite corresponds with his appearance." The words "*beau-idéal* of aristocracy" hit off Lord Shaftesbury's likeness as closely as it is possible for a few words to paint a human being. Descended from a line of distinguished ancestors, he was by birth, by breeding, by every inherited trait, an English Peer; and an English Peer, moreover, inheriting traditions handed down from a period when the hereditary members of the House of Lords formed in reality the first estate of the realm. Neither his special and eminent greatness, nor his defects, can be appreciated at their right value unless the qualities be noted which, bad as well as good, came to him by birth. Lord Shaftesbury's earnest wish was that any literary portrait made of him should express the whole truth and nothing but the truth; and reverence for a good man who in his generation rendered noble service to mankind, makes it a duty to note the defects or limitations impressed upon his character by his position. High lineage, no less than obscure descent, has its disadvantages; and no candid reader of Lord Shaftesbury's biography can fail to see that an ideal aristocrat must of necessity inherit aristocratic deficiencies.

At the basis of his character lies a quality which, though closely connected with the highest virtues, is in itself a defect. It is difficult to find the exact word for a fault which it would be an exaggeration to call a vice. The term which perhaps most nearly defines it is "rigidity." Lord Shaftesbury was utterly wanting in flexibility. There is nothing in him of intellectual subtleness or versatility. Impressions once made upon his mind seem to have been indelible. But his nature at least was not easily impressible. There is not a trace throughout his copious diaries of the play of thought. He possessed a sound practical judgment; he had in him many elements of a statesman. But, as is often the case with men eminent in statesmanship, his reflections are worth much less than his acts. He passed, it should be noted, through a training which, whatever its demerits, has certainly been most effective in the moulding of character. He was an Oxford First-Class man; yet it requires almost an effort of faith to believe that he was ever at Oxford. The education which has left indelible traces on the minds, not to say on the natures, of Newman, of Arnold, and of Gladstone, hardly touched the character of Lord Shaftesbury. His tastes, no less than his principles, seem almost enough to prove that he graduated at Cambridge and heard every sermon of Simeon's. Aristocratic polish, combined with Evangelical strictness, resisted every influence of Oxford origin. Neither history nor metaphysics, but mathematics and astronomy, were the forms of scientific speculation which possessed an attraction for Lord Shaftesbury's intellect. Stiffness of mind is traceable even in his purely political opinions. To no subject connected with the Constitution did he give more thought than to the position of the House of Lords. Yet when a statesman as aristocratic as Lord Palmerston perceived what Bagehot has termed the "inestimable and unprecedented opportunity" of reforming the House of Lords without agitation, Lord Shaftesbury pronounced off-hand that the creation of life Peers was "a step as pernicious as it is specious," and foreboded that it "would end by making us the American Senate." And here, be it noted, we have a singular specimen of confident ignorance; for, to give the House of Lords the position of the Senate, would be to make it the most powerful body in the state. In truth, throughout Lord Shaftesbury's career, his aristocratic stiffness is seen to be closely connected with aris-

tocratic self-confidence. This fact should be observed, because it explains the least amiable side of his character. From youth up, he occupies quite unconsciously the attitude of a censor. The Duke, Peel, Russell, Palmerston, Gladstone, the Bishops, his Puseyite opponents, his Low-Church friends, all and each fall under his lash. Mr. Hodder gives us an example of the manner in which his Lordship could "rebuke" a clergyman: the one specimen exhibits a good deal more of aristocratic severity than of noble courtesy.

If, however, Lord Shaftesbury exhibited the failings, he displayed all the high virtues of an English nobleman—and very high virtues they are—in their best form. The self-consciousness and self-condemnation to be found in his diaries cannot conceal from any intelligent reader that he was endowed with the gifts of leadership. It is impossible, indeed, not to fancy that the seventh Earl had inherited from the first much of the restless energy ascribed by Dryden to Ahithophel. He assuredly showed an intensity of public spirit which no one can fairly ascribe to the first Lord Shaftesbury, but which has been the noblest quality of the English nobility. The gentry in all their ranks were for centuries the leaders of England; they made good their claim to leadership by the zeal and capacity with which they discharged ill-remunerated or unpaid public service. Lord Shaftesbury's whole life was spent in the performance of labors which benefited the State while they entailed loss upon himself. No statesman in office was so active a legislator. He remodelled the trade legislation of the country; he reformed and he administered the lunacy laws; he inaugurated and carried out a system of sanitary legislation; he extended, or attempted to extend, the protection of law and of feeling over all persons who could not adequately protect themselves; he worked in Parliament as hard as a Minister without attaining office, and he worked in Government boards far harder than a civil servant without receiving a civil servant's pay. His direct political or legislative employments were, moreover, but a part of the toils in which his life was spent. A list of three hundred and odd societies, religious, moral, or philanthropic, with which Lord Shaftesbury was connected, gives some faint idea of his multifarious energy. He was not a man to connect himself with institutions to which he gave merely nominal assistance. Many of the associations to which he lent his name were his own creation. In many others he was the guiding spirit. With none was his connection merely nominal.

While he was guiding the benevolent labors of thousands, he was, be it remembered, something like the head of the most active among English religious parties. The fostering of what he deemed the truth; the active opposition of what he deemed error; the constant supervision of ecclesiastical policy, might fairly have been described as the occupation of his life, had it not, in fact, been one among a hundred other occupations. With the results of his laborious energy we are not at this moment concerned; the point which deserves pressing home upon every man's attention is the vastness of the load of work taken by Lord Shaftesbury on his shoulders, and the pure public spirit which compelled him to turn his life into a life of gratuitous toil. Public spirit is, though the most conspicuous, not at bottom the highest of aristocratic virtues. Bold frankness and a love of justice are the merits which, as every one feels, belong of right to nobility. In the matter of intrepidity Lord Shaftesbury fell not a whit below the proverbial boldness of Lord Russell. No man ever spoke his mind with more plainness, not to say with more audacity. Study his correspondence with the French Emperor and with the Emperor's Minister. Lord Shaftesbury was convinced, and with good reason, that French Protestants did not enjoy religious freedom. M. Drouyn de Lhuys and Louis Napoleon attempted in vain to convince his Lordship that he was wrong. Lord Shaftesbury held firmly to his facts. Never was a crowned head so "tackled" by an uncrowned correspondent as Louis Napoleon by "your Majesty's very obedient servant, Shaftesbury." The plain truth is, that his Lordship's frankness was stimulated, in part at least, by the contempt of a highly descended Peer for an imperial parvenu. The solid foundation, however, of his firmness was his stern belief in justice. "Justice—*raw* justice—is the Shekinah of governments." The man who in youth wrote this sentiment down as the maxim of his life, had early imbibed the noblest of the ideas belonging to aristocratic rule, and was not likely to quake in later life before kings or emperors.

If Lord Shaftesbury wore a coronet, he also throughout life "prayed," and nothing would be more ridiculous than to consider the secular without also recognizing the religious side of his character. For fair criticism, the most important thing is to recognize the fact that Lord Shaftesbury's position and the inherited bias of his nature were closely linked with his religious attitude and convictions. The stiffness and unpliability which are noticeable throughout his public career, no less than in his private reflections on men and things, are discernible in his religious belief. When quite a child he received strong and lasting religious impressions. Religion came to him, as was natural during the first decade of this century, in the form of evangelical piety; and from the day when young Lord Ashley learned his first prayer at the knees of Maria Millis, down to the day when, three years ago, Lord Shaftesbury died "undisturbed by any fear of death, unshaken in faith, and in full assurance of hope," he remained, to use his own words, an Evangelical of the Evangelicals. He moved, as far as doctrine went, neither to the right hand nor to the left. The High Church revival, the speculative activity of the Broad Church, the enthusiasm of Dissent, the zeal of the Salvation Army, touched him not at all. "Despite all the changes of religious beliefs in others," writes Mr. Hodder, "he in 1878" [and the remark, we assume, applies to 1884] "not only stood firm in every opinion he held in 1838, but he held every shade or phase of these opinions." This we presume is meant for eulogy; it is in reality the bitterest censure. Mr. Hodder's words mean that the experience of forty years, and of forty years filled with moral, intellectual, and religious movement, taught his hero nothing whatever. Lord Shaftesbury towards the close of his life seems, it is true, to have perceived that for some reason or other the Evangelical party was losing its hold on the living world of English life. That influence must inevitably desert men whose greatest leader could learn nothing from forty years' experience, is clear enough to readers of Mr. Hodder's book, but probably never occurred to Lord Shaftesbury.

His extraordinary inaccessibility to new ideas explains his absolute deficiency in critical acumen. He was, according to his biographer, a good judge of men. That he possessed good common sense is apparent; but for his acuteness in appreciation of character, and, in truth, in criticism of any kind, we want better evidence than the verdict of biographical partiality. Of Mr. Maurice we find written in Lord Ashley's diary, "He is one of those who must be ranked according to old Fox's definition, as neither sound Protestant nor true Papist. . . . He once did excellent service in the cause of the Jerusalem Bishopric. This covers a multitude of sins. If it gives him pleasure or does him good to assail me, he is welcome." These words were written, it is true, when a teacher who in piety and goodness assuredly equalled, and in wisdom and in mental power infinitely surpassed, Lord Shaftesbury, was still known as "Mr. Maurice of Guy's Hospital." Lord Shaftesbury may later have changed his opinion about a man whom it was arrogance on his part to judge. But as things stand, the criticism is noteworthy as presumably the stupidest estimate ever put on record by an excellent man of another whose virtues and powers could not be appreciated by his critic. Lord Shaftesbury's judgment of Maurice can, for intellectual obtuseness, be paralleled, if at all, only by the description of 'Ecce Homo' as "the most pestilential book ever vomited forth from the jaws of hell." Of this statement Lord Shaftesbury did not repent. He considered the words "too strong for the world, but not too strong for the truth."

Just criticism of men or of literature is a power not promoted either by aristocratic training or by zealous religious dogmatism. Nor would Lord Shaftesbury's errors as a critic be of much moment but for two considerations. They explain in the first place the ease with which Lord Shaftesbury, like other practical men, looked upon the theological theories which he had imbibed, together with genuine spiritual convictions, as uncontrovertible facts which could be denied only by fools or knaves. That the belief in the verbal inspiration of Scriptures was at best a theory, and, in the opinion of far better judges than his Lordship, a theory irreconcilable with the plainest facts; that the doctrine of eternal punishment, of which, quaintly enough, he says, "If I maintain it I do not wish it," and which he "found revealed," was, in the judgment of theologians of far profounder knowledge than himself, neither revealed nor compatible with moral justice—were considerations which obtained no entrance into his mind. When he heard of any theological doctrine with which he did not agree, his simple course was to label it as either superstition or neologianism, and at once pronounce its condemnation. His mistakes as a critic, in the second place, explain a certain want of fineness even in religious feeling. By far the least admirable feature of Lord Shaftesbury's career is the scheme of church appointments adopted at his suggestion, or instigation, by Palmerston. The Evangelical leader saw only too plainly the immediate or apparent advantage to the "truth" of filling half the sees in England with sound Low Churchmen. The Premier saw the undoubted political gain of bribing with bishoprics and livings the most influential of English religious parties. Of the two, Palmerston had the best of it; he obtained the support for which he paid. Lord Shaftesbury worked irreparable injury to the cause he meant to serve. The connection, moreover, between him and Palmerston presents on one side a tragic aspect. Lord Shaftesbury perceived the great and good sides of the Premier; he also perceived that Palmerston was not a "religious man," as Lord Shaftesbury would have generally defined that term. One can trace, in his account of Palmerston's death, the painful effort to reconcile his genuine and warranted belief in Palmerston's virtues with his theological theory that all these virtues were of no account in the eyes of the Deity. Truth is self-consistent; theological theories which do not square with the facts of life distract even the best of men, by involving them in the unconscious worship of inconsistent ideals.

If, however, theological dogmatism conceals from religious souls like Lord Shaftesbury's the reality of secular virtue, it is equally true that critics who are not in sympathy with the religious doctrines of men like him, immensely underrate the salutary effect of a religious faith which cannot fairly be estimated by the dogmatic forms in which it is more or less accidentally clothed.

It were absolutely idle to deny that religious conviction gave to Lord Shaftesbury's life both its color and its depth. He had the virtues of an English Peer, but what distinguished him from other Peers who have greatly and nobly served the state, is the strength and reality of his faith. We may assume, if we like, that the so-called enthusiasm of humanity would, in the absence of dogmatic belief, have driven Lord Shaftesbury to a career of philanthropy. This assumption, however, is a mere hypothesis, and an hypothesis incapable of verification. Lord Shaftesbury would undoubtedly have attributed the labors of his life to the influence of religion. We may well accept his own view of his career. Pity for suffering and hatred of injustice were, no doubt, part of his natural disposition. Habits of benevolence at last made the service of man its own reward. But it may well be believed that nothing but firm belief in a definite religious creed would have turned an ambitious English nobleman into pursuits which imposed all the labors and promised none of the rewards held out by public life.

However this may be, two facts are well worthy of notice. The first of these is, that piety intensified all Lord Shaftesbury's natural virtues. Under its influence, manly independence expanded into absolute disinterestedness; public spirit developed into hatred of oppression; sensitiveness to suffering grew into active philanthropy; and the inflexibility which was near akin to an intellectual defect, conferred infinite benefit on the nation when it took the form of unyielding resistance to every form of wrong. Religion, in short, gave a new intensity to every quality of Lord Shaftesbury's nature. If some of his defects were rendered the more apparent, his virtues received an untold accession of strength. The second fact is, that Evangelicalism received, under the unconscious influence of Lord Shaftesbury, a new development. His religion was "practical" no less in the good than in the bad sense of that term. He had little gift for speculation, and it is greatly to be regretted that he had not even the capacity to perceive that he was not born for a thinker. But he saw with statesmanlike keenness the evils of society which a statesman might attempt to remove. He labored, no doubt, for the salvation of men's souls, but he perceived, with a clearness not given to many of his religious teachers, that physical misery was inconsistent with spiritual growth. He denied no doctrine which had been taught him by Wesley, by Cowper, by Romaine, or by any of the school from whom he had learnt his creed. He would have denounced indignantly and with perfect honesty the notion that he believed in the merit of "good works." Still, as a matter of fact, he imbibed, almost against his will, one idea of his age. His aim was to save men's souls, but he gave his whole heart and spirit to saving them from misery, from want, and from oppression during their present life. Religion took the form of enthusiasm for social reformation, and, by one of those practical paradoxes of which history is full, a Peer of ancient lineage, who, by the force both of pride and principle, was impelled to keep upon the old paths, became a great social revolutionist. Here, however, Lord Shaftesbury's character merges in his work. But to understand the work itself we must remember that it was done by a nobleman who might well be described as the last of the Tories and the last of the Evangelicals.

ADAMS'S PUBLIC DEBTS.—I.

Public Debts: an Essay in the Science of Finance. By Henry C. Adams, Ph.D., of the University of Michigan and Cornell University. D. Appleton & Co. 1887.

Dr. Adams has rendered an important service in this painstaking treatise both to financial science in general and to American financial history in particular. The social, political, and industrial effects of public borrowing and of interest-paying are methodically unfolded. The mysteries and sophisms that have grown up like weeds about public debts are cleared away in language addressed to scholars, but not too recondite to be understood by any reader of fair education. The author has been classed, and, we suppose, fairly so, among the "professorial socialists" of the day, but there is little in the present work that justifies the association. There is hardly any other branch of economics that lends itself so readily to the conceits of those who hold that the financial operations of the Government should serve to bring about a more equal distribution of property. Prof. Adams gives no countenance to this doctrine, but he shows plainly enough how public borrowing does commonly affect the distribution of the proceeds of the national industry, and that it does not tend to a more equal distribution of wealth, but the contrary. More stress might have been laid on the opposition of the protected classes in the United States to the reduction of taxation, but the allusions made to this branch of the public-debt question imply that the author considers protectionism an obstacle to the adoption of sound principles of finance at the present time.

Prof. Adams finds that public debts have their origin in constitutionalism as distinguished from absolutism; that, in the beginning of debt-making, people were willing to lend money to the Government if it was more or less their Government, but not if it was entirely the King's Government. "The broad theory of constitutional liberty is, that the people have the right to govern themselves; but the historical fact is, that, in the attempt to realize this theory, the actual control of public affairs has fallen into the hands of those who possess property. It follows from this that when property-owners lend to the Government, they lend to a corporation controlled by themselves." This is quite true if we attach no other meaning to the words than the context implies. Intelligence really rules the world, and those who possess property usually possess intelligence, which, when applied to government, produces discipline, organization, continuity, method, and the use of credit, while the want of it yields revolution, anarchy, confiscation, and repudiation. It is not implied, and must not be inferred, that the control of government by the property-owning classes leads to the creation of public debts, but merely that this sort of control enables the Government to get money when money must be had.

The two main causes of modern public debts are classed by the author as Nationality and Socialism. We cannot consider these terms good substitutes for War and Public Works. Nationality is responsible for a very small part of the public debts of Europe, even of those which have been piled up since 1850. It was not nationality that set Russia against Turkey, and England and France against Russia, in 1854. It was not nationality that precipitated France against Austria, Mexico, Germany, Tunis, Madagascar, and China within recent years. None of England's wars in the present century have been, strictly speaking, wars of nationality. Socialism, as used by Prof. Adams, is the opposite of *laissez-faire;* but it is not an aid to clearness to say Socialism when you mean harbors and bridges, or railways and telegraphs. The controversy between Socialism and *laissez-faire* as abstractions is as barren as would be a controversy between medicine and surgery. The State can do some things better than individuals, while individuals can do other things better than the State. There is room for dispute as to what things can best be done by the one and what by the other, but all that can be affirmed abstractly is, that, since individualism is the natural order of things, the burden of proof is upon Socialism to show that State interference is more advantageous in any given case. The author's first duty to his reader is to expel abstractions as much as possible, and especially not to import them when they do not inhere. This is a duty which Prof. Adams has, for the most part, kept in view.

The only political effects of public borrowing worthy of notice are those of an international character, as where the citizens of one country lend money to the Government of another country. Here no political effects arise unless the borrowing Government fails to pay according to the terms of the contract. Then the question arises how far the Government of the lending country may or ought to interfere to secure the rights of its citizens. This is an important question, but it is of a diplomatic, not of a financial, nature. The European world may yet be set by the ears by reason of the debt of Egypt. England has undertaken to administer Egypt, and has asked leave of France and Germany to "scale" the debt of that country, and has received a negative answer. The debt of Mexico was made the pretext of the French invasion of that country, and might have been the cause of war between the United States and France. The policy of England in respect of the claims of her subjects against foreign Governments is that of *caveat emptor;* for, although she claims the right to interfere, she does not exercise it in any case whatsoever, for the reason that it would thus be possible for private citizens to involve the country in war by design, and for the further reason that the Government would thus become practically the underwriter of all foreign loans on the Stock Exchange.

The surface arguments by which national debts, once created, are defended as commercially advantageous, are easily exposed and brushed aside by Prof. Adams. Reduced to their simplest terms, these are arguments intended to show that it is wise to make a permanent provision for one portion of the community, and necessarily a small portion, at the expense of all the rest. Such arguments show "how easy it is for men to convince themselves that what proves to be of personal advantage must of necessity benefit the community at large." The existence of a national banking system dependent, as regards circulation, upon the permanence of a national debt, does not alter the fact that the debt itself is an evil to be got rid of, in an honest way, as soon as possible. It is not true that the debt creates social inequalities—these existed before the debt existed. It was because there were rich men in the country that it became possible to have a debt. But the debt, if permanent, will perpetuate inequalities by the operation of the taxing power. It will take from the mass in order to support the few. Interesting tables drawn from the last census are introduced by Prof. Adams, showing how and where the bonds of the United States are held. Excluding the national banks and foreign holders, the number of persons and corporations receiving interest from registered bonds in the year 1880 was 80,802. This table included $300,000,000 of bonds that have since been paid off. So the number of holders must have been considerably reduced, perhaps to 50,000. Of these holders, 25,613 held between $50 and $500 each, and 52,841 held less than $2,500 each. The New England States held 17 per cent. of the whole, the Middle States 67 per cent., the Western States 13 per cent., and the Southern States 3 per cent. The social effect of public interest-paying thus comes to have a geographical cast. There is a transfer of capital from the West and the South to the East. It is possible, however, to assign too much importance to this feature, and we

think that Prof. Adams does so. In its geographical aspects, it is not the public debt that causes the transfer of money from one section of the country to another, but the possession of capital. It would go on just the same, and to the same extent, if there were no public debt at all.

WILSON'S CHINA.

China: A Study of its Civilization and Possibilities. By James Harrison Wilson. D. Appleton & Co.

DESPITE the multiplicity of books on China, there is always room for an unhackneyed view of the vast empire, put into print. Dr. S. Wells Williams was, perhaps, the last of old-fashioned scholars who could or would write an encyclopædic account of the country and people. We now look for and can tolerate only the specialist and expert. In two parts of the great field there are few laborers, notwithstanding the white promise of harvest. About the China of the dawn of history or before it, and the China to be—China touched by science—we want good books. Of the making of these there is scarcely a beginning.

With a distinct purpose in view, Gen. James Harrison Wilson went to the Middle Kingdom. While inquiring into Chinese civilization and possibilities, and learning these from men and books, he studied, from horseback and with an engineer's eye, the face of the country Then, as a practised railway manager, already familiar with the thorns and hard places in the seat of the presidency of a road, he looked at the obstacles, real, possible, and imaginary, to the introduction of traction by steam into the oldest of empires. He talked with the common people, studied their religion, prejudices, and superstitions, their houses and their graves, their fields, roads, and methods of trade and transport; and then interviewed mandarin and merchant. To any one familiar with Gen. Wilson's previous career, it goes without proof that our latest American traveller in China was well equipped for his task. Educated at West Point, a soldier during the whole of the civil war, an engineer and cavalry officer, a railroad builder and manager for twenty years, and well known recently as the President of the New York and New England Railroad Company, he set his eye on the only great country yet to be provided with railroads. His book is a commentary on the one text of progress in China.

Sailing from San Francisco October 19, 1885, after a visit to Japan and the run to Shanghai, he hurried forward to Tientsin. He had several encouraging interviews with Viceroy Li, and, at his request, made a midwinter journey of fifteen hundred miles on horseback through the three northeastern provinces of Chi-li, Ho-nan, and Shan-tung. A journey was made in central Japan, "the most beautiful country in the world"; and then a trip to Formosa, followed by a second visit to Tientsin. Between leaving and returning to New York, a year, lacking three days, elapsed.

In his twenty-one chapters, one of which is devoted to Japan, the author discusses his theme in the most practical manner. He touches upon the questions of population, education, government, foreign and missionary influence, and national history, only so far as they illustrate his one idea kept in view. He believes China need suffer from no fear of over-population, as the soil is able to support treble the present number of people. He notes and seizes, much more clearly than most outside visitors, the fact of China's long isolation. Surrounded only by pupil nations, and kept far away from equal or superior civilizations and their modifying influences by high mountains, cold steppes, malarious jungles, unnavigable rivers, or oceans vexed only by natural forces, the Middle Kingdom stood for monotonous centuries like an island in the midst of the ocean. Now the old conditions are changed. Steam has wrought more wonders than all the dragons. The ocean has become a pathway, steppes and defiles can be made into roads by ties and rails, and, instead of vassals and tributaries, China is touched on her borders by arrogant Europeans—Russians, French, British. Only three or four days distant is the "neighbor-disturbing" Dragon-fly Country, with sea-going ironclads and the finest infantry in Asia. With the prospect of a railway from St. Petersburg to Vladivostok, another from Calcutta through Burmah to the borders of Yun-nan, and a fleet of steel cruisers in Yedo Bay, the question of railroads in China touches the instinct of self-preservation, and interests the Chinese soldier even more than merchant or mandarin. The nerves of China are said to be more obtuse than an alligator's, but nowadays nations get new nervous systems by means of iron and electricity. In spite of popular opposition and the feng-shuey (wind-and-water superstition), Li and the progressives have persevered in their schemes of telegraphic connection of the frontiers with the capital and its seaport. About 5,000 miles of wire are now in operation. "Military necessity" has spurred on the Government thus to adopt one of the cheapest and easiest features of modern civilization. In this there is hope for the speedy entrance of the locomotive.

In carefully weighed words, Gen. Wilson states his belief that China is very nearly ready for railroads, that even the popular prejudices can be overcome by wit and silver, that private wealth can be secured for the purpose, and that the progressive statesmen will gradually impress their views on the conservatives and win them over. This he believes, despite his thorough consideration of the fact that the attitude of nearly all the civil officers towards the foreign appliances of civilization is that of stolid apathy. In a word, Gen. Wilson believes that progress is possible to China. If one feels disappointment at the author's grave, judicial, and cautious statements, and longs for warm and rosy views, he must remember how often the sanguine prophets have failed. One who loves fact more than fancy will thank Gen. Wilson that he has so clearly, soberly, and industriously given the reader such lavish materials on which to build a sound opinion.

In its literary mechanism the book is to be commended. The style is clear, straightforwad, with no attempt at rhetorical embellishment or originality of view, yet readable and pleasing. A good preface, analytical table of contents, index, and colored map, with print, paper, and binding, make this literary venture of a soldier and engineer a worthy inmate of the permanent library.

The Chief Periods of European History. Six Lectures read in the University of Oxford in Trinity Term, 1885, with an Essay on Greek Cities under Roman Rule. By Edward A. Freeman, M.A. Macmillan & Co. 8vo, pp. 250.

THE special merit of this course of lectures is suggestiveness. We do not know that Mr. Freeman has anywhere given so good a key to the problems of European history. It is not, as he himself says, a key which will unlock all these problems. It is but one out of many possible divisions into periods. "Another man might divide on some principle altogether different; I might myself divide on some other principle in another course of lectures." However this may be, the principle of division here followed is peculiarly suggestive. It is "the main outlines of European history, as grouped round its central point, the Roman power." The heads of the chapters illustrate this: "Europe Before the Roman Power," "Rome the Head of Europe," "Rome and the New Nations," "The Divided Empire," "Survivals of Empire," and "The World Romeless."

But while the course is in its very nature full of instruction and suggestion, so that even these titles carry the reader right into the heart of the subject, we must say that the execution in detail is in great part perfunctory, to a degree very unusual with Mr. Freeman. The outline of the course has so much meaning that it is difficult to fill out this outline without a considerable amount of trite and indifferent matter which may fairly be called padding. He urges in the preface "that no one may be disappointed if he fails to find in this thin volume even a summary of all European history, much less a philosophical discussion of all European history." But, thin as it is, this volume of six lectures contains more than the necessary space for stating and elucidating his general outline. The essential points in this suggestive theme, of Rome in its relation to European history, even with all the illustration that is needed to give it fulness and clearness, occupy only a moderate proportion of these pages. We have never read any of Mr. Freeman's works in which his special fault of loading his pages with an excessive amount of detail, much of it of a recondite nature and much in a very allusive form, is so conspicuous as here. But then, we hasten to add that in none of his works will the reader meet with more, not merely of suggestiveness, but of bright and felicitous statement. After speaking (p. 45) of the historical relation of Gaul and Teuton to Rome in the building of civilization, he adds: "They who came as invaders only had to be dealt with as invaders and not as disciples. The Gaul who came before his time had his scourging at Sentinum. The Teuton who came before his time had his scourging at Aquæ Sextiæ and Vercellæ." Of Odoacer (p. 96): "The only difference between the revolution of 476 and a crowd of earlier revolutions was that Odowakar found that it suited his purpose to acknowledge the sovereignty of an absent sovereign rather than to reign in the name of a present puppet of his own creation." Of Theodoric (p. 97): "His rule was the best, as that of the Franks was about the worst, to be found in Roman and Teutonic Europe in his day. Still, fusion between Roman and Teuton was the very essence of Frankish rule; under the system of Theodoric no direct step towards fusion could be taken. It was the necessary result of his position that he gave Italy one generation of peace and prosperity such as has no fellow for ages on either side of it, but that, when he was gone, a fabric which had no foundation but his personal qualities broke down with a crash." Of Charlemagne (p. 108): "The truest view of the event of 800 is that the existing empire was split asunder, and that the western fragment, that which acknowledged the Frankish King as its Emperor, was in form enlarged by the addition of the territories of the Frankish King."

A line of thought which runs through the book, parallel with that of Rome, is that of the "Eternal Eastern Question." "In that abiding strife," he says (p. 5), "that Eternal Question, the men of the Eternal City, Scipio and Sulla, Trajan and Julian, played their part well indeed; but it was waged before them and after them as far back as the days of Agamemnon and Achilleus, as near to the present moment as the days of Codrington and Skobeleff." Few men have the gift of covering so much ground with one sentence as Mr. Freeman; and the sentence just quoted is the text for a large part of the volume. Another sentence in this connection deserves to be cited (p. 52): "Never, in truth, was the Eternal Ques-

tion so near to its solution, so near to a solution which might have stifled the life of Europe for ever, as when Hannibal debated in his mind whether he should march straight from the field of Cannæ to the gates of Rome."

The closing essay, from the *Contemporary Review*, "Greek Cities under Roman Rule," is in Mr. Freeman's best style, and deserves to be carefully read by all who desire to understand the fundamental nature of the Roman provincial rule. To be sure, it covers only half the ground, and one wishes that Mr. Freeman would do for the Roman power in the West what he has here done for the Roman power in the East. The work was a wholly different one: "There Rome did not enslave or destroy, but created. The towns of the West looked forward, while the Greek commonwealths looked backward." But the legal relation was identical in the two cases; and Mr. Freeman's brilliant and graphic delineation in detail will afford, for the whole subject, the best possible commentary to Mr. Arnold's excellent account of the Roman provincial government, or to Mommsen's lately published volumes.

A Contribution to the Bibliography and Literature of Newport, R. I.: Comprising a list of Books published and printed in Newport, with Notes and Additions. By Charles E. Hammett, jr. Newport, R. I.: Hammett; Providence: Rider. 1887. 4to, pp. 185.

If every lawyer owes a debt to his profession which can only be paid off by contributing something to the elucidation of the law, still more ought every intelligent bookseller to feel bound to make some record of the literature with which he has to deal. Newport is fortunate in having in Mr. Hammett a bookseller who is at the same time author, collector, and publisher. His exhaustive list of Newport publications must reach over a thousand numbers, beginning as early as 1647 with a theological tract, others following it at irregular intervals until 1725, at which date (annually produced by its local press, and on subjects of local interest or by local authors) there began a growing literature, here duly chronicled in an alphabetical list and in a chronological index, each checking the other and correcting it.

Apart from the interest in religious controversy, in which liberal Rhode Island strove against orthodox New England, the Newport succession of eminent preachers from Hopkins to Channing supplied abundant material in their sermons, often controversial, sometimes historical, and always theological. Then, too, next after the Boston *News Letter* of 1704, and the Boston *Gazette* of 1719, came the printer of the Boston *Courant* of 1721, James Franklin, the elder brother of Benjamin, and in 1732 issued the *Rhode Island Gazette*. He died in 1735, and was succeeded in his business as printer and publisher by his widow Anne, who, aided by her daughter and her son, James, a native of Newport, managed it until he was of age, when he became the partner of his mother and conducted the business in his own name. He began printing about 1754, published the Newport *Mercury* in 1758 (still issued), and died in 1762, when his mother resumed the business, but in partnership with a son-in-law, under the name of Franklin & Hall, who were in turn succeeded by printers in regular order down to the present century. The imprint of the Franklins in Boston and in Newport has almost as much value in the eyes of the bibliographer as that of the more famous brother in Philadelphia. It might be worth while, as it would be easy, to collect from Mr. Hammett's pages a complete list of the Newport Franklin books and pamphlets. Practically the Franklin press, under their name and that of their successors, Southwick, Edes, and Farnsworth, served the needs of Newport for home productions, although many of Mr. Hammett's titles are of Newport books printed elsewhere. If James Franklin printed Penn's writings, it was more to supply the local Quaker demand than to contend for the control of that kind of theological literature. Morton's 'New England Memorial,' the earliest history of New England, first published in Cambridge in 1669, and in London in the same year, was honored with a third edition in Newport in 1772, the second edition being that printed in Boston in 1712; for this the local demand could not have been very great. One of the early London accounts of King Philip's War is that printed in 1676, and attributed by Increase Mather to "a Quaker in Rhode Island." Gorton and Coddington and John Clark and the early leaders and settlers of Newport printed their first works in London; nevertheless, the fourth New England press and the second American newspaper had their seat in that city.

It is curious to mark the medley of loyalty and patriotism in the years that ushered in and saw the Revolution. In 1775 the speech of George the Third and a poem on the conquest of Louisburg appeared from the same Newport press that printed Warren's oration and the address from the Continental Congress. 1776 brought Paine's 'Common Sense' and Hopkins's 'Address on Slavery.' In 1777 we find Blaskowitz's map of Newport and Chastellux's Travels, printed on board the French fleet, then in the harbor of Newport. (Mr. Hammett has made a special study of maps, and his bibliography is enriched by a very exhaustive account of all those that include Newport.) 1778 and the years of the English occupation of Newport produced Howe's loyal newspaper, Burgoyne's speeches, and other Tory publications. The same type served the invader that before and after the occupation was used by the patriotic native printer. 1783 produced Ædanus Burke's sharp attack on the Cincinnati as the foundation of an aristocracy, a charge which was best met by the modest gathering of its members in Newport only this present summer.

To err is human, but to be a bibliographer without error would indeed be superhuman. Some of the mistakes in Mr. Hammett's pages are no doubt the printer's, and he modestly disarms criticism by inviting it for both sins of omission and those of commission. His cataloguing Shipley's sermon under "Lord [Bishop ?]" is corrected by its being put properly under "Shipley." The reference to Trevett vs. Weeden ought to include a statement of the fact that the importance of that case is due to its being the earliest instance of an act of the Legislature overruled by the courts on the score of unconstitutionality; this, too, was before the adoption of the Constitution of the United States, and while Rhode Island was still living under its royal charter. The book is very attractive typographically, and reflects credit on the local press, and it is altogether a marked event in the literary history of Newport that its bibliography should be so well presented. Future editions may perhaps furnish still further evidence of its claim on public attention by corrections and additions that will enhance its value.

Photographic Printing Methods: a Practical Guide to the Professional and Amateur Worker. By the Rev. W. H. Burbank. Scovill Manufacturing Co.

The photographic world will be under no small obligation for this very convenient compendium of all that is most wanted as information and instruction, whether to the practised printer who sometimes forgets formulas, or to the beginner who has them all to learn. It comprises all the various methods of producing positive images from the negatives which are made in the camera—the ordinary silver print on albumenized and plain papers, iron and uranium, platinum, carbon, all the mechanical methods based on gelatine or asphaltum, and known as heliotype, collotype, alberttype, etc., etc., or heliogravure, photogravure, etc., etc., and even the difficult processes of enamelling by photography and putting the positive image on the block for wood engravers; but we do not find the description of the Woodbury process, which is, of all, the most desirable for certain kinds of work, and the details given of the Ives and Meissenbach processes are hardly sufficient to enable a beginner to experiment on them.

But what is of the highest importance in all these processes, the peculiar quality of negative requisite for the method desired, is not touched on at all; and if a second edition of this manual should be called for, we recommend that this point be put in a most clear light. The negative that will give a satisfactory print on albumenized paper will often give most unsatisfactory results with any of the so-called matt prints, as platinotype, Eastman's bromide paper, plain paper, etc.; and this is one, and perhaps the chief, reason why the albumenized paper print still holds its popularity, though the most fugitive of all the silver processes. A negative for an albumenized paper print is only required to show all the detail in its shadows when held up to the light—every degree of gradation will appear in the print; while in the matt print all degrees below a certain depth of shadow will be lost in a uniform black. The negative for a matt print or any of the photogravures or heliogravures must, therefore, be made of a special character to avoid this difficulty—they must have as little deep shadow as is compatible with the subject, and the best results will be given by negatives which have only very small passages of perfect transparency, and as little as may be of high light, the greatest extent possible being of half tint, subdued lights, and illuminated shadows. A negative which, when held up in the direct sunlight, shows the most gradation and detail will generally give the best matt print, and if it is not intense in development, so much the better. Two or three specks of absolute transparency in the negative are all that is necessary in shadow, and a little more in high lights will give a matt print a beauty of effect which will leave no place for the glossy surface of the albumenized print.

The question of permanence is one of great importance in selecting a process, and here it is necessary to say that no silver process is to be considered absolutely permanent; in fact, only the ink-printed types are so. But of all the silver processes, the albumenized paper is the least to be trusted. The Eastman bromide process is fairly permanent, but will not resist bad air (sulphuretted hydrogen, etc.) or mineral acids. The platinotype, if thoroughly washed from its iron salts, will resist anything but aqua regia; the carbon and Woodbury prints, though perfectly permanent as regards fading, will sometimes crumble and leave the mount through decomposition of the gelatine which forms the vehicle of the image.

The index of this manual is badly arranged and perplexing, and some carelessness is noticeable in the proof-reading. For instance, on page 55, in the formula for sizing for platinum prints, we read, "aniline blue powered [*sic*], 10 to 20 drops." What is a drop of powered (powdered ?) anilne ? And speaking of the platinotype print, which is the acme for amateurs, we may say that, in spite of all the directions as to development, which prescribe soaking for five seconds, we have always found that the best and most brilliant prints were got by printing sufficiently, and then drawing the print rapidly across the surface of

the developing solution without allowing this to touch the back of the print. An under-printed proof must be left longer, but the object should be to keep the image as much on the surface of the paper as possible.

A Course of Elementary Practical Histology. By William Fearnley. Pp. xi, 363, 45 figs. Macmillan & Co. 1887.

THERE exists no work in any language which describes and figures the fine or histological structure of all the organs and tissues of the human body, nor is there any work which gives the methods especially applicable for the investigation of this subject. Following Kölliker, works which purport to be human histology give figures and descriptions of structures from man, fish, frog, rabbit, dog, or some other animal the name of which is sometimes not given. The inevitable impression upon the mind of the student is, that if he knows the structure of any tissue or organ in fish, frog, or other vertebrate, he knows the structure of the corresponding organ or part in man. That this is true in a very general sense is not denied, but no one knows more surely than the morphologist that there is a marked individuality in the histological as well as in the gross structure of the animals forming the great groups. The book or books which should bring out clearly the histological structure of one entire animal and describe the necessary methods of study, would be welcomed by the large and constantly increasing body of teachers and students of human and comparative anatomy who realize that exact knowledge of one animal in its entirety forms the best and safest standard of comparison. To all such the present work will be disappointing, for it is in line with the numerous guides that have preceded it, including directions for the study of objects from the yeast plant up to man. It has no definite aim, but is designed for medical students and others who care to study histology and can afford the necessary apparatus and material.

It is divided into two parts—1, the theory and use of the microscope, and the methods of histological study (pp. 1-207); and 2, headings followed by blank spaces, equal to six printed lines, for the definition of terms and the description of preparations (pp. 209-356). This second part contains the only new feature in the book. At the beginning of it the author directs the student that "he should fill up these spaces before commencing to study the preparations, using a good text-book," etc. After this process the average student would, no doubt, be able to see in his preparations all the structures described, although a histologist might not be able to make out a single one of them clearly. None but those who have trained their unaided eyes to see things as they are, can realize the amount of self-restraint required to see no more and no less than is actually present in the field of a microscope; and they must deprecate any method which does not distinctly and emphatically tend to cultivate self-restraint, self-reliance, and thoroughness.

The directions for the choice and use of a microscope are simple and usually good; but the discussion of the reason for the various processes and of the optics of the microscope is so inadequate that the student could hardly fail to be puzzled and discouraged. Some of the statements are not only inadequate, but ambiguous and incorrect. For example, it is stated that, "if a vulgar fraction having 1 for its numerator be made of the focal distance of the lens, we only require to put a 0 after the denominator to ascertain the magnifying power of the lens" (p. 8). The statement is inaccurate, however interpreted, and the difficulty of applying the rule, admitting its accuracy, will be apparent to any one who attempts to apply it to a lens whose focal distance in inches is represented by a number greater than unity, or a fraction whose numerator is greater than one. Although the author evidently intends to use the metric measures, the English and metric systems are badly mixed up in the description of the apparatus, materials, and processes. On one page the temperature is given in degrees Fahrenheit, and on another in degrees Centigrade. In one place lengths are expressed in centimetres, and in another in inches; and sometimes the student is in the same sentence bade to take a certain number of ounces of one ingredient and a certain number of grammes of another.

In addition to the confusion and obscurity, the diction is too often commonplace, as when the student is instructed to "carefully remove the 'pluck' entire"; and in giving directions for obtaining material from the lower animals the common names are applied to the objects, no reference being made to the names of the homologous parts in man. There are also many repetitions, and very few cross-references. As the index and table of contents are both very meagre, the book is exceedingly difficult to use unless one is thoroughly familiar with the entire work. Thus, the student is told (p. 153) to "catch a rat." On a previous page very good directions are given for this, but as the word "rat" does not appear in either the index or table of contents, and no cross-reference is given, the student, unless he had previously read and remembered the directions, would probably conclude that he was expected to follow his own devices in performing this somewhat delicate operation. In short, no student could successfully pursue the study of histology by the guidance of this work alone, and the competent teacher would find it quite unnecessary, if not an actual hindrance, and inferior to the majority of those which have preceded it.

How to Make a Saint; or, The Process of Canonization in the Church of England. By the Prig. Henry Holt & Co. 1887.

To readers of "the Prig's" former books, it will be recommendation enough of this one to be told that in it his hand shows no loss of cunning. Even of him it would be too much to expect that he should not once nod in the course of a hundred pages; but, admitting more than one attack of drowsiness, it must be said that he is almost always amazingly alert and wicked. English High-Church vagaries have long been counted fair game for the satirist—as long ago as 'Pendennis' Thackeray gave us Mr. Smirke; but we doubt if there has been a more subtle and amusing drive at them. The little book opens with a fine touch: "'The Romanists have just beatified a number of English martyrs, and why shouldn't we do it too?' 'Mr. Maniple, those words of yours, "Why shouldn't we do it too?" may be said to have been the initial impulse of every movement, in a Catholic direction, taken by the Church of England. . . . We have already done everything else; so I also say of this, "Why shouldn't we do it too?"'" The choice of a nineteenth-century saint—gallantly left to a "Ladies' Committee"—in the person of Hannah More is also delicious. "The Prig's" Roman Catholic sympathies are more pronounced than in his 'Bede'—the citations from Jerome and Augustine, for example, in support of the worship of the Virgin, being quite lugged in, and serving better the purposes of controversy than of jesting; but it is something to get so much pure fun from a Roman Catholic writer, if such "the Prig" verily is. A satire is necessarily but partial truth, and we are content to let this one go as such without alluding to those noble qualities in the satirized which one of "the Prig's" good sense would be the first to admit. Nor would he deny, we think, that the Roman communion needs something more than facilities for saint-making; what Janet says of Buddhism, "Il a fait des saints, il n'a jamais pensé à créer des citoyens," is perilously near being applicable to Roman Catholicism.

BOOKS OF THE WEEK.

Battershall, J. P. Food Adulteration and Its Detection. E. & F. N. Spon. $3.50.
Benjamin, S. G. W. Sea-Spray, or Facts and Fancies of a Yachtsman. Benjamin & Bell. 50 cents.
Brunetière, F. Études critiques sur l'histoire de la littérature française. 3e série. Paris: Hachette; Boston: Schoenhof.
Burroughs, J. Birds and Bees. Houghton, Mifflin & Co. 15 cents.
Claretie, J. Candidat. Paris: Dentu; Boston: Schoenhof.
Clarke, Mrs C. M. More True than Truthful: A Novel. Harper & Bros. 20 cents.
Cluseret. Mémoires du Général Cluseret. 2e siège de Paris. 2 vols. Paris: J. Lévy; New York: Christern; Boston: Schoenhof.
Daudet, A. La Belle-Nivernaise. Geo. Routledge & Sons.
Daudet, A. Tartarin of Tarascon. Geo. Routledge & Sons.
De Foe, D. Robinson Crusoe. From the original 1719 edition. Thomas Whittaker.
Desbeaux, E. Mattie's Secret. Geo. Routledge & Sons.
Doncieux, G. Un Jésuite homme de lettres au XVIIe siècle. Le Père Bouhours. 8vo. Paris: Hachette; Boston: Schoenhof.
Dowd Smith, J. Luella. Wind Flowers. Chicago: Chas. H. Kerr & Co. $1.
François, Louise von. Phosphorus Hollunder. Boston: D. C. Heath & Co.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 15, 1887.

The Week.

THE letter which Mr. Oberly, acting as President of the Civil-Service Commission, has sent to the Chairman of the Civil-Service Board of Examiners for the Cincinnati Post-office, is a very creditable and timely document. It sets forth very clearly and forcibly the intent of the Civil-Service Law in regard to removals for political reasons. Mr. Oberly cites the provisions of the law, and concludes:

(1.) That it is unlawful to ask an applicant for appointment under the Civil-Service Law to divulge his political opinions or affiliations.

(2.) That if the appointing officer ascertain in any way what are the political opinions or affiliations of any applicant for appointment, it is unlawful in him to therefore either discriminate in the applicant's favor or against him; that it is unlawful in the appointing officer to appoint an eligible for the reason that he is or is not a Democrat, or to refuse to appoint an eligible for the reason that he is or is not a Republican, and vice-versa.

(3.) That it is unlawful to remove any person from the public service for refusing to render political service.

This is the very essence of the law as it was designed by its authors. The object sought above all others was to remove entirely the question of political faith, and allow the applicant to gain his position through merit alone, and to retain it on the same basis. The appointing officer who allows political faith to influence him either in the selection or removal of subordinates, violates the law, and is liable to the penalty, which is removal from office. A few applications of that penalty would break up the abuse very quickly.

In disagreeable contrast to these straightforward utterances of Mr. Oberly are some views which are attributed to another member of the Commission, Mr. Edgerton, in a talk with a *Tribune* reporter. Mr. Edgerton adheres to his position in the Chicago case, that subordinates can be removed without specified cause, attacks the various civil-service reform organizations in different cities as "political organizations" designed for "political effect," and then says of the Commission of which he is a member: "The Commission has no power. The Commissioners are simply onlookers. There is no punishment provided under the law for a violation of its provisions, except removal by the President. There has been no case where the President has removed a person as a result of any investigation by the Commission. Their investigations, therefore, have simply been notices to the public that they are trying to do something." We advise the President to consider that remarkable deliverance carefully. It is clear from it, as it has been from previous remarks from the same source, that Mr. Edgerton has no sympathy for civil-service reform, and has no other ostensible purpose upon the Commission than to belittle its work.

Gen. Corse, the Boston Postmaster, has treated the Smelling Committee of spoils Democrats as unceremoniously as Mr. Saltonstall did. He referred them to the Postmaster-General at Washington for the information they were seeking. Gen. Corse gives an interesting account of the controversy he has had with the Democratic bosses in Massachusetts, and it is very evident that they have found more than their match in him. He says he entered upon his duties with the intention of "running the office as a business concern is conducted, of getting all I could for the Government I have sworn to serve, and, if possible, to make it the best post-office in the country." That was a laudable ambition, and everybody who is familiar with the General's record as a soldier need not be told that the resolve once taken was not to be changed by either coaxing or bullying from any source. He tells the story of his tussle with his party, and we commend it to the careful perusal of everybody, and especially of Jeffersonian Democrats. The outcome of his course, as he puts it, is that "I have the business interests of Boston at my back, just as President Cleveland has the business interests of the country very largely behind him, regardless of party lines."

When the Democratic bosses discovered that the General had this formidable backing, they began to say that the President did not approve his course, in order to justify themselves for their unwise conduct. This did not affect the Postmaster any more than the previous threats, and it certainly did not deceive the public. What the Independents think of the whole controversy, both with the Collector and Postmaster, is shown by an interview which is published with one of them, Mr. Winslow Warren. He says that the action of the Democratic State Committee in sending out the Smelling Committee "is deserving only of contempt," and has had the natural effect of making the Independents disinclined to support the Democrats in the approaching State campaign. This disinclination is offset by an unwillingness to take any course which would seem to show disapproval of the President, for, according to Mr. Warren, the Massachusetts Independents, "as a body, and with very few if any exceptions, are as thoroughly in favor of President Cleveland as they were in 1884." They think "he has done as well as any man could do," and "prefer to support him until a better man and a more perfect enforcement of civil service reform is offered." For these reasons Mr. Warren thinks that whatever the Independents do this year "will be done with regard to 1888 rather than 1887."

Ex-Gov. Washburn of Massachusetts is a painfully unorthodox Republican, and is in danger of being read out of the party. He says of the Republican proposition to reduce the surplus by taking the taxes off whiskey and tobacco: "The duties on the necessities of life should be taken off as far as possible. The internal-revenue duties on liquors and tobacco should not be reduced a penny. These articles should be taxed as high as possible." That is pretty serious, but what follows is so much more so that we do not see how it can be condoned: "I am a Republican still, and shall probably remain so all my life, but I am free to say that Mr. Cleveland has made a capable and honest President. He has made good appointments and bad appointments, but the pressure on any President is always tremendous, and I think Mr. Cleveland has done what he thought was right."

The Massachusetts Prohibition Convention, like that of the same party in New York, was the largest in the history of the State. It was characterized also by great enthusiasm and outspoken hostility to the Republican party, based there, as it is here, upon the unfaithfulness of that party to its promises in regard to temperance legislation. As one of the delegates put it: "The Democratic party is hopeless—we have nothing to do with that; our only course is to defeat the Republican party and thus bring its members to our support." This is the spirit which prohibition advocates are showing everywhere, and it is evident that they are everywhere gaining fresh recruits, not so much because additional people are being suddenly converted to prohibition principles as because of the growing conviction that something must be done to check the liquor evil, and that there is no hope in this direction from either of the regular parties. Then, too, the steady refusal of the Republican party leaders to do anything but harp upon the past is having the natural effect of driving voters to a third party which has a conviction and a mission.

The refusal of the acting Secretary of the Treasury to buy any of the bonds offered on the 7th inst., although some of the offerings were at lower rates than some purchases previously made, may be due to a variety of reasons. The cash balance in the Secretary's hands at the time may have been below the average, in which case the tightness of the money market would not be chargeable to the operations of the Treasury. In other words, that fact would prove that the public disbursements had been in excess of the receipts, and consequently that the condition of the money market was due to other controlling causes. One great misfortune of the present situation is that all eyes are turned upon Washington, and that, whether money is tight or easy, the business community is most deeply concerned with conjectures as to what the Secretary will do next week, and the week after, and the week after that. Instead of adjusting their plans to known facts in the world of trade and industry, merchants and bankers are necessarily speculating upon the intentions of the Secretary in reference to his cash balance. This is an anomalous and unhappy condition, and the only wonder is that any business requiring large prevision and careful calculation can be done at all. All this results from the neglect of Congress to reduce taxation to the needs of the Government, or to make some lawful dis-

position of the surplus revenues. The Secretary is powerless to prevent money from coming into the Treasury. He can only devise means within very narrow limits for returning it to business channels.

The crash in the collaterals by which the loans to Henry S. Ives & Co. were supposed to be secured appears to have taken Wall Street by surprise. Yet there was nothing in it which had not been trumpeted on the housetops for weeks before. It had been known all along that the Cincinnati, Hamilton and Dayton preferred stock was mostly fraudulent, and that the value of the common stock had been lessened to the utmost extent that a consummate swindler could impair it. There is no new fact disclosed by the sales except the names of the lenders of the money. Here is good ground for surprise, for we find among them some of the most prudent and close-fisted institutions in the country, old iron-bound savings-banks and others, besides private lenders who are commonly regarded as the very skinflints of the money market. And yet, when a Woman's Bank, like that of Mrs. Howe in Boston, gets away with a lot of money belonging to widows and sewing-girls, we think that the credulity of some people is unfathomable.

There has been a great pother in the newspapers lately about a "concession" granted by the Chinsee Government to an alleged Count Mitkiewicz and Mr. Wharton Barker of Philadelphia for a monopoly of banking, telegraphing, telephoning, railroading, etc., etc., in that empire, all of which may be very important, and is certainly very funny in view of the antecedents of Mitkiewicz. What concerns the American people, however, is the apparent endeavor of the parties holding the concession to get some kind of endorsement or recognition from our Government. This they have not yet obtained, and probably will not. If all the parties were perfectly respectable, it would still be, upon all accounts, absurd and *outré* for the United States to lend its sanction, however remotely, to a private adventure of that kind. According to the reports of the more enthusiastic correspondents, the concession amounts to little less than conferring the Government of China upon Mitkiewicz and Barker. If a similar concession were granted to them in this country, and could be enforced, we should consider the other government—the one which is divided into executive, legislative, and judicial departments—not worth retaining. Probably the grant, whatever it may be, depends upon some expression of views by the State Department at Washington. If any such expression should be given, the Chinese Government would very likely attach to it more importance than would properly belong to it. Therefore no expression of any kind should be given except a friendly warning to Li Hung Chang to beware of adventurers, and especially of American Counts. We imagine that the danger of "recognition" is not great, since the negotiation between Mitkiewicz and our Government has only advanced to the point of presenting to the Assistant Secretary of State "a fine imperial photograph" of Li Hung Chang. This is the stage at which it should be allowed to rest.

The citizens of New York have to elect this fall two judges of the Supreme Court. A morning contemporary, a few days since, laid much emphasis upon the necessity of reëlecting those judges who have given the public faithful service on the bench, and it instanced Charles Donohue and Abraham R. Lawrence as two shining examples of this kind of judge, both of whom deserved reëlection. We do not suppose that the *Sun* cares one farthing whether Judge Lawrence is reelected or not. It evidently thinks that Judge Lawrence has character and reputation enough for two, and that if he and Donohue were nominated together, Judge Lawrence would pull the ticket through. We do not think so. We think that Judge Lawrence richly deserves a reëlection, and we hope that the Democratic factions may unite on him as they did on Judge Barrett last fall. His repute as an able and high-minded jurist, above the reach of any sinister influence, personal, political, or other, is of the same kind and degree as Judge Barrett's. The securing of good judges on the bench is, perhaps, the most arduous task, and is certainly the most important achievement, that our form of government involves, and it is accordingly by all means desirable when we have had fourteen years' experience of one, and have found him unexceptionable, that we should retain his services. Judge Lawrence has fulfilled all the requirements that a high standard of judicial excellence imposes, and he should accordingly be renominated and reëlected. But it should not be required of him to tow any other candidate into the haven of safety. Judge Donohue and Judge Lawrence have been on the bench together during the past fourteen years. They have had equal opportunities to make reputations for themselves. They have made their reputations, each after its kind, and every citizen of fair education and discernment knows what they are and how they compare with each other. Everybody knows that if they were competitors for the suffrages of the people without the intervention of party nominating conventions, Judge Lawrence would be reëlected, and that Judge Donohue would be left in a hopeless minority.

The opinion of Corporation Counsel O'Brien on the rights of the Manhattan Elevated Railway to occupy street intersections for stations, and to establish retail stores in the public highways, and to lay three tracks where the law authorized only two, is an "eye-opener" to the public as well as to the Mayor, and accordingly we cannot sympathize with the Mayor's indignation that it should have leaked out and found its way into the newspapers. The situation of the Manhattan Company is such that it is forced to make encroachments all the time on the rights of the public. Its growing traffic pushes it with irresistible force in those directions. So much the more important is it that the city authorities should be on the alert to keep the company within the measure of its legal rights, and compel it to pay for what it is necessary that it should have. Certainly no step taken by Mayor Hewitt since he came into office has been more timely or more imperatively required than this, by which he and his successors in office have procured a chart in outline showing the boundaries of public and private rights in this matter. It was especially important that the Mayor should know whether the power exists to complete the roofing of the streets in which tracks are now laid by putting in a third track, and that if no such power exists, the work should be stopped before it becomes a *fait accompli*.

Judge Gorman gave a Walking Delegate some information last week which seems to have greatly surprised him. He had appeared in court, extremely well dressed, to answer to a charge of boycotting a laborer named Hoff, who had been expelled from the American Carpenters' and Joiners' Union. Wherever Hoff obtained work, the Walking Delegate, Farrell, appeared and threatened the employer with a strike of all his other hands unless Hoff was discharged. Hoff had him arrested for this conduct, and when the case was stated to Judge Gorman, he informed the Walking Delegate that from the moment the Union expelled Hoff it had no authority over him whatever, adding:

> "You walking delegates must not prevent this man from working where he can get an employer, where he has one, and where he pleases to toil. It is against the laws of this State for you to prevent or attempt to prevent any man from earning his own living peaceably in this State. It is intimidation for a walking delegate to go to an employer and threaten to deprive him of hired laborers unless he will discharge a particular workman. When you do that, you go outside your field. You are minding somebody else's business."

The counsel for the Walking Delegate was so alarmed by this view of the law that he was unwilling to accept the Judge's offer to have his client go free on condition that he did not repeat the offence, and asked to have the case carried to the Court of General Sessions, saying that if the law was subjected to the "strained interpretation" put upon it by the Judge, the "efficiency" of labor organizations would be seriously impaired. His case will be carried up, therefore, and the Walking Delegate is certain to get all the light that he wants upon the law, for nothing is clearer or more firmly established by a long line of decisions than that this "strained interpretation" is the only sound one.

The transformation of the *Independent* into a journal of the most approved and ultra orthodoxy—or, as the *Christian Union* recently described the process, the triumph of its publisher over its editors—appears now to be complete. Its latest broadside at the Andover professors is the publication of the sentence of condemnation passed upon them by the religious press of the country Such thunders the *Independent* used to despise in the days when they were just as vigorously launched against itself; and some of its readers who remember the lofty contempt with which it spoke of the assaults upon itself of the obscurantist *Observer*, rub their eyes when they see it now referring to that paper as a "theological authority." Meanwhile, the Andover professors

reply in kind, in the last number of their *Review*, by quoting the comments of the organs of English Independency, which are somewhat in their favor. The possibilities of a discussion conducted along this line are alarming.

The importance of forestry management in the estimation of older nations, better skilled than we are in economic administration, appears in a volume of Consular Reports extending to 315 pages, lately published by the Department of State. The reports cover the particulars of Government control and management of forests in Austria-Hungary, Germany, France, Italy, and Switzerland, and are full of matter of great use to students of the subject in this country. Consul-General Jussen reports that no proper returns are published in Austria-Hungary of the profits of Government forests for the whole empire, but for Bohemia alone the clear annual profit is about 14,000,000 florins. The net income from the Prussian State forests, Consul-General Raine reports, stands at about 24,000,000 marks annually. The French net annual income is about 16,000,000 francs, as reported by Consul Roosevelt. Consul-General Alden reports that it is impossible to give trustworthy figures of the revenue and cost of forestry in Italy. According to Consul-General Winchester, the Swiss Confederation derives no revenue from forests. The total value of yield from cantonal forests, however, is about 33,000,000 francs, and the returns from the forests of the Canton of Zurich show a nearly three-fold increase of profit yielded during a period of fifty years of cultivation—from 31.28 francs per hectare (nearly two and a half acres) in 1830–40 to 90.58 francs in 1870-78. Add to this the provision of useful and wholesome employment for great numbers of the population—the number of forest officers of all grades being about 32,000 in Austria alone.

It is becoming clear to the French themselves that the chauvinists who went to Moscow, or sent delegates there, to worship at the funeral altar erected to M. Katkoff and burn cheap incense to Russophilism, have not only made the French Republic ridiculous before liberal Europe, but disgusted the higher strata of Russian society itself. The thing was preposterous from beginning to end. Katkoff had the merit, in the eyes of Déroulède and his followers, of having been, in his last days, an opponent of a policy favorable to German interests; but that is all. A short while before, he advocated a Russian alliance with Germany; some months later, if death had not put an end to him, he might have preached a crusade against the Republic. He was decidedly a friend of German culture. German philosophy, and German methods of government in contradistinction to French. He combated German autonomy in the Baltic provinces of the Czar's empire, not because it was German, but because it was autonomy. It was in vain that the Gallic Katkoff worshippers were reminded by the Polish exiles in Paris how cruelly he had mocked at all French sympathy, governmental or popular, with bleeding Poland, when that secular ally of France made an attempt in 1863 to shake off her Russian fetters; how his Moscow *Gazette* applauded the very work of "the hangman" Muravieff, whose hand a Russian grandson of Suvoroff, the subduer of Kosciuszko's insurrection, refused to shake, because there was too much Polish blood on it. In vain Prince Kropotkin, in a letter to Rochefort's journal, reminded his fellow-revolutionists that Katkoff's name had been for a score of years a synonym of anti-revolutionary repression. Rochefort suppressed the letter, excusing himself with a bad joke. What now spoils the joke (of the whole affair) is the circumstance that Prince Meshtcherski, upon whose shoulders Alexander III. has thrown the mantle of Katkoff, directing the special favors bestowed on the Moscow *Gazette* to be turned over to the Prince's *Citizen*, immediately assailed the French phrasemongers with merciless invective, and that the Czar himself is credibly reported in French correspondence to have enjoined his surroundings to exclude the French papers from his newspaper desk, on account of the juggling attempts to make him play out French cards.

Charles Marvin, an English writer whose thesis has long been that the Russians mean to advance on India, and are eager to pounce upon Herat, "the key of India," and that salvation only lies in keeping them out of "the gates of Herat," is downcast over the settlement of the frontiers of Afghanistan and Russian Turkestan just concluded by Russia and England. In a letter to the London *Times*, he endeavors to expose the fallacy of the rose-color view taken by the British negotiator, Sir W. Ridgeway, and Lord Salisbury regarding the relative importance of the concessions made by the Russians on the Oxus and by the English, in the name of the Amir of Afghanistan, on the Kushk and Murghab. The district ceded between these two rivers, Badgheis, is uncultivated. "True, but that does not guarantee that the Russians will not cultivate it and settle it in a very short time," as they settled the Tejend oasis, between Askhabad and Merv, which they occupied in 1883, and the population of which their Transcaspian railway has since raised from a few scattered families to upward of 15,000 people. The country between the Kushk and Murghab is no less fertile, and the Sarik Turkomans have there enormous flocks, computed to number three quarters of a million sheep. The Sariks will spread over the lands ceded to them; discontented Persian and Afghan border tribes will swarm there, as they did in the Tejend territory. Strategically considered, the cession is disastrous, Mr. Marvin thinks. The London protocol of 1885 gave Russia a distinctly restricted lodgment between her new military basis of Merv and the Herat country, separated from each other by a strip of desert; the new agreement enlarges this lodgment by 800 square miles, enabling Russia "to mass a force, intended to seize Herat, within seventy or eighty miles of the key of India, instead of at a distance of 240 miles from it." Mr. Marvin's information on this topic may be both fresh and correct, but his notion of the strategic keyship of Herat is as false as it is old, as we have more than once shown in these columns.

We referred last week to the fact that a detailed narrative of the fall of Querétaro and the capture of Maximilian had been drawn up by Gen. Escobedo, Commander-in-Chief of the Liberal forces, and sent to the Mexican Government. Before transmitting it to the Secretary of War, he read the document to all the surviving officers who were present at the siege, convincing them of its accuracy. In addition to what he has said before, Gen. Escobedo now distinctly declares that Lopez, the accredited messenger of Maximilian, on the night of May 14, after vainly trying to negotiate a surrender with the Emperor excluded, made a final offer, as he was ordered to do in the last resort, to surrender the key to the fortifications. This meant the infallible capture of the whole army, which resulted, in fact, the next morning, when Lopez fulfilled the agreement to the letter. Escobedo further declares, as explanatory of his strange silence all these years, that Maximilian, when he found that he was to be tried and probably executed, besought him to keep the whole affair a secret for the sake of his family. The General could not promise to do so, but finally, when the Emperor implored him at least not to divulge the treachery until after the death of Carlotta, he gave a qualified pledge that he would not. He feels now, he says, that he is fairly released from his word by the appeals made to him to declare the whole truth, as well as by the need of refuting the slanders directed by the Clerical press against the Liberal party. The whole is a terrible blow to the Church party, which has always looked upon Maximilian, badly as he disappointed it, as a hero and martyr.

If the defence which the friends of President Barillas of Guatemala make of his conduct in decreeing himself Dictator is not grossly untruthful in its statements of fact, it must go far towards justifying so extreme a measure. It shows, at any rate, that it had become for the country a question of either dictatorship or usurpation. The Clerical majority in the Assembly pushed through laws of a revolutionary and unconstitutional character which were designed to subject the entire Government to their policy, and which certainly would have done so had not Barillas cut the whole thing short by assuming the power of a Dictator. The most obnoxious and radical of the laws threatening him was a scheme to transfer all the power of the Executive to the Supreme Court. Having first, in defiance of the Constitution, displaced the judges who by law were entitled to two years more of service, the Assembly proceeded to enact that the court could summon the military to enforce its sentences, that it could suspend at will all inferior judges, all officers in the army, Custom-house and Treasury officials, and that the President himself must obey the orders of the court without any appeal against their legality. It is easy to see that Barillas would have had no authority left under such laws, and, as his veto was powerless to prevent their enactment, he took the only other course possible—unless he were to go into exile.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 7, to TUESDAY, September 13, 1887, inclusive.

DOMESTIC.

THE Secretary of the Treasury has instructed the Collector at the Port of New York to permit the entry of the baggage and effects of the military companies from Denmark, Sweden, Norway, Belgium, and other foreign countries, which will soon arrive to take part in the International Military Encampment at Chicago.

George R. Tingle, Treasury Agent in charge of the Alaskan Seal Islands, says in his annual report that the estimate made last spring of the number of seals on St. Paul and St. George Islands was 6,557,750, which he thinks was too great by one fourth. "The Department," the agent says, "cannot place too high an estimate on the value of this seal property, and the Government, I am sure, will not yield to any demands which would make it possible to accomplish the destruction of seal rookeries and seal life, which, under judicious management and protected by law, may be perpetuated indefinitely." He estimates that 5,300 skins have been taken by marauding sealers during the season.

The official count of the recent vote cast in Texas on the constitutional amendment to prohibit the liquor traffic shows that 129,273 ballots were cast for prohibition and 221,627 against it.

In nine counties in Missouri, a vote was taken on the prohibition of the liquor traffic September 8, and in seven of them the Prohibitionists were successful. The traffic is now prohibited in thirty counties, and elections are soon to be held in eighteen others.

The Prohibitionists of Massachusetts nominated a State ticket, September 7, with W. H. Earle of Worcester for Governor. The platform demands, "as an act of simple justice, that the Legislature grant municipal suffrage to women."

Gov. Ames of Massachusetts has nominated Judge Marcus P. Knowlton to be Judge of the Supreme Court of that State, vice Judge W. S. Gardner, resigned. September 7, Judge Thomas J. Simmons of the Superior Court of Georgia was elected by the Legislature a Judge of the Supreme Court of that State, to fill the vacancy caused by the recent death of Judge Hall.

At a meeting of the Commissioners of the New York State Reservation at Niagara Falls September 6, the Superintendent reported that the privilege of placing carriages in the depot yards and of soliciting passengers on the trains and in the depots was enjoyed by one company, that this company is interested in bazaars for the sale of merchandise, and in distant points of interest where admission fees are charged, and that the drivers are obliged to carry their passengers to these places before taking them to the falls. Steps were taken to put an end to this imposition.

The Ninth International Medical Congress at Washington adjourned September 10, and the Tenth Congress will be held at Berlin in 1890. The proceedings are reported to have been less important than of most of the preceding Congresses.

Mr. Powderly, the chief officer of the Knights of Labor, issued a circular "to the order everywhere" on September 7 outlining a new plan, the enactment of which at the next General Assembly he recommends. The main features of the plan are to give to every trade the right to organize a national trade assembly under the jurisdiction of the General Assembly, to allow every national trade assembly to meet at least once a year for the election of officers and for the better regulation of the affairs of the trade and district, and to have exclusive control over the affairs of its trade without let or hindrance so long as the Constitution of the General Assembly is not violated; to forbid a local trade assembly to enter upon a strike until all the assemblies in the national trade assembly shall have voted on the question, and shall have by a three-fourths vote agreed to render assistance (the general laws of the order requiring attempts at arbitration to be observed).

The Edison Power and Light Company September 9 let a contract for the building of a water-power canal along the rapids of the St. Mary's River at Sault Ste. Marie, to supply, by the use of immense water-power, electric power to run elevators, mills, and other machinery, and an electric-light plant.

Elijah Hayes of Warsaw, Ind., has given $130,000 to the Board of Missions of the Methodist Episcopal Church—the largest single gift it has ever received.

The trustees of the American Catholic University met in Baltimore, September 7, elected Bishop Keane of Richmond rector, and decided to begin the erection of the building for the theological department this fall, and to locate the University in Washington.

Col. Thomas G. Jones, commander of the Second Regiment, Alabama State Troops, has sent to the Governor of Connecticut the old battle flag of the Sixteenth Connecticut Volunteers, which was captured April 20, 1864, by the Confederate forces under Maj.-Gen. R. F. Hoke.

The anniversary of the battle of North Point was celebrated in Baltimore September 12. The surviving members of the Old Defenders were dined at a hotel. They are James C. Morford, aged ninety-two, John Peddicord, ninety-three, and Nathaniel Watts, ninety-three. Mrs. Elizabeth Sands, aged ninety-nine, whose brothers took part in the battle of North Point, was also served with dinner by a committee at her home.

Heavy rains on September 8 and 9 washed away five miles of the Southern Pacific Railroad track between Tucson, A. T., and Benson. Telegraph wires are down and in some cases are embedded ten feet in the sand. Steel rails were carried a quarter of a mile down the river. Travel over the road is interrupted for a week, and great damage has been done.

Ex-Gov. William Aiken of South Carolina died September 7, aged eighty-one. He was Governor in 1844 and a Congressman from 1851 to 1857. He was at one time the largest slaveholder in the State, but he opposed nullification and secession. He was one of the first trustees of the Peabody Fund.

Gov. Washington Bartlett of California died in Oakland, September 12. He was born in Georgia in 1824, and went to California in 1850. He was elected to be County Clerk in 1859, Mayor of San Francisco in 1882, and Governor, as a Democrat, in 1886. William A. Washington, who was said to be the nearest living relative of George Washington, died September 11 at Owenboro, Ky., in his eighty-eighth year. He was the son of Fairfax Washington, a second cousin of George Washington, and was the oldest of ten children.

FOREIGN.

A meeting was held in Mitchelstown, September 9, to protest against the issuing of a warrant for the arrest of William O'Brien, which was attended by 7,000 persons, including Messrs. Dillon, Brunner, Labouchere, John Ellis, Gill, Condon, and O'Shea, members of Parliament. A Government reporter with an escort of police tried to push his way up to the vehicle from which Mr. Dillon was speaking. The crowd resisted them with sticks and stones. The police made a charge on the crowd, and were repulsed. They then fired from the barracks and killed two men, and wounded another so badly that he subsequently died. Many persons in the crowd and a number of the police received slight injuries.

At a meeting of the Irish Privy Council in Dublin Castle September 8, it was decided to have Mr. William O'Brien arrested if he did not appear before the court at Mitchelstown the next day in answer to a summons. He did not appear, and the service of the summons was proved, and the judge granted a warrant for his arrest. He was arrested at Kingstown, September 11, whither he went to decline an invitation to go to London. Subsequently at a hotel in Dublin he made a speech in which he said: "So long as there is breath in my body my voice will not be silent until I am gagged. I am proud to suffer for Mitchelstown. When in Kingstown I was told that I would not be arrested if I did not undertake to go to England. That shows that the Government is beginning to dread us in England." He was taken to Mitchelstown September 12. At Limerick he was enthusiastically received by a large crowd. In an address he said he never went on a journey which promised better for the cause of Ireland than the one he was now making. The Mayor, members of the municipality, and prominent citizens met him at Cork. Two hundred policemen and a strong force of military escorted him to the court house, where a formal charge was made against him and he was remanded to jail. The streets through which he was taken were lined with troops and crowded with people. Stones were thrown at the police escorting him and several of them were wounded. The police then charged the mob, using their batons freely and injuring many of the spectators.

In the House of Commons September 12, a motion to go into Committee on the Appropriation Bill was made the occasion of a long and bitter discussion of the Mitchelstown tragedy. Sir William Vernon Harcourt, Liberal, called attention to the general policy of the Government in Ireland, especially to the invasion of the rights of the people respecting the holding of public meetings. He demanded that the House be informed of the nature of the instructions given to the police in Ireland regarding the line of action they are to pursue with respect to public meetings. Mr. Balfour refused to give the information, but made a long speech in reply to Sir William. In the course of the debate Mr. Gladstone said, that with regard to the Mitchelstown affair, which at once moved and harrowed up the feelings of the country, Mr. Balfour's conduct seemed marked by singular rashness and imprudence. Mr. Balfour had done all in his power to bias the case, and driven the Opposition to state how the facts appeared to them. He reserved his judgment, but he considered that Mr. Balfour's assertions were right in the teeth of the facts. He feared that all that was occurring in Ireland tended to support the contention of the Opposition that the Government's legislation was directed not against crime, but against combination for liberty of speech and public meeting. He was convinced that the people of England would not follow the Government's course, which could lead to nothing but distress and disaster. The debate was of special importance, because it showed that the Government will grant no inquiry into the conduct of the Michelstown police, and are prepared to give the police practically a free hand over Ireland.

Later, on the same evening, Messrs. Graham (Liberal) and Edward Harrington (Nationalist) were suspended from the House of Commons for refusing to apologize for disparaging remarks about the House of Lords.

The practical work of the session of Parliament was closed September 13, when the Appropriation Bill passed its third reading in the House of Commons. There was a long and bitter debate about the treatment of political prisoners, which was provoked by Mr. O'Brien's confinement in a cell nine feet by four. Mr. Balfour expressed the determination of the Government to make no distinction between political and other prisoners. Parliament adjourned till September 16, when it will be prorogued.

At Ballyporeen, Tipperary, September 11, a riot broke out in a public house, and the

police, though they used their batons freely on the rioters, were compelled to retreat to their barracks, from which a few shots were fired at the crowd.

On September 11, near Ennis, in County Clare, moonlighters murdered a constable named Whelehan, and mortally wounded another officer. Twelve policemen had waited in concealment in a house where they had learned that a number of moonlighters would gather. When the moonlighters came, they were admitted, and then the door was closed and locked after them. The fight took place in a small room.

The English Union Conservative clubs have arranged for an autumn campaign to cover the whole country. Meetings will be held in 220 towns, and sixty-five members of Parliament have consented to take the stump.

Mr. Gladstone, in answer to an invitation to attend the centennial celebration of the adoption of the United States Constitution at Philadelphia, wrote, July 20, in a letter that was first published August 8: "The attractions of the invitation are enhanced to me by the circumstance that I have always regarded that Constitution as the most remarkable work known to modern times to have been produced by human intellect at a single stroke, so to speak, in its application to political affairs. So far as I can see, the whole small residue of activity at my command will be dedicated to the great work at home. I regard the Irish question as the most urgent and most full of promise of beneficial results to my country that I have ever been engaged in. I ought, perhaps, to add that, viewing the jealousies prevalent in England, it is doubtful whether they might not be stimulated were I to accept the distinction you offer me, which is not less signal than undeserved. That you and your children may be enabled by the help of the Almighty to worthily meet the accumulation of high duties and responsibilities proportioned to ever-growing power, will be, I am confident, the prayer of your kinsmen here, who hope, nay believe, that the moral relations between the several portions of one race are wisely destined to acquire increasing harmony and closeness."

Mr. John Bright, in declining to attend the Constitutional Centennial at Philadelphia, wrote: "I need not say how much sympathy I feel with the gathering to which you are looking forward with so great an interest. All the civilized world, all who love freedom in it, must regard the event as one of the most important in the annals of men. In the great struggle of twenty-five years ago the strength of your country was exerted and its unity secured. My voice was raised at that time in favor of that unity, which I hope may never again be endangered or imperilled. And now I will look forward with hope and faith. As you advance in the second century of your national life, may we not ask that your country and mine may march in line in the direction of freedom and a policy which the moral law will sustain? May we not comfort ourselves with the belief that your country, under a succession of noble Presidents, with their Ministers and your Congresses, and my country, under a succession of patriotic sovereigns, with their Ministers and Parliaments, may assist and guide the growing millions for whom they act to nobler ends than have hitherto been reached? May we not ask that our two nations may be one people?"

The English Trades Congress on September 7 adopted a resolution to form a labor electoral association to secure an increase in the labor representation in Parliament. This may have an important political bearing, because the English labor representatives are all attached to the radical wing of the Liberal party. Mr. Broadhurst, their chief, is a follower of Gladstone, and was Under Secretary of the Home Department in his last Ministry. Another resolution of the Congress was to begin an agitation in favor of decreasing the hours of labor to eight per day, and to make every Saturday a full holiday. The Congress was captured by the Socialistic element.

Twenty thousand nail-makers at Worcester and Stafford, England, are on strike for an advance of 20 to 30 per cent. in wages.

Queen Victoria has conferred the order of Knighthood upon Dr. Morell Mackenzie in recognition of his services to the Crown Prince of Germany; and the Emperor Francis Joseph of Austria has conferred upon M. Pasteur the decoration of the Order of the Iron Crown, with the title of Baron.

Sir Charles Young, the dramatic author, died suddenly in London September 11.

The British ship *Dunskeig*, from London April 20 for San Francisco, was wrecked June 23 off Terra del Fuego, and a part of the crew perished.

It is semi-officially reported at St. Petersburg that the Russian Government, not obtaining the assent of the Powers to the proposed mission of Gen. Ernroth to Bulgaria, will endeavor to gain the adhesion of the European Powers to other plans for the settlement of the question; and that the abdication of Prince Ferdinand will be a necessary result of the adoption of the Russian policy. The state of siege has been raised at Sofia. The *Political Correspondence* (Vienna) says it is semi-officially stated in St. Petersburg that Russia is determined, unless Prince Ferdinand departs from Bulgaria, to declare the Berlin Treaty void.

The *Figaro* (Paris) has published a letter written by Prince Ferdinand expressing delight at his enthusiastic reception in Bulgaria. He believes that the people are thoroughly attached to him. He complains of the opposition of three great Powers, and regards their war against him as cruel and unjust, but he is resolved to do his duty whatever happens. It has been reported from Bucharest that ex-Premier Radoslavoff and several officers have been arrested for connection with an alleged military plot. It is reported at Sofia that the police invented the plot in order to further the ends of the present Prime Minister of Bulgaria.

A procession of members of the National party at Sofia marched to the palace September 12 and cheered Prince Ferdinand. Thence it proceeded to the residence of the ex-Prime Minister and threw stones at the windows. The police were unable to quell the disturbance, and many persons were injured. The procession became a mob, and visited the offices of the Opposition journals and smashed the windows, shouting, "Down with traitors." The crowd returned to the palace, where Prince Ferdinand addressed them, saying: "Love me. Be good patriots. Long live Bulgaria."

M. Ferron, the French Minister of War, at a dinner given on September 9 by the officers of the Seventeenth Army Corps, with which the successful mobilization experiment was made, offered a toast in honor of the corps, and praised the zeal of the civil officials and the devotion of the people, from whom, he said, any sacrifice might be asked when the interests of France were involved. The experience gained by the mobilization of the corps, he declared, had dispelled the doubt oppressing the nation, and had given Parliament and the country a feeling of confidence which they did not possess before the mobilization. The Berlin newspapers commented favorably on the mobilizing experiment, but some of them insinuated that there had been special preparation.

The *Journal des Débats* of Paris announced September 12 the issue of a new French loan of about 700,000,000 francs.

The death was announced September 13 of Georges-Maurice Guiffrey, a member of the French Senate.

The Paris *Petit Journal* and the Warsaw *Gazette* have been excluded from Alsace-Lorraine.

On September 7, while the Socialists of Rotterdam were entertaining one of their agitators, a crowd stoned the building in which the reception was held, and tore down and burned a Socialist flag, and broke the furniture. The police charged the mob and dispersed it, but quiet was not restored for several hours.

The seventieth birthday of the Queen of Denmark was celebrated September 7.

A number of officials and merchants at Vienna have been arrested for fraud at the Custom-house.

Three soldiers at Trapani, Sicily, who were sent to perform disinfecting duty, were assailed by a mob and killed September 11.

An officer of the Pontifical Guard has been attacked with cholera, and the Pope has ordered that the strictest precautions be taken to prevent the spread of the disease.

It is reported from Bombay that 31,328 deaths from cholera occurred in Oude during last May.

The Berne Government has sent a demand to the Bundesrath to prohibit Mormon propaganda in Switzerland.

The commander of the German squadron at Samoa recently demanded a heavy fine from King Malietoa for robberies committed on German plantations, and landed 500 men and declared Malietoa's rival, Tamasese, King. Malietoa resisted, and the British and American consuls are reported to have issued a proclamation advising submission in the meantime, but declaring that their Governments would not recognize Tamasese. The *North German Gazette* (Berlin) on August 10 said that the Government had received no information concerning the deposition of Malietoa, but it said that the squadron was ordered to demand satisfaction for robberies and for insults to Emperor William and the abuse of Germans while celebrating the Emperor's birthday. Samoan foreign relations, the *Gazette* declared, especially the equal rights of Germany, England, and America, will remain the same, whatever may be the fate of King Malietoa. A large majority of the Samoans have long recognized the authority of Tamasese as King.

The German East African Company, by treaty with the Sultan of Zanzibar, has acquired a large tract of territory south of Mombasa, which includes a strip of coast necessary for their development of the inland country.

A despatch has been received from St. Paul de Loanda, under date of September 9, saying that Maj. Bartellot, commander of the camp on the Aruwimi, had received news from Henry M. Stanley dated July 12. Stanley was then ten days' march in the interior, and was still proceeding up the Aruwimi, which he had found navigable above the rapids. He had launched the steel whaleboat and rafts. The members of the expedition were in good health, and provisions were easily procured at the lodge villages. A caravan of 480 men followed the expedition on the left bank of the river, and an advance guard of forty natives of Zanzibar led it. Stanley expected to reach Wadelai by the middle of August. The advance had been so peaceably accomplished that he informed Bartellot that he would soon send him orders to follow the expedition by the same route.

The International Prison Congress began its session at Toronto, September 11, and the Hon. R. B. Hayes, ex-President of the United States, delivered the opening address.

Archbishop Lynch of Toronto, in answer to an inquiry, has said: "Henry George's doctrine or book has not as yet been pronounced on by the Holy See," and "Dr. McGlynn's excommunication was occasioned by his persistent refusal to obey the commands of the Holy See, to which he promised obedience as a priest and as an alumnus of the College of the Propaganda at Rome. Dr. McGlynn's case is purely ecclesiastical, not political."

The Mexican Judge Zubia, at Paso del Norte, who recently made a personal assault on the United States Consul there, has been suspended from office.

The filibustering expedition from Key West to Cuba is reported to have been composed of only a handful of adventurers, of bad antecedents and of no prominence.

HOW TRADE DOES NOT FOLLOW THE FLAG.

We have been favored with a small pamphlet of twenty-eight pages, entitled 'You are Interested'— the subject in which we are interested, or to be interested, being the payment of subsidies to American steamships, and the compiler being Mr. H. K. Thurber, President of the United States and Brazil Steamship Company. The usual argument for subsidies is here reinforced by a statement of the recent action of the Spanish Ministry in subsidizing three lines of steamers, one from Spain to Vera Cruz, another to the West Indies and Colon, and a third from Cuba to the United States and Canada. These subsidies amount altogether to $1,022,640, and are subject to the approval of the Spanish Cortes and the appropriation of the necessary funds, but the ships have already been in the service six or seven months. The effect of the subsidy, in the opinion of the writers of the pamphlet, will be to "drive every American vessel, steam and sail, out of the West Indies and the Spanish Main business." The remedy suggested is an equivalent subsidy, or some subsidy, from our own Government to American steamships.

So much stress is laid by Mr. Thurber on the phrase "Trade follows the flag," frequently used in his pamphlet, that we are moved to inquire what it means. It cannot mean that where there is no American flag there is no American trade, because the largest part of our trade, and a very large trade it is too, is between New York on the one hand and Liverpool, Havre, Bremen, and Hamburg on the other. Here there is no American flag at all, or none worth mentioning, yet the trade is immense and increasing all the time So there is a trade which does not follow the flag, which is indifferent to all flags, and which follows dimes and dollars, regardless of the bunting at the masthead. We presume that Mr. Thurber's trade is mostly of the kind that seeks the cheapest bottoms on the ocean as well as the cheapest railways on land, for if it were not of this kind it would not long exist. There is a large trade between New York and the West Indies. Here there is an American flag, but we have never observed that American trade followed that flag in preference to any other. Indeed, the complaint of the advocates of subsidies is that it tends to follow other flags, even where no subsidies are paid to the foreign carrier. So it is not true that trade follows the flag. What trade follows is the almighty dollar. It would be a fool if it followed anything else.

In one case only is it true that "trade follows the flag," and that is where there is no other flag to follow, or where ours is the cheapest, the handiest, the most expeditious, serviceable, and convenient. The phrase was coined to express the idea that where there is at present no means of ocean communication, trade will spring up if you establish such means. In this restricted sense it is true, but if two means of communication are established, trade will follow whichever flag offers the best terms. Certain patriotic and poetic suggestions follow the flag wherever it goes, but trade is neither patriotic nor poetic—neither Mr. Thurber's trade nor any other. The fact that trade follows the dollar, is the real reason why subsidies are asked for.

The example of foreign nations as subsidy payers is the main argument of subsidy advocates in this country. But there are important differences between ourselves and them. Most of them have colonial dependencies in various parts of the world, with which it is indispensable that they should maintain frequent and rapid communication. In other words, there are political reasons in addition to commercial ones for paying subsidies. Again. those countries really desire foreign trade and take pains to promote it. We do not. We have adopted the policy of "creating a home market." We have been taught for a quarter of a century to look upon foreign trade as injurious and almost sinful. Our legislation has been directed to the preventing of importation, without which there can be no exportation. Public sentiment has been trained to look askance at ocean-borne commerce. At this very day, with a surplus revenue coming into the Treasury which is a menace to all trade, it is doubtful whether any of the artificial restrictions imposed on foreign trade can be relaxed, so strong is the belief that such trade is detrimental to the nation. Even the advocates of subsidies are generally opposed to the removal of these restrictions. They are as much in favor of high tariffs as anybody, and they contribute to the bad education which teaches the people that foreign trade should be shunned and repressed. This teaching has returned to plague the inventors. When they set forth, as in the present pamphlet, the allurements of foreign commerce, they find their influence deadened by a conviction that it is not worth while to spend the public money to win something that has been deliberately spurned and publicly abjured. Those, on the other hand, who hold that foreign trade is just as advantageous as any other kind of trade, will be apt to insist that the removal of artificial restrictions, which costs nothing, shall at least keep pace with more expensive means for rebuilding the ocean commerce of the United States.

THE DUTY OF CONGRESS ABOUT POVERTY.

Mr. Butterworth, the Ohio Congressman, has been interviewed as to "what Congress will attempt at the next session towards the improvement of business and reduction of the surplus, or other modes and means of reform," and answered that "it certainly ought to do something," because "the present order of things is tending to great aggregations in large cities, colossal wealth, and abject poverty, with corruption and dissipation." The remedy for this very objectionable state of things he described as follows:

> "We must see that our prosperity is more generally shared in by the masses. I do not mean that idleness shall be encouraged, rewarded, or even tolerated, or that the idler and industrious shall be equal yoke-fellows in any field of competition; but that the Government shall not permit any of its agencies to be used to increase the strength of arms that are already too strong, and to add to the thrift of those who are dangerously thrifty already, or to pile up colossal fortunes that are already dangerous in amount."

This is more of the talk of which we have had so much from clergymen and philanthropists during the past year, and which does so much to aggravate whatever danger there is in the existing social situation. These dark hints that there is some expedient as yet untried, but within reach of the Government, which can cause a more equal distribution of wealth and diminish poverty, have, we do not hesitate to say, an immense influence in stimulating idleness and increasing poverty and corruption. They enable hundreds of lazy agitators all over the country to live off the wages of the poor, and increase the distaste for industry and the indifference to thrift and skill which are already becoming in an alarming degree a characteristic of the American laborer. They help, too, to spread and confirm the notion that character has but little to do with shaping the condition of society, and that the world can be made to move as fast as is necessary simply by bill and resolution.

We repeat that it is the bounden duty of every man of influence or position, who holds that the present distribution of property in this country is unjust, and can be and ought to be changed by legislation, and feels it necessary to announce his views publicly, to tell people exactly what he thinks the legislation ought to be. When he finds fault with "the present order of things," he ought to tell us in definite terms what the "present order of things" is, and exactly how he would go to work to change it.

The feature of the "present order of things" which seems to call forth most animadversion, is the fact that a few men are very rich, and most men comparatively poor. This has existed ever since human society was founded. It is and always has been objectionable, and if it can be remedied, ought to be remedied. But anybody who has a remedy for it ought at once to produce it on paper. Any one who thinks it can be changed by act of Congress ought to draft a bill for the purpose and publish it. If Jay Gould, for instance, has too much money, the precise means by which his fortune ought to be reduced should be described, and the persons among whom it is to be distributed ought to be pointed out. If "colossal fortunes" are dangerous to the State, there is no use in repeating that colossal fortunes are bad things: we ought to be told how their growth is to be prevented. In like manner, if there are too many poor in New York or any other large city, in proportion to the number of rich people, we ought to hear how many poor a city like New York ought to have, and how their number is to be kept fixed, and how a man who is rescued from poverty by the State is to be kept from falling back into it again. Congressman Butterworth is just as competent to do this as any of his colleagues.

The fondness of the laborers, too, for parades like that of "Labor Day," as a means of "showing their strength," is wholly, or almost wholly, due to the notion that somebody is keeping them out of something which he will surrender when he sees how numerous they are. This is the sole object of showing "strength." It is a sort of semi-hostile demonstration, like the naval and military reviews to which European sovereigns treat their enemies or rivals. It means that if the rest of the community does not let them have their due, some sort of compulsion for which "strength"

is necessary will be resorted to. This notion is kept alive and encouraged by such talk as Mr. Butterworth's. But for it we should, instead of the tomfoolery of "Labor Day," have exhibitions showing how much capital the laborers have; how many commodities they produce and sell on their own account; how little they spend in drink; how much they have done to improve their own dwellings and raise their standards of living, and to increase their mental and moral culture. These are the things on which civilized men nowadays pride, or ought to pride, themselves. It is the kind of men we are, and not how many of us there are, which most concerns, or ought most to concern, all of us.

DIRT AND DISORDER.

Mayor Hewitt's remarks on the indifference of householders in this city to the condition of the streets, and the habit of dumping ashes and garbage in front of their doors in disregard of the appearance of the streets or the health and comfort of their neighbors, suggest an interesting inquiry as to the cause of the difference in this respect between the people of New England and those of New York. Anybody who has crossed the line from Massachusetts or Connecticut into this State along the ordinary highroads, must soon have been made painfully aware of the great inferiority of the New York standard of neatness as regards the care of streets and dwellings. We believe from a very early period the householder in a New England village who allowed his yard to become dirty or disorderly and his fences to get out of repair, or made the sidewalk or highroad a receptacle for refuse of any description, incurred serious social discredit. Gen. Francis A. Walker, in an address on the "Labor Problem" some months ago, confessed to a falling off in this respect, owing to the influx into the New England towns and villages of foreign immigrants with low standards of living. There is, however, considerable difference between the various European countries which send us additions to our population. The Irish are probably the most careless and squalid, as is natural in a people whose only protection against a steady rise in rent was the assiduous external manifestation of great poverty. The Germans, whose social training is better than that of any other immigrants except the Swedes and Norwegians, on the whole leave little to be desired. The Italians and Hungarians are mostly birds of passage, who do not care how they live, as long as they can save money, and rarely become householders.

But we doubt whether any of them would, if left to themselves, make settlements displaying less regard to appearances than even the prosperous towns and villages of northern and central New York, or, indeed, we may say, any part of New York. These all seem pervaded by that extraordinary indifference to appearances outside their homes which in New York city tolerates the use of the streets as stable-yards, and the sidewalks and gutters as dumping-ground. One might go along the whole of the rich Mohawk Valley without finding a single town or village in which people seemed to care particularly what becomes of their refuse after it leaves their kitchens, or whether their yard fences are repaired or painted, or whether the roadside is overgrown with weeds or the gutters choked with rubbish, or whether the yard itself is mown or trimmed.

In New England, in the days before lawn-mowers, long grass in the yards was not uncommon, but since the introduction of these useful implements, one rarely sees a bit of lawn which is not kept in pretty good order, or flowers which do not seem to be tended. On the New York side of the line one rarely sees any sign of the lawn-mower's existence. The yard, if the owner has no cattle or sheep to graze it, is apt to be a tangle of grass and weeds, which, but for the path to the door, would lead one to suppose that the house was deserted. The fences are very apt to be broken down or much decayed and defaced. No one, for instance, who walked through the suburbs of Johnstown would dream that it was one of the oldest and most prosperous villages in the State. The dwellings generally have an air of poverty and decay. They seem to be the abodes of people who have been worsted in the struggle for existence and are too dispirited to care what their surroundings are, or to be willing to carry their garbage further than the nearest hollow in the road, or to spend ten minutes in the evening cutting down the grass and weeds which grow up to their windows and almost exclude the light. One of the most odious characteristics of such places, too, is that if one turns up a tempting wood-path, or tries to follow the meanderings of a pretty stream, one is pretty sure to light soon on a dumping-ground, heaped high with the refuse of the neighboring houses. The practice seems to be, when refuse is not deposited in the street, to carry it to the nearest secluded or shady place, and unload it close by the path or roadway, or in whatever spot, not visible from the windows, is most easily reached.

In fact, there is no part of the country in which the village-improvement societies that have done so much to make many New England villages charming and attractive, are more needed than in New York. The spirit of indifference to dirt and squalor and disorder in one's surroundings, which makes the problem of street cleaning so formidable in the city, extends over the whole State. Unhappily, too, it seems to go hand in hand with the liquor traffic. The dirtier and more unkempt and uncared for the streets and houses are, in any particular locality, we may be sure the more liquor-shops it contains. Whatever local splendor or neatness there may be, is, in fact, apt to find most expression in the bar-rooms. The proportion of bar-rooms to population, too, is, in towns of 3,000 to 5,000 inhabitants, like Herkimer, for instance, something appalling. Of course a rousing liquor business soon extirpates among the men all care about the neatness or prettiness of home or its surroundings. It is always easier to tipple and gabble in a bar-room than cut grass in one's yard, or mend or paint one's fences, or provide for the burial of one's garbage. Nothing destroys the horror of dirt and disorder, which is what most distinguishes the civilized man from the savage, more rapidly and thoroughly than frequent drinking. What makes the phenomenon of New York untidiness all the more inscrutable is that the State was largely settled by two of the tidiest and cleanliest peoples in the world—the Dutch and the Yankees.

THE ART OF MAKING MONEY.

The Boston *Herald* has been trying to cater to the tastes of its Sunday readers by consulting a number of rich men as to the easiest way of getting rich, and printing their answers. Barnum said it was quite simple; all you have to do is to spend less than you earn, and to "shun rum and tobacco." Gen. Butler's advice was to buy improved real estate, partly for cash and partly for small notes, this being the way he became rich himself. Mr. Faxon, the temperance advocate, advised the practice of "sobriety, industry, economy, and faithfulness." Mr. Erastus Wiman warned young men against speculation, and maintained that "legitimate trade, the honest, plodding routine of life, was the true basis for good fortune," and that if a young man does not obtain riches through these, he will at least deserve them. Mr. Asa Potter advised a young man to "select a business that is congenial to him," and, while carrying it on, to be "industrious, temperate, and patient." Mr. Miller Pillsbury, "the flour king," of Minneapolis, recommended exceedingly hard work and a just estimate of one's own abilities. Mr. Russell Sage, for his part, advised the young man to commit to memory, as he did, the advice of *Polonius* to *Laertes*, and try to live up to it. Any one who does this, he says, is as certain to become wealthy as "the night is to follow the day."

It will be easily seen that none of these eminent men had a word to say to people eager to get rich, beyond the commonplaces of worldly philosophy—except, perhaps, Gen. Butler, who did descend into details. But, of course, nobody who values the General's advice on any subject supposes that he owes his "competent fortune," as he once called it, to investing small savings in improved real estate. The fact is, that, barring the men who make a fortune by a single "big strike" in some sort of speculation, there is probably no millionaire who can tell how he became rich—that is, what the qualities or practices were which most aided him in acquiring wealth. All millionaires probably think they know, but they really do not. If the best means of acquiring wealth could be communicated to others by successful practitioners, the art of making money could and would be taught in schools and colleges. There would be professors of money-making as there are of "journalism," but they would have to be rich men, because a poor man teaching people how to escape poverty would be a somewhat ludicrous object. The fact that there are no such schools or colleges is, in truth, the best possible proof that the art of money-making is unteachable, because there is no art in which the demand for instruction is so widespread and so fierce.

The reason why the causes of success in getting rich cannot be communicated is probably the same which prevents the cause of success

in any calling from being communicated. To say that a man succeeds through industry and integrity is a mere platitude. These qualities may help a man a good deal, but they are evidently not essential, for a great many men succeed without them, and tens of thousands who have them do not succeed. In fact, we cannot put our finger on a single quality or gift which is necessary to make a man a millionaire, nor can we say what the exact combination of qualities or gifts is which makes a man succeed in anything. It appears to be just as hard, if we may judge from the number of failures, to succeed at the bar, or in medicine, or divinity, or soldiering, as in money-making. The men who succeed, all know of something which was of great use to them in rising, but not one knows of anything or any two or three things in the absence of which he would certainly have failed.

If anybody had asked Napoleon, or Wellington, or Grant to explain to him how he won battles, he would have got no better answers than the Boston *Herald* got from the millionaires about money-making. The great general to whom such a foolish question was put would have answered that he could not tell; that training was, of course, very valuable, but that in the last resort what did the business was good judgment at critical moments, and that this judgment had its source partly in character and partly in experience. A man with the money-making talent knows "a good thing," that is, a desirable investment or venture, when he sees it. How he knows it he cannot explain. In fact, there is no talent which is so deeply hidden away in the recesses of a man's mental and moral constitution; there are no trustworthy outward signs of it; neither temperament nor education indicates it or produces it. This, as we have said, is in some degree true of talent in all callings, but in a much smaller degree in all others than in what is called "business." In every calling, success is a personal attribute, something which comes out of a man's brain and character, and which he can neither share nor transmit nor explain. All he can say is that he somehow knew how to do things well, and when to do them and when to let them alone.

THE NEW IRISH ACTS.

DUBLIN, August 27, 1887.

THE new Land Act has now been issued. Jeremy Bentham complained of English legislation that, "as if from a rubbish cart, a continually increasing and ever shapeless mass of law is from time to time shot down upon the heads of the people; and out of this rubbish and at his peril is each man left to pick out what belongs to him." The Irish Land Laws are an example of this legal rubbish shooting. This last of our many land laws is ambiguous, involved, and obscure; but not more so than previous acts. The Land Law of 1881 was described from the bench by a judge as "like a Chinese puzzle." The new Act, though not very long, refers to so many other acts which are wholly or partly incorporated with it, or to be read with it, that it is somewhat of a puzzle to put them together and extract the general meaning. Scarcely any measure of more general relief could now be taken in hand than a consolidation and codification in plain language of our wonderfully complex and contradictory budget of land laws, under which neither landlord nor tenant can deal with their respective estates without legal aid, and but rarely without litigation.

The general provisions of the new Land Law are as follows:

(1.) Almost every agricultural leaseholder may enter the rent courts and have a fair rent fixed on his farm for a term of fifteen years.

(2.) The provisions excluding what are, under the present law, "town parks" from the operation of the Land Law of 1881, are slightly relaxed in favor of occupants of some classes of these holdings.

(3.) Ejectments are facilitated by substitution of a formal notice for the actual execution of the ejectment, after which the ejected tenant had six months during which he could redeem his tenancy.

(4.) Changes are made in the law of purchase, facilitating sales, and affecting owners and encumbrancers rather than landlords and tenants.

(5.) The rate of interest on loans made to tenants for the purchase of their farms under the Land Act of 1870, the Church Act, and the Land Law of 1881 is reduced to 3⅛ per cent., and the time for repayment is extended.

(6.) Judicial rents fixed before 1886 are to be altered by order of the Land Commission so as to differ from the amounts originally fixed "by the difference in prices affecting agriculture" at present and in the years in which such rents were fixed. Evictions for non-payment of judicial rents may in certain cases be temporarily stayed.

The admission of leaseholders to the rent courts has been refused by every Government since 1881, though repeatedly and urgently demanded as a matter of justice and equality. It is a tardy concession, given only on compulsion. It is better, however, for the leaseholders who have tried through the past trying years, to go into court now, when the permanent fall in prices is recognized, and its effect on farming understood, than it would have been in 1881. English public opinion is now less likely to influence the courts in favor of the landlords, who, as a class, have ceased to have any political importance.

The provision for altering judicial rents according to "the difference in prices affecting agriculture" is vague and obscure; but it seems to be understood by the Government and the Land Commission to mean that the rents in the several unions are to be reduced in the same proportion as prices have fallen. The word "agriculture" is not being taken in its strict sense; the average changes in prices of all products, whether agricultural or pastoral, are being ascertained by the Land Commission, but rates of taxes and the price of labor, both of which affect agriculture directly, are left out of consideration.

There is no chance whatever of this provision giving satisfaction. Every one knows that a fall in the prices of farm products should be attended by a very much larger percentage of diminution in the rent than that which has taken place in the prices. But the Cabinet overlooked this until the bill had passed the House of Commons; and at the last moment the Government altered in the Lords the clause they had agreed to in the Commons. This was apparently due to representations of the Land Commissioners that, under the clause as it originally stood, requiring them to determine "what alteration if any ought equitably to be made" in the rents, they would in equity have been bound to reduce some rents 40, 50, and 60 per cent., and in some cases to make even larger reductions. The change of the wording of the Bill was made because what was plainly equitable would involve a loss to the class who, in this case, had voting power enough to do as they pleased.

The probable result will be that where the judicial reductions seem insufficient, the Plan of Campaign will be resorted to. The task of trying to fix fair rents is an impossible one; no rule of fairness has yet been found. "Unkindness has no remedy at law," nor can the courts deal with this question, which is one of morals more than of law and fact. Low rents may be ascertained, and, if fixed, may be paid. Value, whether annual or salable, is capable of being approximately estimated, and, according as the rents or prices are more or less below this estimate, so are they low or the reverse. But this pursuit of fairness, or any rule by which it can be ascertained, is a delusion.

The operation of the clause for altering rents in butter districts is already being freely discussed in the south. The yield, owing to the great drought, has been very small—according to some estimates, it is less than half the average; but the price has increased from 30 to 40 per cent., probably on account of the deficient yield. It is the same with other produce that is not affected by foreign imports: the yield of hay and potatoes is small, the prices are high. The wheat crop is good, but the amount of the home-grown crop practically has no appreciable effect on the price.

The Coercion Act was passed mainly with a view to the Plan of Campaign. It is already in operation; the National League is proclaimed as dangerous; prosecutions have been commenced. The hostile mind, however, continues in full vigor notwithstanding the proclamation; and there seems likely to be a sharp competition among Nationalists as to who shall get first into prison. If the Land Law and Crimes Act were ever so just and necessary, the fact of their administration being wholly in the hands of the anti-Nationalist minority would make them appear unjust. The one pleasant feature in the present condition of affairs is the diminution of international ill-feeling, which is due to the hearty support given to the National party by the Gladstonian Liberals. For a long time Michael Davitt, alone among Irish Nationalists, preached peace and good-will between the Irish and the English peoples. But now a strong political section of Englishmen is seeking to substitute, for the nominal union of Government, a real union of interest and affection between the two countries, and its efforts, earnestness, and kindly feeling are recognized and reciprocated. An organized series of public meetings in England, to be addressed by leading Home-Rulers, has been arranged for the autumn and winter months; but it is possible that the Irish members may be in prison or occupied with the direction of affairs at home.

On the whole, the winter may be expected to be one of unrest, political and social disturbance, unless the landlords make a new departure and accept the proposal made by Archbishop Walsh to confer with the Nationalists as to the terms of a temporary and permanent settlement of the land war. Late though it be, they might even now with advantage to themselves take to heart and act upon Edmund Burke's words, that "early reformations are amicable arrangements with a friend in power; late reformations are terms imposed upon a conquered enemy."

A LAND VALUER.

MILITARY SWITZERLAND.

PARIS, August 22, 1887.

I SPOKE in my last letter of the military preparations being made in Belgium for the eventual defence of her neutrality. A few days ago the King of the Belgians took the opportunity afford-

ed by the unveiling of statues to two heroes of the old struggles against the Spaniards in Flanders, to remind his subjects of the necessity of active efforts for the perpetuation of the nation's independence. "The life of nations is a perpetual struggle," said he; and liberty must be defended at times by the sword. King Leopold, who is the most prudent of sovereigns—as prudent, certainly, as his father, who was once called the "Nestor of Kings"—must have had very strong reasons for emerging as he did from the constitutional cloud in which he lives, and giving thus an indirect advice to his Chambers on the question of compulsory military service.

The tendency of the times seems to be adverse to small countries, and Belgium is a small country: it takes only little more than an hour to go by rail from the French frontier to Brussels. But the Belgians do not seem at all inclined to cease to be a nation, and they show no desire to be merged in a larger nationality. The same may be said of Switzerland; and, historically speaking, the Swiss have even a better right than the Belgians to preserve the dignity of a separate nation. Few people have not visited the shores of the admirable Lake of Lucerne, and the world-famous spots where the "little Cantons" became the nucleus of Switzerland. At a time when there was no artillery those small Cantons were almost impregnable fortresses, especially the four Cantons which are grouped on the various branches of the Lake, the "Vierwaldstädte." The confederation had its birth in the three primitive Cantons (*Urcantone*), Unterwalden, Uri, and Schweitz. When you are on the Lake, you are always shown the place near the Axenberg, with its little chapel built in 1388, where Tell jumped on the rock from the bark of Gessler; on the other side, at the foot of the Seelisberg, is the famous Grütli. Not far from Flüelen is a fountain with the statue of Tell built on the place where he is supposed to have hit the apple with his arrow. The inexpressible beauty of these shores, the calm of the valleys which open from distance upon distance on the Lake, do not make you think of war; but you are reminded of the preoccupations of the present time by the military road which follows, like a serpent, all the indentations and curves of the Lake. Everything is ready for the transport of an army from the great plain of Switzerland to the mountains, which now, as in old times, would be the strongholds of Swiss liberty.

The Swiss, by a strange contrast, are bound to neutrality, and still they are among the most military races of the world. Their spirit can be well judged by the extraordinary levies which have been made in their country down to very recent times. Before the French Revolution they had in the foreign service twenty-nine regiments, which formed an army of 50,000 men. Twenty thousand of these men were in the pay of the French monarchy, and it has been calculated that the French levies of the thirteen Cantons amounted in three centuries after Louis XI. to 700,000 men. Baron Zurlauben wrote a very valuable history of these Swiss regiments. France kept at all times an ambassador in Berne (though Berne is a small residence), with the special function of seeing to all the details of these levies and to all the articles of the treaties made by France with the Cantons. These Swiss regiments had their own rules, their own discipline; they were commanded by men who belonged to the best families of the Cantons. I have an old friend who saw before the Revolution of 1830 a council of war in a Swiss regiment; the officers formed a circle, and the accused soldier was judged without appeal. The military law of the Swiss was almost Draconian, and their admirable discipline made them a model for all armies.

In our long wars of religion in the sixteenth century the Swiss regiments played a very important part. They were always on the royal side; they saved the Catholic army at the battle of Dreux; they saved the young King during the famous retreat from Meaux to Paris. Sometimes, however, they refused to fight—it was when they were not paid; at least they waited till they were paid before fighting. The army was a profession for the poor shepherds of the High Alps. After a few years of service they came back with a pension and sometimes a little booty; the officers received titles and pensions.

The French had a proverb, "Pas d'argent, pas de Suisse." Napoleon, for his campaign of 1817, asked the Confederation for a force of 16,000 men. The old monarchy had found its last defenders in the Swiss who were massacred on the steps of the Tuileries. I was visiting a few days ago the beautiful monument of Thorwaldsen at Lucerne. I had seen it often before, but it seemed to me even more beautiful in the morning light, with the azure shining through the branches of the overhanging trees. Time has improved the *cadre* of the dying lion; the trees are larger, the whole scene seems more solemn. Thousands and thousands of travellers pay their homage to this monument; it may have faults in point of art, but it is a thing always to remember, it speaks really to the soul.

The Bourbons, after the Restoration, formed six Swiss regiments, two of which were a part of what was called the Royal Guard. Since 1830 there have been no more Swiss regiments in the French Army; but for many years after that date there were Swiss troops in Naples and in Rome. In 1848 the Federal Constitution formally interdicted the levies in the Cantons, and ever since Switzerland has only been occupied in organizing its own forces and its own defence. In 1847, at the time of the so-called Sonderbund, the thirteen Liberal Cantons were leagued against the seven Cantons of the Sonderbund. The Liberal army had no fewer than 90,000 men, with 74 guns; Neufchâtel and Appenzell took no part in the struggle. The Constitution has always in principle forbidden the existence of a permanent army in the interior of the country; the military forces of the country are there formed by the militia. The Swiss are all good shots and take much pleasure in the *tirs fédéraux*, which are the great festivals of the Confederacy. One of my friends who lives in Geneva told me once that every Genevese was born a watchmaker, a radical, and a carbineer. The mountaineers who are accustomed to hunt the chamois are first-rate shots, and the competition for the prizes is very ardent in these great *tirs*.

All citizens from the age of twenty to the age of forty-four are liable to military service. There is, however, an exemption tax, but it can only be paid under conditions determined by law. The militia compose the active army, or *armée d'élite;* the Federal army (*Bundesauszug*) represents three per cent. of the population, and is composed of the young men between twenty and thirty years; then comes a first reserve of men from thirty to forty years, which forms one and a half per cent. of the population; then another reserve, or Landwehr, which is only called out in time of great national danger. The first two classes can furnish 106,000 men: 83,000 for the infantry (99 battalions of *fusiliers* and 8 of *tirailleurs*); 3,500 for the cavalry (24 squadrons of dragoons and 12 companies of guides); 14,000 men for the artillery (50 batteries); and 3,000 men for the engineers (8 battalions, besides the *pontonniers* and *pionniers*); and there are, besides, the staff, the surgeons, and the troops of the administration. The Landwehr, which has the same *cadres*, with the sole difference that its artillery is only half the artillery of the active army, can contribute as many as 97,000 men. In time of war, it is therefore expected that Switzerland can bring to the front an army of 203,000 men.

The mobilization of the army would require 9,000 horses. There are in all nine divisions, subdivided into brigades. The militiamen, who are equipped by the Cantons, are placed under the orders of the Cantonal authorities, in the limits admitted by the Federal power, who call the men, dispose of them, furnish their arms, instruct them, and keep the men every year long enough to teach them the manœuvres and the use of arms. There are several corps of cadets, and the military academy of Thun trains the under-officers and the officers. The officers are appointed by the Federal Council, on the proposition of the Cantons; but the choice of the Commander-in-Chief belongs only to the Federal Assembly, which chooses him from among the Federal Colonels, the highest grade of the officers in the Federal army. Some of these Federal Colonels are very remarkable men, well known in military circles. They travel, see foreign wars and foreign countries, and their reports are read with much interest.

The troops are only paid during the manœuvres or in time of war. A question which for many years has been a subject of discussion in the Confederacy is this: Ought Switzerland, like all other countries of Europe, to have artificial strongholds and fortified towns? The wars of the French Revolution and the campaign of 1813, during which the Allies invaded the Swiss territory, have proved that the natural ramparts of the Alps are not invulnerable; nevertheless, the Alps are still considered as the natural defence of the country. Military roads cut in various directions would permit the rapid concentration of the army in a first line of defence in the mountains; behind this there is a second line of defence. The Swiss trust in the undoubted courage of their army and in the strategy of their officers. They have done nothing to fortify their frontiers, not even on the line of the Rhine and on the side of Geneva, where those frontiers are the weakest; on the other hand, nothing has been spared in the improvement of the militia, the military education of the officers, and the armament. As it is, the Swiss Army would, in my opinion, be a formidable adversary; and the Swiss may console themselves for having no fortifications by the thought that year after year the progress of artillery makes fortifications useless. They have saved all the money which would have been spent in forts and ramparts; and the time may come when, at little expense, they will find themselves well fortified in the weak parts of the frontier by a few steel cupolas.

PALÆO-ITALIC ARCHÆOLOGY.

PARIS, August 20, 1887.

IN the years 1886 and 1887 a citizen of Boston, Mr. Dana Estes, surveyed the opening and clearing of about twenty-four ancient tombs in the immediate vicinity of Belluno (province of Venice). He was fortunate enough to secure possession of the objects discovered, which must now have safely reached the United States. On his way home, Mr. Estes passed through Saint-Germain, and kindly showed me a part of his interesting collection—about one-third, as he told me, the remainder having been directly forwarded to America. These discoveries demand serious attention. They are remarkable and admirably preserved specimens of an archæological series hitherto little attended to—completely unknown, I venture to state, to most professional scholars out of Italy—the study of which, however, is calculated to throw a quite new and unexpected light on the remotest ages in the Italian peninsula. Very few museums in Europe possess antiquities of that class, and I am almost certain that Mr.

Estes's palæo-Italic collection has been the first to cross the Atlantic. The possessor will undoubtedly take the trouble of publishing the narrative of his discoveries, with select engravings from the most important types; he will thus render a real service to archæological study by facilitating comparisons between the contents of the Belluno tombs and the spoils of other cemeteries in the valley of the Po.

Meanwhile, and with Mr. Estes's permission, I seize the occasion of a palæo-Italic series having been shipped to America, to summarize our actual knowledge about these curious antiquities, which must be carefully distinguished from the works of Etruscan and of Roman industry. I do not intend to describe what I have seen of Mr. Estes's collection: I must leave to him the honor and the pleasure of doing so. It will suffice for my purpose to say that the entire lot was discovered in cup-shaped tombs, the sides of which are walled with small irregular stones, superposed without any mortar, and covered with a large lid of tufa. Inside each tomb was a vase in earthenware, affecting a form of frequent occurrence in coæval cemeteries, and also some minor urns, in earthenware or in bronze; the principal vase contained the ashes of the deceased, no case of inhumation having been observed. Among the ashes were found different implements, such as large bronze fibulæ or safety-pins, ornamental bronze pendants of various designs, beads of yellow amber and of colored glassware or porcelain, iron spearheads, etc. The fibulæ are peculiarly worthy of attention; they belong to a well-known type, that of Villanova, and are decorated with engravings in the geometrical style. Some of them are ornamented with small bronze rings or glass beads suspended to the brooch, others (and this is a very rare occurrence) have their upper end, where the pin is inserted, shaped in the form of animals, the design of which recalls the primitive engravings and rude figures on the bronze implements from Koban in the Caucasus and from Hallstatt in upper Austria. Similar objects, but of inferior quality, were obtained in 1870 by M. Leicht from tombs discovered in the suburbs of Belluno, and described by the finder in a short pamphlet, 'Avanzi preistorici nel Bellunese' (Belluno, 8vo, 1871). Some archæologists may fancy that the interest of a discovery is greater when nothing like it has yet occurred. This is an error which even simple dilettanti ought not to share. The chief object of archæology, as Gerhard and Longpérier often repeated, is to *form series*, to reveal and define the geographical and chronological limits, both in space and in time, within which the works of the same art or industry are to be encountered. From this point of view, we may say that Mr. Estes's collectanea are specially interesting, because they occupy a definite place in a large sequence of analogous discoveries made not only in the valley of the Po, but in that of the Danube and of the Rhone, on a line which can now be followed uninterruptedly from Hungary to the eastern province of France.

The name of antico- or palæo-Italic archæology is a happy idea of Count Conestabile, the celebrated Etruscan scholar. Being rather vague, this appellation has the advantage of not prejudicing the obscure question about the race (or the races) to which belonged the people who, previously to the Romans, the Greeks, and the Etruscans, scattered the vestiges of their civilization on Italian ground. The culture of northern Italy, so far as it is neither Etruscan nor Græco-Roman, is also styled Villanova culture, from the name of a necropolis of two hundred tombs discovered in the vicinity of Bologna. Formerly (that is, until about the middle of the present century) archæologists used the word Etruscan in as wide and much-abused a sense as that of Pelasgic: everything which seemed in Italy to be neither Greek nor Roman was styled Pelasgic or Etruscan. Recent researches, the results of which were for the first time condensed and tested by public discussion at the International Congress of Bologna in 1871, enable us now to investigate with greater precision the remote periods of Italian archæology. The principal conclusions which have been obtained and are generally admitted, may be stated as follows:

Firstly, thanks to Bonucci, Capellini, and others, it has been ascertained that Italy, like France and Great Britain, went through a *palæolithic* period, in which the use of metals was unknown. In spite of much dispute and contradiction, it seems certain that the period in question was of less importance in Italy than in England, and especially in France. This is evidently the case for the second part of the palæolithic period, the principal feature of which are the bone-caves with organic deposits. Such caves are by no means rare in Italy, but a great number of them belong to a later epoch, and, as the reindeer does not appear to have passed the Alps, no traces have been found there of the remarkable development of sculpture and engraving on bone and horn which gives so high an interest to the caves of Périgord and of Switzerland.

After the palæolithic period we find, as elsewhere, the neolithic or polished-stone age, when the first metallic implements were introduced in Italy by the rising flood of commerce. In fact, it is now generally acknowledged that the polished-stone period cannot be strictly distinguished from the age of metals, but the development of this idea would carry us too far. Archæologists have not yet come to an understanding about the primitive importers of metal implements: some believe them to have been Phœnicians, others admit a gypsy-like immigration of small metal-working tribes, which, originating in Central Asia or the Altaic region, gradually spread through Europe, following the valleys of the Dnieper, the Danube, and the Po. Two facts, however, are certain: (1) that the bronze implements of the most ancient period afford, from one extremity of Europe to the other, and particularly in Central Europe, a striking similarity in shape and in the composition of metal. As we gradually get nearer to the historical period, the resemblances between implements from different regions are found to diminish—a result which, combined with the discovery of moulds and foundries, goes to prove that the industry of bronze soon became localized in various centres, such as Hallstatt in Austria and Bologna in Italy; (2) that when bronze implements become numerous, the custom of incineration more and more replaces that of inhumation, an evident sign that some change has occurred in the religious ideas and habits of the European communities, perhaps also that a new race of men has entered the scene, not necessarily in large numbers, but with a superior power of assimilation and proselytism. That race *may* be the Aryans, but this is as yet a mere hypothesis, and is sternly denied by the school of Latham, Penka, and others, who place the birthplace of Aryan civilization in Scandinavia.

If we compare the neolithic period in Italy with the similar period in France, so well known by the methodical investigations of the dolmens of Brittany, we perceive the following discrepancies: (1.) Dolmens are not to be found in Italy; the so-called *Cyclopean* walls of the ancient cities and the *nuraghs* of Sardinia are of a quite different and later character. (2.) The stone implements or celts in jade, jadite, chloromelanite, and other rare or non-European materials—which are frequent in Brittany, where they must have been introduced by commerce, and are also to be found in the lake-dwellings of Switzerland—seem almost or completely wanting in Italy. (3.) Northern Italy possesses lake-dwellings similar to those which exist in Switzerland, but they have not been met with in the other parts of ancient Gaul. The lake-dwellings of northern Italy, carefully studied since 1863, must be put on the same line with the so-called *terramare*, the investigation of which began about 1865 and has recently afforded Prof. Helbig the subject of a most interesting book, 'Die Italiker in der Poebene.' The *terramare*, as everybody knows, are accumulations of débris, forming deposits of ammoniacal earth, which the peasants used as manure. They were called cemetery earth, from the belief that they marked the place of Roman *ustrinæ*. A more attentive study of the fragments and implements they contain, enlightened by the discovery of the Swiss lake-dwellings by Keller in 1854, proved that the *terramare* are the remains of very ancient pile-buildings belonging to the earliest age of metal. When the study of these deposits had only just begun, the Swiss archæologist Morlot compared them to the kitchen-middens of Denmark, another variety of accumulated débris, but dating from the remote palæolithic period, in which the use of metal was still unknown. Although Morlot's parallel has often been repeated, it can no longer be maintained. The *terramare* must be compared to the lake-dwellings, and are, in fact, nothing but artificial lake-dwellings, established in a moorland and wet country, in the interest both of health and of security. This system of pile-building, which has been observed at Castione and elsewhere, would suffice to make a link between the early populations of Switzerland, of northern Italy, and of the Austrian Alps, where other lake-dwellings have been discovered; and this view is quite supported by the similarity of the stone and bronze implements obtained from the *terramare* and from the lakes. It must also be borne in mind that ancient writers have mentioned lake-dwellings in Macedonia and near the Caucasus—that is, on the very road which seems to have been followed by the neolithic and early metallic culture of central Europe.

Another fact which must be insisted upon is that the age of bronze *alone*, excluding the use of iron, if even such an age may be spoken of, cannot have been of long duration in Italy. Iron implements are already met with in the most ancient cemeteries of Gallia Cisalpina, such as Villanova, Golasecca, and Chiusi. There never existed in the Peninsula, any more than in France, a well-defined and characterized *bronze age*, such as has been so successfully studied since 1830 on the soil of Sweden and of Denmark. No doubt, during the most ancient period, the weapons and personal ornaments were made of bronze, in Italy as well as in France, a preference which may be accounted for by various reasons—the pleasing radiancy of new-melted bronze; the very bad quality of primitive iron; the ugly and destructive effects of rust; perhaps, also, some religious ideas, as expressed in the old Latin inscription, "Ferrum pium esto." But we may safely assert that iron tools were used in Italy as early as ten or eleven centuries B. C. To find similar implements in Sweden, we must go down to the period of the Roman Empire—a proof that an *exclusive* bronze civilization is nothing like the effect of some universal law, but a local fact special to the countries of northern Europe.

The pottery which has been gathered from the *terramare* is particularly instructive. Although very rude and unskilful, it presents the same character as most of the earliest vases found in the cemeteries of the Po valley, and in the oldest tombs in the necropolis of Corneto in Etruria. In the latter necropolis, where there appears a civilization closely connected with the culture of the *terramare*, excavations have recently brought

to light a funeral *hut-urn* of a type which had hitherto only been found in Latium. These urns are probably imitations of the pile-buildings erected by the inhabitants of the *terramare*.

A very ancient tradition, which archæological discoveries have confirmed, asserts that the Etruscans, who appear to us in the height of their power about the sixth century B. C., were not a homogeneous race, but an amalgam of two different peoples: an Italic population, superior in number, and a Tyrrhenian warlike aristocracy of Oriental origin. That aristocracy introduced into Italy the Etruscan language, a curious monument of which seems to have recently been found at Lemnos, in the northern part of the Ægean. No doubt the conquerors also brought with them Oriental works of art, which, together with the models introduced by Phœnician, Carthaginian, and Greek commerce, gave rise to imitations to which Etruscan art owes its peculiar interest and flavor. But Etruscan art, just like the Etruscan people, is not homogeneous. We see the Oriental and Hellenic influences steadily gaining ground, but the primitive stratum of Tuscan industry belongs to a far more ancient period than the Tyrrhenian conquest. If we study the cemeteries of the Villanova type, which are very numerous in Italy northwards from the Apennines, we soon discover that the bronze and iron implements found in these tombs present a most striking uniformity, and that the Oriental elements are very rare or even missing in the most ancient ones. What seems to us Oriental, in those primitive works of industry, recalls the most archaic vases from the Ægean, the rude bronzes gathered in the deepest strata at Olympia, and belongs, in consequence, to a period anterior to that of Semitic influence. Thus it has been possible to distinguish two utterly different elements in Etruscan art: (1) a layer or stage which might be called Aryan, which on Italian ground is better styled palæo-Italic, and seems to have been the common property of the people who, more than ten centuries B. C., probably more than fourteen, emigrated towards the west in following the valley of the Danube; (2) a derivative art, imitating the Oriental and the classical Hellenic style, formed under the influence of the steady commercial intercourse between Etruria on the one hand, Greece, Phœnicia, and Carthage on the other. Until quite lately, the latter element was believed to be the whole of Etruscan art, though it is only the more recent and the most superficial part of it. Thus the *Italic* art of Villanova forms a complete contrast with the *Oriental* art of Etruria. However, the culture of Villanova having lasted during many centuries, and the Etruscan power having extended to the north of the Apennines, the Villanovan art experienced, to a large extent, the influence of Hellenized Etruscanism. For that reason it is often difficult to distinguish, in the cemeteries around Bologna and elsewhere, what is Villanovan from what is Etruscan. The fibulæ with figures of animals found at Belluno by Mr. Dana Estes go to prove that the necropolis he has explored belongs to the Etruscanized class, and must rank along with the cemetery of the Certosa near Bologna, while, on the contrary, no Etruscan influence is yet to be traced in the necropolis of Villanova.

Count Conestabile, at the Congress of Bologna in 1871, proposed to distinguish four strata in the primitive ethnology of Italy, not including the period anterior to the use of metals, which is entirely involved in darkness. These immigrants, Conestabile believed, all belong to the Aryan family, but succeeded each other at various epochs and followed different ways. (1) The *Pelasgo-aborigines*, who entered the Peninsula by the Alps; they are identical with the inhabitants of the *terramare;* (2) the *Umbrians* and the *Latins*, forming the group which Mommsen calls *Italiote*, who took the same road as their predecessors, and penetrated to the southern end of Italy; (3) and (4) the *Græco-Pelasgi* and the *Tyrrhenian-Pelasgi*, who both arrived in Italy by the sea route.

We are perhaps able to define a little more the second group mentioned by Count Conestabile. It was observed a long time ago that the Italic languages, the best known of which is Latin, closely resemble the Celtic dialect; we also know that the Umbrians were, to say the least, near relations of the Celtic tribes, a result which is partly due to the excavations ordered in 1861 at Città d'Umbria by an American archæologist, Mr. Alexander Wolf. Now, the Greek writers show that the Celts, at the most ancient period of history, extended over the valley of the Danube, the valley of the Po, and Gaul. Consequently, we are induced to believe that the cemeteries of the Austrian Alps, those of the Po and the Rhone valleys, which yield monuments of very similar civilizations, equally advanced in the industry of metal, are, in reality, Celtic cemeteries. Perhaps the more recent parts of these necropolises should be styled Gaulish and not Celtic, if we admit with M. Bertrand that the Celts belong to a former migration, and that the Gauls, ethnographically connected with the Celts, subdued the Celtic populations about the fifth century B. C., thanks to their knowledge of more powerful iron weapons, and that they continued to live among or over the Celts in the manner of a conquering aristocracy. For our part, we do not hesitate to believe that the necropolis of Belluno, like that of Hallstatt and that of Alaise, near Besançon, is a Celtic, Celto-Gaulish, or Umbrian cemetery, anterior to the seventh century B. C., Celts, Gauls, and Umbrians being only considered as kindred tribes or fractions of the same stock.

Are the Celts of northern Italy the descendants of the lake-dwellers and pile-builders? Probably; but positive proofs are still wanting. We have spoken above of the pottery of Villanova, which seems to be the continuation of the pottery in the *terramare*, but the value of such an argument should not be overrated. The distinction of the Celtic and Gaulish tribes is of much more importance to history than the confusion of the lake-dwellers with the Celts.

Another Celtic tribe, the Belgians, had followed a quite different route from the Celts and Gauls of northern Italy. Instead of advancing towards the west along the valley of the Danube, they crossed the large plains of Poland and northern Germany, then ascended the valley of the Rhine and established themselves on either side of the river, especially in the northeastern part of Gaul, where Cæsar, many centuries later, still recognized them as distinct from the other Gauls. Some groups of Belgian warriors, instead of entering Gaul, made their way to northern Italy, where they joined hands with the Gaulish invaders of Carniola and Helvetia. These were the Gauls who defeated the Romans at the battle of the Allia, after having previously conquered the Etruscans; these were they who became the valorous allies of Hannibal, and remained during centuries in the north of Italy as a perpetual menace to Roman power. An archæological proof of this was given as early as 1865: in the more recent parts of the Italic cemeteries of Este and Marzabotto, weapons and personal ornaments were discovered absolutely identical with those which had come to light by hundreds in the cemeteries of Cæsar's Belgium, especially in the French province of Champaign. It is the merit of M. A. Bertrand to have shown with good arguments that the Gauls of Brennus did not come from central or western Gaul, but were rather distant relations of the other Celtic tribes established for many centuries past in northern Italy. So we understand how the Etruscans and Romans could describe the invaders as *novum et invisitatum genus hominum*—a phrase which would be almost absurd if the Celts of northern Italy or southeastern Gaul had been meant.

To conclude: we find in Italy not only Græco-Roman and Etruscan art, but a widely spread and most ancient industry, which can be ascribed with much probability to the Celtic tribes hitherto too much neglected by archæology. To that Celtic or palæo-Italic art belong the bronze and earthenware antiquities collected by Mr. Dana Estes. The collection he has brought together can easily bear comparison with any similar collection out of Italy. It is therefore sincerely to be hoped that the discoveries made at Belluno, as well as all similar objects belonging to travellers and dilettanti, may be designed and engraved with the necessary care. Much too few of these relics of ancient art have been as yet adequately published, the greater part of Italian provincial monographs being almost unattainable. Science is in want of numerous documents of that kind, well knowing that no series of antiquities better justifies Gerhard's favorite motto: *Monumentorum artis qui unum vidit, nullum vidit; qui mille vidit, unum vidit.*

SALOMON REINACH.

Correspondence.

SILVER COINAGE.

TO THE EDITOR OF THE NATION:

SIR: Can you state any reason why there should not be going on at this moment an outside coinage of silver at least equal to that of the Government? It is perfectly easy to make an absolute facsimile of the silver dollar—not a counterfeit, but the identical thing, as to weight, fineness, and stamp, so that the severest Government tests could not tell the difference. Suppose there were factories for this purpose in Europe, in Canada, in Mexico, in South America, in Africa, in China, or Japan. Nothing could be easier than to introduce them into this country, unless it is the putting them in circulation after they get here. The cash profit on the transaction would be more than 30 per cent., and what business is there in the world which will pay that profit with so little risk? When we know what the Jews will do in financing, is it unreasonable to suppose that millions of dollars may be thus infused into our currency every year without anybody being the wiser? It seems to me so strange that no more stress is laid on this by the opponents of our silver law, that I should like to ask if there is any weak spot in the reasoning.

ANTI-SILVER.

SEPTEMBER 5.

[Whatever may be said of the reasoning, the fact is that the thing is not done, although the opportunity to do it has been open ever since the passage of our silver law. It has been open equally in France, Germany, and all other countries which have a large silver circulation passing at par with gold, but intrinsically worth much less. The reason why false coining is not carried on must be that the difficulty of getting the coins into circulation and the risk of detection outweigh the profits on the transaction. Coins *exactly* like the genuine cannot be produced in a chimney corner.—ED. NATION.]

TOLSTOI, NIHILISM, AND EDUCATED RUSSIANS.

TO THE EDITOR OF THE NATION:

SIR: The writer of the article on the "Russian

Realistic Novelists" in this week's *Nation* says, about Tolstoi's 'Two Hussars,' that "it does not appear in the full and authorized edition of Tolstoi's works," and asks whence the story was taken. My edition is dated 1886, in twelve volumes. The second volume, pp. 167-243, contains this tale (*póvyešt*), and gives the date as 1856. Although the author's works are here arranged chronologically, this tale, for a reason best known to the publishers, was given a place after 'Albert,' which is dated a year later. The writer's charge that the chief interest which the educated (I greatly dislike the word "upper" which he uses) classes of Russia take in the religious writings of Tolstoi is mainly due to a need of "spiritual excitement," does injustice not only to the thoughtful minds of Russia and to human nature in general, but also, let us hope, to the writer himself. In this country and in England many rich persons devote themselves to charities, and they have often been charged with taking up these charities as a "pastime," as a "sop to their consciences." The charge against the educated Russians and their interest in Tolstoi is as unfair, I venture to think, as that against the charitable rich. There are, doubtless, *some* rich people who take up charity because it is the fashion, because they must have something to do that is more satisfactory to their better selves than the whirl of social lives which daily becomes more meaningless. There are even some rich people who take up charity because they might thus further their ambition, whether social or political. So there are, likewise, educated Russians who read Tolstoi now because everybody else reads him, because he does furnish a kind of "excitement"; but a general sweeping statement like that of your contributor is, I fear, unjustified.

This is not the place to discuss this point at length. I can only now hint in a few words the point of view from which the matter is to be looked at: *Whoever does not see in the "Nihilistic" revolutionary movement of Russia a religious movement, misreads Russian history for the last twenty-five years.* The "Nihilists" took to politics, Tolstoi takes to literature; but both are the offspring as well as the instrument of the profound religious movement which is now taking place among educated Russians. That the Nihilists themselves would be the very first to scorn the name of religious apostles, or that Tolstoi himself would probably deny that he is as much a *sign* of the current as a pilot in the current; that educated Russia itself would protest that it is utterly unconscious of any religious fermentation brewing within it (*Sturm und Drang*), is hardly to the point. The future historian of the movement of "Idti v Narod"—to go among the peasants—which is even to-day, after ten years, as much the essence of Nihilism as it was in 1872-6, will have a pretty task before him when he comes to study the relation of Tolstoi to Nihilism, and that of both to the religion of unselfishness, which is the essence of Christianity.

Respectfully, IVAN PANIN.

WELLESLEY, MASS., September 9, 1887.

DUKE GEORGE.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent in No. 1157 of the *Nation* will find the solution of his puzzle when he remembers that, though Albrecht, Duke of Saxony, father of George, died, as correctly stated, September 12, 1500, he, however, as early as 1488 transferred the reign in Saxony to his oldest son, George. The latter had, therefore, a perfect right to order him a horse in 1499 and make the order as Duke of Saxony.

The letter published by your correspondent and its accidental discovery are highly interesting.—Yours respectfully, A. V. WEISE.

SARCOXIE, MO., September 4, 1887.

CORNER LOTS AND BARBECUES.

TO THE EDITOR OF THE NATION:

SIR: The following copy of a post-bill in my possession, which was generally distributed in Kansas City, presents so unique a phase of financial speculation that I send it to you for the benefit of your readers. It deserves to be recorded in the history of finance and speculation:

BARBECUE.
Mount Wolfson will be sold at Auction
on
Thursday, July 28.
50 foot lots to the highest bidder—one-third cash.
Building loans given if desired.
Busses will leave * * * 's office at 10 o'clock morning of sale.
BRASS BAND,
FREE DINNER,
FREE RIDE,
FREE DRINKS,
DANCING IN THE EVENING.
Everybody invited.

T.

COLUMBIA, MO., September 3, 1887.

"TO CONDONE."

TO THE EDITOR OF THE NATION:

SIR: During the last twelve or fifteen years, the verb "to condone," I have noticed, has often been burdened with a sense which it seems impossible to reconcile with the etymology of the word. Two instances in point I am able to quote, and I might have quoted many more but for an accident to my papers.

Mr. Philip Robinson, in his 'Fishes of Fancy' (1883), writes, at p. 76: "The red Indian . . . deprecates the anger of the eaten thing's relations by formulas of propitiation, and hopes, by posthumous ceremonials of respect to the skull and bones and skin, to *condone* the consumption of the meat and fat." Again, Mr. Arthur W. Peel, the Speaker of the House of Commons, is reported, in the *Times* of June 24 of this year, as having said on the previous day, in administering an official reproof: "I trust that you will endeavor, for the future, to *condone* your offence . . . by a steady determination to abstain from any practices of the kind which have brought you under this severe censure." In both these cases, "to condone" is unmistakably used for "to atone," which is very different from "to pardon" or "to overlook," its older sense and its familiar modern sense respectively.

But stranger still is the phrase "to condone with," seen in the following quotation from Mr. Leslie Stephen's 'History of English Thought in the Eighteenth Century' (1876), vol. i, p. 273): "In short, the main result of the attack and defence was to lower the general tone of religious feeling, without destroying the respect for established creeds; to make men unwilling to ask awkward questions, and *condone with* their consciences by not making arrogant assumptions," etc. "Compound with" is the expression for which, apparently, "condone with" is here substituted.—Your obedient servant, F. H.

MARLESFORD, ENGLAND, August 27, 1887.

Notes.

HOUGHTON, MIFFLIN & CO. announce as the next volume in their Commonwealths Series 'Tennessee,' by James Phelan, member-elect from that State of the approaching Congress, and 'Patrick Henry,' by Prof. Moses Coit Tyler, in the Statesmen Series; and 'Franklin,' by J. B. McMaster, and 'Hawthorne,' by J. R. Lowell, in the Men of Letters Series. Their fall list also includes 'The Gates Between,' by Miss E. S. Phelps; 'The Unseen King, and Other Poems,' by Mrs. Caroline Leslie Field; a new edition, enlarged, of Mrs. Margaret F. Deland's 'The Old Garden, and Other Poems'; 'Poems,' by the late Edward Rowland Sill; 'Bird-Talk,' poems, by Mrs. A. D. T. Whitney; 'Early and Late Poems of Alice and Phœbe Cary,' not included in the Household Edition; a handy little edition of more than sixty 'Lyrics, Idyls, and Romances,' selected from Robert Browning; Longfellow's 'Evangeline' in a new oblong form, decorated with colored leaves from the Acadian forests; Lowell's 'Vision of Sir Launfal,' a holiday volume, with nine full-page illustrations and a new portrait of the author; Whittier's 'Poetical Works,' in a new Riverside Edition, making four volumes, with steel portraits; 'The Princess of Java,' a novel by Mrs. S. J. Higginson; 'Paul Patoff,' by F. Marion Crawford; 'Frontier Stories,' by Bret Harte; 'The Second Son,' by Mrs. M. O. W. Oliphant and T. B. Aldrich; 'Knitters in the Sun,' short stories by "Octave Thanet"; 'The Works of George Peele,' in Bullen's series of the English Dramatists; 'Wit, Wisdom, and Beauty of Shakspere,' selected by C. S. Ward; 'The Fighting Veres,' by Clements R. Markham; 'The History of Prussia during the Reign of Frederick the Great,' by Prof. Herbert Tuttle of Cornell University; 'The French and English in North America (1689-1763),' being volume five of Mr. Winsor's "Narrative and Critical History of America"; a small-sized issue, with reduced illustrations, of F. Hopkinson Smith's 'Well-Worn Roads in Spain, Holland, and Italy'; 'Our Hundred Days in Europe,' by Dr. O. W. Holmes; 'Memories of Coleorton,' consisting of letters from Coleridge, Wordsworth and his sister, Southey, and Scott to Sir George and Lady Beaumont, edited by Prof. Wm. Knight of St. Andrews; 'Winter,' selections from the journals of Thoreau; 'Men and Letters,' essays in criticism and characterization, by Horace E. Scudder; 'Henry H. Richardson and his Works,' by Mrs. Schuyler van Rensselaer, illustrated with thirty full-page views of this architect's buildings, from photographs, a portrait, and minor sketches; a 'Life of Ormsby McKnight Mitchel,' by his son, F. A. Mitchel; 'Three Cruises of the *Blake* (1877-1880),' by Alexander Agassiz, in two volumes; and 'Roman Excavations since 1871,' by Prof. Rodolfo Lanciani, Director of the Roman Museum.

Lee & Shepard will soon publish a book of verse, 'Meadow Melodies,' by Charles F. Gerry of Sudbury, Mass.

E. P. Dutton & Co. have in press and will publish next month, uniform in size with their edition of Faber's and Newman's Hymns, a volume of Poems by George MacDonald, selected from the four English volumes of his poetry, and for the first time collecting those scattered through his novels.

Prof. Robert Ridgway's 'Manual of North American Birds,' illustrated with numerous full-page plates, and with a portrait of the late Prof. S. F. Baird, will be published directly by J. B. Lippincott Co.

Cassell & Co. have in press Dr. Peter Bayne's 'Martin Luther: the Man and his Work.'

Geo. Routledge & Sons issue this month 'Paul and Virginia,' with illustrations by Maurice Leloir; and the 'Cotillion Almanac for 1888,' a miniature presentment of "the German."

A German Grammar, based on that of Prof. Meissner of Queen's College, Belfast, by Prof. Edward S. Joynes of South Carolina College, is promised directly by D. C. Heath & Co.

T. Y. Crowell & Co. announce 'Uli the Servant,' by Jeremias Gotthelf.

The Herder publishing-house, at Freiburg im Breisgau, has in preparation a work on 'Kanada und Neufundland,' by Ernst von Hesse-Wartegg, freely illustrated, and in very good style, with the aid of American art, to judge from the prospectus. It fills a want, the author thinks, in German geographical literature relating to

foreign parts. Newfoundland will be treated in the fourth and last chapter.

A work growing out of the interest excited in Great Britain for her colonies is an 'Introduction to a Historical Geography of the British Colonies' (Oxford: Clarendon Press; New York: Macmillan), by C. P. Lucas, who treats at some length of the four main motives of colonization—love of adventure, desire of wealth, political and social discontent and religion; next discusses the relations of climate and race, the modes of colonization and the classes of immigrants; and finally gives a brief historical account of the various colonies, beginning with those of Phœnicia and ending with the English. The characteristics of the different modern nations are well brought out. It is interesting to note the reasons given for the success of the Dutch, "their strict attention to business, involving dogged maintenance of their commercial monopolies; the rigid supervision kept over their subordinate officers; and the combination, in the case of the latter, of regular payment and systematic promotion with absolute prohibition of private trading." Their decay is attributed to the fact that "their commercial system was unprogressive and unsound." The closing chapter is on the changes in the English colonies in the nineteenth century. There are several maps, but they are on too small a scale to be of much value. This volume is to be followed by others treating of the various colonies in detail.

Half-a-dozen years ago there appeared an aggressive and suggestive book called 'American Whist,' by "G. W. P.," the author of which has now followed it by another book equally aggressive and suggestive, 'Whist Universal: an analysis of the game as improved by the introduction of American leads and adapted to all methods of play' (Boston: Ticknor & Co.). It is not intended for beginners who wish to learn whist—for these Col. Drayson's 'Practical Whist' is incomparably the best book—but for those who play whist and play it well, and wish to play it better yet. In fact, it is a sort of post-graduate course for advanced students. 'Whist Universal' is likely to be a very annoying book to most whist-players, who play by rote entirely and without thinking. One reason for the popularity of whist is that the play has been so systematized that there are rules for almost every contingency; and so great is the average intellectual laziness that most people rejoice to rely on rule, and shirk thinking. To those who really understand the underlying principles of whist, and who like to play with their minds and not with their memories, this book may be most highly commended. "G. W. P." is severe, but not unduly severe, on the chatterers who talk while playing, and on the triflers who are for ever asking to see the last trick, and on certain English writers—Mr. Campbell Walker and Mr. Proctor especially—whose alleged whist manuals are incomplete and pretentious, and probably worse than useless.

'The Startling Exploits of Dr. Quiès' (Harpers) is a translation of the latest contribution to youthful literature by M. Paul Celières, 'Les mémorables aventures du Docteur J.-B. Quiès' (Paris: Hennuyer; Boston: Schoenhof). The original has 125 characteristic illustrations by Lix. These have been well reproduced in the American edition, which forms a very handsome and well-printed volume. The translators, Mrs. Cashel Hoey and Mr. John Lillie, have done all in their power to preserve the odd humor of the French, which is at times a little strained. As to the involuntary journeyings of Dr. Quiès, they are brought about in such a forced way, there is such a sameness in his discomforts on being disturbed from his quietude, that a little adaptation and arrangement would have improved the original work. Still, pictures and all, the book presents a very pleasant view of French provincial life, which will amuse a young reader. By a strange misprint, the name of the author is spelt Celière instead of Celières on the title-page of the American edition.

'Mattie's Secret' (Geo. Routledge & Sons), by Émile Desbeaux, is one of the very numerous attempts to convey knowledge to the youthful mind by means, as it were, of sugar-coated pills. Information is given about such subjects as coal, diamonds, beer, and explosives, in language which has apparently been transferred bodily from some encyclopædia, and with far too few explanations of technical terms. The illustrations are numerous and in many instances very good. The story which forms the sugar-coating is, in no invidious sense, thoroughly French in all its characteristics, but is too slight in plot and barren of incident to insure the attractiveness of the book.

'Scapegrace Dick' (T. Whittaker), by Frances Mary Peard, is a tale of the Commonwealth. An English lad, taken prisoner in one of the numerous sea-fights in the Channel with the Dutch, is carried to Holland, where he is apprenticed to an engraver and makes friends with Titus, the son of Rembrandt. Charming pictures are given of the home of this painter, as well as of his friend, Gerard Douw of Leyden. While not strictly an historical story, there is yet considerable history interwoven with the narrative, and so skilfully that the reader can scarcely fail to have his curiosity excited to learn more of those stirring times.

A very good description of a life-saving station on the Atlantic Coast is given by the Rev. E. A. Rand in 'Fighting the Sea' (T. Whittaker). The story does not amount to much, but the reader will get a clear idea of the station-house, the duties of the surfmen, the various kinds of life-saving apparatus and their uses, along with a spirited account of a wreck and the rescue of the crew. If Mr. Rand wrote more carefully and thoughtfully, his work would be greatly improved. As it is, this book shows an advance upon the last of his which we have read.

There is a peculiar charm about Mme. Spyri's 'Swiss Stories' (Boston: D. Lothrop Co.), which both young and old will feel. They are five in number, the first, that of the herdsboy Toni, showing the most originality. Each has to do with the children of peasants, and describes in a quiet but effective manner the hardships and dangers to which they are exposed, and at the same time reveals the devotional spirit and simple piety which characterize them.

Why the Rev. W. W. Tulloch's 'Story of the Life of Queen Victoria, told for Boys and Girls all over the World,' should have been thought worthy of an American imprint (A. C. Armstrong & Son) we cannot divine. The fact that it has been "revised by her Majesty" is not decisive. One hardly knows how to characterize the eighth chapter, which is called "Sympathy with Sorrow," and is wholly given up to evidences of the Queen's regret at the death of Principal Tulloch in 1886—one of her chaplains in Scotland—and of his widow. It ends with these words: "Her Majesty has been most graciously pleased to continue the pension enjoyed by the late Mrs. Tulloch to her unmarried daughters."

The sixth annual report of the Dante Society contains a list of additions to the Dante collection in the Harvard College Library, and a Dante bibliography for the year 1886, compiled by William C. Lane.

There is nothing in the body of the *Pennsylvania Magazine of History and Biography* for October that has reference to any year later than 1787. Dr. W. H. Egle concludes his sketches of the members of the Philadelphia Convention which ratified the Federal Constitution. Extracts from Washington's diary while attending the Constitutional Convention are subsequently printed; such as relate to his fishing excursions having been already anticipated by Mr. Geo. H. Moore. There are very entertaining pictures of Philadelphia society before the Revolution in the letters of Alexander Mackraby to Sir Philip Francis, 1767–1769, of which more are to come. They are well annotated.

L'Art for August 1 (Macmillan) has mainly a literary significance, by reason of a temperate archæological discussion of the authenticity of a *fauteuil* associated with the name of Rabelais in the Museum at Châteauroux. Much evidence is given of Rabelais's frequenting the departments of Indre and Cher. The chair is figured in the text.

The *Gazette Anecdotique* (Paris: Librairie des Bibliophiles; New York: Duprat) continues to furnish the cream of the literary and artistic news. The last two numbers are specially interesting. The opéra-bouffe episode of the Boulanger letters is all given in a succinct form after a short article headed "La Boulangite," in which there is a list of portraits, songs, placards, etc., to which the disease has given rise; these already number forty-five. Besides the usual short semi-political items which the *Revue* dwells upon with its usual moderation, it contains also just enough about the recent duels, statues, expositions, and *concours* of painting, etc. In the number for August 15, the famous little story "Marie, ou le mouchoir bleu," by Béquet, of which many may have heard without ever having had occasion to read it, is reproduced in full.

M. Georges d'Heylli, editor of the *Gazette Anecdotique*, has just published a new edition of his 'Dictionnaire des Pseudonymes' (Paris: Dentu; Boston: Schoenhof). This edition, completely recast, enlarged, and brought down to date, contains only contemporary pseudonyms and more than 5,000 fictitious or real names. It is rich in biographical and anecdotal information in regard to men of letters, so many of whom, in France, write under an assumed name, or at least have more or less altered their own. An alphabetical index at the end makes the work perfectly practical. It is beautifully printed by Jouaust.

M. Paul Janet, in his 'Histoire de la science politique dans ses rapports avec la morale' (Paris: Alcan, 3d ed., 1887), writes at length upon Montesquieu and the great work of his life, the 'Esprit des lois,' which he does not hesitate to call the greatest book of the eighteenth century. M. Janet has placed this portion of his work at the beginning of the new volume published by Delagrave in his "Classiques Français": 'Montesquieu: Esprit des lois, livre i. à v' (Boston: Schoenhof). To the sixty-six closely printed pages of this introduction he has added about thirty pages of notes, which are models of clearness and conciseness, and as an appendix those books which complete Montesquieu's theory of government, and also those which have had the greatest influence upon the reformative ideas of the eighteenth century. This appendix is an addition to the text of the author of more than twice as much as is required by the official demands for examinations, which the edition is intended to meet. The compact little volume is completed by the "Éloge de M. le président Montesquieu," by D'Alembert, placed at the beginning of the fifth volume of the *Encyclopédie*.

At the head of the article which M. Ferdinand Brunetière devotes to Montesquieu in the *Revue des Deux Mondes* for August 1, he gives the titles of the three works which have appeared this summer almost simultaneously upon that author—M. Paul Janet's, as above, M. Edgar Zévort's (Lecène & Oudin), and M. Albert Sorel's (Hachette); and in his very characteristic introductory paragraph he speaks of the edition of M. Janet, the biography of M. Zévort, and the work of M.

Sorel. To consider M. Janet's luminous exposition of Montesquieu's theories as merely an "edition" for the use of classes however advanced, would be entirely to misunderstand its value, and would probably cause it to be passed over unexamined, as the critic of the *Revue des Deux Mondes* seems to have passed it over, not unnaturally.

The same *Revue*, for August 15, contains the third of M. C. de Varigny's papers on the "Oceanica of To-day." He is most entertaining in his description of the Marquesas Islands. The natives of this group, he affirms, tattoo their bodies with designs representing their genealogy and family history. The more complicated and varied the designs, the nobler and more ancient is the ancestry of the person thus decorated. One chief whom he saw was so completely covered with tattoo-marks, even in the armpits and up the nape of the neck, that he was obliged to have a noteworthy event recorded on his tongue, no other place being available. A great obstacle to their civilization arises from their reluctance to hide these highly prized records by clothing. New Caledonia is but briefly treated, the writer being evidently inclined to think that the French policy of colonizing with convicts is a mistaken one. Rabbits and the Chinese are the principal topics discussed in connection with Australia. Following this is a short account of recent events in New Guinea, and the growth of German influence and commerce in these seas.

M. Gaston Paris is now preparing a 'Manuel d'ancien français, XIe–XIVe siècle.' It will contain (1) a sketch of the history of French literature during the period named; (2) a summary grammar of Old French accompanied by the elements of its versification; (3) a choice of texts; (4) a complete glossary of the words contained in these texts. The sketch of the literary history is now in press; the three other parts are in preparation, and will be published in succession, and so that they can be bound in a single volume when completed. Meantime, M. Gaston Paris published in June last parts of this work under the title 'Extraits de la Chanson de Roland et de la Vie de Saint Louis par Joinville' (Paris: Hachette; Boston: Schoenhof). The notes of the Roland are to a great extent literary; those of the Joinville, though more grammatical, explain the usages and ideas of feudal times. The glossaries are very complete and carefully done; the first consists of fifty-five pages, the second of sixty. The whole is preceded by 170 pages of grammatical observations, making the most valuable text-book for Old French that has ever been published.

A national congress of the professors of the Italian universities will be held in Milan September 25 under the Presidency of the Minister of Public Instruction, Signor Coppino. The principal subject to be discussed is the reform of the universities.

—Prof. Alexander Johnston's article on "The First Century of the Constitution," in the September number of the *New Princeton Review*, is instructive in pointing out that "the work of the Convention was mainly that of selection from the provisions of the State constitutions," these provisions having been, in the States, "adequately discussed as well as tested by experiment." Gladstone's remark, that "the American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man," is regarded as intimating anything but a compliment to the members of the Convention, as charging them with "having deliberately hazarded the destinies of their country upon the outcome of an entirely new and untried instrument of government." Doubtless English writers have been much disposed to overlook the State constitutions, and to deal with the national instrument as a thing without antecedents. Not only such writers, but many of our own people, will be surprised to see how large a part of the great instrument whose centenary is now at hand is shown by Prof. Johnston to have been drawn from the local constitutions and the colonial experience of our people. The adoption of the United States Constitution is found to be really in the main an illustration of the general political methods of English-speaking peoples, viz: "to allow the institutions of a country to grow up simply and naturally" before fixing them permanently by legislation. It is in ordinary legislative action that Prof. Johnston finds the greatest danger of departure from our political traditions, in the view that sometimes (*e. g.*, in dealing with railroads) it is better to "pass something, anything, and then, by popular pressure here and yielding there, modify the statute itself." And the one point where, so far, there has been the strongest contrast with our traditional method, is thought to lie in dealing with the government of cities. They are deprived by over-legislation of the opportunity to develop natural remedies for the evils which they develop. Of course this is open to the remark that the cities are not merely separate municipalities, but parts of the State; and it is asking much of the State to allow itself to suffer while the city works itself clear of its poisonous matter by secular natural methods.

—Of good right, the rubric Medicine demands by far the largest space in the eighth volume of the great 'Index-Catalogue of the Library of the Surgeon-General's Office' at Washington: 177 columns are filled, though only the subdivision "Naval" has been reached. Materia Medica calls for about a third as many. To Man himself are allotted only 19, and even Life gets but 16. Of the parts of the body directly considered between Legier and Medicine, the Liver triumphs in 142 columns, while the literature of the Lungs is satisfied with 84, and of the Lips with 14. Leprosy occupies 22 columns, Lithotomy and Lithotrity 85. Among the special affections, Measles ranks first with 25 columns, followed by Malaria and Malarial Diseases with 14. Works on Magnetism—or articles (for in the present volume reference is made to 24,174 articles in periodicals, and this is the least number yet)—must be sought for in 23 columns. Among the topical entries, London leads with 35 columns, and Massachusetts comes next with 26. As a rule, the longer book-titles indicate the older books; but there are many exceptions. Their quaintness is often most amusing. We might cite 'A Letter from a physician in the Highlands, to his friend in London, on the subject of a consumptive habit, wherein he demonstrates, etc., etc.' (1747); or 'The extraordinary case of Joseph Lockier, who was struck by lightning, and existed three weeks in a wood near Bath, on water only' (1806); or 'The treasurie of health, contayning many profitable medicines, . . . with the aphorismes of Hipocrates and Jacobus de Partibus, redacted to a certaine order according to the members of mans bodie,' etc. (1535); or 'A pretious pearl in the midst of a dunghil; being a true and faithful receit of Mr. Richard Mathews's pill,' etc. (1663). Pathologic biography is illustrated by 'Die nervösen Beschwerden des Dr. Martin Luther' and 'La pathologie dans l'histoire: les maladies de Luther.' Professional dissensions are manifested in the 'Trial of William Bushnell, etc., all of Boston, for practising homœopathy while they were members of the Mass. Medical Society' (1873). But if there is much to entertain the layman who curiously turns these pages, he is also constantly reminded of the enormous and disinterested labor which has gone to the compilation of this monumental clue to what has been written for the relief of human suffering.

—If it was the first thought of those who attended the meeting of the American Library Association at the Thousand Islands this year, that there was a less eager interest displayed in library matters, a little less of the constant recurrence to library topics in conversation, which has been a marked feature of previous conventions, and undoubtedly is one of the main advantages of gathering librarians together annually—if there was any fear that the Association was going into a decline and here was the beginning of the end, it must have vanished after the first session. The flagging interest revived at once and increased in force with each succeeding day. Even outsiders were drawn into the current, and some who had come merely for the excursion, with the intention of going to one session for decency's sake, were to be seen in the front row at every session. There were, as usual, too many papers, and discussions were cut too short; for discussions, where bright ideas are struck out by the collision of minds, are more suggestive and more impressive than prepared essays. Many little practical details come out sharply stated without amplification, and one may hear the experience of a dozen talkers in the time that one writer would take to develop his thought. But there must be a preliminary paper to set the ideas of the debaters going, as in a drawing-room the conversation is liveliest after the piano-playing begins. And it is probably best that there should be too many papers; for the feeling that there is little time makes each man the more eager to say his say, and compels compact and incisive speech. The convention thus becomes an experience meeting, to the great profit of those who listen. Librarians are usually so overburdened with routine work that to induce them to do anything out of the usual run they need the impulse which comes from finding that other libraries have adopted improvements that would leave their own in the rear. They must have received many such impulses this year, for the practical hints given were numerous—on alphabeting, book-measuring, business methods, card guards, sale catalogues of duplicates, lettering, map cataloguing, besides the many hints on varied subjects that cropped out in the course of the discussions. No doubt, some were reminded in this way of devices which they had known before and forgotten, perhaps, and many got hints that will repay them for the cost and fatigue of attendance. No very startling heresy was maintained, and there was no heated conflict of opinion. The chief novelties brought forward were the recommendation of pigskin for binding, as more lasting than the other coverings, leather and duck, hitherto considered the best; the proposition to establish State bureaus of bibliography that should suggest the books to be bought by the smaller libraries—the use of their list, however, not to be compulsory. The proposition amounts to somewhat more than the publication for each State of a separate A. L. A. (American Library Association) list of selected current books; but the fact that it is urged in a State where its need seems to be strongly felt is a renewed testimony to the general want of the long-delayed A. L. A. catalogue and its continuations. We must confess that we have not much hope of seeing the want satisfied. Before anything can be accomplished there must be found in some young man a union of enthusiasm, capacity for work, learning, and judgment, that are not often united. The question of the cause and prevention of fires in libraries excited so much interest that a special report upon it was ordered for the next annual meeting.

—The President's address was devoted to an account of the rise and progress in England and

the United States of libraries supported by public taxation. He showed by the example of the Boston Athenæum that a tax-supported library need not kill off the proprietary library in the same city. It would have been well to add, however, that numerous instances show that no proprietary library (mechanics' institute, athenæum, mercantile library) can long support itself in concurrence with a public library unless it is well endowed. The historical element was further represented by sketches of three librarians, Dr. Cogswell, Mr. Jewett of the Boston Public Library, and Mr. Smith of the Library Company of Philadelphia, and by an account of the libraries of Canada, written by the most active of their librarians, Mr. Bain. The close connection of libraries and schools was urged as usual in several papers, and the advantages to be got by the libraries from another educational agent, the newspapers, was frequently insisted upon. A practical example of the similarity of their work was given when Mr. Larned of Buffalo, an ex-editor and present librarian, read an admirable report on the library architecture of the last two years, worthy to be placed beside the report on classification which he read at Buffalo. Two retrogressive papers described with commendation the British Museum system of press marks, and its method of keeping its catalogue on slips pasted in books. A back current of dissatisfaction with the card catalogue on account of its inconvenience to the user has been manifest for some time. It is possible that this peculiarly American system may be discarded by some libraries for a time; there is a fashion in these things. But we believe its cheapness will enable it to hold its ground, especially in those places where its use is facilitated, as it ought always to be, by a suitable provision of guide blocks. The four papers that excited the most attention were, first, an account of the "Seminary" system of study, with especial reference to college libraries, by Prof. Adams of Johns Hopkins University. It is, of course, an imitation of the *Seminarium*, first introduced in Germany by Prof. Ranke; but, curiously enough, it has strong points of resemblance to the method of interesting scholars in the library worked out independently by Mr. Green at Worcester and adopted by others after him. The second was a description of the Columbia College School of Library Economy by one of the students, Miss Plummer, very interesting and giving a strong idea of the enthusiasm that prevails among the students. Mr. Green's report on the school, by the way, mentioned as its only defect "a certain want of repose—in fact, a feverish atmosphere." The third paper, by Miss Burt of Chicago, though entitled "The Relation of Literature to School Work," was really an attack on written examinations, and had little connection with library economy. It was bright, amusing, but one-sided, with a little straining after effect; yet it deserved that the Association should recommend its publication to the Commissioner of Education. The fourth paper, by Mrs. Sanders of Pawtucket, was an account of her own work as librarian among a manufacturing community, and would be read with pleasure by every one who is interested in civilizing the young and helping the poor, for Mrs. Sanders does not confine herself to ordinary methods, but considers that everything which can effect her purpose is within her province. No city, for instance, has a more effective flower mission than Pawtucket. The good that these and similar agencies do would be sufficient justification for them, but it was interesting to see in her narrative how much they had redounded to the good of the library. It is not often that any pastoral work shows immediate results; but Mrs. Sanders was able to report a drunken man cured by getting him interested in books and reading. If public libraries, besides being the people's university, can be city missions also, they certainly should not fail to receive public support. The Association meets next year at St. Louis under the Presidency of Mr. Cutter of the Boston Athenæum.

—We have already spoken of the manifesto against Zola which appeared in the *Figaro* of August 18, and which was reproduced in part, with decided approbation, in most of the Paris papers of the following day. To this M. Zola has replied in *Gil Blas*, the paper that is publishing his new story, 'La Terre,' the cause of this sudden outburst of public reprobation; but he has replied in an interview with a reporter from the paper, and in a way that allows him to evade the real points at issue. He only defends himself against the serious accusations that have been made by saying, first, that he does not know the young writers who repudiate his methods; that they are not among his friends, and that if they are his disciples it is without his knowledge or responsibility. Secondly, that it is unjust to judge a work before it is finished, and that one-fourth of 'La Terre' still remains to be published. Thirdly, that what he calls *les incongruités* in that work, which are by no means all for which he has been reproached, have belonged, ever since the time of Rabelais, "de plein droit au comique français," and no one has ever thought of being offended by them. Finally, that he has invented nothing and that his types all exist. His defence, if it can be called one, is so utterly futile that he begins by saying he shall make no reply to the declaration of "ces messieurs," whose opinion he does not care for because he does not know them. The only one, he then says, "que je connaisse quelque peu—mais si peu!" is M. Bonnetain. "Je crois bien qu'il est venu une fois chez moi," to ask a favor of him, and he adds that he met him once afterwards at a dinner given by Alphonse Daudet, "et c'est tout."

—The next day a reply from M. Bonnetain appeared in *Figaro*. "Mais si, mon cher Maître, vous nous connaissez tous!" he says; "we could make volumes of your letters, and we have had the honor of seeing you, of applauding you oftener than it pleases you to remember," and he even gives a portion of a letter to himself written by Zola in 1883, filled with paternal advice in regard to his literary work, and begging him "de faire simple et de faire tranquille." Such advice, M. Bonnetain adds, he has given to all of them, and he tells us that the title of his own early work, 'Charlot s'amuse,' for which he was prosecuted as being an offence against public morals, though acquitted, was given to it by Zola himself. He adds that this sin of his literary youth has done more to make him known than "beaux et bons livres" have done for his companions, Rosny, Descaves, Margueritte, and Guiches. In a few energetic lines he reiterates the original charges, which he considers fully justified by the "demi-silence" of Zola, who has nothing to say in defence of the literature of his *décadence*, of 'La Terre' especially, the "malpropretés" of which cannot be excused for æsthetic reasons, since they are lacking completely in artistic treatment, and cannot be sheltered under the mantle of "la vérité quand même," since they are deliberately sought for, born of the imagination of the author, and not of his observation. He speaks with vigor of the uselessness of much of Zola's offensiveness, which could only be justified by necessity, by strict truth of observation, and by artistic treatment. He ends by recalling to mind that in the way of violence and hardihood of language and of situations, and, indeed, of all that he and his friends reprobate in 'La Terre,' he himself began as Zola is now proceeding; that in renouncing all this he voluntarily gave up the great profits and the great success of his first works, while by a contrary proceeding Zola has continually multiplied the editions of his own novels. To those who wish to pursue this controversy further, we can recommend M. Anatole France's summing up in the *Temps* of August 28.

—Dr. Alexander Schmidt, author of the 'Shakspere Lexicon,' died in Königsberg, June 27. He was born on Russian territory, of German parents, in 1816. His father not prospering in his profession of medicine sufficiently to maintain a large family, removed to Prussian soil, and died after thirty years' practice as Kreisphysikus, greatly regarded. Alexander Schmidt was the schoolmate of Dr. Hagen, the eminent professor in the Cambridge (Mass.) Museum of Comparative Zoölogy. He studied philology in Königsberg, became a teacher in Danzig, and in 1855 was appointed Director of the Realgymnasium at Königsberg, an office which he held thirty years. He was a man of extraordinary energy and industry, of high aims, and beloved by all that knew him. The 'Shakspere Lexicon' appeared in 1874, has lately come to a second edition, and cannot be superseded. It is written in English, and in good English, and will have a much wider use than it could have had if composed in German. Nothing that existed before it is to be compared with it—indeed, the few pages of grammatical observations at the end of the second volume are by themselves of more value than anything that was ever written by anybody else on the language of Shakspere. Dr. Schmidt also edited "King Lear," "Coriolanus," and "Julius Cæsar," with German notes, and wrote an essay on the Sonnets. Shakspere was not the only English author that he treated: Milton and Walter Scott received his attention. A very poetical translation of the war songs of the Carlists is spoken of, and no doubt the notices which his death will call forth in Germany will bring out much more. With all this, Schmidt was unwearyingly devoted to the interests of the school over which he presided.

CABOT'S EMERSON.

A Memoir of Ralph Waldo Emerson. By James Elliot Cabot. In two volumes. Boston: Houghton, Mifflin & Co. 1887. Pp. vii, 809.

THE lovers of Emerson have a great happiness in store for them, in the reading of these two handsome volumes. Mr. Cabot has taken a modest view of his duty; he has not attempted an estimate of Emerson or of his just place among the men and the spiritual forces of his generation. He has rightly judged that the time has not yet come for that. Speakers and writers are not wanting who have thought it well to enter upon that topic, but they have seldom had much success in it. Mr. Cabot is no such person. His cool and lucid mind has justified the confidence which Emerson reposed in it, and we have here something very different from the rhapsodies of the Concord "School of Philosophy." Emerson knew just what he was doing when he named Mr. Cabot as his literary executor—a friend of many years, whose severe, accurate, and just habits of mind he greatly valued.

"My object in this book," says the writer, "has been to offer to the readers and friends of Emerson some further illustrations, some details, of his outward and inward history, that may fill out and define more closely the image of him they already have, rather than to attempt a picture which should make him known to strangers, or set him forth in due relation to his surroundings or to the world at large. . . . My aim has been to use these opportunities to furnish materials for an estimate of him, without undertaking any estimate, or interposing any comments beyond what seemed necessary for the better understanding of the facts presented. Where I may

seem to have transgressed this rule, I am in truth for the most part only summing up impressions gathered from his journals and correspondence, or from the recollections of his contemporaries."

What we find, then, in these volumes, is an admirably stated narrative of the facts of Emerson's uneventful life, some account of his ancestry, large extracts from Emerson's journals, "of which there is a full series from his college days [the junior year, 1819-20; vol. i, p. 55] onwards almost to the end of his life," and a considerable number of his letters. Interwoven with these are accounts of Emerson's nearer friends and of his relation to some of the leading events and movements of his time. In touching what used to be known as Transcendentalism, and in considering Emerson's persistent desire and effort to deal with what he called the "Natural History of the Intellect," we have instances of that apparent transgression of his rule not to venture upon any estimate of Emerson, or to interpose any comments beyond what was necessary to an understanding of the facts, which Mr. Cabot lays down in the above-quoted passage from the preface. Such, then, in general, is the nature of these two small octavo volumes.

"He who would not be frustrate of his hope to write well hereafter in laudable things, ought himself to be a true poem"; so said the great Englishman whose "soul was like a star and dwelt apart." Emerson was of the same mind, and kept this lofty faith through a long life. "I have been entirely free," says now the writer of his life, " . . . from the gravest embarrassment that can meet the biographer of a man of letters who aspired to be a public teacher—I mean the traces of a discrepancy between the teachings and the character." This will not surprise anybody, but it is a beautiful and impressive fact. The testimony is all one way as to the charm and nobility of Emerson's daily walk and conversation. "He was to my senses," said Henry James, the elder (a man who found it hard to understand him), "a literal divine presence in the house with me. . . . No man could look at him speaking (or when he was silent either, for that matter) without having a vision of the divinest beauty." "His most transient guests," said Harriet Martineau in 1835, "owe to him their experience of what the highest grace of domestic manners may be." When he was in England, a dozen years or more afterwards, Crabbe Robinson quoted as "admirably describing" him these other words of Miss Martineau: "There is a vague nobleness and thorough sweetness about him which move people to their very depths without their being able to explain why. The logicians have an incessant triumph over him, but their triumph is of no avail. He conquers minds as well as hearts wherever he goes, and, without convincing anybody's reason of any one thing, exalts their reason and makes their minds of more worth than they ever were before." One of his companions in his journey to California, when he was nearly seventy years old, says the same thing: "It was the behavior of one who really *believed* in an immortal life, and had adjusted his conduct accordingly; so that beautiful and grand as the natural objects were among which our journey lay, they were matched by the sweet elevation of character and the spiritual charm of our gracious friend."

These impressions of persons who had seen him and felt the pure and subtle charm of his presence are the same in kind with those which affected his readers who had never seen him. For many years his daily mail brought him from far and near the ardent expressions of persons who had been aroused by his writings; in whose hearts they had had the power, as Wordsworth says, of "The Last Supper," in the Refectory at Milan, to

> " erase
> (At least for one rapt moment) every trace
> Of disobedience to the primal law";

who had felt as Matthew Arnold did after reading the 'Essays':

> "O monstrous, dead, unprofitable world,
> That thou canst hear, and nearing hold thy way!
> A voice oracular hath pealed to-day,
> To-day a hero's banner is unfurled."

In these new volumes of the 'Life,' the same feeling will be roused and confirmed: from beginning to end there is the same "open vision of things spiritual," the same aspiring, intrepid soul, the same obedience to the heavenly vision. It was in 1866, at the time of his grand climacteric, that he wrote the poem "Terminus," and sang so nobly, and, it is good to think, so truly:

> "As the bird trims her to the gale,
> I trim myself to the storms of time,
> I man the rudder, reef the sail,
> Obey the voice at eve obeyed at prime:
> 'Lowly faithful, banish fear,
> Right onward drive unharmed;
> The port, well worth the cruise, is near,
> And every wave is charmed.'"

Emerson was born in Boston on May 25, 1803, his father being the minister of the First Church in that town. He died in Concord, Mass., on April 27, 1882. In these two places (not without a few journeys and an occasional brief stay elsewhere) his whole life was passed. He studied for the ministry, and became in 1829 the colleague of Henry Ware, jr., as minister of the Second Church in Boston, and soon afterwards its sole minister. After a little more than three years he resigned this place in 1832, owing to certain difficulties about administering the rite of the Lord's Supper, and was never again settled as a preacher; although he preached pretty regularly for a long time afterwards (once filling a pulpit for several years), and, occasionally, down to the year 1847. His occupation and principal means of support, after leaving the Second Church, were found in lecturing. Mr. Cabot, in an appendix, has given a list of these lectures, with abstracts of such as have not been printed. They run from 1833 (printed, by mistake, 1832) down to 1881 inclusive, a period of almost exactly fifty years; but after 1872 few, if any, of the addresses were the source of any income. During the settlement over the Second Church Mr. Emerson was married, and also lost his wife, by her untimely death, after about a year and a half, in 1831. She left no children. His wife's estate came to him after her death, and gave him a moderate income. In 1835 he married again, and his wife and three children now survive him. He was obliged to work hard and to practise a strict economy all his life until, in the later years of it, he was relieved through the careful management of his property by his son-in-law and the increased income from his books. His father had died before he was eight years old, leaving the family very poor; so that, in 1814, during the war, when flour was seventeen dollars a barrel in Boston, the family had to retire to the hospitable refuge of the Old Manse at Concord until peace came. While Emerson was in college he was the "President's Freshman," and was also a waiter at Commons. In our later war, in 1862, he wrote to his brother William:

> "The 1st of January has found me in quite as poor a plight as the rest of the Americans. Not a penny from my books since last June, which usually yield five or six hundred a year; no dividends from the banks or from Lidian's Plymouth property. Then almost all income from lectures has quite ceased; so that your letter found me in a study how to pay three or four hundred dollars with fifty. . . . I have been trying to sell a wood lot at or near its appraisal, which would give me something more than three hundred, but the purchaser does not appear. Meantime we are trying to be as unconsuming as candles under an extinguisher, and 'tis frightful to think how many rivals we have in distress and in economy. But far better that this grinding should go on, bad and worse, than we be driven by any impatience into a hasty peace, or any peace restoring the old rottenness."

"For the filling of his purse," says Mr. Cabot, "the only means he could invent was lecturing. As his name grew more widely known, . . . he could, with much travelling, collect fees enough to fill the ever-yawning gap betwixt income and outgo, though never much more than fill it. . . . He writes to Mr. Alexander Ireland in 1847 that the most he ever received was $570 for ten lectures: in Boston, $50; in the country lyceums, $10 and travelling expenses. . . . So it came about that all these years in the forties were years of unremitted watchfulness and sometimes anxiety to keep out of debt." April 4, 1840, he writes to his brother William: "I got home yesterday morning. I crowed unto myself on the way home, on the strength of my $300 earned in New York and Providence. So should I pay my debts. But pride must have a fall: the Atlas Bank declared no dividend; so I find myself pretty nearly where I was before."

Lecturing was often a very laborious and very odious task. In 1839 he thinks that he will never do it after his next course; but "lecture he did every winter but one from the time he came to Concord so long as he was able; gradually extending his field from year to year towards the West." "There was something questionable, if not repugnant, to him in thus bringing his thoughts to market. 'I feel [he writes in his journal] that my life is frivolous and public; I am as one turned out of doors; I live on a balcony or on the street'; and he is constantly resolving to withdraw." "This climate and people [he says of a winter trip to the West] are a new test for the wares of a man of letters. All his thin, watery matter freezes; 'tis only the smallest portion of alcohol that remains good. At the Lyceum the stout Illinoisian, after a short trial, walks out of the hall." Again: "'Twas tedious, the obstructions and squalor of travel. The advantage of these offers made it necessary to go. It was, in short—this dragging a decorous old gentleman out of home and out of position to this juvenile career—tantamount to this: 'I'll bet you $50 a day for three weeks that you will not leave your library, and wade and freeze and ride and run and suffer all manner of indignities, and stand up for an hour each night reading in a hall'; and I answer: 'I'll bet I will.' I do it and win the $900." This appears to have been in the fifties. He writes in March, 1851, from Pittsburgh, of having spent two nights "in the rail-cars and the third on the floor of a canal-boat, where the cushion allowed me for a bed was crossed at the knees by another tier of sleepers as long-limbed as I, so that in the air was a wreath of legs"; in January, 1856: "A cold, raw country this, and plenty of night travelling and arriving at four in the morning to take the last and worst bed in the tavern." From Michigan, in February, 1860, he writes of riding in a buggy forty-eight miles to Grand Rapids; then, after lecture, twenty more on the "return." In 1867 (being then sixty-four years old) he "had the pleasure of crossing the Mississippi in a skiff with Mr. ——, we the sole passengers, and a man and a boy for oarsmen. . . . Much of the rowing was on the surface of fixed ice, in fault of running water. But we arrived without other accident than becoming almost fixed ice ourselves; but the long run to the Tepfer House, the volunteered rubbing of our hands by the landlord and clerks, and good fire, restored us." Emerson found much to compensate him in these journeys; they enlarged his knowledge of men and manners. They must have been of peculiar value in this respect to one whose studies and whose habits of mind would otherwise have kept him too much retired.

Besides this enforced travelling, Emerson went three times to Europe, and twice or thrice made long journeys at home—to Florida soon after it was acquired by our Government; again to the

South with his wife in 1830; and to California in 1871. Several of these journeys were compelled by the condition of his own health. Three or four of his brothers had fallen by the way, one when very young, and two brilliant and most promising men, Edward and Charles, who, after graduating at Cambridge and preparing for the bar, had been carried off by an affection of the lungs. Waldo was also in danger. It seems easy now to see that the hardships of the early life of these children, the rapid and undue development of their intellects ("I found there," says Dr. Furness, "the pressure of I know not how many literary atmospheres"), and the slight attention that seems to have been paid to the physique of children in those days, must have laid the foundation of trouble. Emerson says that the doctor told him, when he was a boy: "You have no stamina." Having entered college at fourteen (not an unusual age then), and graduated in 1821 in a class of fifty-nine, somewhere above the middle of it in rank, and taught school for three years and more, and having then, in February, 1825, entered the Divinity School at Cambridge, he was driven away, in a month, by poor health and failing eyes. He returned the next year, and was "approbated to preach" in October, 1826, and preached his first sermon on the 15th of that month in the church of his uncle, the Rev. Samuel Ripley, at Waltham. Before the year was out he was threatened by disease of the lungs, and was sent to the South in a sailing vessel. He went as far as St. Augustine, and returned in June, 1827, pretty much restored. In 1832, after the separation from his church, his health gave out again, and on Christmas Day he went in a sailing vessel to the Mediterranean. He was at home again, restored, in October, 1833; but as late as 1843 he seems to have been occasionally troubled with "tenderness of the lungs." It was on this journey that he first saw Carlyle. He went through Italy to Geneva and Paris, and then to London. In the same autumn of his return he began his new career as a lecturer. His next visit to Europe, in October, 1847, was in answer to an invitation from his friend Alexander Ireland to come over and lecture; he returned in July, 1848. In October, 1872, after the burning of his house and an illness consequent upon the excitement and exposure that attended that event, he went again to Europe, and even as far as Egypt, and returned, well, in May, 1873.

After his first return from Europe, he seems, for the most part, to have been strong and well. It was his habit to take long walks in the afternoon. "I count myself," says Mr. Cabot, "a good walker, but I used to find myself kept at a stretch when I walked with him in the Concord woods, when he was past seventy. . . . A life so much in the open air no doubt had gradually strengthened an originally feeble habit of body." His eyesight was strong, and "he used no glasses in reading his lectures until he was sixty-four." His preface to Prof. Goodwin's revision of the translation of Plutarch's Morals, written in the summer of 1870, is mentioned by Mr. Cabot as being probably "his last effort at composition." He lectured, of course, after this, and 'Parnassus' was published in 1874, and the volume entitled 'Letters and Social Aims' a year or two later than that; but the original work in these books and papers was of an earlier date. During the last years of his life Emerson's powers of speech failed him to some extent, and also his memory; but up to the end he never, as the phrase is, had "lost his mind." "'A queer occasion it will be [he said, when he was to read a lecture at the Concord Lyceum in 1878]—a lecturer who has no idea what he is lecturing about, and an audience who don't know what he *can* mean.'"

"To me," Mr. Cabot beautifully says of his later years, "there was nothing sad in his condition; it was obvious enough that he was but the shadow of himself, but the substance was there, only a little removed. The old alertness and incisiveness were gone, but there was no confusion of ideas, and the objects of interest were what they always had been. He was often at a loss for a word, but no consciousness of this or of any other disability seemed to trouble him. . . . He liked, perhaps, to listen rather than to talk. He 'listened and smiled' as a man might who was recovering from illness, and felt himself removed for a time from his ordinary activities; but he often talked freely. . . . In general, his memory of persons was good, even though they might be recent acquaintances. Sometimes there was a strange lapse, as once when I asked him about John Sterling, with whom he had been in correspondence up to the time of Sterling's death. He could not remember to have heard the name."

The very gradual coming on of this state of things is dated by Mr. Cabot from as early a period as 1870 and 1871, the time of Emerson's University lectures at Cambridge. He seems to have undertaken then a work to which, as it proved, he was unequal, the "taking up and completing of his sketches of the 'Natural History of the Intellect,' which he appears to have regarded as the chief task of his life." He did not accomplish what he wished. It may be surmised that neither the thing itself which he had in view nor his own methods were well adapted to a course of academic lectures. At any rate, "the effort of the Cambridge course," says his biographer, "had left a strain upon him from which he never recovered; or perhaps it only betrayed the decline which had already begun." It has been commonly thought that this decline was only manifested after the burning of his house in 1872; and we cannot but think that the reader would get (from the statements on p. 651, for example) the impression of an earlier and more rapid change than actually happened.

Emerson, without having any special skill in the care of money or the management of his affairs, was always careful, exact, and faithful in these matters. Charming pictures are given of his relations to his family. "Here sits Waldo beside me on the cricket," he writes to his wife from his study in 1838. ". . . News comes from the nursery that Hillman has taught him A and E on his cards, and that once he has called T. All roasted with the hot fire, he at present gives little sign of so much literature, but . . . has just now been singing, much in the admired style of his papa, as heard by you only on several occasions." This was the little boy whose death in 1842 was lamented in that lofty rhyme the "Threnody," and of whom he writes to Miss Fuller in 1844:

"My divine temple, which all angels seemed to love to build, and which was shattered in a night, I can never rebuild; and is the facility of entertainment from thought, or friendship, or affairs an amends? Rather it seems like a cup of Somnus or Momus. Yet the nature of things, against all appearances and specialties whatever, assures us of eternal benefit. But these affirmations are tacit and secular; if spoken, they have a hollow and canting sound. And thus all our being, dear friend, is evermore adjourned. Patience and patience and patience! I will try, since you ask it, to copy my rude dirges to my darling and send them to you."

On the birth of his first grandchild, he writes to his daughter: ". . . Fair fall the little boy. . . . It is long before he will come to himself, but I please myself already that his fortunes will be worthy of these great days of his country; that he will not be frivolous; that he will be noble and true and know what is sacred." See, too, the letter to his daughter at school, on page 489, beginning: "Finish every day and be done with it. For manners and for wise living it is a vice to remember." Even in these domestic letters there is the same high strain of thought and feeling which is found in his essays, which appeared, indeed, in all his speech, as it appeared also in his looks and his lovely daily manners—so that to see him walking in a city street would sometimes give one a better notion of a truly kingly person than any he had had before—so serene and commanding an expression was in his face, such "looks commercing with the skies." When he writes a lover's song "To Eva," the noble passion of it has in it his deepest philosophy:

"O fair and stately maid, whose eyes
Were kindled in the upper skies
At the same torch that lighted mine:
For so I must interpret still
Thy sweet dominion o'er my will,
A sympathy divine:

"Ah! let me blameless gaze upon
Features that seem at heart my own;
Nor fear those watchful sentinels,
Who charm the more their glance forbids,
Chaste glowing underneath their lids
With fire that draws while it repels."

Emerson had few intimate friends. He was all his life a student and never a man of the world; and he often complains of what he calls his "porcupine manners" with strangers, of his inability to get on easily with people, of the "deoxygenation and asphyxia" that come upon him in large social gatherings. It is probable that Emerson, with his large conceptions of what a man might be, expected of himself on such occasions what others did not expect of him. His own rule and method in conversation was that of nature: "The great mother Nature," he writes to his daughter, "will not quite tell her secret to the coach or the steamboat, but says, One to one, my dear, is my rule also." Henry James, the elder, a robust person, dogmatic, and of a very different fibre, resented Emerson's delicate ways, and speaks of him as keeping "one at such arm's length, tasting him and sipping him and trying him to make sure that he was worthy of his somewhat prim and bloodless friendship." Margaret Fuller also made many a vigorous and direct assault upon his hiding places, but with no success. The only really close and intimate friendships that he seemed to have were with those of his own household (his brothers especially), and one or two others—like Miss Elizabeth Hoar, who had been engaged to be married to his brother Charles, and was really a sister to him, and with Dr. Furness—"oldest friend of all," he writes in 1875, "old as Mrs. Whitwell's school, and remembered still with that red-and-white handkerchief which charmed me with its cats and dogs of prehistoric art, . . . and so on and onwards, but always the same, a small mutual-admiration society of two." "Furness," he writes in 1843, "is my dear gossip, almost a gossip for the gods, there is such a repose of worth and honor in the man." But, of course, as is well known, he held friendly and cordial relations with very many persons, and heartily admired some of these; although, as it is instructive to see, in the case of some of them, with no blind admiration.

Interesting as this memoir proves itself in its details of Emerson's life and habits and daily surroundings, its chief attraction lies in the light which it throws upon Emerson's writings, his aims, and his way of thought. One remarks the quiet and level-headed way in which he settles down before his problems from time to time and looks at them on all sides; his largeness of mind; the persistence of his aims; his secure and absolute faith in the highest doctrine that he inculcates. His journals contain his intimate talks with himself; and in them he discusses the religious questions of his earlier life, the slavery controversy, proposed social reforms, the sayings and the quality of his friends. No one could doubt where he stood upon the issues involved in the slavery question and some other leading reforms of his period. But it is very striking indeed to read his private statements about some of these things. A remarkable letter, "without address or date, but written, I conjec-

ture, about 1840" (vol. ii, p. 453), states his general position as to social reform, and is well worth reading. Of a leading abolitionist, he says in his journal, "—— is venerable in his place, like the tart Luther; but he cannot understand anything you say, and neighs like a horse when you suggest a new consideration, as when I told him that the fate element in the negro question he had never considered."

He began writing verse when he was a mere child, and while in college wrote a poem for the "Pythologian Society," and also his class poem, "which," says a classmate, not without ambiguity, "was pronounced superior to the general expectation." In his college notebooks he collected phrases "for use poetical." While his main work in life was that of lecturing, yet this, says Mr. Cabot, "was after all a *pis aller*, an expedient, not the mode of utterance to which he aspired. *That* was verse; not so much, I think, from a direct impulse towards rhythmical expression as for the sake of freer speech; because, he says, we may speak ideal truth in verse, but we may not in prose." Had Emerson been free enough from the constant pressure of his bread-winning task of lecturing to cultivate more fully the practice of "rhythmical expression," it may well be doubted, not only whether he would not always have held the form too subordinate to the thought, to reach or long hold the highest regions of poetry; but also whether he had the right temperament, in point of breadth and scope, for the highest success. He was indeed a great and admirable poet in a certain sense, and he often and rightly called himself a poet. But he himself indicates what he means by this. Before his last marriage, in 1835, he wrote to the lady who was to be his wife: "I am born a poet, of a low class, without doubt, yet a poet. That is my nature and vocation. My singing, be sure, is very husky, and is for the most part in prose. Still, I am a poet in the sense of a dear lover of the harmonies that are in the soul and in matter, and specially of the correspondences between these and those." Again, in 1842, he writes to his wife of Horace Greeley and the Socialist, Brisbane: "They are bent on popular action. I am, in all my theory, ethics, and politics, a poet; and of no more use in their New York than a rainbow or a firefly. Meantime," he adds, with a touch of the delightful wit that was always characteristic of him, "they fasten me in their thought to 'Transcendentalism,' whereof you know I am wholly guiltless, and which is spoken of as a known and fixed element, like salt or meal." Again, in his journal, "Expression is what we want. . . . I don't know but I value the name of a thing, that is, the true poet's name for it, more than the thing. If I can get the right word for the moon, or for its manners and influences, the word that suggests to me and to all men its humane and universal beauty and significance, then I have what I want of it." It was a cast of mind, that of the idealist, and a way of dealing with things and with thoughts, that Emerson meant when he talked of himself as a poet; it had nothing to do with what he calls "the tinkling serenader's art." "Study, with him," says Mr. Cabot, "was mainly the study of expression; not the rounding of periods, but the effort to reproduce the impression precisely as it was received. If he was sometimes led astray by what he calls 'the point and surprise of a sentence'—his own or another's—how little he was willing to sacrifice to literary form, is shown by the stumbling-blocks he constantly allowed to remain in his verse. His chief, one may almost say, his sole, aim was to write in close contact with life and reality."

As regards his own style and mode of communicating his thoughts in his formal writing, Mr. Cabot confirms the statements already sometimes made, that Emerson used his journals "as a quarry," and whenever he had a lecture to write gathered from under the appropriate heads what suited his purpose—passages that had been written when the high mood was on, and which bore what he calls "the essential mark of poetry . . . that it betrays in every word instant activity of mind." This, of course, gave a fragmentary quality to his work. But it is also to be observed that, originally, he probably adopted out of set purpose somewhat of his style and method. He was, as we have seen, "a poet," and so regarded himself; and he sought to convey his thoughts after the poet's method—not indeed, in most of his writings, in rhyme or rhythm, but in ways very different from those of the ordinary philosopher and man of letters. Mr. Cabot says that in June, 1835, he finds in Emerson's journal the beginning of an attempt to expound the First Philosophy—"that is, he says, the original laws of the mind, the science of what is, in distinction from what appears." He gives a specimen of it, and adds: "He did not proceed far with the attempt to write out in plain prose the fundamentals of Transcendentalism. They are to be felt as sentiments, religious emotions, or grasped by the imagination in poetic wholes, rather than set down in propositions. For himself, at any rate, a freer mode of speech was needed. This he attempted in Nature." This "freer mode of speech" was, indeed, prose, but it was a very striking and peculiar form of prose. It addressed the imagination; largely it was written in the mood of the poet, to be read accordingly. And so sometimes the words have a high music of their own. Of the noble lines on "The Seashore," beginning,

> "I heard, or seemed to hear, the chiding sea
> Say, Pilgrim, why so late and slow to come?"

we have been authentically told that they were originally written as prose in Emerson's journal at the seashore, without any thought of their having a rhythmical form; and that when it was observed that what was written fell into verse, not more than two or three slight changes were made in arranging it as it now stands. This "freer mode of speech"—not without its own faults and drawbacks—has troubled many people, and even stirred Bishop Whately to open revilings in the preface to his edition of Bacon's Essays, where, without naming Emerson, he makes a series of disjointed, misplaced, and garbled extracts from the Divinity Hall address, and utters amusing heavy-handed and heavy-headed maledictions.

There is very much more which one would like to quote or to make the subject of comment. Let us rapidly note a few things. In speaking to some of his early pupils later in life, he says: "I was . . . already [1821-1824] writing every night, in my chamber, my first thoughts on morals and the beautiful laws of compensation and of individual genius which to observe and illustrate have given sweetness to many years of my life." This was the keynote of very much of his thinking—the observation and noting of the working of the spiritual and moral laws. In 1848, while he was trying to prepare some lectures on "The Natural History of the Intellect," he writes to his wife: "I foresee plainly that the trick of solitariness never, never can leave me. My own pursuits and calling often appear to me like those of an astronomer royal, whose whole duty it is to make faithful minutes which have only value when kept for ages, and in one life are insignificant." He was constantly "soliciting the soul," in search of new manifestations of the invisible Power behind all phenomena, and new illustrations of its operation in man and nature. In the conduct of the intellect, he says, "the ground position is that the intellect grows by moral obedience."

Curious and amusing details of earlier New England life and politics are found in some of the letters in the first volume, but these we must omit. Emerson's first lectures were on topics connected with natural history. After commenting in one of them on the accuracy and clear discrimination that these studies induce, he adds: "What pity, instead of that equal and identical praise which enters into all biographies and spreads poppies over all, that writers of character cannot be forced to describe men so that they shall be known apart; even if it were copied from the sharp marks of botany—such as dry, solitary, sour, plausible, prosing; which were worth a graveyard of obituaries." Of certain tedious and afflicting persons that flocked to him, he writes in his journal: "Could they not die, or succeed, or help themselves, or draw others, or draw me, or offend me? In any manner, I care not how, could they not be disposed of, and cease to hang there in the horizon, an unsettled appearance, too great to be neglected, and not great enough to be of any avail to this great craving humanity?" "Carlyle, too," he writes to his wife, in describing his London lectures, "makes loud Scottish-Covenanter gruntings of laudation, or at least of consideration, when anything strikes him, to the edification of the attentive vicinity." Of Carlyle's style, he writes in his diary: "O Carlyle, the merit of glass is not to be seen, but to be seen through; but every crystal and lamina of the Carlyle glass shows."

Of Alcott, whom Emerson greatly admired, but with many shrewd qualifications which it is curious to read, Emerson said: "When I go to talk with Alcott, it is not so much to get at his thoughts as to watch myself under his influence. He excites me, and I think freely." "It would be a pity," he said, "if Alcott should survive him, since he alone possessed the means of showing to the world what Alcott really was." At p. 281 one may see the indications of what he would have said.

"The morning," says Mr. Cabot, "was his time for work, and he took care to guard it from all disturbance. He rose early and went to his study, where he remained until dinner time, one o'clock, and in the afternoon went to walk. In the evening he was with his family, sometimes reading aloud, or went to his study again, but never worked late, thinking sleep to be a prime necessity for health of body and of mind. He was a sound sleeper, and never got up at night, as some one has fancied, to jot down thoughts which then occupied him."

But we must stop, for these quotations are already too much extended. And yet many of the chief things which we wished to quote must be left. Mr. Cabot appears to us to have done a difficult task with singular skill and success. The chief regret with which one lays down the book is that he has not given us more; and yet here also we must agree with him, in not carrying the 'Life' beyond its present size. But there are those who crave a sight of all that Emerson has written which is not too sacred for the public eye, and it may be hoped that they will some day be gratified. Emerson's writings have still a great future before them, and all that can throw light upon them has the greatest interest.

LORD SHAFTESBURY.

II.—HIS WORK.

The Life and Work of the Seventh Earl of Shaftesbury, K.G. By Edwin Hodder. 3 vols. Cassell & Co.

LORD SHAFTESBURY was a Peer, a Tory, and an Evangelical; yet Lord Shaftesbury's work was the inauguration of a social revolution. What sounds even stranger is, that his high lineage, his Toryism, and his old-fashioned religious orthodoxy were the causes of his success as a revolutionist.

"The social reforms of the last century have not been mainly due to the Liberal party; they have been due to the influence, character, and perseverance of one man—Lord Shaftesbury." "That," said Lord Salisbury, "is, I believe, a very true representation of the facts." The Duke of Argyll should have restricted his observation to the last "half century"; otherwise we may agree with Lord Salisbury that the Duke's words are in a general way a true representation of the facts. When Lord Shaftesbury began his political career, there were in existence both Tories and Reformers. The Tories, however, were opposed to all great changes, and were still under the influence of the reaction against Jacobinism. Peel was educating or misleading his party, but his followers of 1826 or 1827 agreed with the sentiment of George III., that the British Constitution was "the most perfect of human formations." The Reformers, on the other hand, were Whigs, or men influenced by Bentham. The reforms sought for aimed either at changes in the distribution of political power, or at the removal in all directions of impediments to individual freedom of action. One class of changes may be fairly represented by Lord Russell and the Reform Act, the other class by Cobden and the repeal of the Corn Laws. Lord Shaftesbury had, from position and turn of mind, little sympathy with either political or economical innovation. He opposed the Reform Bill, he disbelieved in the blessings of free trade. There was, however, one kind of improvement which enlisted his sympathies from his earliest years: from the beginning to the end of his career he aimed at protecting by the power of the State any class of human beings—such as lunatics, factory children, boys employed as chimney sweeps—who in his judgment could not protect themselves. To judge from his diaries, the force which impelled him along the path which he found or cut out for himself was compassion for suffering strengthened by a sense of religious duty. It is difficult to see that, when he began public life at least, he had any clear theory of the principles on which the relation of the State to individuals should be regulated. The only thinker who greatly influenced him was a writer whose works would hardly now be known, but for the fact of his having told the life of Nelson and the life of Wesley in a manner which makes it difficult for any one to tell these lives effectively again. Robert Southey's poetry is dead; his speculations on social or political questions are, it may be supposed, mainly known to the majority of readers through a slashing attack of Macaulay's upon 'Colloquies on the Progress and Prospects of Society.' But to judge from the testimony afforded them by more than one biography, Southey's character was far more impressive than his writings, and Southey's views of society, whatever their speculative merits or defects, anticipated ideas which at the present day exert an immense and acknowledged force. Southey, though a Tory, was never a Conservative; he might almost be described as a Carlyle without Carlyle's contempt for humanity and benevolence. His political creed appears to have been that while the educated ought to be the leaders of the people, the power of the State should be used for the benefit of the poorer classes.

A good deal of Southey's opinions was certainly assimilated by Lord Shaftesbury. He no doubt never advocated anything which he himself would have considered, or which could fairly have been represented, as Socialism. But he did altogether repudiate—in practice, at any rate—the theory of so-called *laissez-faire*. Hence he came into sympathy with much of the natural, as distinguished from theoretical, Socialism of the working classes. Men whose lives are passed in the midst of toil which, if under favorable circumstances it secures tolerable comfort, cannot under unfavorable circumstances protect them from want, come sooner or later to feel that mere political or economical reforms do not meet their needs, and that the State ought at any rate to save them from evils (such as constant exposure for low wages to great risks of physical injury) from which they cannot, or think they cannot, protect themselves. Men deficient in education are the more certain to take this view, because they cannot see the indirect ways in which economical reforms, such as free trade, do in the long run alleviate physical misery. To artisans having these feelings, Lord Shaftesbury was a heaven-sent leader. He fully believed that law could do much to protect persons, such as factory children, who could not protect themselves; and, as already pointed out, he did not believe in economical reforms such as the introduction of free trade, the theory of which, it must fairly be admitted, he never seems to have studied with any care. Though much, therefore, is said, and rightly said, by Lord Shaftesbury's biographer and by Lord Shaftesbury himself, of the opposition with which he met, he was in reality, like many other reformers, carried along by a stream of feeling of much greater permanent strength than the current of opinion with which he struggled. Whatever judgment be passed upon the merit of the reforms which he advocated, no one can doubt that he really did introduce a fundamental change in the attitude adopted by the State towards classes who are, or seem, too weak to protect themselves in that struggle for existence which is known as competition. It is not too much to assert that every kind of factory, one might say every kind of workshop, has, through the efforts of Lord Shaftesbury, been placed under State supervision. For the theory that every one must take care of himself, has been substituted the theory that the State must protect any one who cannot take care of himself. The adoption of this view, due as it is mainly to Lord Shaftesbury's labors, is a far more important thing, both for good and bad, than his legislative triumphs, great though they were in particular cases. It is a far less important thing to have established machinery for protecting children from being overworked in mills, than to have established the principle that the due protection of classes who are helpless requires that the State should inspect all places where large bodies of laborers are employed.

The principle, indeed, has been given far wider extension than Lord Shaftesbury would at any part of his career have sanctioned. He certainly never contemplated that rule of inspectors which has already commenced and is every day extending its sphere. In practice he was inclined to restrict the intervention of the State to cases in which the persons who ask for protection were, like lunatics or young children, strictly speaking, incapable of guarding their own interests. Not only Lord Shaftesbury's deeds, but the whole language of his diaries, leads to the conclusion that he never meant to help any one who could help himself, or to hold that a man was not bound by a bargain simply because he entered into it at some disadvantage. But the effect of a reformer's action cannot be limited by his own intentions or wishes, and the effect of Lord Shaftesbury's efforts has gone far beyond the ends at which he consciously aimed. Hardly a year now passes during which the English Parliament does not pass acts for the protection of persons, such as sailors or tenants, who are presumed to be unable to manage their own affairs for themselves. The doctrine of benevolent State intervention holds the field; it has for the time almost banished the rival dogma of *laissez-faire*. The man whose efforts have mainly achieved this result was, for good or for bad, a revolutionist.

No person, it is true, would have detested the name of a revolutionist more than Lord Shaftesbury. He would have said, and with truth, that he was, from some points of view, a Tory of the Tories, and that no man more distrusted speculative innovation or was more loyal to the Throne and the Church than himself. And in saying this he would have said nothing more than the truth. It is, nevertheless, clear that the character of his mind, no less than his position, greatly aided his effectiveness as a revolutionary innovator. Like all practical men, his main idea was that it was always wise to deal directly with patent evils, without any great thought as to the speculative objections to which the particular mode of dealing might be open. He saw clearly that factory children suffered wrong, and he thought—and in this instance it would seem truly—that State interference with labor would diminish the sufferings of factory children. What he did not see—one may fairly say would not see—was that State interference with labor involved great evil, and that when once the policy of State intervention began, it was very hard to see where it would end. Lord Macaulay in this instance supported Lord Shaftesbury, and Macaulay was certainly not prone to treat with too much consideration views opposed to his own. But whoever will read his excellent speech on the Ten Hours Bill, and compare it with the tone adopted by Lord Shaftesbury about the same measure, will see the whole width of the difference which separates a man of thought from a practical reformer. Macaulay felt at once that the opponents of the bill might oppose it fairly and allege strong grounds for their opposition. It is hardly unjust to say that Lord Shaftesbury thought every one opposed to him guilty either of ignorance or of inhumanity.

From this restriction of view Lord Shaftesbury gained force as a leader, and this in two ways. He was able, in the first place, to treat opposition as a proof of selfishness; he was able, in the second place, to keep out of view the wide principles involved in the Ten Hours Bill. Now the English public are alarmed at principles, but they are pleased with anything which appears to be practical. Hence, at the very time when Maurice and his Christian Socialism were exciting nothing but alarm and meeting with little but denunciation, Lord Shaftesbury's factory legislation met with general approbation. Maurice, however, was a thinker, and thought, as every Englishman knows, is opposed to common sense. Lord Shaftesbury, again, gained weight quite legitimately from his position. How was it possible to suspect a Peer and a Tory of innovation? It was as easy to believe that the worthy clergymen who crowded Exeter Hall every May to hear Lord Shaftesbury read out the reports of half-a-dozen religious societies, were Jesuits in disguise. The disguise, moreover, in this case concealed the character of the man's work as much from himself as from his followers. "Innovation," says Burke, "is not reform." This maxim has long passed into a platitude, but reform is always, in truth, innovation, and Lord Shaftesbury's magnificent series of practical reforms have turned out a body of innovations amounting to a revolution. It is just because he did not see this that he was a successful revolutionist.

ADAMS'S PUBLIC DEBTS.—II.

Public Debts: an Essay in the Science of Finance. By Henry C. Adams, Ph.D., of the University of Michigan and Cornell University. D. Appleton & Co, 1887.

In Prof. Adams's chapter on the industrial effects of public borrowing, he analyzes a class of facts extremely recondite, but of the highest impor-

tance in the financial administration of nations Every country must pay its current expenses, whether for war or for any other purpose, out of its current production. Unless it borrows from other nations, it must pay all its yearly expenses, of whatever nature, from its yearly earnings. Issuing bonds and creating a debt does not absolve it from this necessity. Whether it spends a hundred millions or a thousand millions in a single year, the property must be created before it can be consumed. The accumulations of former years are mainly in the form of fixed capital, not adapted to the immediate purposes of the Government. A year's stock of consumable commodities, domestic animals and other movable things, may be on hand, but seldom more. This stock cannot be much reduced without causing immediate and general distress.

How, then, does it happen that the country is still paying the expenses of the war of 1861-5? If it paid these expenses at the time when they were incurred, is it now paying them a second time? To answer this question, let us ask what would have been the effect if Congress had levied in 1861 the taxes that were imposed in the later years? The proceeds of these taxes amounted in a single year (1866) to the sum of $558,000,000, a sum greater by nearly $100,000,000 than the expenditures of the year 1862. It is quite conceivable that the whole cost of the war might have been defrayed by current taxation, in which case there would have been no debt. To accomplish this, it would have been necessary that the magnitude of the war should have been foreseen, and that there should have been a general concurrence in the policy of taxation to meet it; in other words, that the state of the public mind regarding it should have been at the beginning, or rather a year before the beginning, what it was in 1863 and 1864. But this is what did not exist, and could not. Neither the machinery for efficient taxation, nor the disposition to adopt it, existed. Therefore borrowing must needs be resorted to.

What does borrowing signify? What does the use of public credit imply? Let us try first to imagine what would take place if there were no such thing as money, and if the business of the world were carried on by barter. The Government does not want money except as a means of getting property. It wants clothing, arms, ships, provisions, munitions, utensils, etc. Manifestly it must get these things first from those who have stocks of them on hand, and subsequently from those who have facilities for supplying them as fast as the existing stocks are used up—that is, from the possessors of circulating and fixed capital. It is convenient to obtain these things by borrowing money. We could hardly understand how it could be done otherwise in the complex conditions of modern life. But the intervention of money does not alter the essential nature of the transaction, which is the transfer of commodities from the citizen to the Government—commodities either produced before the war or while it is in progress. The reason why we appear to be paying the cost of the war a second time, although it was really paid while the war was going on, is that some persons—viz., the owners of circulating and fixed capital—supplied more of the means for carrying it on than would have been their share if taxation and not loans had been resorted to, and that this excess is now being returned to them. Various economic blunders, and especially the issue of legal-tender notes, served to swell the expense of the war to the taxpayers by nearly one thousand million dollars. This is conclusively shown by Prof. Adams on page 131. This excess of payment over actual cost—the cost being merely the quantities in bulk of property used and consumed—results from the alternate depreciation and appreciation of the standard of value. In 1864 the Government received only fifty cents' worth of goods for each dollar of securities issued. Seldom in the world's history has there been more improvident and wasteful financiering. Yet there has actually been considerable competition among statesmen since the close of the war for the honor of the invention of the greenback, and no little glorification of that instrument as a symbol of patriotism. Prof. Adams is fully justified in his contention that there was no need of legal-tender notes if correct views of finance had been held in the beginning. This brings us to the author's criticisms upon the management of American finances in the wars of 1812-15 and 1861-65; but before noticing these we remark that his subdivision of the industrial effects of public borrowing into three titles, viz., loans placed at normal rates, loans placed at high rates, and loans placed at rates abnormally high, appears to us to be an over-refinement, and not well sustained by the argument.

It will shock the feeling of patriotism to be told that both Mr. Gallatin and Mr. Chase and their coadjutors in Congress held radically wrong notions of the kind of financial administration needed for the carrying on of a war. Both were of the opinion that loans could be relied on, with only sufficient taxation to provide for ordinary peace expenditure plus interest on the debt. The plan broke down disastrously in both cases, although the calamity was more complete and decisive in the first than in the second, because in the latter case it was sooner abandoned, and because, also, the resources at command, when adequate taxation was finally resorted to, were proportionately larger. It is easy to say in defence of both these statesmen that probably nobody else in their time and surroundings would have done better. Nevertheless, Mr. Chase had Gallatin's experience before him, and Mr. Gallatin had a large assortment of financial disasters in the earlier history of the country to serve for his guidance. Therefore neither of them can be wholly absolved. The true policy of a finance minister in the presence of a war of unknown duration and magnitude is to support credit by taxation much greater than annual interest on loans, and, as the war progresses, to avail himself of the rising patriotism of the taxpayers to come nearer and nearer to a realization of the maxim, "Pay as you go"; and this for a great variety of reasons.

In the first place, debt should be avoided altogether if possible; but if it is unavoidable, vigorous taxation enables the Government to borrow on the most favorable terms, and a high public credit thus conserved is itself a most valuable moral agency in stimulating the courage of the people and depressing that of the enemy. Our internal-revenue system did not get into fair working order until 1864. In that year it yielded $110,000,000, in 1865 $210,000,000, in 1866 $311,000,000. If these sums could have been realized two years earlier respectively, "what a change would it have produced upon the financial administration. Its moral effect upon the South, working especially through her European sympathizers, would have brought the war to a more speedy termination, the credit of the Government would not have suffered as it did, while the advocates of legal-tender money would have been deprived of the argument of necessity." This it will be hard for anybody to gainsay. The following application flows naturally:

"The responsibility for the tardy flow of revenue from internal duties is traceable to the policy upon which the finances of the war were set on foot, and not to the inability or the reluctance of the country to pay. Secretary Chase denied the necessity of meeting any part of the war expenditure from war taxes, because the financial theory which he espoused deprecated the endeavor; and it required nearly three years of disastrous treasury management to convert the Administration and Congress from this erroneous theory."

What should be the financial policy of a country after the debt has reached its maximum and the occasion for it has passed away? Should the revenues be applied, as the saying is, to the reduction of taxes, or to payment of the obligations incurred, or both? And what part of the debt should be paid first? There may be some taxes more burdensome than others, some more burdensome than a prolongation of interest payment would be. Such taxes should be removed, even at the expense of a prolongation of the debt; but it is to be observed that classes and interests will always be found insisting that taxes which bear directly on them are the ones whose removal is most conducive to the public good. Payment of the debt is what is really conducive to the public good, and all complaints of special interests against this or that tax should be viewed with suspicion. The first step to be taken, however, is to improve the public credit, in order that conversion or refunding of the debt from high rates of interest to low rates may be effected. To this end it is especially needful that specie payments should be restored, if they have been suspended during the crisis. Therefore irredeemable paper circulating as money should be first attended to. As the issue of such paper has swelled the debt beyond reasonable bounds, the redemption and retirement of it, or the bringing of it to par with gold, is the indispensable step towards reduction of the annual burden of the funded debt. This truth was realized by Congress in 1869, when it passed the "act to strengthen the public credit," but no measure was passed to carry it into effect until six years later.

Prof. Adams places a high estimate, but none too high, on Secretary McCulloch's contraction policy. This was theoretically sound, but politically impossible. The imaginations of the great mass of the people were opposed to it. The plan of Secretary Boutwell, to let the country grow up to the volume of the currency, involved contraction the same as Secretary McCulloch's, but it was not a contraction that could be seen. In point of fact, it did not advance the country perceptibly towards specie payment. Secretary Bristow's plan, to withdraw the legal-tender character of the greenbacks as to future contracts after three years' notice, and to fund them into interest-bearing bonds, was practicable and statesmanlike, but the author upon the whole prefers the plan actually adopted in the Resumption Act of 1875, the principal features of which were free banking, eighty per cent. of greenbacks to be retired simultaneously with the new issues of bank notes, the retention of as many greenbacks as would under no circumstances be presented for payment in specie, and the accumulation of an adequate gold reserve in the Treasury. There is certainly much to be said in favor of this plan, but if Secretary Bristow's plan had been adopted, we should have been spared the last legal-tender decision of the Supreme Court.

Prof. Adams discusses the Refunding Act of 1870, under which the present 4½ and 4 per cent. bonds were issued, and shows that it was based upon a serious miscalculation, resulting in an inexpugnable debt of $738,000,000 running at 4 per cent. to the year 1907, not to mention the lesser one of $250,000,000 4½s running till 1891. Here we find, on page 227, a single paragraph (and the only one in the volume) which we are unable to comprehend. It is this:

"It seems, then, that in 1896 the Administration must adopt some other method of paying the debt, or suspend for a term of years the sinking-fund appropriation. To adopt this second suggestion would be for all practical purposes to decide upon the maintenance of a debt of three-quarters of a billion, for taxes once remitted are with difficulty reimposed for the purpose of pay-

ing a debt. Still, it cannot be said that this is a serious criticism of the Act of 1870; the greater blame lies with those who now profess to manage the financial affairs of the country."

It seems to us that those who now profess to manage and who do manage the financial affairs of the country are concluded by the Act of 1870 and the funding operations settled in pursuance of it, having no option or discretion at all, and that no blame can be attached to them. Whoever the galled jade may be, their withers are unwrung.

We have indicated our high appreciation of Prof. Adams's work as a whole. We must dissent, however, and dissent strongly, from his argument in favor of Treasury interference with the money market in times of panic. The plan proposed or approved contemplates that the Government shall convert interest-bearing bonds into legal-tender notes at the option of the holders of the bonds, and to the extent desired by them in times of panic. It is consoling to know that such a plan if adopted could last no longer than the public debt lasts. The argument in favor of it is illustrated by the suspension of the Bank Act in England in the crises of 1847, 1857, and 1866—*i. e.*, the authorization of the Government to the Bank to issue notes over and above the legal limit, upon the invariable condition, however, of redeeming them in gold on demand. "It now stands," says the author, "as an unwritten law that the Bank Act shall be suspended whenever demanded by the exigencies of the market." This is surely very loose writing. That there is no such unwritten law is made abundantly clear by the fact that when an attempt was made a few years ago to pass such a law in Parliament, it failed. But suspension of the Bank Act is not the most important part of the proceeding. The question of greatest moment is whether the Bank will avail itself of the authority given. It declined to do so in the panic of 1866, for the reason, undoubtedly, that the condition of things in the panic quarter was thoroughly rotten, and neither worth saving nor susceptible of being saved, although the panic itself was tremendous. This leads us to ask what are in general the "exigencies of the market"? Was the recent Black Friday in Wall Street one of them? Was the panic that set in when Grant & Ward failed in 1884 the right kind of an exigency? Several banks suspended then, and the New York Clearing-house went extensively into the business of settling balances with certificates based upon mercantile paper. Failing to define an exigency or to produce anybody who can, we think that Prof. Adams has here run counter to his own excellent rule to deny everything that cannot be stated with some degree of clearness. The fact is, that exigencies are occurring all the time, and that under any settled plan of the kind suggested the determination of exigencies under every kind of pressure, personal, political, and financial, would wear out the life of any Secretary, and produce more confusion, ten times over, than it would allay. It would be easy, moreover, to show that relief would not be gained in the manner proposed, for the reason that the bondholders are not generally the class who want money in times of panic. The plan failed when tried in 1873, and for reasons quite different from those assigned by the author. "I believe," says the author, "that good government is more likely to be secured by increasing personal responsibility than by restricting the functions of the State within such narrow limits that only men of ordinary strength of character and inferior talent will be drawn to a public career." Now, the kind of character and talent needed in this case is simply superhuman. It is what no man living possesses or ever did possess. We presume that the author himself would hesitate to accept the appointment of Appraiser of Exigencies or Chief Examiner of Panics—with permanent headquarters in Wall Street.

We have little space left to notice Part 3, relating to State and municipal debts, beyond saying that the treatment of these seems to us less satisfactory than the body of the treatise. The subject is too large to be dealt with as an appendix to National Debts. The tabular statements on pages 378 and 382, showing the constitutional inhibitions on State and local indebtedness, are very instructive, and, for purposes of ready reference, quite invaluable.

MEMOIRS OF COUNT BEUST.

Memoirs of Friedrich Ferdinand Count von Beust, written by himself. With an Introduction by Baron Henry de Worms, M.P. 2 vols. London: Remington & Co. 1887.

"MEMOIRS" is hardly a correct description of these two portly volumes. They are, rather, a series of desultory comments upon German history during the last half century. With the details of that history Count von Beust assumes that his readers are already acquainted; and in Germany, perhaps, such an assumption may be reasonable. In all other countries, however, it makes a demand upon the historical information of the "general reader" which assuredly it is quite incapable of responding to. Who but an erudite German professor is able to find his way through the trackless jungles of German domestic history? Who can recall the rulers or even the names of the petty principalities into which Germany was cut up, until the man of "blood and iron" appeared upon the scene? Not the least among the services rendered to humanity by the expulsion of Austria from the German Confederation, and the extinction of that body itself, may be reckoned the simplification of both Austrian and German history for all time to come. Count von Beust, naturally enough, does not appreciate the utterly bewildering character of German domestic politics when viewed by an ignorant spectator from the outside. He has trod those mazy paths till every inch of the ground has become familiar to him. He finds it as difficult to lose his way among them as an ordinary man on a straight road. And the consequence is that he almost always writes allusively. He mentions, without explanation or introduction of any kind, scores of German celebrities, who, for the world in general, are as unknown as the brave men who lived before Agamemnon. He refers familiarly to incidents which, outside of Germany, are as clean forgotten as the politics of the globe before the flood.

There is, however, another aspect in which these volumes are amusing and interesting enough. They constitute a remarkable revelation of the way in which a thoroughgoing diplomatist reads and understands the evolution of human history. At the beginning of his 'Memoirs' Count von Beust tells the following anecdote of Dresden court life:

"In the first years after 1830, even at court, old things had somewhat yielded to new; and among other innovations guests were allowed to appear at the court balls in trousers. After the marriage above referred to, severer rules were enforced and knee-breeches were revived. On this subject I once said in the presence of the Court Chamberlain, who was otherwise my friend: 'What a good time that was when we were allowed to appear at court in trousers!' He flew at me in a towering passion, and said: 'Trousers! I gave you credit for greater attachment to the royal family.'"

Count von Beust's work in the world was not connected with the regulation of court ceremonial, so he could smile at the spiritual significance discovered by this excellent Chamberlain in the wearing of silk stockings. His work was to draw up conventions, protocols, identical notes—paper devices of all kinds, having for their object to stereotype for ever the state of Europe as it had been arranged by the Treaties of 1815; and the profundity of his belief in the efficacy of these devices is hardly less astonishing than that of his friend the Chamberlain in the sanctity of silk stockings. The war of Italian Unity, the campaign of Sadowa, the Austro-German war, are thought by ordinary people to have been due to a multitude of slowly converging causes, but mainly to the unnatural and artificial partitioning out of Europe by the sovereigns and statesmen of the Vienna Congress. Count von Beust, for his part, thinks that one and all might have been postponed *sine die* by a slight readjustment of those arrangements; but, unhappily, those directly concerned in these occurrences would not listen to his suggestions. And the reason why he holds this singular belief is, that the peoples of Europe are apparently, in his judgment, "une quantité négligeable." They are merely the counters by means of which kings and diplomatists play their games. The destinies of the world are decided by a very few men who meet in ante-chambers, give audiences, and hold confidential communications among themselves. That Count von Beust was a kind-hearted, good-natured, placable man, there are in these volumes abundant proofs; but sovereigns, statesmen, and diplomatists he would appear to regard as a privileged class, elevated by their position and the august functions which they discharge, into a region where no cold morality reigns. These distinguished creatures may commit blunders: they are incapable of crime. On the other hand, there is a certain satisfaction in learning from Count von Beust's unimpeachable testimony that statesmen and diplomatists are inspired by a genuine faith in the efficacy of their paper contrivances for healing the maladies of suffering humanity. If wars break out, they are not, according to our author, caused by the insufficiency of these paper remedies, but by the perversity of the "peoples," who, like a refractory patient, refuse to accept the prescriptions of their physicians.

The important parts of Count von Beust's public life extend over the years when he was Chief Minister to the last independent King of Saxony, and, after the battle of Sadowa, when, to his own great amazement, he was offered and accepted the post of Chancellor of the Austrian Empire. In both these positions circumstances forced him into an attitude of antagonism to Prince Bismarck. He was the able and determined opponent of the Prussian statesman's design for forcing Austria from the German Confederation, foreseeing, clearly enough, that the autonomy of Saxony was dependent upon the defeat of this policy. The Prussians were aware of this, and when the Prussian troops marched through Saxony, they did the Count the special honor of plundering his house and destroying his furniture, as an evidence of their sentiments towards him. Amid the lesser consequences of the Prusso-Austrian war, not the least gratifying to the victors was, without a doubt, the abrupt ending which it seemed to have inflicted on Beust's career as a power in German politics. He resigned office at the end of the war, in order to facilitate the resumption of friendly relations between Prussia and Saxony; but hardly had the Prussians ceased to congratulate themselves on the occurrence when they saw him rise from momentary eclipse to the brilliant position of Chancellor of the Austrian Empire. Their chagrin was great, and throughout his Austrian career the Count had the honor of being pursued by the invective and calumny of the Prussian official press.

Prince Bismarck figures, in person, in these pages, on not a few occasions. The notices of him are always interesting, and in entire agree-

ment with what has been previously recorded of a man whose strength lies in a stern and unflinching adherence to the maxim that he who wills the ends, wills the means. As an indication of character the following story is worth extracting. It is Beust who speaks:

"The three weeks I passed [at Gastein] have left me the most pleasant recollections. We were both staying at Straubinger's Hotel, and saw each other daily. To those whom he likes, Prince Bismarck is the most agreeable of companions. The originality of his ideas is only surpassed by that of his expression of them. He has a spontaneous, and therefore pleasing, bonhomie which mitigates the asperity of his judgment. . . . He spoke a great deal of the French war and of his negotiations with Thiers and Jules Favre. 'The truce was coming to an end,' said Bismarck, 'and I said to Thiers: "Écoutez, Monsieur Thiers, voilà une heure que je subis votre éloquence; il faut une fois en finir; je vous préviens que je ne parlerai plus français, je ne parlerai qu'allemand." "Mais, monsieur," answered Thiers, "nous ne comprenons pas un mot d'allemand." "C'est égal," I replied. "Je ne parlerai qu'allemand." Thiers then made a magnificent speech; I listened patiently and answered in German. He and Favre went up and down the room, wringing their hands in despair for half an hour; at last they yielded, and did exactly what I wanted. Upon this I at once spoke French again.' Bismarck told this story as a capital joke. He seemed to have no suspicion of the want of feeling he showed, not so much in the act itself as in the manner in which he related it, for the two men must have suffered martyrdom in such a critical hour for their country. . . . Two other statements which he made to me about the war were very interesting. The first was that he had opposed the acquisition of Metz because of the disaffection of its French inhabitants, and that he only yielded in consequence of the urgent demands of the military authorities, who said that it would make a difference of a hundred thousand men in time of peace. The other was that the siege of Paris would have had to be abandoned if Metz had held out another month."

Remembering how largely the defeat of Austria at Sadowa was due to the fact that a whole army was employed in the defence of the Quadrilateral, one may surmise that in the end Prince Bismarck will be found to have been more prescient than the generals who opposed and overruled him.

Norway Nights and Russian Days. By S. M. Henry Davis. Fords, Howard & Hulbert. 1887.

THIS little volume comes very near belonging to the class which persons of bibliomaniac proclivities are in the habit of characterizing as "dainty." It would quite deserve that description if the paper were a little heavier and the engravings always as well executed as the subjects of them are well chosen. The literary part of the work is done in a graceful and interesting way, which holds the attention with just about the degree of firmness required by the purposes of a summer-afternoon lounger. What we have in the book is an account of a "pleasant journey of three women, neither 'lone' nor 'lorn' (which) began the first day of June, 1886." This repudiation of the predicates of "loneness" and "lornness" constitutes about all the personal information we get concerning our travellers. The narrative is as objective as possible, and trips on lightly from point to point, never dwelling long and never making heavy draughts upon the reader's historical or ethnological intelligence. Sometimes the writer's touch becomes so very light and feminine as to be really distressing to one who cannot or will not temporarily lay aside his erudition. Thus, one runs across this on page 21: "Here we first heard the language of Denmark and Norway, rather blunt and unmusical, and with so slight an analogy to any other that memory retains it with difficulty." Then, a few lines below, we have given as a specimen of the "mystic syllables" of this strange tongue the sentence: "Ver saa god luk op dören og luk vinduet igjen," which is explained as conveying no deeper meaning than "Please shut the door and open the window." We do not criticise either the guide-book Danish or the translation, though neither is unimpeachable; but taking the text as given, we ask if this is language which presents but a "slight analogy to any other." Suppose we read: *Were so good, lock up door-(the) eke lock window-(the) again.* That is to say, aside from the fact that our English tongue no longer makes an imperative from the root which has given us *were,* every word in the above sentence is a familiar English vocable under a not very opaque disguise.

But we do not press these strictures, since it evidently did not lie in the author's path to go much into Scandinavian philology. For all who care to travel in agreeable company over the now familiar route up the coast of Norway to the North Cape, and then, with Sweden and Finland in parenthesis, through the two chief cities of Russia, Mrs. Davis has written a pleasant and readable book.

The Ventilation and Warming of School Buildings. By Gilbert B. Morrison, Teacher of Physics and Chemistry in Kansas City High School. Appletons' International Educational Series. 1887.

IN the general treatment of his subject, mathematical and physical questions are given considerable prominence by Mr. Morrison; *e. g.,* the formulæ for different fans for propelling air are discussed, and mathematical estimates of the cost of different systems of heating are given. The author's own system (patent applied for) is also described—which seems a trifle incongruous with the purpose of a normal-school text-book, for which the editor, Mr. W. T. Harris, recommends it. Committees and masters in search of information will find the book useful; it should, however, be supplemented by some such work as that of Billings, and occasional slips should be guarded against. We must add that it contains a good deal which can be utilized by those who cannot digest mathematics.

Pocahontas, alias Matoaka, and her descendants through her marriage at Jamestown, Va., in April, 1614, with John Rolfe, gentleman, etc. With biographical sketches by Wyndham Robertson, and illustrative historical notes by R. A. Brock. Richmond: J. W. Randolph & English. 1887. 8vo, pp. 84.

WE have tried in vain to discover the possible value of this book. The circular speaks of thirty years' preparation for its publication, and we see no traces of the result. The first twenty-three pages are given to a sketch of Pocahontas, but nothing new is related, except possibly the date of her marriage to Rolfe. The author evidently intends to reply to Deane's trenchant criticisms on the fables of Capt. John Smith, but the only result is to make the reader aware that the writer is determined not to admit any evidence opposed to his own prejudices. It is a kindly attempt to reinstate in popular favor an idol evidently hopelessly overthrown. As to the genealogy, it is a mere list of names, with very few dates, and without any attempt at arrangement. The notes are trivial, and of value only to the immediate family.

Issued simply as a family record, the book would take its proper place among the scores annually printed for private circulation. As a contribution to history or to genealogy in its larger sense, it is of no value to any student.

BOOKS OF THE WEEK.

Adams, Mrs. L. Madelon Lemoine: A Novel. Philadelphia: J. B. Lippincott Co. 25 cents.
Annuaire des Traditions Populaires. Paris: Maisonneuve & Ch. Leclerc.
Battles and Leaders of the Civil War. Part 4. The *Century* Co. 50 cents.
Bowne, Prof. B. P. Philosophy of Theism. Harper & Brothers.
Carey, Rosa N. Esther: a Book for Girls. Philadelphia: J. B. Lippincott Co. $1.25.
Charnay, D. The Ancient Cities of the New World. Harper & Brothers.
Cooper, Sarah. Animal Life in the Sea and on the Land: a Zoölogy for Young People. Harper & Brothers.
Hawthorne, J. The Great Bank Robbery. Cassell & Co. $1.00.
Heyse, P. The Romance of the Canoness. D. Appleton & Co. 75c.
Hugo, V. Les Misérables. Part 3. Marius. Wm. R. Jenkins.
Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A. Vol. 8. Legier—Medicine. (Naval.) Washington: Government Printing Office.
Jackson, E. P. The Earth in Space: a Manual of Astronomical Geography. Boston: D. C. Heath & Co. 35 cents.
Johonnot, J. Stories of Heroic Deeds. For Boys and Girls. D. Appleton & Co.
Jusserand, J. J. Le Roman au temps de Shakespeare. Paris: Delagrave; Boston: Schoenhof.
Körting, G. Neuphilologische Essays. Heilbronn. Gebr. Henninger.
Larison, Dr. C. W. Elements of Orthoepy. Ringoes N. J.: C. W. Larison.
Larousse. Grand Dictionnaire universelle du XIXe siècle. 2e Supplément, fasc. 6 et 7. Boston: Schoenhof.
Little, Rev. W. J. K. The Broken Vow: A Story of Here and Hereafter. 2d ed. E. & J. B. Young & Co.
Rolfe, W. J. Minor Poems of Milton. Harper & Brothers.

A new Catalogue of High School and College Text-Books for the study of the English, French, German, and Greek languages, of History and Economics, Mathematics and the Natural and Physical Sciences, will be sent free on application.

Henry Holt & Co.,

NEW YORK AND CHICAGO.

To be Let, Furnished or Unfurnished, or to be Sold.

A most substantial and well-built red brick house of commanding elevation and especially well situated. Corner house in Bramham Gardens, South Kensington, London, facing Collingham Gardens and the newest and most elaborate Queen Anne and Elizabethan mansions designed and built by Ernst George and Peto; 6 reception rooms, 10 bedrooms, dressing room, bath room, 4 lavatories, very complete servants' offices, servants' hall, housekeeper's room, etc.; hot and cold water on every floor; electric bells, gas, and speaking tubes throughout; parquet flooring; stone mosaics in hall and on first floor landing; most elaborately furnished and decorated quite lately; everything equal to new; 6 minutes' walk from 3 railway stations and half an hour's ride to city; very large ornamental garden in the rear; south aspect. TERMS: Furnished £750 per annum, unfurnished £350 (ground rent only £40 per annum), or to be sold for £5,000; fixtures and furniture, at a valuation. Apply to Messrs. LUMLEY & LUMLEY, Land Agents and Auctioneers, 22 St. James's Street, Piccadilly, London.

OLLA PODRIDA, or a well-digested Melange. Being Odds and Ends. No. 24 selected from the "Literary Junk Shop" of A. S. Clark, 34 Park Row, New York City. Now ready A. S. CLARK.

"I particularly like its systematic arrangement of the elements of the language on the one hand, and the omission of multitudinous rules and classifications on the other."—Wm. H. Carpenter, Ph.D., Instructor in German, Columbia College.

GERMAN SIMPLIFIED.

An eminently practical new method for learning the German language. Edition for self-instruction, in 12 numbers (with keys), at 10 cents each; school edition (without keys), bound in cloth, $1.25. For sale by all booksellers. Sent, postpaid, on receipt of price, by Prof. A. Knoflach, 140 Nassau St., New York. Prospectus free.

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 22, 1887.

The Week.

THE *National Republican* of Washington city thinks that the cure-all of the present stringency in money would be an order from the President to the Secretary of the Treasury to receive United States bonds on deposit as security, loaning an amount not exceeding the par value of the bonds so deposited, at interest at the rate of 2 per cent. per annum. The Philadelphia *Press*, with rather clearer views of the state of the law, urges that the Secretary "increase the Government deposits in the depository banks." There is no authority vested in any officer of the Government to lend the public money at any rate of interest. There is plenty of authority for depositing the public money in depository banks, provided the banks furnish security in "United States bonds and otherwise"—the word "otherwise" probably meaning personal security, or the security which the bank offers to all depositors. The law, having been passed during the suspension of specie payments, makes exception of "receipts from customs," which were payable in coin only. So, in a technical sense, the Secretary can only deposit in banks the money received from internal-revenue and miscellaneous sources, but the distinction is quite unimportant. The obstacle to the plan is found in the kind of security required. We imagine that any bank or any number of banks that can give United States bonds at par as security will find little difficulty at Washington in getting all the money they want. But the Secretary cannot change the kind of security required, and ought not to. The depository law is an attempted compromise between the sub-treasury system and the Bank of England system of handling the public funds, but it has ceased to be effective by reason of the scarcity and high price of Government bonds. A holder of United States bonds can ordinarily borrow more money on them in the open market than he can get in the way of deposits from the Government.

The question what is the actual Treasury balance and how does it compare with former periods, is more easily asked than answered, the liabilities of the Government being of such a varied character. Probably the following comparison extracted from the Treasury statements of August 31, 1886, and August 31, 1887, in round numbers and excluding small items, is not far from the truth:

CASH LESS ALL LIABILITIES, INCLUDING CERTIFICATES AND ACCRUED INTEREST.

August 31, 1886	$104,000,000
August 31, 1887	71,000,000
Apparent reduction of balance	$33,000,000

LIABILITIES OTHER THAN CERTIFICATES AND ACCRUED INTEREST.

	Aug. 31, '86.	Aug. 31, '87.
Reserve against greenbacks	$100,000,000	$100,000,000
Redemption fund for national bank notes retired	72,000,000	112,000,000
Disbursing officers' balances	43,000,000	50,000,000
	$215,000,000	$262,000,000
Increase of reserve balances		47,000,000
Less the reduction above		53,000,000
Net increase of cash in Treasury		$14,000,000

Nearly the whole difference in liabilities arises from the retirement of national-bank circulation, against which greenbacks have been deposited in the Treasury. The notes are still outstanding, and so theoretically they constitute a demand liability. But as a matter of fact they come in for redemption very slowly.

The Republican State Convention held at Saratoga last week was neither remarkably good nor remarkably bad. The ticket put in nomination is respectable, but not in any way aggressive. There is nothing original about it, except, perhaps, the nomination of Col. Fred Grant for the leading place. This is more likely to repel than to gain votes, for the reason that it is an attempt to secure an indirect endorsement of Platt as a holding-over Quarantine Commissioner. The Governor nominated Col. Grant as Quarantine Commissioner last winter, Platt's term having long ago expired, and Col. Grant was willing to accept the position. The Senate refused to act upon the nomination. After the Legislature adjourned, Platt wrote a letter to the Governor offering to resign if the Governor would promise to appoint Col. Grant to the place. The Governor replied that it would be indecorous for him to make a bargain beforehand as to the disposition of an office not yet vacant. He added, as a cutting sarcasm, that it was surprising that Mr. Platt, if he wanted Col. Grant to have the office, did not make way for him at the time when the Governor actually nominated him. Of course Platt did not want him to have it, but the spectacle presented to the people by the refusal of the Republican Senate to confirm the son of the great General was so little edifying that something must needs be done. Hence the nomination of Col. Grant for the office of Secretary of State.

The speech of the temporary Chairman, Mr. Seth Low, was the best thing this Convention had to show for itself. It was truthful and fearless to a degree, free from shams, and replete with the spirit of reform which Mr. Low carried into practice as Mayor of Brooklyn. The platform is both long and prosy, and the only point of interest in it is the attempt to dodge the high-license question by using the words "restriction by taxation." No form of words could have been chosen so well calculated to exasperate the temperance men as the resolution which deals with the liquor question. Over this there was a very amusing conflict between Mr. Seth Low and Mr. Evarts. Mr. Low said, in his opening speech, that this was "no time for the Republican party to utter vague uncertainties upon the questions of the hour," and, in enumerating those questions, he placed prohibition first, adding:

"The Republican party should have clear, ringing words to say in the presence of a question like this. So far as the Prohibition vote is a political vote it is, in my opinion, out of our reach; for I believe it to be oftentimes in the interest of the other side. Let us then abandon all attempts to catch this vote, and plant ourselves distinctly upon the broad middle ground between the two extremes. Let us stand for high license and for local option. This is the platform sure to draw to itself in the end the great mass of moderate men."

When Mr. Evarts rose to explain why in his estimation the plank which he had drawn was neither "shilly-shally" nor "contemptible," he said: "We of the Committee did not choose to commit the Convention to the phrase 'license,' which many people, and many sensible people, object to, nor to the phrase 'high,' which means to many minds higher than it ought to be. We provide that when local option does not extirpate this mischief of the liquor traffic, then we recommend restriction by taxation—high taxation, heavy taxation, taxation that will restrict"; and then he quoted with great solemnity from Chief-Justice Marshall that the "right to tax is the right to destroy." The Convention howled with delight at this erudite defence of the platform's phraseology, and Mr. Evarts sat down and chuckled, as well he might.

The official count of the vote on the prohibition amendment in Texas deserves the careful attention of all who are interested in the drift of public sentiment and the attitude of parties regarding the temperance issue. The total vote was much the largest ever cast in the State—351,207, against only 322,209 for President in 1884—thus showing that a question of public policy can interest voters quite as deeply as a contest over the offices. Of this total, 129,273 were cast for prohibition, and 221,934 against, which means that of every 100 voters 37 supported the amendment and 63 opposed it. Some Republican organs have contrasted the adverse majority of 92,661 with Cleveland's plurality of 131,978 over Blaine as evidence that the Republicans were gaining upon the Democrats, manifestly supposing that the Republicans as a rule favored prohibition, and the Democrats as a rule opposed it. A greater mistake could not be made. In 1884 Blaine carried nineteen counties in Texas. Every one of these nineteen counties voted against prohibition, their aggregate being 9,207 for the amendment and 30,352 against it. Further analysis shows that the negro vote was almost solid against prohibition. Thus Fort Bend, which has 7,508 negroes to 1,871 whites, gave only 399 votes for the amendment, and 1,595 against it, which agrees almost exactly with the vote in 1884 of 317 for Cleveland and 1,588 for Blaine.

On Sunday the Central Labor Union, which nominated George for Mayor last fall, and did the larger part of the work of his campaign, was shown to be about evenly divided between George and the Socialist or Progressive Labor party, which is anti George. The test vote showed 52 members for George to 44 against him. Furthermore, the anti-George party has control of the *Leader*, which is the only daily Labor organ in the city. The result of Sunday's meeting confirms what John Swinton said on Saturday of the disintegration that is in progress in the Labor party. He declared that last year George "had the powerful

support of the Central Labor Union, which he certainly will not have this year"; that the support of Irving Hall gave him the "use of a working machine, but that machine will be turned against him this year"; that the Socialists, "who brought energy and funds into the George ranks," are this year organized in hostile array; that of "eighty or ninety trade unions which gave him their active support last year, at least sixty are antagonistic to him"; that Powderly will not come to his aid this year, and that the Knights of Labor will not issue a "red-letter call" in his behalf; and, finally, he will, through his association with McGlynn, have the bitter opposition of the whole Roman Catholic Church. One other cause of George's weakness which Mr. Swinton touches upon, is, we have no doubt, the most powerful of all, and that is the very strong suspicion of "deals" between him and the leaders of the regular political parties. Mr. Swinton charges directly that the "George ring traded with the Democrats on the State judicial ticket and with the Republicans for members of Congress," and declares that "such jobbery is again going on this year—not only with Boss Platt for the Republicans, but with Jimmy O'Brien for himself, and with others yet out of sight." As for evidence of a "deal" with the Republicans this year, Mr. George confessed it at his convention when he suppressed his free-trade views in his platform, and put three professional Blaine-Butler men upon his ticket; but he made all concealment impossible when he requested Mr. McClave, the Republican member of the Police Board, to name his 812 election-district inspectors for him.

The lively scolding which the Charleston *News and Courier* gives Jeff Davis for his inability to forget the past, and his "preference to stand alone and be a Confederate sign-post," is fully deserved, but we doubt if the talk which the *News and Courier* objects to has much influence upon anybody. The bloody-shirt organs always quote every fresh instalment of it with impressive comments about the South "still being rebel at heart," but even they do not believe anything of the kind. Davis has long since ceased to represent the South, or to speak for anybody save himself. His refusal to ask to have his political disabilities removed is probably based upon the conviction that, so long as he retains the distinction of being the only unreconciled rebel, he will attract much more public attention than he could hope to in any other way. After all, his ravings are not much more of a burden than the wearisome harangues which Gov. Foraker and Senator Sherman are pouring out in the Ohio campaign, with the bloody shirt and rebel flags as their chief topics.

The extent to which the leaders in the Confederacy have passed away is only appreciated when the roll is called, as has been done by Col. C. C. Jones, jr., in a recent address before the Confederate Survivors' Association. The Constitution of the Confederate States was signed by forty-nine delegates, thirty-seven of whom are dead. The President survives, but Vice President Stephens died four years ago. Of three who held the portfolio of State in the Cabinet, all are dead; of five Secretaries of War, all; of two Secretaries of the Treasury, one; of four Attorneys-General, two, and the one Secretary of the Navy; while the sole Postmaster-General, Mr. Reagan, is still very much alive, as he proved by taking the stump for Prohibition in the recent Texas canvass, and arguing against the declaration on the other side of his old chief. Of thirteen Commissioners accredited to represent the Confederacy abroad, ten are dead. There were five men who bore rank as full generals in the army, of whom Johnston and Beauregard alone survive; twenty-one lieutenant-generals, of whom eleven are dead; 100 major-generals, of whom fifty-five are dead; and 480 brigadier-generals, of whom Col. Jones thinks that considerably more than half are dead. Each year makes serious inroads upon the survivors, and it will not be so very long before the "Confederate brigadier," so dear to Bourbon Republican organs and stump-speakers, will be only a memory.

What seems a very strange decision has been rendered by Mr. Justice Paul in the United States Circuit Court for the Western District of Virginia, in the case of Woodland and wife vs. Newhall's administrators, reported in the *Federal Reporter* for August 30. The facts set forth in the bill, not denied in the answers, and sustained by the evidence taken in the cause, are that, in the year 1857 or 1858, Paulina Isbell, the mother of the female complainant, being a slave, with savings of her wages purchased her freedom and that of her daughter. The law of Virginia at that time forbidding a slave set free to remain in the State, Paulina, not wishing with her child to leave Virginia, had the title to the two, as slaves, made out to Newhall, with the full right and privilege reserved by them, and agreed to by himself for them, to do as they pleased, just as free-born citizens, which privilege they ever after exercised, Newhall being always ready and willing to release his bare title whenever they should so desire. Under this state of things, Paulina, having further accumulated $1,000, placed the same in Newhall's hands, in trust to buy her a house and lot. Newhall accepted the trust and bought a house and lot, but, finding the title defective, annulled the purchase, and died before he executed the trust. Paulina died before Newhall, but he all the time acknowledged the trust, and after her death he kept an account of his indebtedness to "the estate of Paulina Isbell." Newhall made his will on March 20, 1865, in which he gave his estate, a large one, to his two nephews, Harrison Sublett and Charles M. Sublett. This will was admitted to probate on April 3, 1865, and Charles M. Sublett qualified as the executor thereof. On the same day of making his will Newhall executed a witnessed paper of directions to his two nephews, the legatees in his will: "*To my Nephews, Charles M. and Harrison Sublett:* Having entire confidence in you, I wish you to carry out this, my will in fact." After other matters, he says: "Pay to Lizzie Penn one thousand dollars ($1,000). [This was the female plaintiff in this suit.] I give this in consideration of the amount I owe her mother, which is on my books. Set her free, and see that she has all her rights. These legacies must be paid in specie or its equivalent." The executor recognized the trust by paying interest on the $1,000 to July, 1871, and made several promises to pay the principal at an early day, but, failing to pay any further sum, after preliminary proceedings of no present significance, the suit under mention was instituted.

The paper of directions called a "will in fact" the Court disposed of by saying that it is null and void as a testamentary paper, for want of the requisite number of witnesses, and does not create a trust, because it is not founded upon any meritorious or valuable consideration. As to the substance of the case, the Court held that Paulina was a slave, and all of her efforts to secure her freedom did not change her condition in the slightest degree. No matter how much liberty she may have been allowed, nor what privileges common to free persons she may have been permitted to enjoy by Newhall, who purchased her and stood in the place of her master and owner, she was equally a slave, and all the disqualifications and disabilities incident to that condition of servitude attached to her. The statute law of Virginia prescribed the means, and it was the only way, by which a slave could be emancipated, that is, by last will in writing, or by deed duly recorded in the proper court—to be followed, of course, by expatriation, as we have noted, to avoid which was the sole object of Paulina's retaining the slave status nominally. As a slave, she could neither contract nor be contracted with. "It follows," says the Court, "that all agreements and contracts of every kind between Paulina and Newhall were entirely null and void." "They created no legal obligation whatever on Newhall which will support a trust for the benefit of the child of the slave mother." "All contracts, rights, trusts, and obligations growing out of Newhall's transactions with the slave Paulina Isbell must fall to the ground as utter nullities." The bill was dismissed upon the merits.

In current newspaper discussion it seems to be assumed that the Union Pacific Railway officers have refused to answer certain questions put to them by the Pacific Railroad Commission, which has lately returned from the Pacific Coast. This idea has doubtless been engendered by the refusal of the Central Pacific people to answer certain questions put to them, and by Justice Field's decision that they could not be compelled to answer except in ordinary judicial proceedings. The fact is, that the Union Pacific officers answered every question put to them and exhibited every book and paper called for. In short, they "turned themselves inside out," and for this they ought to have due credit. We believe that President Adams proposed, in addition, to pay the Government in full now and take a quittance. In the present state of the money market this might not be practicable, but it would have been practicable a year ago, and will become so whenever the present stringency subsides. It is an indispensable condition, however, that the Government should release its second-mortgage lien upon receiving its money. This requires additional

legislation. When the Commission make their report, the necessary legislation will undoubtedly be obtained, for the denial of it would imply that Congress wants something more than payment in full.

The President's exposition of his and Mrs. Cleveland's attitude towards the invitation to her to present the flags to the firemen ought to, and we trust will, settle the matter, and relieve the minds of all concerned from any burden the affair may have imposed on them. The rule which the President lays down, that the President's wife ought not to assume any "public rôle independent of her husband, and not as an adjunct or incident to something he is to do," is, if not a necessary, certainly a wise and convenient, one. There is always a vigorous effort made during every Administration, especially by society in Washington and by the newspapers elsewhere, to give a touch of royalty to the President's family, and assign to their sayings and doings an importance which a certain class in Europe derives from "the blood." In other words, it is difficult in our day, and has been difficult ever since the Middle Ages, to keep any chief magistrate a magistrate simply, in the Roman sense. People will insist on giving him and his belongings a touch of "the divinity that doth hedge a king." Consequently his son runs some risk of being flattered as if he were an heir apparent, and his wife of being converted into a sort of viceroy, charged with the social portion of the Presidential functions, with the title of "the First Lady in the Land." It is just as well to discountenance this notion whenever it takes on a concrete form. There is no more fitness in calling on the President's wife to lead in a public function than in calling on his son or his daughter, and it is rather absurd to try to make her an *ex-officio* social leader. Mrs. Cleveland happens to be eminently fitted for such a part, but all Presidents' wives are not.

It is difficult to guess on what ground the condemned Chicago Anarchists propose to carry their case to the Supreme Court of the United States, or how Capt. Black expects to bring it there. The idea is probably of a piece with the expectation that the President could be got to pardon them. The most comfortable frame of mind is that of those of them who maintain that they have done nothing for which they ought to ask pardon of anybody, that it is for "society to ask pardon of them, not for them to ask pardon of society," and that they will "die as they have lived." If the infliction of capital punishment be ever useful and desirable, it is certainly so in their case. Nothing short of it could ever convince the strange horde of social malcontents who are landing here every year, that the United States is not a good place for anarchy. The prompt way in which the Milwaukee riots were put down has done a world of good in Wisconsin, and the hanging of these six murderers will similarly clear the Anarchist brain in Chicago. It is not a brain that can be worked on by exposition or instruction. It needs to be met by the blank wall of impossibility, before it can settle down to industry or sober living.

That Sir William Harcourt has come to the front during the past session of Parliament as Mr. Gladstone's successor in the leadership of the Liberal party, is what might have been expected from the remarkable powers as a debater which he has exhibited both in the House and on the stump. His attacks on the Ministry have been almost cruel in their effectiveness. It is not an exaggeration to say that they have ruined Mr. Goschen as a politician. This service, rendered in the darkest days of the Liberal party, has, of course, helped to wipe out the memory of the vacillation which Sir William undoubtedly displayed in the earlier days. In 1874 it seemed very doubtful, after Gladstone's defeat, whether he would stand by him any longer or not. Reflection probably brought wisdom, and he has, since the Irish question came up, come to the discussion of it with the experience of a man who has tried all the Tory arts and knows their worthlessness. When he is twitted with having been a coercionist himself, he has the ready reply that this is the very reason why he is now an anti-coercionist.

A curious "crisis" in the famous Government manufacture of Sèvres porcelain, near Paris, has just come to an end. Until very recently the painters and sculptors employed in the manufacture worked by the piece—that is, they undertook a certain article, were paid for it when finished a certain amount, and chose their own hours while engaged on it. Some months ago a new director, M. Lauth, was appointed, and he began reforming by putting the artists on salaries and insisting that they should keep regular office hours and be timed whenever they entered or left the building. They thereupon struck, or rather threatened to strike, and probably would have struck if M. Lauth had not resigned and M. Deck had not succeeded him. M. Deck has restored piece work, and lets the painters and sculptors come and go when they please, but "invites" them to observe the same hours as the other employees of the establishment, and there has been accordingly great rejoicing. But the critical public in France still complains of the great falling off in the Sèvres porcelain, owing to the profuse production of popular vases for prizes at agricultural and other shows and matches, and presentations to railroad conductors, firemen, and the like. The artists do not put their best work into things like these, and accordingly it is announced that the production of them at the manufactory is to cease.

The German crownlands of Cisleithan Austria are Catholic, warmly attached to their Hapsburg dynasty, which has ruled them for six centuries, and proud of their common capital, Vienna; but they are German, and constant and growing national contentions with the Slavs of the empire have heightened a centrifugal tendency towards a union with the German Empire. In Hungary, a spirit of complete national independence is constantly at work, as it has been for centuries, counterbalancing the craving of security from a crushing foe which the connection with the other provinces of the Hapsburgs afforded when the Turk held Buda and ravaged the Hungarian plains, and now affords in face of threatening Russian Panslavism. Bohemia, rendered intensely Catholic by the work of Ferdinand II., Wallenstein, and the Jesuits in the Thirty Years' War, and dreading above all the Protestant German power of neighboring Prussia, whose armies have repeatedly swept over her fields and cities, clings through her nobility and clergy with fervent loyalty to the House of Hapsburg; but she is also bent on regaining her former status as a Slavic kingdom, with Moravia and Austrian Silesia as integral parts, and her democratic younger generation gravitates towards Russia as a ready ally against the Teutons, whether ruled from Berlin or Vienna. Galicia, the only part of Poland which enjoys a Polish autonomy, is cordially thankful to the Emperor Francis Joseph for that national blessing and for protection from the hated Muscovite, but she makes no secret of regarding her connection with the empire of the Hapsburgs as only temporary, being ready to coalesce with Russian and Prussian Poland as soon as freedom dawns once more upon the now divided fatherland.

We are reminded of these intrinsic political dualisms by the antagonism which has recently been developed within the most artificial and most temporary of the Austro-Hungarian political combinations. We refer to the clerico-feudal and nationalist coalition which sustains the Cisleithan Cabinet of Count Taaffe by a large parliamentary majority. The Poles of Galicia and the Czechs of Bohemia and Moravia are the leading elements in that coalition, which is in the main federalistic, directed against the centralizing tendencies of the German Liberals, and consequently intrinsically Slavic. But impatient of what they deem a still slow advance towards complete national supremacy in Bohemia and Moravia, the Czechs, and especially the Young-Czech faction of them, have of late assumed so pronounced an ultra-Slavic tone in dealing with their German fellow-citizens and the Vienna authorities, and have given such decided vent to their pro-Russian leanings, that the Poles, who are longingly waiting for a clash in the Balkan Peninsula to call them under the Austro-Hungarian banner against Russia, now find the utterances of some of their Bohemian and Moravian allies smacking of treason towards the empire and dynasty to which they owe allegiance. This antagonism within the Slavic camp of Austria is rapidly growing into an irrepressible feud. Thus every political field of that empire shows centrifugal side by side with centripetal activities respecting it. But the phenomenon is not new, and he would be rash who should conclude from so much internal friction and threatening collision that disruption must ensue. The cohesive power of the Austro-Hungarian monarchy lies in the inability of its component parts to maintain themselves in solitary independence against neighbors whom they dread; it is stronger than the animosities which divide them, and it is a lasting power.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 14, to TUESDAY, September 20, 1887, inclusive.

DOMESTIC.

THE centenary of the Federal Constitution was celebrated in Philadelphia on September 15-17. On the first day there was an industrial parade illustrative of the progress that has been made in the practical arts and sciences and in the development of the country during the last one hundred years. On the second day there was a military parade of United States troops and marines and of militia of many of the States. On the third day an oration on the Constitution by Justice Miller of the United States Supreme Court and a brief address by President Cleveland were delivered. The city was profusely decorated, every part of the programme was smoothly carried out, and a larger number of people participated in the celebration than in any preceding celebration of the kind in the United States.

The Department of State has declined to ask the British Government for the extradition of McGarigle, the fugitive from Chicago, because there is not sufficient ground for such a request under the existing treaty.

The annual report of the United States Pension Commissioner, published September 14, shows that there were at the close of the fiscal year, June 30, 406,007 pensioners, as follows: 294,445 army invalids, 85,010 army widows, minor children, and dependent relatives; 3,281 navy invalids, 1,975 navy widows, minor children, and dependent relatives; 1,069 survivors of the war of 1812, and 11,831 widows of those who served in that war; 7,503 survivors of the war with Mexico, and 895 widows of those who served in that war. There were added to the rolls during the year 55,194 new pensioners, and 17,677 were dropped. The amount paid for pensions during the year was $73,465,581, an increase over the previous year of $9,669,750.

A decision was handed down September 14 by the Supreme Court of Illinois affirming the decision of the lower court and the verdict of the jury in the cases of the Anarchists convicted of the murder of policemen in Chicago, and it was ordered that August Spies, Michael Schwab, Samuel Fielden, A. R. Parsons, Adolph Fischer, George Engel, and Louis Ling be hanged November 11, and that Oscar W. Neebe be sent to the penitentiary for fourteen years.

The New York Republican Convention at Saratoga September 14 nominated Frederick D. Grant for Secretary of State, James H. Carmichael for Treasurer, Jesse Lamoreaux for Comptroller, James A. Dennison for Attorney-General, and O. H. P. Cornell for State Engineer and Surveyor.

The Massachusetts Democratic Convention September 20 nominated Henry B. Lovering for Governor, Walter Cutting for Lieutenant-Governor, John F. Murphy for Secretary of State, Henry C. Thatcher for Treasurer, John W. Corcoran for Attorney-General, and William F. Cooke for Auditor. The platform is a less sincere expression of approval of the President's policy of civil-service reform than the platform adopted by the Massachusetts Democrats last year.

The Legislature of Montana Territory last winter offered a bounty of 10 cents for every prairie dog killed, and of 5 cents for every ground squirrel. More than $50,000 had been spent by the middle of August, and the Legislature was called in special session to repeal the law granting these bounties. It did its work and adjourned September 14.

In reply to Southern criticisms of its opposition to inviting Mr. Jefferson Davis to fairs and similar gatherings of people, the Charleston *News and Courier*, a Democratic journal, in a recent issue said: "The political disabilities of Mr. Davis would be removed upon petition, as were the political disabilities of Vice-President Stephens, Postmaster-General Reagan, and a host of other Confederates of high position. It is his preference to stand alone and to be a Confederate sign-post. Nobody cares to find fault with this wish, perhaps, but there is the right, and the will besides, to remind Mr. Davis that he owes more to the South than the South can ever owe to him, and that he is untrue to the people who were always true to him when he puts himself in a position to injure them by furnishing material for a political war to the enemies of the Southern States and of the Union in general."

Settlers are rushing into the country near Baraga, Mich., to preëmpt pine and farming lands recently taken away from a railroad company by a ruling of the Interior Department.

The American Forestry Congress at Springfield, Ill., September 16, prepared a memorial to Congress, to enact a law providing for the protection of the forests on the public land, the withdrawal of forest land from entry under existing laws, the classification of forest land, the creation of forest reserves, the creation of a Commissioner of Forests in the Department of the Interior and four assistant Commissioners, the organization of a force of inspectors, and an appropriation of $500,000.

In the case of the State of Iowa against Fred. Munchrath, jr., who was on trial as accessory to the murder of the Rev. Mr. Haddock, a Prohibitionist, the jury at Sioux City, Ia., September 18, brought in a verdict of manslaughter.

September 20, an express train on the Texas and Pacific Railway was robbed near Benbrook, Tex. In the passenger cars there were armed guards, but the robbers forced the engineer to stop the train so that the passenger coaches were over a high trestle, and they robbed the express and the mail cars of a large sum of money.

The trial races between the American sloop yachts, the *Volunteer* and the *Mayflower*, to decide which should race with the Scotch yacht, the *Thistle*, were sailed on September 14, 15, and 16. There was no breeze on September 14 and 15, but on the 16th the *Volunteer* won, and was chosen as the defender of the *America's* cup. The dates of the races between the *Volunteer* and the *Thistle* are September 27, 29, and, if necessary, October 1.

Ex-Gov. Luke P. Blackburn of Kentucky died at Frankfort September 14, aged seventy-one. He was a physician, and he distinguished himself in several epidemics of yellow fever by his devotion to the sick. Joseph Cilley, the oldest ex-United States Senator and a veteran of the war of 1812, died at Nottingham, N. H., September 16, at the age of ninety-six. Mrs. Septima Randolph Meikleham, the last surviving grandchild of Thomas Jefferson, died at Washington, September 14, the day before the celebration was begun at Philadelphia of the one hundredth anniversary of the adoption of the Federal Constitution. Rear-Admiral J. R. Madison Mullany died at Bryn Mawr, Pa., September 17, in his seventieth year. He entered the navy as a midshipman in 1832.

FOREIGN.

An English home-rule deputation were welcomed to Dublin by an immense meeting September 14. Messrs. Rogers, Conybeare, and Pickersgill, English members of Parliament, and several women, made addresses. At the annual convention of the Highland Land League, in session at Oban, Scotland, on the same day, a resolution was adopted condemning Government interference with freedom of speech in Ireland. Mr. J. T. Brunner, Liberal member of Parliament for the Northwich Division of Cheshire, has given $5,000 for the purpose of starting a fund to relieve the distress prevalent in Ireland. He has suggested that Earl Spencer, the Earl of Aberdeen, and Baron Wolverton be selected as trustees of the fund, and that a commission of well-known men from England, Ireland, Scotland, and Wales be appointed to superintend its collection and disbursement.

At a conference of Irish landlords at Dublin, September 15, resolutions were adopted denying that the present rents prevailing in Ireland are excessive, or that general and reasonable abatements have been refused during times of distress. The landlords of Ireland, it was maintained, have rendered important services to Irish agriculture, and they do not, as alleged, neglect their duties towards either their property or the community. The resolutions declare further: "We demand that the Government speedily and finally settle land legislation in Ireland on just terms to all parties concerned, including compensation to landlords for the loss of exclusive ownership and the reduction of the public charges on land."

At a conference of Scottish Home Rulers at London September 16, Mr. Findlater, President of the Scottish Farmers' Alliance, advocated home rule for Scotland. He declared that the northern and eastern counties of Scotland were ripe for it. A committee was appointed to consider the question of bringing the matter before Parliament.

Parliament was prorogued September 16. In the Queen's speech there was the following paragraph on legislation about Ireland: "The wants and difficulties of Ireland have occupied your close attention during a protracted session. I trust the remedies your wisdom has provided will gradually effect a complete restoration of order in Ireland and give renewed encouragement to peaceful industry. In order to pass them it has been necessary to postpone many important measures affecting other parts of the kingdom, which doubtless you will be able to resume without hindrance at the coming session." At the end of the session the Government is weaker by eight votes than it was at the beginning, four by the bye-elections and four of members who have changed from Unionists to Gladstonians. There are besides about a dozen Radical Unionists upon whom the Conservatives cannot depend during the coercionist divisions. The Gladstonians have not lost a single man, either at the elections or through disaffection.

Mr. Mandeville, who was charged with violating the Crimes Act at the same time Mr. O'Brien's offence was committed, was arrested at Mitchelstown September 17.

A proclamation was published September 19 suppressing the League and all its branches in County Clare and various branches in Galway, Kerry, Cork, and Wexford. It is signed by Prince Edward of Saxe-Weimar, commander of the forces in Ireland; Baron Ashbourne, Lord Chancellor of Ireland; A. J. Balfour, Chief Secretary for Ireland; Henry Bruen, Justice of the Peace; J. G. Gibson, Attorney-General for Ireland, and Gen. Sir Redvers Buller. The proclamation makes it criminal to convoke, hold, or publish meetings or do anything in connection with the League.

September 20 Mr. John Dillon presided at a meeting in the Limerick Town Hall under the auspices of the National League. He said that Mr. O'Brien would doubtless be condemned as a felon, but if so, he would have the sympathy of the whole civilized world. The Government must not think they could crush the League by any such means as those resorted to in the persecution of Mr. O'Brien. Each arrest of that kind would add fresh courage and spirit to the people of Ireland in their struggle for home rule, and increase the gulf of separation between the landlords and populace and put new fuel into the fire now burning. The United States of America was now back of the great Irish home-rule movement.

A sergeant of the Irish Constabulary, in his testimony before the coroner's jury at Mitchelstown, Ireland, September 19, said that buckshot was fired from the back windows solely to defend the policemen who were running to endeavor to get into the barracks to escape the stones which were coming thick and fast upon

them. Mr. Timothy Harrington, Secretary of the Irish National League, denounced the witness as a murderer. The Crown counsel protested against the use of such language, and Mr. Harrington answered: "The jury will also call him a murderer."

The mission of Mgr. Persico, the Pope's envoy to Ireland, has been prolonged.

The English Socialists have for some time been diligently working among the Northumberland miners, and have persuaded the Miners' Union to discontinue the payment of funds to Mr. Burt and Mr. Fenwick, the miners' members of Parliament. The real reason of this is that Mr. Burt and Mr. Fenwick are moderate men, Mr. Burt being one of the most respected members of the House of Commons, and that they have not worked on Socialist lines. Mr. Burt got £500 a year for his services, and Mr. Fenwick £200. Unless their constituents make some provision, they will have to retire in November.

The Executive Committee of the new National Labor party in England has issued an address in which the following programme of reforms is laid down: Adult suffrage, one man to have but one vote, the payment of members of Parliament by the State, free education, land reform, poor-law reform, the maintenance of free trade but the abolition of State-paid bounties, home rule and local government reform, and religious equality.

The *Trafalgar*, the largest ironclad ever constructed, was successfully launched at Portsmouth, Eng., September 20. She is of 11,940 tons and 12,000 horse-power, and will carry 12 guns—4 of 67 tons and 8 of 40 hundredweight.

An excursion train on the Midland Railway in England came in collision with another train September 16, and twenty-three persons were killed and sixty hurt.

The Count of Paris issued a manifesto September 14, in which he said: "The apparent calm ill conceals the perils of the future. All-powerful electoral considerations dominate Parliament and sterilize all efforts to adjust the finances. The instability of the Executive isolates France in Europe. The ascendant faction oppresses the remainder. Nobody has confidence in the morrow. The situation imposes duties upon the Monarchists in the country, who, unshackled like those in Parliament by a limited mandate, must show France how necessary it is and how easy it will be to restore the monarchy, and must reassure her against imaginary dangers and prove that the transition can be legally effected." The manifesto concluded: "May all good citizens whose hopes have been deceived, whose interests have been compromised and whose consciences have been wounded, by the present régime join the laborers of the first hour to prepare a common salvation. May they second the efforts of him who will be King of all and the first servant of France." The Paris *Temps* said: "The document will have no disquieting influence on the country. It will only excite and embarrass the Right, owing to their *rapprochement* with the Government. It indicates, between the Count's views and the Cæsarian doctrine of empire, that the monarchy can only be restored through a violent internal crisis and the triumph of anarchy. Republicans whose political experience continues to increase will not afford the monarchy that chance." The supporters of Boulanger take credit for having warned the country of "the Royalist conspiracy" in the Chamber. M. de Cassagnac has assured Premier Rouvier that, notwithstanding the manifesto, the Right will continue to support the Cabinet, but on the condition that no change be made in the policy of conciliation which the Cabinet has hitherto pursued. The manifesto made no impression in Germany. The London *Times* declared that the Count chose the present moment to issue it because he fears that his followers are being insensibly drawn into acquiescing in the Republic.

The manifesto has had the effect in France of causing the announcement to be published that M. Rouvier, on the opening of the Chamber of Deputies, will deliver a reply to it; that several of the Extremist Deputies will initiate a movement for the expulsion of all Orleanist and Bonapartist Princes; and that the proposition will again be made to confiscate all their property in France.

At a military banquet given in Toulouse September 13, Gen. Bréart declared that France now knew her strength, and that she was ready and awaited revenge. M. Cales, member of the Chamber of Deputies, made a similar speech.

Gen. Boulanger, in an address to the officers of his command at Clermont-Ferrand, September 17, said: "We have to-day more need than ever of the qualities of a warrior. No, the hour has not yet struck for the disarmament of the peoples of old Europe. It is madness to believe it a crime to say this, for it points to peace at any price as the goal to which our country should aspire; and our enemies—who often appraise us at our real value better than we do ourselves—know well that we have not got as far as that. More than ever we must continue the work. It is for France."

The clerks in the French War Office who were arrested on the charge of divulging the details of the plan for the mobilization of the Seventeenth Army Corps have been found innocent, and have been released. It has been learned that it was a newspaper writer who sold the information for 250 francs to the Paris *Figaro*.

A son of M. Schnaebelé, the French Commissary who was arrested at Pagny-sur-Moselle last April by the Germans, has been arrested and imprisoned by the German authorities for crossing the frontier near Cheminot and affixing a treasonable placard bearing the tricolor of France upon a tree by the roadside.

The census of France for 1886, which has just been issued, shows an excess of births over deaths of 52,560, against 85,000 in 1885. The divorces granted in 1886 numbered 2,949, against 4,277 in 1885.

A French dentist on September 14 removed a tumor from the gums of the German Crown Prince Frederick William.

The German police have arrested twenty-six Social Democrats at Breslau, including two editors of Social Democratic papers.

The *North German Gazette* declared on September 19 that in consequence of the failure of the Czar to offer to visit the German Emperor, it is fully understood that the alliance of the three Emperors is at an end. Germany has recovered her freedom of action, and can, without further regard to Russia, more closely strengthen her ties of alliance with Austria.

La Bulgarie, a newspaper published at Rustchuk, Bulgaria, recently declared that the German Vice-Consul had been recalled on account of scandalous conduct. By order of the Government on the following day it issued a formal denial of the statement and offered an apology. But the German Chargé d'Affaires at Constantinople sent a note to the Porte requesting that three German war ships be allowed to pass through the Dardanelles en route to Bulgarian ports to demand satisfaction. In order further to satisfy Germany, the Bulgarian Government will suppress the paper and prosecute the editor.

It was reported September 20 that Germany had officially declared the satisfaction offered by Bulgaria sufficient.

The Porte has sent another circular to the Powers, proposing that a general chosen by Turkey and Russia jointly be sent to Bulgaria with power to restore order in that country in accordance with the terms of the Treaty of Berlin. The assent of Germany, France, and Russia to this proposal is considered certain, while that of England, Austria, and Italy is thought uncertain.

A pamphlet has been circulated in St. Petersburg announcing that the reorganization of the Nihilists has been successful, and that the centres of action are fully provided for the carrying out of their plans. Nihilism is said to be fast spreading in Siberia, where during August forty-five guards absconded and twenty-three prisoners escaped.

The widow of M. Katkoff, the Russian editor, is preparing for publication enough of his newspaper writings to fill eight volumes, comprising 5,000 pages.

There were 56 new cases of cholera reported at Rome, and 252 new cases and 113 deaths at Messina, from September 14 to September 17. From the latter city 30,000 persons are reported to have fled, and business is suspended.

King Humbert has subscribed $10,000 to the fund to relieve the sufferers at Messina, and 200 Golden Cross volunteers are trying to check the epidemic. Almost all the inhabitants rich enough to bear the expense have left the city.

King William opened the Parliament of Holland September 19. He thanked the people for the evidences of national loyalty which they manifested so conspicuously during the recent celebration of his seventieth birthday. The finances of Holland and her relations with all foreign countries, the King said, were in a satisfactory condition. He hoped the bill for a revision of the Constitution would be passed, and announced that measures would be proposed for the promotion of agriculture and for the improvement of the training of Dutch youth for service in the navy.

Prof. Aloys von Brinz, the jurist, died at Munich September 13. After 1861 he had been a pro-German member of the Bohemian Diet and of the Austrian Reichsrath. Gen. Count von Werder died on September 12 on his eightieth birthday at Greussen, Pomerania. He took part in the engagements before Strasbourg and in the battles near Belfort, in the Franco-German war, and won a victory of great importance for the Germans in the defeat of Bourbaki's army. The celebrated critic, Frederick Theodore Vischer, died at Grüningen September 14. M. Charles Ferdinand Gambon, the French politician, died September 17. Richard Quain, M. D., F. R. S., the well-known English physician and writer on medical subjects, died on the same day. He edited a 'Dictionary of Medicine,' published in 1882, and was the author of many valuable papers on medical topics.

Information has been received by the American Board of Commissioners for Foreign Missions at Boston that there is great distress in Asia Minor. The missionaries of the Board at Adana report that 1,500 families have to be fed by charity. Numbers of the people are kept alive by eating grass, roots, berries, and small fruits. An appeal is made by the Board for money for their relief.

A private letter from Rio Janeiro has been published at Cincinnati wherein it is said that the Emperor Dom Pedro has lost his mind; that when he sailed from Rio Janeiro to Europe on June 30, he went never to return, and that his daughter, Donna Izabel, is now at the head of the Government.

President Diaz opened the Mexican Congress September 16. He said that, generally speaking, Mexico's relations with foreign Governments were friendly, and that harmonious relations continue to be cultivated with the United States. If there were not wanting diplomatic complaints of one country against the other, they were due to private individuals who deemed themselves injured, and this state of affairs must be considered a consequence of the contact which neighborhood produced.

The *Mexican Financier* (City of Mexico) advocates the formation of a joint international tribunal of arbitration between Mexico, the United States, and England, so that the irritating questions continually arising, especially on the border, may be settled on grounds of equity. This is proposed in the belief that the United States and England will enter into some such arrangement,

SOME THINGS OVERLOOKED AT THE CENTENNIAL.

It is rather curious that amid the numerous comments which the celebration of the Centennial of the Constitution has called forth, so little mention has been made of the failure of the instrument to overcome the main difficulties in the way of its original framers. Their two great difficulties were the union of slave and free States under a common government, and the merging of State allegiance in national allegiance in the mind of the citizens of the several States. Everything else was comparatively easy. But on these two points the Constitution was only partially successful. It only held the slave States in the Union for two generations, and never succeeded in getting itself really accepted by the people of the slave States as "the supreme law of the land." The compromises or arrangements by which it sought to accomplish these objects, after what must be considered a comparatively short time, broke down one after the other—that is to say, they failed completely to satisfy that portion of the population for whose satisfaction they were intended. The provision for the return of fugitive slaves proved insufficient for the protection of slave property. The partial counting of slaves as a basis for representation did not succeed in the eyes of the owners in preserving the balance of power between the free and the slave States. Moreover, seventy years of familiarity with the direct exercise of the Federal power on individuals did not establish at the South the feeling of nationality, or weaken the opinion of the people that the State Government was the supreme object of their political devotion.

When these things are taken into account, we think it will be generally admitted that the Constitution may be fairly considered as having existed in what may be called a provisional or experimental stage down to 1861, and that a very large share of whatever glory is due to its framers belongs of right to the men of the generation now passing away. They twenty-five years ago resolved that they would cure its defects at whatever cost, and put it into an undeniably permanent shape, and did so amid difficulties compared to which those of the Convention of 1787 were a mere trifle. They took hold resolutely of all the seriously obscure or ambiguous passages in the instrument, and of all compromises which had proved difficult or incapable of execution, and eliminated them. The amendments they made took up the points on which there was widespread or dangerous difference of opinion, and settled them in language which nobody can fail to understand. Nobody, for instance, who remembers the trouble caused by the doubt which prevailed under the old Constitution as to the power of the State Governments in fixing the status of persons within their limits, can help feeling that the thirteenth, fourteenth, and fifteenth amendments were an immense boon to the nation, considered merely as settlers of controversy. They cleared up matters which for seventy years had occupied, to the serious injury of great interests, a large proportion of the acutest minds of the country in fruitless logomachy.

Consider, again, the condition of doubt in which the old Constitution left a large part of the population as to the real seat of sovereignty in the United States. It did not create a Government which the people of the South ever recognized as possessing undeniable marks of supreme authority. In one way or another—which we have no space to discuss here—the original framers left or allowed to be left in a certain obscurity the question, which of the two a citizen was to obey when the State Government said one thing and the Federal Government said another—a doubt which notably found expression in the "Resolutions of '98." They had suffered so much from the absence of any Union that they shrank from making it appear that the Union they had established was as strong as they really meant it to be, and hoped it would some day become. It fell to the lot of the men of 1861 to settle once for all whether the Federal Government was a national Government or not, and they settled it at a cost from which the men of 1787 would undoubtedly have shrunk in dismay. They gave to the Constitution that final sanction without which no government is ever strong, or can ever command general obedience—the sanction, namely, which comes from the knowledge that it has irresistible physical force at its back. There was always from 1787 down to 1861 the greatest diversity of opinion both at the North and at the South as to how much force the Constitution had at its back, and the doubt was a very serious hindrance to its successful working, and produced every week the most scandalous anomalies in various parts of the country. The men who revised the Constitution in 1863-5, and who have given it to us in a shape which will probably undergo no great change as long as the social organization continues what it is at present, did not hesitate to ask the people to say whether the Federal Government had that final sanction without which no government, however deftly framed on paper, can properly be considered a government at all. They got the answer they expected and desired, but it required enormous wisdom and courage to ask the question boldly and to turn the answer to its proper account.

In view of all this, it seems to us as if a very large part of whatever fame the construction of the Federal Government reflects on the American people is due to those who gave the organic law its final revision; and we think it by no means unlikely that those who celebrate the next centennial of the Constitution will be disposed to put the date in 1865, rather than in 1787, or will at all events hesitate between the two years.

THE FINANCIAL SITUATION.

The financial situation at the present time is the most curious, and perhaps the most serious one, short of absolute panic, that the present generation has witnessed. There is a most painful constriction in the money market at a time when confessedly we have more money in circulation than ever before, and when prices of commodities and securities are and have long been on a very low plane. The stringency in money is most seriously felt in mercantile circles, although this is not so readily seen as in the stock and produce exchanges. There has been an occasional relaxation of the hardness, following gold importations and Treasury disbursements, but the tendency has been towards harder and harder conditions for nearly three months. Unless relief is had soon, and in much larger degree than heretofore, very grave consequences are to be apprehended. The condition we have described is not peculiar to Wall Street. In fact, Wall Street is merely the place where it is easiest to take the temperature of the country. If money is wanted to move the cotton crop in Texas, for example, Wall Street will be applied to first. If Wall Street cannot respond, the inability to do so will be felt more painfully in Texas than here, but Wall Street will be the place to gauge the intensity of the want in Texas. And so of any other wants of any magnitude in any part of the country. It is common to think and speak of Wall Street as identical with the Stock Exchange, because the Stock Exchange can be seen and heard daily, whereas the enormously greater transactions representing the exchange of commodities, the bona-fide trade of the country, are not seen at all except by the few who study the bank clearings.

What has brought on this unexpected and anomalous state of monetary stringency? It is acknowledged that we have upwards of $70,000,000 more money in circulation than we had one year ago, and yet, when we had $70,000,000 less, there was no stringency at all. If we go back another year, to the summer of 1885, we find that there was an unused surplus of nearly $70,000,000 lying in Wall Street, which could not be loaned at all. It appears, therefore, that within two years there has been brought into requisition and use no less than $140,000,000, one half of which is the "mobilization" of money in existence but not in use in 1885, and the other half an addition to the circulating medium.

It cannot be said that speculation has brought on the stringency, because there has been less of this than usual. So far as Stock Exchange securities are concerned, there has seldom been a season of such remarkable dulness. Stock brokers have not been making office expenses for a long time. The course of the market has been rather downward than upward, and it is well known that a declining market calls for less and less money. The business of the Exchange has been mostly in the hands of room traders, whose operations offset each other and affect the mercantile business of the country not at all. There was some speculation in wheat and coffee in the early summer, but this came to a speedy and disastrous end. The later one in California was strictly local, although it led to some transfer of funds from the East to San Francisco. Speculation in general merchandise has seldom been at so low an ebb as during the present year.

But what about the speculation in real estate? This, too, has been mainly local. That is, it has been confined to the West and Southwest, and not uniformly distributed even in those sections. It has been a town-lot speculation. Farming lands have not been the subject of speculation more than usual. Undoubtedly

this town-lot speculation has contributed something to the stringency in money, for if a bank lends half of its money to such speculators, and they, although redepositing in the bank, keep it circulating among themselves, it has so much less to lend to merchants and manufacturers. But the rage of real-estate speculation has scarcely touched the Eastern States, where the major part of the loanable capital of the country is found, nor has it been at all pronounced in the Western cities of the first class.

The question recurs, Where has all the money gone to? What has become of the $140,000,000 of new or newly mobilized circulation that has found employment within two years? If it has not been absorbed in high prices of commodities, as it certainly has not been, where is it to be found? Mostly, we think, in the natural expansion of healthy trade which has succeeded the reaction of 1882, 1883, and 1884. The "good times" which began in 1879 culminated about the time that President Garfield was assassinated in 1881, but the reaction that then set in did not reach its maximum until the Grant & Ward failure three years later. A year or two of liquidation and languor succeeded, and then better days began to appear. The first sign of betterment was the gradual clearing away of the great surplus fund in the New York banks already referred to. This was the proof that capital could once more be profitably employed. The improvement in trade led to the resumption of railway building on a pretty large scale, but these enterprises have for the most part been undertaken by old companies, possessing sufficient capital to tide them over the period of infancy and small earnings, and not, as in former periods, by private adventurers. None the less do they call for money. They make drafts upon Wall Street just as the same enterprises would in the hands of "impecunious devils." But the difference between the two is very great. It is quite certain that the money thus borrowed by the Atchison, the Northwestern, the Burlington, and other old companies will pay the stipulated interest, and that there will be no list of bankruptcies following, like those which strewed the country after 1873.

We may, therefore, class these enterprises as a part of the general and healthy growth of business which has drained out the idle funds that accumulated in all the business centres in 1884, and has called for and obtained fresh supplies of an equal or greater amount. At this juncture a new competitor for money comes into the field, viz., the United States Treasury. The payable part of the public debt having been cleared off, and the revenue laws remaining unchanged, there is a public income without a corresponding outgo. Unlike other civilized States, we have no means of keeping public moneys in touch with commercial interests. What is collected in the way of taxes does not go into a Bank of England, or of France, or of Germany, to be used when wanted by the Government and meanwhile by solvent borrowers, but becomes a useless and blighting hoard, which the Secretary struggles fitfully and with limited authority to get rid of. Immediately that this condition supervenes, all eyes are fixed upon the public hoard to see whether it grows larger or not. Very few are able to tell by watching whether it increases or decreases, but everybody takes alarm more or less. Any tightness produced by the Treasury is reproduced in a hundred other places. "We have got plenty of money," remarked the president of one of our large trust companies the other day, "and we intend to keep it; we don't know what the Secretary is going to do, but we mean to be on the safe side." The situation is such that the Treasury is able to produce and must produce a reflex stringency in the money market even when it does not directly cause it, since it works upon the apprehensions of other custodians of large sums. It provokes hoarding even when it does not itself hoard. How far this private hoarding has been carried it is impossible to say, but knowing as we do particular cases of such hoarding, we assume that there are many others. It is customary in ordinary times for the trust companies to keep all their money in the Clearing-house banks. At the present juncture, however, they keep what they consider an adequate emergency fund in greenbacks in their own vaults. Probably other institutions and houses that have large demand liabilities do the same.

Now the question arises, What can and what ought the Treasury to do? The safe rule in ordinary times is for the public authorities to let the money market alone. We would apply this rule to all cases where the Treasury itself has not been instrumental in producing an abnormal and artificial condition. That it has contributed to bring about such a condition at the present time is hardly open to dispute. That Congress is primarily to blame is certainly not open to dispute, but, as the Boston *Herald* very justly remarks, when the President undertook to manage things without calling Congress in extra session, he assumed the responsibility for any mischance resulting from his own lack of power. A panic and crash during the interval would be visited upon the Administration. No attempt to shift the responsibility upon Congress would avail, because Congress cannot act until it is convened by law or proclamation.

Neither Congress nor the Executive can get rid of surplus money without applying it in some way upon the public debt, principal, interest, or both. The purchase of bonds has been hitherto confined to the 4½ per cents. Why should not the 4s be included in the Secretary's plans? Why not broaden the basis by taking in the $738,000,000 of this class of securities? Although the premium to be paid for the 4s is much larger than for the 4½s, the saving to the Government is by far larger. A 4 per cent. bond for $1,000 running twenty years involves the payment of $1,800 principal and interest. If bought now at say 126, there is a saving of $540. A purchase of 4½s of the same amount at 108 saves only $100. If there is some danger of demagogic attacks upon the Administration for paying large premiums to bondholders, that risk is much less than the risk of a financial crisis. All the blatherskites of finance heretofore have bent their artillery upon the "great surplus" in the Treasury, insisting that it should be paid out. It is hardly likely that they will change their line of attack as they would have to do in order to assail the Administration for buying bonds at a premium of 8 or of 26. We think that the basis of bond purchases should be broadened at once to the full amount of the bonded debt, which is upwards of $1,000,000,000. If the Secretary should fix a reasonable price for each description of bonds, and offer to take all that are offered, up to the limit of his necessary working balance, he would assuredly not be liable to censure. Nor would he be responsible in that case for any subsequent disaster to commercial interests.

CONCERNING HIGGINS.

An occasional correspondent writes to us from Washington what he believes to be the reasons why Eugene Higgins is retained in office, notwithstanding the disgrace and shame that he has brought and is daily bringing upon the Administration and the cause of civil-service reform and decent politics, which the Administration is believed to be sincerely desirous to promote. In this letter, which comes from a highly respectable and intelligent quarter, although not an Administration quarter, "Higgins's bad reputation," we are told, "is based entirely on acts done before his appointment. It might have afforded a sound reason for not appointing him, but it cannot be made a valid basis for his removal, after having been more than two years in office, unless supplemented by subsequent misconduct. The past was wiped out when he was appointed." We cannot allow that baptism and the remission of sins belong to the political power, but in any case repentance should go before absolution. It is carrying the doctrine of "vindication" pretty far if not only an election by the people, but an appointment by the President or Secretary of the Treasury, can "wipe out the past." When Mr. Blaine, as Speaker of the House of Representatives, was accused of trafficking his influence and his rulings for pecuniary favors, it was claimed that his subsequent election to the Senate wiped out the past and made him over as good as new. But the people of the United States did not so regard it. Nor would his election to the Presidency have wiped it out. Nor would anything under heaven have that effect, for the simple reason that nothing under heaven makes the past different from what it is.

If there was a sound reason for not appointing Higgins in the first place, to wit, his bad reputation, this was not only a valid basis for his removal as soon as it was discovered, but has been a continuing valid basis ever since, and, we may say, a growing one. For it is evident that one bad reputation does more harm to the Administration than ten good ones can repair. The public have a right to expect good ones everywhere. The public offices are for the public good. When the people find the offices filled and administered on this principle, they get only what they bargained for and what they pay for. They are not beholden to anybody for this. They are not bound to be thankful for it, although they usually are so. When they get something quite different from what they were promised and had a right to expect, even

though this is in only a few places, or in one single place, they have a right to complain, they always do complain, and we hope they always will. All attempts to offset a bad appointment with a good one or any number of good ones will be treated by them with indignant scorn. A good reputation is made not by a *majority* of good acts, but by *uniformity* of them. When Higgins was first appointed, a distinguished Republican politician in this city said: "That act will destroy the Cleveland Administration." "Why do you think so?" asked his interlocutor. "Because it takes away the moral superiority that carried the election," was the answer. This may be an exaggerated view, but it contains the germ of an important truth.

Prior to the election of 1884 it was one of the common jests of the Republican politicians, when a particularly bad nomination or platform was made, or a bad bill passed by their side, that probably the other side would "help them out." The meaning of this was, that the Democrats would be pretty sure to commit some greater blunder, and that the people would put up with the Republican bad thing in order to avoid the Democratic worse thing. This rule "helped out" so many times that finally they became reckless enough to nominate Blaine for President. The Democrats forgot their rôle that time. They did not help the Republicans out, but the people helped them out in a different sense, and they remain out yet. There are not wanting signs that the Republicans are going to take up the rôle of helping out, by doing or threatening to do things so much worse than keeping the Baltimore gang in office that the people will find themselves better able to stomach Higgins & Co. than the plans offered by the other side. Insults to the Chief Magistrate of the nation for his opposition to pension profligacy, for example, may countervail and overpower the just indignation which attends the distribution of offices in Maryland. The renomination of Blaine would certainly do so. But banking on the blunders of your adversary is very bad politics. The Republicans, after all is said, are more experienced and capable political managers than the Democrats, and in any controversy that is to be won by wits alone, they will in the long run outwit their adversaries. The Democratic party cannot possibly be the smarter of the two, but it may be the better. If it cannot be the better, and distinctly so, it will go out of power in the course of a very few years.

The plea now put in that Higgins is a good clerk and attends to his duties well, and that he has no real power, is not calculated to make any impression on the public mind, for two reasons. In the first place, the country is full of men, of Democrats if you please, of good reputation, who could also fill the place and perform the duties satisfactorily. If the office is not one of much responsibility, the field of choice is by so much the wider. Again, nobody is bound to accept the statement that Higgins performs his duties well, because the witnesses are under suspicion. The only persons having the opportunity to judge are interested to vindicate their own choice of him and their retention of him in the face of much remonstrance and obloquy. We can cite at least one instance where he performed his duties so extremely ill that a well-ordered Administration would have dismissed him at once. We refer to his suppression of Secretary Manning's telegram to Appraiser Coombs. But, of course, the public have little means of judging of these things. Nor do these things much concern them.

EUROPE IN SUSPENSE.

PARIS, September 8, 1887.

NEVER, since I have been an observer of European politics, do I remember a time when the mutual relations of the great Powers have been, I will not say so unsatisfactory, but marked by so much distrust and uneasiness. I will not speak here of the relations between France and Germany: the Schnaebelé incident is still fresh in everybody's mind, and everybody knows that last spring a war was almost imminent; if it had not been for the energetic action of the President of the Republic and of the group of republicans who go under the name of Opportunists, and who determined to exclude Gen. Boulanger from the Cabinet, war was almost certain. Nor will I speak of the new attitude assumed by the German Government in Alsace-Lorraine, and of the measures adopted in these provinces since the last elections took place; without questioning the right of the German Government, it is enough to say that this new attitude creates a state of things which is a permanent danger.

If I examine the relations of France and England, I am obliged to confess that they are far from satisfactory. The time of the cordial alliance is past; the necessity of having a good understanding with our neighbors across the channel is no longer felt as it was once by the Government of Louis Philippe and by Napoleon III. By a curious coincidence, the French and English have never been socially so united and politically so independent. Paris receives every day hundreds of Englishmen; you can see English bars in every street of the quarter of the Madeleine and of the Champs Élysées; all our young men have learned the jargon of the turf; we have English tailors for men and for women; our worst novels have as many readers in London as they have in France; we exchange fashions, plays, books, reviews, newspapers. But this permanent social fusion has no effect on the political interests of the two countries. If you wish to have a proof of it, look at the history of the late Anglo-Turkish Convention, prepared by Sir Drummond Wolff, and rejected by the Porte. There never was a more extraordinary diplomatic incident. Sir Drummond Wolff was not a diplomat *de la carrière*, as we say—he had not been bred in the art of concealing artfully facts behind words; he had in this convention boldly and openly claimed for England the right, after she had evacuated the valley of the Nile, to reoccupy it in case of need and in certain emergencies affecting the material order and financial prosperity of Egypt. It was hardly necessary to put such a clause in the convention, as circumstances which would make an occupation of Egypt imperative cannot well be defined beforehand. Europe did not object to the existing occupation, though some of the Powers did not like it. Europe, in all probability, would not object any more to a reoccupation in a certain number of years, if this reoccupation seemed a necessity. "Il y a des choses," says Beaumarchais, "qu'il ne faut pas se dire à soi-même." *A fortiori*, you must not tell them to others. To assume in a convention a positive right of occupation at any time was to invade the rights of sovereignty of the Porte—rights which are still nominally recognized, and which form the basis of all conventions with the Porte. M. de Montebello, the French Ambassador at Constantinople, had a conversation on the subject with the Sultan, and, following the instructions of his Government, represented to him that France could not accept the idea of a diminution, a division of his own sovereignty with England. The Sultan was, at the time, on the point of signing the convention; he was evidently moved by the argumentation of the French Ambassador, and was also reassured against the consequences of a rupture with England, when the French Ambassador went so far as to say that France would guarantee the Porte, at any risk and any price, against the selfish and ambitious designs of England. This was very strong language—so strong that in other times it would have seemed antecedent to open hostilities. The Sultan was so much impressed by it that he asked the French Ambassador: "Will you not let my first dragoman make a written note of what you have just said to me?" The French Ambassador could not well refuse; but the note had no official character. How it came into the hands of Sir Drummond Wolff, almost immediately, it is not for me to say, but those who are familiar with the ways of Constantinople will not be surprised at it. What is more surprising is that this informal note, this résumé of a conversation, made, not by the French Ambassador, nor revised or approved by him, found its way, with its strong, perhaps exaggerated, expressions, into a Blue Book presented to the English Parliament. Little has been said about this note in the English or French press; its gravity was such that it was felt imprudent to discuss it. At the same time, the note throws a great light on the actual relations of France and England, which are no longer what they used to be. England, since the rejection of the convention, simply maintains her position in Egypt; but the time will come when a diplomatic solution of the Egyptian problem will become necessary, and we do not see clearly what this solution will be.

If we look on the European continent, we find that the mutual relations of the three great empires are suffering a slow and gradual change. It seemed at one time as if this alliance of empires was a solid foundation of peace which could not be shaken; it was rendered apparent to the world by solemn and annual interviews. Everybody feels now that there is something rotten in the great alliance, though few know exactly where the rottenness lies. Are we to believe that the policy of semi-abdication which Austria has followed since the creation of a new German empire is on the point of coming to an end, that Austria will again be tempted to have a will of her own? Her statesmen have wisely united their action with the action of Germany for eighteen years; the Emperor has shown himself devoid of all petty feelings of vanity: he has consulted the interests of his numerous peoples and the interests of peace, instead of obeying his pride. But it was always felt by him, as well as by the greater part of his subjects, that he could not renounce one thing, which was the historical mission of Austria in the valley of the Danube and in the Peninsula of the Balkans; that his duties to Germany would cease if Germany sacrificed the interests of Austria to the interests of Russia.

Germany may well say that, so far, she has not sacrificed her Austrian ally; that she has allowed Austria to occupy Herzegovina and Bosnia, and that no limit has been fixed to this occupation, which has already assumed the character of an annexation. Germany may say, also, that Russia has not gained much in the Peninsula of the Balkans, and, in fact, we hear Russia complaining every day of the Treaty of Berlin. The

state of Bulgaria shows how difficult it has become to satisfy the feeling of Russia. Prince Alexander of Battenberg incurred the disgrace of the Emperor Alexander and left the country. After a long period of suspense, the Bulgarians have elected a new sovereign in the person of Prince Ferdinand of Coburg. Russia will not recognize him, and invites the Porte to join in her protest. Austria dares not give an open support to Prince Ferdinand, but evidently she would be satisfied with his becoming the sovereign of Bulgaria. A sister of Prince Ferdinand is married to the Archduke Joseph, the commander of the Hungarian Army. The father of Prince Ferdinand was, in his lifetime, a general in the Austrian Army, his mother, Princess Clementine, lives chiefly at Ebenthal, near Vienna. The choice of Prince Ferdinand has not satisfied Russia, and Prince Bismarck has immediately espoused the cause of Russia in this case: the strongest attacks on the young Prince have been made in Berlin. The situation of the Bulgarians is truly painful: they cannot obtain a ruler, meeting everywhere the resistance of Russia; they have had no government for two years, and Russia, though she hinders everything, proposes nothing.

This situation is very critical. England and Italy are inclined to take the part of Austria; France and Germany are courting Russia and trying to satisfy her, not because they care for Bulgaria, but because they are afraid of each other. The situation is such that not a single great Power knows exactly where she is going, who will be her friends to-morrow, who will be her enemies. Nobody wishes for war, and everybody feels that an incident may bring it about. The nations are living in darkness, and their rulers in fear. If you add to the uncertainty created by an absolute contempt for written treaties, by a complete disregard of old traditions, the uncertainty which arises from the great age of the Emperor of Germany, of his Chancellor, of the President of the French Republic, by the state of health of the Crown Prince of Germany, by the state of parties in England and in France, by the obscurity of the Russian policy, you must acknowledge that Europe, though she is now at peace, is in the most unstable equilibrium. The system of armed peace is becoming an almost insupportable burden for all nations; the neutrals are all alarmed, and take expensive precautions for their neutrality. The most dangerous illusions fill all minds: the French republicans, and even the French Communists, trust in the friendship of autocratic Russia; the Panslavists think that they can dispense with the culture of the Occident, and bring to the world a new ideal of right and of civilization. The Italians, instead of enjoying their new unity, and developing all the resources of their admirable country, have dreams of distant and of near conquests. A spirit of domination and of ambition has entered all souls: the people of the Peninsula of the Balkans, instead of forming a confederacy, meditate mutual absorption. The gates of the temple of Janus are still shut, but it is not because we love peace; it is because no nation can trust another, no durable alliances can be made, no common action can be prepared; because everybody feels that in the present condition of Europe the consequences of a great commotion can neither be foreseen nor limited.

THE ECLIPSE EXPEDITION IN JAPAN.

SHIRAKAWA, Japan, August 20, 1887.

THE important day has come and gone—the eclipse is over, and the old castle, selected by Prof. Todd for the station, will again be left to its clematis and ivy, its lizards and crows; while the unwonted activity which has centred here for the past few weeks will depart with the instruments and the white tents. Sixteen thousand miles of continent and ocean traversed for three wonderful minutes, and unremitting labor during every clear night, and on all days of whatever sort, all for that little time, which may be cloudy or not at its own sweet will. Such are the chances of an astronomer's life, but glorious his compensations when nature is kind.

The principal instrument used on this occasion for observing the eclipse was the photoheliograph, a form first devised by the late Prof. Winlock, and independently by Capt. Laussedat of France. It consists of a heliostat mounted upon a pier, the large stone for which was taken from the old castle wall only a few feet away. The heliostat has an unsilvered mirror set at such an angle that it shall reflect the sun's rays through a lens, and thence through a tube nearly forty feet long, into the dark-room or photograph house. The tube was in this case covered by a sort of roof and sides of bark to prevent its accumulating heat from the sun's rays, and thus disturbing the light in its passage. The mirror is a piece of plate-glass, polished with as great accuracy to a plane surface as the finest lens to a curved one, and it is left unsilvered because all of the sun's rays reflected into the dark-room would be too intense for the purpose. It is made to revolve upon an inclined axis in the same direction as the sun moves—from east to west, so that the direction of the reflected rays remains constantly unchanged. The actinic, or photographic rays, coming to a focus at a different distance from the ordinary optical rays by which objects are seen, the lens is corrected for the former. This instrument has never been used before to photograph an eclipse, and it was brought at this time for that purpose in order to obtain a more correct knowledge of the relative positions of the centres of the sun and moon than could be gained by observing merely the contacts.

The photographs of the partial phases are upon plates seven inches square, and it was intended to take fifty before totality and fifty after, while the corona photographed by this instrument would be given on a larger scale than ever before. The image, being formed nearly forty feet from the object-glass, makes the sun's diameter about 4½ inches, on plates themselves 17x20. Shortly before totality the mirror is exchanged for one which is silvered, with a surface as accurately figured and polished as the first one, all of the rapidly fading light being now required in the dark-room.

In order to manage the photoheliograph with proper precision, the services of six persons are ordinarily required. These should be the astronomer-in-charge, who makes the exposures at the proper moments, and the necessary records; the assistant astronomer, stationed at the heliostat, whose duty is to see that the sun's rays are constantly reflected in the proper direction from the mirror; and a photographer, with three assistants, to attend to the necessary manipulation of the sensitive plates. The services of an assistant astronomer could be dispensed with if the screws by which the heliostat is adjusted could be brought under the control of the chief astronomer in the photograph house. Chief-Engineer Pemberton, U. S. N., who was detailed with Lieut. Southerland from the Asiatic squadron to accompany the eclipse expedition, was occupied a large part of the time in the practical working out and applying this device, which was found to work admirably. This is so important an addition to the apparatus as heretofore operated, that it may well come into use on future occasions where the instrument is employed.

Prof. Todd placed the immediate direction of the photographic operations in charge of Mr. R. Hitchcock of the Smithsonian Institution, now teaching in Osaka. He was ably assisted by Mr. K. Ogawa of Tokio and Miss Y. May King, M. D., a young Chinese lady who has recently graduated brilliantly in medicine in New York, and whose fine work at the Smithsonian with M. Smillie in microscopic photography has received much attention. Nothing was spared to make the photographic outfit as complete and thorough as possible, and a number of experimental investigations were undertaken for the solution of problems occurring for the first time in eclipse photography.

In order that pictures shall be available for scientific purposes of precision, it is necessary that some line whose exact direction and position are known shall appear upon each photograph; a small plumb-line of fine gold wire is therefore suspended in front of the sensitive plate. When the exposing slide is drawn and the sun shines on it, this line appears with great definiteness upon every picture of the sun which is made. When the eclipse has advanced to such a stage that the crescent is very slender, its light is not enough to show this line, and it was found necessary to devise some means of making it sufficiently luminous to show upon the plate. This was not an easy matter to accomplish. The outer light would not be strong enough to be used on account of the near approach of totality; and artificial light has not sufficient actinic effect to impress itself on the plate, except with a longer exposure than could be given to it at that varying phase when the exposures should follow each other in the most rapid succession. The problem was finally solved by throwing two rays or pencils of light upon the top and bottom of the plumb line, coming directly from a kerosene lamp placed upon a small elevator, to be raised and lowered by the hand immediately after the crescent had been exposed—thus giving virtually two exposures to each plate, and showing the plumb line as a delicate line of light, both above and below the crescent itself.

It is generally recognized that wet plates give the best results in the photography of astronomical phenomena, the only objection to them being that they cannot be manipulated as rapidly as required in eclipse photography. But it was considered inadvisable to employ the dry plates now so much used, on account of the high temperature, and experiments were therefore tried of different methods of preserving the sensitive film of wet plates prepared by the ordinary process. The results were wholly successful, even beyond expectation, and several sets of plates were prepared some hours before the eclipse began. Although it was intended that the preservative should do its work for four or five hours only, a number of plates were exposed in the photoheliograph on the day following the eclipse, and were found to give perfect sun-pictures although taken out of the sensitive bath more than twenty-four hours before they were exposed. These results are of great importance in connection with similar work in the future.

The Amherst College observatory furnished two of its object-glasses—of about seven-inch aperture—for this eclipse, one of which was used here and the other by Prof. C. A. Young at his station near Moscow. Prof. Pickering of Harvard College prepared and sent the sensitive dry-plates exactly alike for both, so that the results from the work at the two stations should be strictly comparable. The lens was here mounted in a temporary tube, and the instrument—called a coronagraph—was placed in charge of Lieut. Southerland, U. S. N., to operate during totality. This is the only eclipse occurring in recent years whose path has so traversed the earth that two civilized countries were near the extreme ends of the line of totality; and the same instruments

and dry-plates being used both in Japan and Russia, the results of the observations were expected to be of particular value, as showing any rapid changes in the corona.

A single camera, with a four-inch lens of short focus, was also provided by Prof. Pickering for special coronal research, which was operated by Dr. D. B. McCartee, and two five-inch lenses for a double camera, of which Dr. Ames, U. S. N., had charge. In addition, some small holders with sensitized plates, especially prepared for determining the actinic effect of the coronal light, were provided, the manipulation of which was in the hands of the American Consul-General, Mr. Greathouse of Yokohama.

A small four-inch telescope, lent by the Japanese Naval Observatory, was intended to be used by Dr. Holland, the naturalist, and party, in sketching the complexity of detail usually to be found in the corona near the sun's poles. Another telescope of similar dimensions was ready for use in searching for intra-mercurial planets. During totality Mrs. Hitchcock made one or two exposures with a camera, using very sensitive plates, which may have some bearing on the actinic power of light during total eclipses. Mr. K. Açinc, a student of practical astronomy at the Imperial University in Tokio, was stationed on a corner of the castle wall to watch, if possible, the approach of the lunar shadow over the paddy-fields towards the northwest, and to make as precise observations as possible of the number, size, velocity, and direction of motion of the diffraction shadow-bands seen on recent eclipses flitting across the landscape. He was also to note the possible visibility of the corona both before and after the total phase.

It was very pleasant to me that I also should be assigned a part to perform on the important day, and I became much interested in preparing to sketch the faint outer corona, with its long equatorial streamers. The first observation of this sort was attempted by Prof. Newcomb at Des Moines in 1869, and again—this time with complete success—at Separation, Wyoming, in 1878. It was tried by Mr. Lockyer at Grenada on the occasion of the eclipse a year ago, but without results, owing to clouds. These streamers are so faint that the eye, if exposed to the full radiance of the corona, becomes so dazzled that it is unable to discern them. Prof. Newcomb's very simple device consists of an occulting disk set up at a distance of about sixty feet from the eye, and of such size as to cover not only the totally eclipsed sun, but also the brighter rays of the inner corona. It was thus found that by neglecting that portion of the corona which numerous observers are always sure to depict, its enormous extension to a distance of several solar diameters in both directions was readily detected. This is regarded by Mr. Lockyer as perhaps the most important observation of a total eclipse which can be made without instrumental aid.

In addition to the work and instruments already mentioned, a series of meteorological observations were made by Mr. M. Nakagawa, Director of the Tokio Observatory, and his assistant, Mr. Shirai, with a full set of instruments for the purpose. Several days before the eclipse, observations were begun hourly of the temperature, air-pressure, velocity, and direction of the wind, and other meteorological elements. During the immediate period of the eclipse itself, all these data were recorded with precision every five minutes. These observations were made on a plan precisely similar to that recommended by the Congress of European Meteorologists, who devised a general scheme for such observations to be made on the occasion of this same eclipse in central and eastern Russia.

Prof. Todd also prepared instructions relating to two distinct classes of observations, which he had translated into Japanese, with reference to securing the coöperation of volunteer observers scattered over every part of Japan which would be covered by the lunar shadow. About forty towns, situated just inside of the north and south limits of the total eclipse, received instructions relating to observing the element of the simple duration of totality. A large number of such observations would furnish valuable data with regard to the position and direction of motion of the moon's shadow across this part of the earth. At more than fifty places situated near the central line of the eclipse, instructions were sent for making pencil and other sketches of the outlines of the corona. In the printing and distribution of these instructions, Prof. Todd had the coöperation of the *Mombusho*, or Japanese Department of Education, and of the Geographical Bureau of the Department of the Interior.

Since the arrival of the party in Shirakawa there had been one long rain, lasting three or four days. With this exception the eclipse could have been observed with more or less success on nearly every afternoon. The prevailing winds were southwest, the mornings inclining towards dampness and cloudiness, with hot and clear afternoons. A strong shock of earthquake, occurring about a week before, had seemed to change the normal conditions of the climate. The heat increased, the breezes died away entirely or blew fitfully from the north or the east for a few moments, and the foggy mornings turned early into scorching sunshine. On the morning of the eclipse day Nasusan, the volcano towards the west, was observed to be unsually active, sending up clouds of white steam from one or two apparently new fissures in its sides. The sky was almost entirely clear, and the heat was well-nigh stifling. During the morning a few white clouds flitted across the sky, but everything seemed favorable for success in the afternoon. About one o'clock a small white cloud was noticed, lying close to the summits of the mountains, and before two this had spread upward like an ominous white finger, reaching the zenith. Then a black cloud arose in the east and another in the south. The distant muttering of thunder was heard, and all the clouds, as if in a conspiracy of opposition, joined their forces against the fair blue, which seemed trying to maintain itself. The beginning of the eclipse was entirely hidden, but, shortly after, the stout crescent of the sun shone through a rift in the clouds, and a few photographs were taken. The motion of the clouds was so slow as to be entirely unnoticeable—they seemed merely to accumulate, pile on pile of varying shades of gray, while one clear spot continued in the north most exasperatingly, just beyond any possibility of use. The dread of failure at totality spread among the guests who were watching from the castle, while the pain and tension of expectancy held every one in silence. The astronomer-in-chief alone was calm and philosophic, taking advantage of every possible break in the clouds to catch the narrowing crescent. The darkness increased and became almost sepulchral; the bit of blue above turned steely gray, and it became evident that no drawing of any part of the corona could be made. Totality was announced, and, by two or three jerks, apparently, the darkness fell. The outlines of the mountains and rice-fields grew indistinguishable, the clouds turned almost black, and thunder rolled all about and above. In the southeast was a streak of strange, sulphurous yellow, which seemed to give out the only light in the world, except the feeble glimmer of a few lanterns in the town below. A weird and breathless silence came over everything, and for three minutes it seemed that the world must be dead and cold, and turned to ashes. Suddenly a tiny flash of light fell like an instantaneous arrow from the clouds, and all nature came to life. A small rift showed the tiny crescent for an instant, and then the clouds rolled over again heavily, and nothing remained of the eclipse which we could see except a gradually increasing light. The visitors moved away quietly, and for the first time the whole extent of the disappointment came over the observing party.

Philosophy must needs be called strongly into requisition where nothing more tangible than the powers of the air can be held responsible for disaster, and an astronomer is at times a hero. The results of this trip are by no means valueless, but with a clear sky they should have become most especially valuable. To-day the sun is shining heartlessly, the insects are chirping in the grass, and all nature smiles.

MABEL LOOMIS TODD.

A WEEK IN ALASKA.

PORTLAND, Oregon, September 5.

IF Long Island Sound could be continued for about a thousand miles, past the coasts of Maine, Newfoundland, and Labrador, as far as the entrance to Hudson's Bay, so that tourists might go all the way on fast river-steamers, with staterooms on the main deck, and without the slightest risk of sea-sickness; and if this hypothetic "Long Island" could be broken up into several thousand, which, instead of being flat and sandy, were covered with forests of almost tropical luxuriance, and with mountains of an infinite variety of shape, continually increasing in altitude until they culminated in two snow peaks higher than Mont Blanc, outrunners of the third highest mountain range in the world, and sending clear down and into the salt water numerous glaciers, compared with which those in Switzerland are mere pigmies—if, in other words, the strip of coast which extends from Tacoma, W. T., to Glacier Bay in Alaska could be transferred to the Atlantic side, it is safe to say that at least a score of large steamers, crowded with passengers, would be going up and down this salt-water river all summer long. The Atlantic Coast people, however, even if they possessed this scenic bonanza, would hardly be able to enjoy it comfortably, on account of the icy ocean current which sweeps down Davis Strait and chills and befogs Labrador and Newfoundland even in summer. Most persons in the East seem to imagine that Alaska must be in a similar, if not a worse, predicament; but they reckon without the warm Japan current which does for southern Alaska what the Gulf Stream does for the British Islands. Northwestern Alaska, indeed, shares with northern Siberia the honor of having the coldest climate in the world; but the southeastern portion of the coast, as far north as Sitka, has a climate not unlike that of Maine, though Sitka is some fifteen degrees of latitude north of Portland, Me. It must be borne in mind how vast a country Alaska is—as large, one writer has calculated, as the original thirteen States. A still more graphic way of realizing its extent is by noting that from California it is as far to the western extremity of Alaska as it is to New York; so that the central city of the United States is not Omaha or St. Paul, but San Francisco!

Fifty years hence, in my humble opinion, San Francisco, or the then metropolis of the Pacific Coast, will be not only geographically but in many other ways the centre of American life. The agricultural, scenic, climatic, and hygienic superiority of the Western to the Eastern Coast is too great not to affect the questions of population and civilization. But long before that era Alaska will have universally established its claim to that much-abused phrase "the American Swit-

zerland"—unless, indeed, the terms should be converted and Switzerland come to be complimented as "the European Alaska." Yearly the number increases of those who ask themselves whether, instead of going to Europe every summer, it would not be worth while to try a Western trip. Before the Yellowstone Park and Alaska were made conveniently accessible, this Western trip could hardly have been recommended as an equivalent for Europe: but now the scales are pretty evenly balanced, and as soon as the St. Elias range shall have been included in the regular round trip, and provided with guides, roads, and hotels, Switzerland will have to "take a back seat"—for St. Elias rises 20,000 feet into the air, and can be seen from base to top, with a snow-and-ice mantle reaching down to the very level of the ocean, while the highest mountain in Switzerland is only 15,784 feet high (to the spectator only about 12,000, as he is already several thousand feet high when he sees it), and has a snow mantle of only about 7,000 feet. Indeed, considering that in the Himalayas and the Andes, the only two ranges that tower above St. Elias, the snow line is as high as 15,000 to 20,000 feet, it would seem that St. Elias must be the most overwhelming *snow* mountain in the world.

Unfortunately, the present Alaskan round trip does not include St. Elias, although the majority of the tourists would gladly risk the chances of sea-sickness by making the additional two hundred miles from Sitka in the open sea. Two mountains of the St. Elias range, with their stupendous glaciers—Fairweather and Crillon, both higher than Mont Blanc—are, however, visible to those who make the present tour; and although, like St. Elias, they are lamentably apt to hide themselves beneath and above clouds, even those who miss this wonderful sight find so much that is unique in the other attractions that no one has ever been known to feel the slightest desire to "get his money back." Were the scenery much less inspiring than it is, yet would the trip be worth making for its hygienic value. Here, for two or three weeks, one can breathe a delicious mixture of ocean and mountain air, the latter just sufficiently impregnated with the fragrance of pine forests to prevent that enervating languor which an exclusive lung-diet of ocean air is apt to breed. As regards the appetite for solid food, its average size may be inferred from the Captain's favorite joke—that, as the provisions are running short, he shall be compelled to take the turbulent outside passage back in order to curb the gastronomic propensities of the passengers. The fare provided on these steamers is about as good as that on the average Atlantic steamers, but the daily salmon and a few other dishes become monotonous, and the passengers look in vain for "local color" in the bill of fare, *i. e.*, for venison and bear steak, wild ducks and geese, salmon-berries, and some of the unusual kinds of fish that haunt these waters. The fault for this omission is laid on the shoulders of the Indians, who are said to be too lazy to hunt and fish for more than they need for themselves daily. But as they willingly work in the mines for $2 a day, it is probable they would gladly hunt and fish for the steamer stewards if enough were offered them. Yet, as just intimated, one needs no such special stimulants for the appetite, and one thing is certain, that the large number of invalids who cross the Atlantic yearly, chiefly to get the benefits of a sea voyage, would do much better to go to Alaska, for there they would be *sure* of gaining in weight daily, owing to the absence of sea-sickness. And another thing in favor of the Alaskan tour is, that one is certain to find pleasant companionship on the *Olympian*. The passengers on Atlantic steamers represent all classes of society, and even of the tourists not all are pleasure-seekers in an æsthetic sense; but of the Alaskan passengers the majority are apt to be persons of refinement and taste, since the only magnet that can draw them there is the hope of enjoying fine scenery.

Most of the tourists, not feeling quite certain whether Alaska will come up to their expectations, go on the elegant new steamer *Olympian*, which is provided with all modern comforts and makes the round trip in twelve days; but not a few regret afterwards that they did not take one of the old freight steamers, *Idaho* or *Ancon*, which require about a week more for the trip, and, as they repeatedly stop a whole day at interesting places, allow the passengers more time to explore the neighborhood, and go fishing, observing the natives, hunting for curios, etc. The *Olympian* makes only six or seven stops in twelve days, remaining from two to six hours at each place; and for almost three days after leaving Victoria she makes no stop at all, thus resembling an ocean steamer—a resemblance made the more suggestive by a series of rocky islands near Victoria that look very much like the coast of Ireland when first approached on the voyage to Liverpool. The regular tourist season extends from the middle of April to the middle of October. Early in the year passengers will see more of the "midnight sun," but in July and August fogs and rain are less common, although even during those months the warm winds blowing inland from the Japanese Current are very apt to condense into clouds and rain—a wise arrangement, which prevents the scenery from becoming monotonous to the tourists; and if any interesting point is thereby missed, there is always a chance of seeing it on the return trip—unless, indeed, the Captain should choose a different channel. There is an endless variety to select from, and the marvel is that any captain or pilot should ever be able to find his way through this labyrinth. For what the milky way is among stars, this island-studded archipelago is among terrestrial water-ways. Capt. Carroll, however, finds his way as unerringly as the salmon which at some seasons splash about the ship, bound for the rivers of the interior. There is not a single light-house, only here and there a rude post. Fortunately the nights never become entirely dark, and even a dense fog does not arrest the steamer's progress, for the pilots have learned, by blowing the steam whistle, to judge by the echo the distance from either shore; and the water is almost invariably so deep that danger is reduced to a minimum.

During our trip, which commenced on August 22, the fog was never dense enough to call for the steam whistle; but the dense smoke, the result of forest fires and "clearings," which had prevented us from enjoying the Columbia River scenery and Mounts Hood and Tacoma, also hid from us the charms of the far-famed Puget Sound region, with its background of Olympian and other snow mountains. Gradually, however, as we passed along British Columbia towards Alaska, the smoke grew less dense and finally disappeared entirely. Isolated columns of smoke were still to be seen frequently in the midst of the primitive forests, indicating Indian camps; but in Alaska, thanks to the frequent rains, forest fires cannot occur—a fact which will console the economically minded for the enormous wastes of timber in Washington Territory and Oregon. The visible wealth of Alaska, as Mr. Hallock remarks, lies in these forests: "There is a supply here of 5,700,000,000 feet at a low estimate, a very large part of which is at once accessible for shipment, as saw-mills and vessels can lie right alongside the timber at tide water all the way up the coast as far as it extends"; and Alaska with its islands is said to have a coast line of 25,000 miles, equal to the circumference of the globe.

Not only has Alaska the third highest mountain range in the world, but if the greatest landscape artist had been consulted, its members could not have been arranged in a manner more continuously impressive to the tourist. Beginning near Victoria with a moderate altitude and mere patches of snow on the sides, they daily grow higher and whiter until the climax is reached in the St. Elias group. When we were northward bound, the smoky atmosphere hid the distant peaks and left the impression that snow was rather scarce for the first three days; but on the return trip a shower had preceded us, clearing away this smoke, revealing snow in abundance, including, about thirty-six hours from Victoria, an undulating range with immense snow fields that would not be without honor even in Switzerland; and this was before Alaska proper had been reached. The whole of the second and third days the passengers could imagine themselves sailing along the Hudson River Highlands or Lorley Rocks on the Rhine; but after that all comparison with Eastern rivers ceased, and the Columbia alone, with its background of snow mountains, afforded approximate terms of comparison. The hour for sleep was postponed as long as possible, from fear of losing some of the grand sights. As one of the passengers remarked, it would be possible to make hundreds of Lake Georges out of this Alaskan salt-water river. The word lake is very appropriate, as the channel continually widens and apparently comes to an end, as in a few places on the Hudson, so that tourists frequently amuse themselves by guessing which way the pilot is going to turn next. In some places the channel is so wide that land disappears on one side; at other times so narrow that a woman could throw a stone on either shore.

Of the abundance and variety of islands which adorn this waterway, only those can form a remote conception who have seen the Thousand Islands of the St. Lawrence. But in Alaska, as one writer has remarked, we see not a thousand islands only, but "a thousand miles of islands," some as large as a State or a European kingdom, others just large enough for a house and garden; while many look as if future generations would inevitably call them "Picnic Islands," from number one to one hundred. Like the mountains that line the shores, all these islands are densely wooded and very few of them are flat. Indeed, a strip of flat land in this part of Alaska is such a curiosity that the tourist's attention is unconsciously attracted by it—reminding one of the young Tyrolean girl's exclamation on entering for the first time the monotonous plain between Munich and Stuttgart: "Oh, mamma, look out of the window. How beautiful!—there is not a mountain in sight!" Bare hillsides are almost equally rare in Alaska till one reaches the glacier regions. Everywhere the forests extend down to the very edge of the water, and during high tide they actually seem to overlap or grow out of the water. Consequently there is no beach, its place being taken at low tide by ten feet or more of rocky wall, adorned with mosses and other vegetable and animal growths, and sometimes almost as brilliantly colored as the walls of the Yellowstone Cañon. The forests above add to this an endless variety of green tints, indicating the different kinds of wood, the age of the trees; or perchance an isolated streak of fresher color betrays the path of an avalanche, which carried away the old trees and made room for a new growth. Some of the mountains are so rocky that they afford insufficient nourishment to the trees, which consequently die after a certain age, their gray, leafless skeletons standing upright among their green neighbors, and suggesting the thought that after all forest fires have their uses as a sort of scavengers. Still, these gray and green forests are less uninviting than those black and green charnel forests in which the fires have done their work in-

completely; and they are the exception, not the rule, in Alaska.

For the first three days, as already intimated, these aspects of nature were the only new experiences and sights offered to the *Olympian's* passengers, no stops being made after Port Townsend and Victoria till we reached Juneau (the largest town in Alaska), omitting Nanaimo, Tongas, and Wrangel. It is customary to stop at each place of any importance either in going up or returning, the Captain being guided in his decision chiefly by the necessity of passing certain dangerous places when the tide is favorable. The most perilous of these places is Seymour Rapids, some hours north of Nanaimo. As we approached these narrows the water presented a most turbulently fascinating appearance, twirling around furiously in hundreds of little whirlpools, while large portions of the surface appeared to be several feet higher than the adjoining parts, as if a submarine earthquake had raised some places and thus made the water run down hill. The spectacle was as exciting as the Niagara Rapids, and more sublime, because the fact of being on the water, and the knowledge that there were hidden rocks all about, added just that slight suspicion of danger which stimulates the feeling of sublimity. In the narrowest part of the channel a regular waterfall was produced by the headlong plunge of the tide-waters down some rocks near the eastern shore, while the other side was rendered equally dangerous by numerous rocks, thus leaving only a very narrow channel in the middle for the steamer to pass through. The *Idaho* and *Ancon* never attempt this passage while the tide rushes through it like a mountain torrent, but the *Olympian* plunged in boldly. In vain, however, did the engineer strain every muscle of his machinery; for more than an hour the noble steamer, though paddling away at a rate of almost twenty miles an hour, did not move a yard. Here was a lovely situation for timid souls, with plenty of time to speculate on the possibility of the shaft or rudder breaking, and to recall the fact that in this very place two vessels have already come to grief, one at a sacrifice of seventy Chinese lives! But the *Olympian* suddenly made a spurt, and the salt waterfall and the maelstroms were left behind.

On the fourth day we met the *Pinta* in a shallow, quiet bay, and exchanged greetings, mails, and provisions. The *Pinta* is the formidable man-of-war which cruises these waters and keeps the Indians in subjection through the fear of having their villages bombarded. While the brass buttons of the officers exerted their usual magnetic power over the lovely eyes of the young ladies, the other passengers were less romantically employed in watching the jelly-fish which crowded about the steamers, literally by the million. The next incident of importance was our stop at the gold mines opposite Juneau, and subsequently at Juneau itself. Everybody went ashore to see the mines and the quartz-mills, where a hundred or more machines reduce the ore to sand with a most terrific noise. The mine is said to be worth twice the price paid for Alaska, and it is evidently prospering, to judge by the additional buildings now in course of erection. At Juneau, which is a larger place than Sitka, the first thing that strikes the eye is the large number of "drug stores," almost every other building being labelled as such. Can it be that the Indian habit of leaving the heads and tails of salmon to decay in the street, in their part of the village, has such an injurious effect on the health of the Juneauites? or has the fact that the sale of whiskey is forbidden in Alaska a remote bearing on the subject? Certainly neither the whites nor the Indians look unhealthy.

Most of the Indian men were at work in the mines, but the squaws sat in rows on the pier or in front of their houses, offering for sale grass baskets, furs, blankets, small canoes and paddles, totem-poles, wooden spoons, masks, bracelets made of silver dollars, berries, etc. Each squaw seems to have the shrewdness and business instincts of a Jew and a Yankee rolled into one. In their own language they comment freely on the tourists—tit for tat—and appear to find their doings rather ludicrous, which, no doubt, they sometimes are. These squaws have obviously given their husbands elementary lessons in "woman's rights," for the latter never dare to sell anything for a lower price than first asked, and if the wife says No, the bargain comes to naught. The squaws are also allowed to share the labor of the men on the water, and they are experts in paddling their own canoes. Their domestic accomplishments are less admirable. The interior of the houses is as uncleanly as the blankets they wear, and it would not be pleasant to think of entering their huts were it not for the disinfecting smoke which pervades them. With a few exceptions, they have no stoves, the food being cooked over an open fire in the centre of the floor. The smoke seeks to escape through a hole in the roof, but, before escaping, it is utilized for curing strips of salmon that are hung on strings below the hole. In front of the houses other rows of salmon are suspended on sticks to dry in the sun; and before each hut lies a canoe carefully covered with mats, to protect it against the sun.

At Sitka we had an opportunity to see the Indians as influenced by missionary efforts. The Mission School contains over a hundred boys and girls. The girls do the cooking, and the boys are experts in carpentry. Their chairs and bedsteads are very neatly made, and are to be seen in most of the Indian huts. The boys wear a blue uniform, to give them a sort of *esprit de corps;* and the girls appear to give considerable attention to their appearance, especially in the arrangement of the hair. Their gait is very ungraceful, owing, as some say, to the fact that their ancestors spent so much of their time in canoes. Among the half-breeds, and the Indians too, some have considerable beauty of figure and face; and were it not for the large mouth, many more would be pretty. It is impossible to look at these Indians and not come to the conclusion that they are descended from the Japanese. The whole cast of the face is Japanese—the cheeks, the small sparkling black eyes, with their scant lashes and brows, and the complexion, are unmistakably so; and the fact that, not so many years ago, some Japanese mariners were shipwrecked on the Alaskan coast, makes the Japanese origin of the American Indian all the more probable. Another Japanese trait of these Indians is their bright intelligence and their eagerness to adopt the customs of the white man. They learn very readily, and some of the pupils recited and prayed in English, while several squaws and Indian men prayed in their own guttural language. The singing of these children did not differ much in quality of tone or intonation from that in our primary schools.

Besides these Indians, there is little of interest in Sitka itself besides the old Russian castle and the Greek church, in which it is odd to see pictures of saints in these out-of-the-way regions. The church itself does not deserve the amount of attention it has received, except from an antiquarian point of view; but the charms of Sitka harbor have hardly been exaggerated even by those who compare it to the Gulf of Naples. The arrival of the *Olympian* is always a great event for the Sitkans, natives and whites, who assemble on the wharf to greet her arrival and cheer her departure; and the local weekly paper, the *Alaskan*, was enterprising enough to get out an extra in a couple of hours with the passenger list; and this edition the young ladies bought by the dozen and mailed to their friends as conclusive evidence that they had been so near the north pole.

In speaking of Sitka before Glacier Bay I have followed the map rather than the steamer's course; for Sitka is already some distance on the home stretch, and before arriving there the steamers visit Lynn Canal, which leads up to the Chilcat country, famous for its furs, blankets, salmon canneries, and glaciers; and then Glacier Bay, which runs almost parallel to Lynn Canal, and, with the Muir Glacier, represents the climax of the present Alaskan tour. Lynn Canal contains a large number of glaciers, each of which would make the fortune of a village and a dozen hotels in Switzerland, and conspicuous among them are the magnificent Eagle and Davidson Glaciers, which would be the "lions" of southern Alaska were they not slightly surpassed in grandeur by the Muir Glacier, which, Jumbo-like, therefore gets all the attention of the visitors. As the steamer enters Lynn and Glacier Bays the scenery becomes truly Arctic, as well as the climate, and overcoats are in demand. Vast snow fields are visible in every direction, and the frozen rivers or glaciers which represent their drainage, all creep down to the water's edge, in some cases presenting a front of several miles. As the steamer moves on, the panorama constantly changes, showing the mountains and glaciers from every point of view without involving the slightest fatigue on the part of the tourists; and as soon as one ice river is out of sight another shows its edge, and gradually stands revealed in all its grandeur. One never gets over the surprise that the snow line should be so low—that the snow in the crater-like dug-outs on the mountain sides should be so near the level of the ocean.

On entering Glacier Bay another Arctic surprise awaits the tourist. Icebergs of all shapes and sizes begin to float about the steamer, some just large enough to fill the steward's depleted ice box, others, the size of a steamer, compelling the *Olympian* to moderate her speed. As the great glacier is in sight two hours before the steamer reaches it, though headed directly for it, the passengers have ample time to admire the exquisite blue and white tints of these icebergs, and note their odd forms and resemblances to the hull of a steamer, various geometrical figures, a bundle of logs, a fairy grotto, or a sphinx, etc. Some of them are entirely covered with scores of gulls, which fly away with harsh cries as the steamer approaches. It appears incredible that the surface of the glacier which lies a few miles ahead should be more than two hundred feet above the water; it seems no more than twenty; but the apparent height constantly increases until the steamer brings up suddenly within a few hundred feet of the icy wall. Then there is a chorus of ohs and ahs, and the Bishop of Rochester (England) dogmatically pronounces it the grandest sight in the world. Imagine a wall of solid ice, two hundred and twenty-five feet high, extending for about a mile to right and left, the upper portions white and broken up into the most fantastic crags and pinnacles, like the rocks of the Yellowstone Cañon; the lower portions of a deeper and deeper blue, according as the increased pressure from above and from the sides has squeezed out the air and changed the solid snow into pure ice, producing near the centre a grotto of more than celestial blue. Imagine, furthermore, that there are eight hundred feet more of this wall under the water, and even if it is true that the Muir Glacier moves thirty or forty feet a day, instead of only two or three, like those of Switzerland, the portion of ice now visible to the eye represents snow that fell perhaps hundreds of years ago, and has been slowly

creeping down with the ice river ever since, and the meaning of the word sublime will perhaps become clearer than any metaphysical definition could make it. Every ten or fifteen minutes the spectator is startled from his reveries by an explosion, followed by an aggravated multitudinous echo, and caused by the fall of a portion of the ice wall into the bay, where it floats away as an iceberg. As it splashes into the sea the water flies up as in a geyser, and a wild wave dashes over the rocks, tosses about the steamer, and threatens to land it high and dry on the beach.

After this spectacle has grown familiar, the boats are lowered and every one goes ashore to climb up the side of the glacier and get a view of its rugged surface, resembling a stormy ocean suddenly frozen with all its white-caps. Here also can be seen the dozen or more tributary glaciers which combine to make the Muir, and the semicircle of snow mountains whose sides they adorn. The amateur photographers have brought their apparatus along, and take groups of the passengers with this picturesque background; and then the steamer's whistle summons all back to embark for Sitka. As the *Olympian* slowly gets ready to depart, one notices what in the excitement had previously escaped notice—the grooved and polished rocks, at least a thousand feet up the mountain side, indicating how high the glacier must have been formerly. A century ago Glacier Bay was not navigable, and according to Indian tradition the Muir Glacier has receded five miles in three generations; but this need not alarm tourists, as it still has a reserve to last a few thousand years longer. On leaving Glacier Bay we were so fortunate as to see the giants Crillon and Fairweather outlined against a perfectly clear sky, illuminated by one of the most gorgeous sunsets I have ever seen, and the glories of which did not fade till ten o'clock. It is a superb mountain group, bearing a distant resemblance to the Mönch-Eiger-Jungfrau group, as seen near Mürren, which Mr. Tyndall does not stand alone in regarding as the finest in Switzerland. HENRY T. FINCK.

Correspondence.

THE NEW ENGLISH DICTIONARY AGAIN.

TO THE EDITOR OF THE NATION:

SIR: Owing to circumstances, the *Nation* of September 1, containing the letter of Prof. March, did not reach me till to-day. In two or three instances his exceptions to my notice of the 'New English Dictionary' are well taken. My failure to find *bargeret* was due to nothing but pure, unadulterated stupidity in not noting what I certainly read. The same is the case with *bel*. Under *bead* I should have said that the quotation from Vaughan does not appear in the place where it properly belongs and with the meaning it properly has. But Prof. March unintentionally misquotes me when he says that I suppose *bargeret* to occur but once in English literature. I said that I knew of its occurring but once. No one regrets more sincerely than myself that the facts of language and my knowledge of them are unfortunately two very distinct things.

But Prof. March's other points are not well taken, and some of them strike me as wholly indefensible. It would be a most unprofitable work of supererogation for the choicest of "choice spirits" to forward words from authors who have already been specially read for this dictionary; and it was to such authors that I intentionally confined myself. Nor could very specific references be deemed matter of much moment in the case of words that had been already passed by in the works in question. In regard to the two, however, which occasion the most distress, *blandulish* will be found in Sterne's correspondence for the year 1761, and *baubledom*—with the spelling *bawbledom*—in the additional letters of Walpole printed by Jesse in his Life of George III. (vol. i, p. 379). The latter does not mean 'bric-à-brac,' but is interesting as showing that the language was feeling about for some word to express the idea conveyed by that term. In regard to *boes*, Prof. March misses the point. The man who knows already that it is a contract form from the verb *behove* will not need to consult the dictionary at all; he who does not, would hardly think of looking for it under that word. A similar remark is true of the once very common, but now obsolete, forms *bit*, *bint*, and *betit*. To a distinguished scholar like Prof. March, who is thoroughly familiar with them, their omission does not seem a deficiency. It might naturally impress otherwise the men who are not familiar with them; and it is not for the men who know, but for those who do not know, that dictionaries are primarily prepared.

I had anticipated Prof. March in the statement that the idiomatic phrase containing *beard* was already included; but that does not justify the omission of its independent use and meaning, which is perfectly plain in the line quoted, and does not require the least suggestion of *double entente*. The implied view, however, that a word or meaning should be excluded because it is not "nice," if accepted as held by the editors of a great dictionary like this, would be a most damaging charge against the work. There is nothing, I believe, to justify the belief that they act upon any such principle. Prudishness is bad enough when displayed anywhere; but it can hardly be more absurdly out of place than in a great dictionary.

THE WRITER OF THE REVIEW.

SEPTEMBER 14, 1887.

THE ILLUSTRIOUS-FATHER MOVEMENT.

TO THE EDITOR OF THE NATION:

SIR: If the sugar which renders palatable the white of an egg will do the same for castor oil, then, doubtless, all sons of illustrious fathers are equally worthy of honor and office, and the fate of one as a candidate will determine the acceptability of another. This theory is advanced as ground for the recent nomination of Mr. Fred. Grant in New York, and it is thought by some that it would be a happy idea to couple his name with that of Mr. Robert Lincoln on the next Presidential ticket. I hear it suggested, however, that there is a grievous mistake in this, inasmuch as Mr. Grant's eminent fitness for the Secretaryship of the United States Treasury—demonstrated in his business career, even previous to the Grant & Ward failure—sufficiently indicates *this* as the one proper position for him under the next Administration. There can be little doubt that the surplus could thus be disposed of in some way without calling for over-exertion on the part of Gen. Butler *et al.*, while the son of some other great man might be found who could better be spared to grace the second place on the ticket or to serve the State of New York. I would suggest that, in order to make the proposed *Illustrious-Father Administration* complete, and to render doubly sure the care of the surplus (though personally I should have no fear for the latter), those who have the composition of the ticket in hand begin early to press upon the principals the claims for the *Assistant Secretaryship* of the Treasury of Mr. Robert Garrett, the son of a most able father, happily released from the cares of a great railroad just in time to enter upon this new field.

With profound respect for illustrious fathers, and a hope that some are in process of growth among us this day, C. M. GARDNER.

CHICAGO, ILL., September 17, 1887.

GRAND ARMY PROGRESS.

TO THE EDITOR OF THE NATION:

SIR: I suspect we have not yet seen the end of the extravagant demands made by members of the G. A. R. They now ask for the offices without that examination into their fitness which other persons must undergo; they ask for pensions for everybody who put on a uniform or shouldered a gun; they circulate petitions for the immediate pardon of a Chicago "boodler," on the ground that he was a soldier in the Union Army. It is perfectly certain that within the next twenty-five years still more astounding claims will be made.

We were congratulated by foreigners at the close of the war that the vast body of men who composed the army, so easily found their old places in peaceful pursuits and did not for a moment become an organized menace to Congress and the President. We congratulated ourselves also, yet we had no fear of such a result. It is possible that we were too sanguine.

Very respectfully, H.

LAWRENCE, KANSAS, September 13, 1887.

STATE OWNERSHIP OF LAND.

TO THE EDITOR OF THE NATION:

SIR: There is a commendable spirit of honesty and sincerity in the letter of your correspondent Henry Bartlett, upon the question of "no ownership in land," as published in the *Nation* of September 8.

His hypothetical case labors under one very serious difficulty, namely, that after he has built his house on the first lot, the other nine men may not prove as unselfish as himself. The first one of them who comes along may be a man of foresight, and may build a fence around the entire nine lots, and, by paying the necessary taxes, maintain his claim against all comers and make them pay him about the market price of the land for his right, or else become his tenants.

Suppose the aforesaid individual should find that his judgment as to the future of the town was in error, and it should happen that there was no demand for the property; then he would have only to abandon it, and would lose no investment, but only the taxes he had paid. Could anything be nicer for a real-estate speculator?

As all the improvements in town would certainly belong to the individuals whose labor and money had put them there, and hence could be bought and sold, and as taxes would be regulated "according to the necessities of Government," it seems possible that some one might own the entire town some day by simply buying up the improvements and meeting the aforesaid necessities of Government. Of course, the people would still own the land, but this grasping capitalist would own a top stratum, so to speak, in the shape of houses, etc.—Very truly, W. M. H.

ST. LOUIS, September 12, 1887.

ENGLISH AND AMERICAN SELF-GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: In the very valuable review of Dr. Gneist's History (*Nation*, No. 1155) the following words occur:

"The American people have retained these institutions of local self-government which they brought with them in the seventeenth century in a far higher degree of vigor and integrity than the mother country has done."

In making a statement so sweeping, your re-

viewer must have forgotten one noteworthy feature in the development of the institutions of local self-government by our brethren in the "old home." During the last half century they have established a dozen thriving communities of men, each with a system of local self-government almost perfect; and have made great progress in preparing a dozen other communities for the same blessing.

But the growth of local self-government is not always rightly indicated by the multiplication of local constitutions. If we turn to the British Islands themselves, we shall find the local life there wonderfully vigorous and wonderfully clean morally. When a municipal scheme is under discussion, it is discussed all over the town, and public opinion is brought to bear on those in authority with a plainness and directness we rarely see here. There seems to be there a wider individual activity in public affairs. With us, matters of vital local concern are too often arranged, for better, for worse, and we scarcely hear an echo beyond the walls of the council chamber.

H. H. M.

WAYLAND, MASS.

A PARCELS POST.

TO THE EDITOR OF THE NATION:

SIR: Some time ago the German Post-office Department invited our own to examine the working of the system for transmission of parcels by post-office, in order that our Government might be induced to join in so convenient an arrangement. Our Postmaster-General appears to have taken some steps in that direction, but found, as it seems, so stout a resistance on the part of the express companies that he was obliged to renounce the plan.

It seems very clear that if our people do not desire to be sacrificed to the express companies, they must make their wishes felt. In other countries, less corporation ridden than ours, this great improvement in international intercourse has long been established. The question is, how long the express companies will be able to prevent its adoption here.

L.

ELIA.

TO THE EDITOR OF THE NATION:

SIR: Perhaps some one among the *Nation's* readers can give me Mr. Lowell's authority for the statement which he makes ('Democracy and other Addresses,' p. 113) with respect to the title of the 'Essays of Elia.' He says: "Old Howell [author of 'Epistolæ Ho-Elianæ'], whom I love to cite, because his name gave their title to the 'Essays of Elia.'"

The name Elia is, I think, generally supposed to have been that of a clerk in the India House years before Lamb went there, or, as others say, in the South Sea House. "Mr. Elia (whose name he assumed)," says "Barry Cornwall," "was at one time a clerk in the India House." Talfourd speaks of Elia as having formerly been a clerk in the South Sea House.

Any reference given in explanation of Mr. Lowell's words would greatly oblige me.

Sincerely yours, W.

Notes.

JOEL MUNSELL'S SONS, Albany, have in press for early publication a volume containing all the inscriptions in the Granary burying-ground, Boston—a task not new, but undertaken now under better auspices than heretofore. King's Chapel graveyard may also be attempted anew, if the above venture succeed. The same firm have just issued the second volume of their 'American Ancestry,' local series, for Columbia Co., N. Y. Living representatives of the Van Rensselaers and Livingstons are among the 3,500 names recorded.

In addition to the announcements of Houghton, Mifflin & Co. already made, we should mention a new revised and enlarged edition of Stedman's 'Victorian Poets,' of which one issue will be on large paper, limited to 250 copies, and illustrated with portraits; and 'In the Track of Ulysses, archæological studies by W. J. Stillman, consisting of his several articles in the *Century* under the above title, and also his previous discussion of the Venus of Melos, with the illustrations.

S. C. Griggs & Co., Chicago, announce 'Hegel's Philosophy of the State and of History,' in Prof. Geo. S. Morris's "German Philosophical Classics"; and 'Men, Places, and Things,' essays by William Mathews.

More dialect in fiction may be had in 'Uncle Lisha's Shop, or Life in a Corner of Yankeeland [viz, Vermont],' by Rowland E. Robinson, to be brought out by the *Forest and Stream* Publishing Co.

The Clarendon Press, Oxford, issues for private circulation a proposal to publish a revised text of the Peshito version of the Four Gospels, under the editorship of the Rev. G. H. Gwilliam, whose collation of several Syriac versions confirms (and partially corrects) the traditional text of the Peshito, and proves that its variations from the Greek are not modern corruptions, but "date from a most remote antiquity."

From Scribner & Welford we have several late issues in the Bohn Classical and Standard Series. Mr. Aubrey Stewart's translation of Seneca 'On Benefits' gives this epistle complete in English for the first time since Lodge's edition of 1614. Heretofore it has been accessible only in Robert L'Estrange's abstract. Apart from its ethical value, the work by reason of its numerous anecdotes has an historical importance, and is in a high degree readable. Mr. Ernest Belfort Bax, in reëditing Adam Smith's 'Wealth of Nations' from the sixth edition in two handy volumes, has treated it as a classic rather than as a living text-book, and hence has supplied foot-notes "only when they have seemed absolutely necessary as correctives of the text." Mr. Bax has, however, furnished an introduction to show the state of the science before this work appeared, and the immediate consequences of the publication, with a mere glance at present tendencies in economic doctrine. Finally, we must mention 'The Letters and Works of Lady Mary Wortley Montagu,' from Moy Thomas's third edition of Lord Wharncliffe, likewise in two volumes, and containing two portraits of the famous wit and traveller.

'Marius,' the third volume of "Les Misérables," has just been issued by Wm. R. Jenkins in the handsome edition he is publishing in French of Victor Hugo's work. The next volume is announced to appear in October, and the last one before the end of the year. Since the Paris publishers have withdrawn the 18mo edition of 'Les Misérables' from the market, the present one is very welcome to those readers of French in this country who do not care to possess it in the luxurious and costly 8vo form in which alone it is otherwise obtainable.

We have received from Routledge & Sons (London and New York) two new volumes of their translation of Alphonse Daudet: 'La Belle-Nivernaise' and 'Tartarin of Tarascon.' Both are very fully illustrated with the original designs of the Paris edition by Montégut, Myrbach, Rossi, etc. 'La Belle-Nivernaise' contains, besides the long story which gives its title to the volume, four of the author's shorter stories, which are always pleasant to read and sometimes delightful. They are the same that appear in the edition published by Marpon & Flammarion, in their "Auteurs célèbres," except that the English translator has omitted the best of them all, "Jarjaille chez le bon Dieu," probably because he considered it too irreverent. The omission is to be regretted, for Daudet has given the old *fabliau* in his most delightful manner. One of the stories translated is, however, among the best of the legends of his native south which he tells so well: "Les trois messes basses," with its fantastic pictures, is altogether charming. The material execution of the books is excellent. No translator's name is given to either, but the versions seem to be as well done as it would be reasonable to expect when the originals are by a writer so striking and individual as Alphonse Daudet.

Two years ago (*Nation*, No. 1045) we noticed, with the praise which it merits, M. Désiré Charnay's 'Anciennes Villes du Nouveau Monde.' It is now before us in English, translated by J. Gonino and Helen S. Conant, and bearing the imprint of Harper & Brothers ('The Ancient Cities of the New World: being Voyages and Explorations in Mexico and Central America from 1857 to 1882'). As all the engravings and maps of the French edition are reproduced, the result, with excellent typography, is a very handsome book indeed, and a valuable addition to the popular sources of knowledge concerning a region still as full of mystery as it is of charm. Mr. Allen Thorndike Rice furnishes an introduction to the present edition.

In the new volume W of *Wide Awake* (Boston: D. Lothrop Co.) we remark, along with the superabundance of imaginative designs usual in children's magazines, a wholesome sprinkling of "process" engravings from nature, like the illustrations to the article on "L'Enfant Terrible Turk," and the English views in the article, "The Story of Two Names"—*i. e.*, Pocahontas and John Rolfe. Of equal merit with these is the wood engraving after the portrait of Pocahontas and her son in Heacham Hall.

Timely "Reading Notes on the Constitution of the United States" are contributed to the July-September Bulletin of the Library Company of Philadelphia by Mr. James G. Barnwell. They are very full and helpful; but as they end with Mr. Gladstone's familiar glorification of the Constitution as a *tour de force*, we naturally miss under the heading "Comparison with Other Constitutions" any direct reference to the several provincial constitutions which Prof. Johnston has just brought to bear so effectively on the instrument of 1787.

Mr. J. H. Hickcox's monthly 'Catalogue of the Publications of the United States Government' (Washington, 906 M. Street, W.) has stood the test of an indispensable good article in obtaining its price. At five dollars it has a chance to live; there are persons enough ready to pay this price, and the third volume has accordingly begun to appear. Nos. 1 and 2 contain a great deal of valuable information as to how to procure Government publications under the law, both gratuitously and by purchase; both after they have appeared and by order before. Knowledge of the right time to notify the Public Printer that extra copies of a forthcoming document are desired can in general only be had from Mr. Hickcox's Catalogue, which is, of course, the sole complete register of the issues from the Government Printing Office.

From B. Westermann & Co. we receive the conclusion of volume 7, and ten parts of volume 8, of the new Meyer's 'Konversations-Lexikon.' Greece and Great Britain are the most significant politico-historical articles. Much space is given to trade and cognate subjects. The closeness of the editing is shown in the account of Lord Har-

tington, whose present attitude towards English parties is recorded. In the chat with correspondents, the main figures of the French census of May 30, 1886, are given, and a necrological list supplementary to the biographical notices in volumes 1 and 7 is appended.

The same firm sends us Parts 83–98 of the 'Allgemeine Naturkunde,' all but the first being devoted to Geology, which is Dr. Melchior Neumayr's province. The illustrations preserve their high order of excellence, and are in the nature of the case often drawn from this continent. Arizona, Wyoming, and Mexico furnish subjects for some of the most striking colored plates. Particularly fine among these are two representing crystals and precious stones.

The publishers of the *Century* probably do not overrate the importance of Mr. George Kennan's series of illustrated papers on "Siberia, and the Exile System," which begins with the November number, when they mention it in the same breath with the War Papers and the Life of Lincoln. It will have a decided political significance, making many revelations, but it will also have some of the charm which Mr. Kennan as tourist and explorer is so well qualified to give it.

The *Studio* for July has been belated by Rajon's etched portrait of Mrs. Cleveland, which, now that it appears, is seen to have been worth waiting for, though it will be felt to fall short of that lady's difficult beauty. It is a profile, and the treatment (from life) is sketchy. The same number is rich in a large number of "process" prints after paintings in the Durand-Ruel collection, of which that by Puvis de Chavannes will most attract attention; and after etchings by Rembrandt. These last are accompanied by a careful article on Rembrandt by the competent hand of Mr. Edward H. Greenleaf, Curator of the Boston Museum of Fine Arts.

The *Curio* (R. W. Wright, 6 Astor Place, N. Y.) offers a handsome first number, containing articles on Binding as a Fine Art, American Book Plates and Book-Plate Engravers, and Washington Portraits by Stuart, which we might have looked for in the *Bookmaker*, the *Book-Buyer*, and the *Studio* respectively. American Pedigrees also receive attention at the hands of Mr. E. de V. Vermont and others; there is a biographical sketch, with portrait, of the eminent London bookseller, Bernard Quaritch; and Mr. Edgar Fawcett begins a story, "The Dominick Diamonds." The number is freely illustrated, and a loose sheet contains a portrait of the Prince of Wales, apparently enlarged from the one which appeared in the Paris *Club Almanach* for 1883. A character summary, after the manner of those prepared for the cartoons of *Vanity Fair*, accompanies this portrait from "the *Curio* Camera." Distinctive departments are a list of articles in the periodicals of the month relating to topics in line with the *Curio*, and a catalogue of current booksellers' catalogues, with select items with prices annexed.

The first number of the (autograph) *Collector*, published by W. E. Benjamin & Co. at 744 Broadway, is before us.

Ginn & Co., Boston, promise directly the first number of the *Journal of Morphology*, and the second number probably in December.

"Christophe Colomb et Savone" is the title of an article contributed by M. Henry Harrisse to the September number of the *Revue Historique*. It is partly an answer to adverse criticisms on his 'Life of Columbus,' and is partly written to draw attention to some documents printed for the first time in the 'Memorie particolari' of Verzellino. He recounts briefly the vicissitudes of the manuscript of this work on the history of Savona (once the rival of Genoa in commerce as well as in its claim to be the birthplace of the great discoverer), which, after the lapse of nearly three centuries, has at length found an editor. He then describes with much humor the growth of the birth-myth in the sixteen other Italian towns which dispute with these two cities this honor, and at the same time the claim of all his countrymen bearing his name to a connection, at least by collateral descent. The documents preserved at Savona, which relate entirely to the business transactions of Domenico, Christopher's father, are then discussed, and shown with great erudition to prove conclusively that Christopher could not have been born in Savona. Incidentally M. Harrisse quotes, from a manuscript recently discovered in the Archives of Genoa, this sentence, which throws much light on the vexed question of the date of the birth of Columbus. It reads as follows: "Christofforus de Columbo filius Dominici, maior annis decemnovem." The document is dated "October 30, 1470." This, taken in connection with other known facts, says M. Harrisse, makes it certain that "the great navigator could not have been born before 1446, nor after 1451." The probability is that his birth took place between "March 25, 1446, and March 20, 1447."

From the *Bulletin* of the Librairie des Bibliophiles (New York: Duprat) we learn that the sixth and concluding volume of the works of Paul de Molènes has just been published. This contains 'Les Caprices d'un Régulier,' a not very edifying sketch, and, in rather odd juxtaposition, a series of hitherto unpublished 'Réflections sur l'Imitation de Jésus-Christ.' These are the annotations made by the soldier-writer on the margins of the copy of the 'Imitation' which he always carried with him in his campaigns. The fourth volume of the edition of Montaigne by MM. Motheau and Jouaust, already mentioned in these columns, has also been issued, as well as an *édition de luxe* of 'Les Quinze Joyes de Mariage,' with a preface by Louis Ulbach and twenty-one etchings by Lalauze. To the collection known as the "Bibliothèque des Dames" of the same house is added the 'Éducation des Filles' of Fénelon, with preface by M. Octave Gréard.

The last volumes issued by Hachette (Boston: Schoenhof) in his collection called "L'Histoire de France racontée par les contemporains" are 'Henri III.: Les débuts de la Ligue, 1574–1578,' and 'Le règne des mignons: le duc d'Alençon et les Pays-Bas, 1578–1587.' These are made up entirely of extracts from the 'Mémoires de l'Estoile,' those of Marguerite de Valois, D'Aubigné's 'Histoire,' the 'Lettres missives' of Henri IV., the 'Économies royales' of Sully, etc. The collection (in a small 16mo at 50 centimes) is edited by M. Bernard Zeller of the Faculty of Letters of Paris. Thirty-four volumes have now been issued.

Hachette has recently published in his "Petite Bibliotbèque illustrée," also at 50 centimes, 'Les Trois Henri,' by Zeller, and, in a large octavo volume, 'Un Jésuite homme de lettres au XVIIe siècle: Le Père Bouhours,' by M. George Doncieux.

American literature is getting a foothold in Paris. Among other translations, we see 'Le prophète des montagnes fumeuses, par Egbert Graddoch' (*sic*). 'Don't' appears as 'Ce qu'il ne faut pas faire.'

—"American Authors and British Pirates," the title of Mr. Brander Matthews's article in the September *New Princeton Review*, adequately describes its contents. As its views are sound, and their presentation clear, it is perhaps hypercritical to remark that there is nothing original in Mr. Matthews's standpoint, and that the instances cited in support of the argument have not the charm of novelty. A more reasonable ground for criticism is, that the author has not chosen to handle his material with his customary literary skill. We have our doubts, also, as to whether the British are "more unblushing and unscrupulous" than American publishers of the same relative standing. Does Mr. Matthews think that the Munros, and Ogilvies, and Iverses would not resort to the tricks of "condensation," like the Warnes and the Wards, if the law in this country did not permit the *total* appropriation of a foreigner's work? And is the frequency of adaptations in England due to the greater depravity of the English publisher, or to the fact that our enormous reading public, having always been accustomed to a larger measure of English literature than American, is as familiar with £, s., d. as it is with dollars and cents, and therefore has no wish for a uniform local color? This may indicate a less degree of literary narrowness, or a wider range of intellectual sympathy, on our part; but it also shows, either that the character of our mental tissues depends upon the cheapness of the food which sustains them, or that there is an inevitable dearth of proper food in this country. As the first supposition reflects upon our honesty, and the second on our capacity, we might as well avoid raising the issue, and content ourselves with the accepted notion that the moral sense of reprinting publishers is pretty much the same, whatever may be their imprint.

—Mr. Stewart Culin, who has carefully studied 'The Religious Ceremonies of the Chinese in the Eastern Cities of the United States,' has embodied the result of his researches in a privately printed pamphlet, which is a luxurious specimen of the printer's art. The Chinese who emigrate to America come from the province of Kwantung, near Canton, seven or eight towns furnishing nearly the entire number. They are unlettered country people, fresh from the hills and paddy fields, the small number of artisans and shopkeepers hailing mostly from the cities, especially Canton. They exhibit many local peculiarities of speech and customs, and their patois can scarcely be understood even by natives of the same province who live at a distance from the group of "four towns," the inhabitants of which are, to the Cantonese, incorrigible rustics. Outwardly professing one or both of the two popular religions of their mother-country, Buddhism or Taoism, the essence of their belief is the primeval fetishism that underlies all the religions of Asia. Their chief shrines for divination, festivity, and worship are at Belleville, Philadelphia, and New York. They are influenced not only by the gods and spirits whose renowned interpositions are famed in all Kwantung and even throughout the vast Middle Kingdom, but also by the spirits native to our heath. Cases are current in which American demons have distressed tired laundrymen by ogling them in the dark, pulling at their bedclothes, and otherwise disquieting the newly arrived strangers. As a matter of courtesy, these foreign ghosts are honored with ceremonial rites, though, unfortunately, as the Chinese master of ceremonies explained, these beings are as barbarous in their tastes as are the laundry customers in the flesh. They do not appreciate the rice or tea offered them, nor are they able to read the characters, and thus understand. A great many interesting facts have been learned by Mr. Culin, and the reader is enabled to see into the significance of certain special customs; as, for instance, blue wrought in the cue or shoes—a sign of mourning—and the symbolism of their shrines, and minor holy things kept in the laundries, or pasted on the walls. The pamphlet ought to be reprinted in cheaper form, and read by intelligent people who desire to know these most terrestrial "celestials," and by earnest Sunday-school teachers who are trying to Christianize them.

—The student of mediæval superstitions will be

glad to have his attention directed to a valuable and but little-known source, of which very few copies can have reached this country. The dangers to which Christianity was exposed from the side of Roman and, later, of German superstition are well known. The early sermons and penance books are full of injunctions against the pagan observances which the convert might be tempted to follow, and the lives of the saints contain frequent accounts of the daring destruction of heathen fanes and groves where the Christians were too prone to forget their new faith. Some years ago Dr. C. P. Caspari, Professor of Theology at the University of Norway (Christiania), discovered in a MS. of the eighth century in the Benedictine Monastery at Einsiedeln a sermon bearing the title: "Humelia sancti Augustini de sacrilegia." The attribution of the sermon to the Bishop of Hippo is incorrect, nor would the title at once give an idea of its interesting contents. The word *sacrilegia* is here used to indicate the practice and observance by the Christians of heathen ceremonies and superstitious customs. It is impossible to fix exactly the date of the composition of this sermon, but it is between the middle of the sixth and the end of the seventh century, and the writer was probably a Frankish ecclesiastic from the north of the kingdom. Prof. Caspari called attention to the value of the sermon in the *Zeitschrift für deutsches Alterthum* (1881), and afterwards edited it with notes in Norwegian in the *Theol. Tidsskrift for den ev.-luth. Kirke i Norge*, vol. ix. This form was not very accessible to scholars, and the editor has now published a new edition in German, under the title: 'Eine Augustin fälschlich beilegte Homilia de Sacrilegiis' (Christiania, 1886).

—Too much praise cannot be awarded this admirable piece of work, which is interesting from so many standpoints. Prof. Caspari's notes are most valuable, and can be consulted with profit by all students of folk-lore. The sermon is in the nature of a solemn warning to Christians not to indulge in a long catalogue of superstitious observances, under pain of losing the benefits of their faith and baptism. The superstitions are naturally for the most part those of the Romans, but there are also German ones, *e. g.*, the February *spurcalia*, driving out the winter in February, etc.; and some common to both nations, as making a great clamor during an eclipse of the moon. It is impossible to mention here even a small part of the long list of superstitions included in the sermon. It furnishes many curious examples of the early occurrence of superstitions which we meet in the later Middle Ages, and even in modern times. One section runs as follows: "Et qui clericum vel monachum de mane aut quacumque hora uidens aut ouians, abominosum sibi esse credet, iste non solum paganus, sed demoniacus est, qui christi militem abominatur." Caspari cites Grimm and an instance from the beginning of the seventeenth century. Jacques de Vitry, the historian of the Crusades, in his hitherto unpublished *sermones vulgares* (Paris, *Bib. Nat. MSS. Fonds latins* 17,509), which belong to the first half of the thirteenth century, mentions the same superstition as existing in France, and adds that he heard that during a plague in a certain city of France, the ignorant people thought the only way to arrest it was to throw their priest into the ditch with the dead. There is a story of the fourteenth century (Bromyard) of a woman who crossed herself when she met a priest, saying she did it to avoid misfortune. The priest, in order that the omen might not fail, threw her into a muddy ditch, saying, "Recte fiat tibi sicut credidisti." Another very interesting superstition is the one in regard to consulting the Scriptures as oracles: "et qui per scripturas sanctas deum, quid eis facturus sit, expectatur, quid ipsas indicent scripturas." This passage Caspari illustrates by two remarkable examples in Gregory of Tours ('Hist. Franc.,' iv, 16; v, 14), and in Jonas of Orleans ('Vita Huberti, Episc. Leod.,' c, 15). Enough has been said to show the great value of Dr. Caspari's little book to the students of folk-lore and *Culturgeschichte*. The philologist will also find much that is interesting in this specimen of mediæval Latin, which offers some forms not to be found elsewhere.

RECENT NOVELS.

In Ole Virginia. By Thomas Nelson Page. Charles Scribner's Sons.

Cracker Joe. [No Name Series.] Boston: Roberts Bros.

Behind the Blue Ridge. By Francis Courtenay Baylor. J. B. Lippincott Co.

The Van Gelder Papers. Edited by J. T. I. G. P. Putnam's Sons.

Penelope's Suitors. By Edward Lassetter Bynner. Boston: Ticknor & Co.

Dick's Wanderings. By Julian Sturgis. D. Appleton & Co.

The Cruise of a Woman-Hater. By G. M. Montauban. Ticknor & Co.

COLLECTIVELY, Mr. Page's tales entitled 'In Ole Virginia' form an epic historical and tragic. After reading them we see one figure with the certainty and distinctness of actual vision. Called by no matter what name, that figure is always the same—a young man, exquisitely fine of nature, gentle, chivalrous, hot-blooded, at once the pink of courtesy, courage incarnate, and honor's self. He can think no evil, much less do it. Born to lordship, his life-path cut straight through gardens of roses that never fade almost before he comes to his own, his princedom is but an empty name: the roses are all thorns; he falls before the cannon's mouth, his dead fingers twined about his so-called country's flag. That is the beautiful figure by which, be it true to life or false, a capable story-teller has chosen to perpetuate the South that fought and died. That is the figure which vivifies all the incidents, serious, melodramatic, and comic, and illumines every picture of family and plantation life.

Mr. Page, like all who are notable in the rising host of Southern writers of fiction, does not recite the epic impersonally as an outside observer, nor does he put it in the mouth of a survivor of the ruling class. The glory of the master is told by the lips and in the language of the slave. There is nothing more curious or interesting in this creative literature of the New South than the apparently spontaneous and almost uniform choice of the negro and his dialect as the mediums best fitted to lay bare the heart of the Old South. The obvious reasons for the selection, such as greater opportunity afforded by it for picturesqueness, for novelty, and for eccentric humor, are not sufficient wholly to account for it. Nor is it convincing to remark flippantly that all the gentlemen perished in the war, or to attribute to the authors a desire to correct a widespread belief in the horrors of the past condition of servitude. The selection is not deliberate and calculated, but rather a strange, general impulse, in obeying which probably not one of the authors perceived any singular significance. The thoroughgoing abolitionist may discover here the hand of fate, retributive and compensatory. The tradition of splendor and supreme distinction is handed down by those upon whose labor they were founded, and for whose sake they were annihilated.

In Mr. Page's hands the negro dialect is an extraordinarily flexible and effective literary tool. By his apparently inexhaustible command of its vocabulary and phraseology, he has won special distinction, but in the writing of plain English he has yet much to learn. "No Haid Pawn" (which, being translated, means No Head Pond) is an effort which suggests limitation of ability. The idea of frightful crime and supernatural visitation in a setting of swamp, marsh, and jungle is too much for him, and he is further handicapped by a seeming fear of that latitude in English construction allowable for grace and force, and by a weakness in some fine points of English grammar. Any man, however, must have a peculiarly weird and fantastic vocabulary at his tongue's end to do justice to the subject of "No Haid Pawn." The only example in the volume of a character not drawn in dialect, yet full of life and free, is that of the Colonel in "Polly." The author has so thoroughly imagined the hard-drinking, hard-riding, freely profane old planter, that the words exactly descriptive come to him with perfect ease and naturalness.

There is a feebleness about 'Cracker Joe' which indicates either that the author doesn't know his locality and characters too well, or that he has not that quality of critical observation which makes a local story valuable and universally attractive. Cracker Joe, the richest planter in Florida, is not a very conspicuous figure, and is chiefly remarkable for the variety and inconsistency of his habits of speech. One moment he is talking jargon, and the next, without any discoverable inspiration, he soars into elegant English, using his colons and semicolons with admirable precision. He might, perhaps, be more highly appreciated if he were not so persistently neglected for other people incapable of keeping in their proper, subordinate place. On the other hand, several of the underlings might repay attention, if they were not, as mere embryos, constantly thrust aside to make room for the nonsensical melodrama woven about Cracker Joe and Hermit George. In a word, the performance is chaotic; the poor bits belong nowhere, and the good bits would have been better somewhere else. The sketch of the low-down Cracker family, though incomplete, is very good. There are individual touches in the story of Derinthy's fatal love for Hermit George which give it probability and refined pathos. The transplanted New Yorkers get along with a rapidity that may heighten the fascinations exercised by Florida over Northerners obliged to emigrate in search of a living. A little reflection, however, will dissuade most people from measuring their own possible success by that achieved by the Ainsleys. It is not every one who can fall back on a bundle of bonds erroneously supposed to have been worthless, a grand piano, and a handful of gold nuggets thrust into a canvas bag in a moment of that contempt for nuggets which characterized every hour of a luxurious past.

In 'Behind the Blue Ridge' there appears again the assumption that the public taste runs to novels written mostly in corrupt English. When American novelists shall have exhausted the various corruptions of speech actually heard throughout the Union, or possibly to be invented at their desks, then they may devote some attention to the remnant that speaks with tolerable correctness and purity. Of all these corruptions, that ascribed to dwellers in the mountains of Virginia and the Carolinas is the rudest. Philologically, it is of the smallest value; for what local color it may give to a narrative, it is certainly not worth the trouble of transcription, or that of spelling out, for no one can truthfully say that he *reads* it. The people behind the Blue Ridge seem to express themselves in as wretched a gibberish as can be conceived. They are a hard, narrow-natured people, as inaccessible to the spiritualizing influences of civilization as is their

mountain fastness to its material benefits. They are dreary, hopeless, quarrelsome people, and it is difficult to see any useful purpose to be served by minute description of their daily life.

There was once a man born among them and of them, yet bearing no sort of resemblance to them. He was called John Shore. He played the fiddle, married a pretty girl, and was all his life long an irreclaimable vagabond. He is Rip Van Winkle shorn of mythical interest. He is the sort of man who appeals to the sympathies of all the world except his relations and neighbors. John Shore is a pathetic person, but not native to the Blue Ridge. In every village there is sure to be one man who, because he is different from the rest, becomes an object of hostility, and the victim of tacitly organized persecution. In fact, there is nothing that either the small or great world resents so hotly as a difference from the generality, in which superiority of one sort or another is vaguely suspected. All the superiority that the John Shores can claim is a faculty for minding their own business and persisting in living their lives according to their own lights. But it is really their small virtues, not their great vices, that excite the wrath of their community. There is little in the novel of which John Shore is the hero to lighten the melancholy atmosphere permanent behind the Blue Ridge; the best that can be said for it is, that it is probably much more truthfully descriptive than are the tales of mountains and mountaineers which delight the imagination and stimulate very fine sensibilities.

'The Van Gelder Papers' are stories of ghosts clanking about old houses at midnight, of goblins haunting forest and stream, by the Long Island shores and the banks of the Hudson. The papers were collected by Volkerk van Gelder, who loved nothing better than hearing an old-wife's tale, unless it might be writing it down. The ghosts whose acquaintance he made, either personally or by hearsay, are original and satisfactory. Like Mr. Frank Stockton's ghosts, they are generally friendly, well-meaning fellows. They descend to earth on some special, sensible business bent, and they transact it exactly as they would have done in the flesh. To study their manners is to educate ourselves away from our horror of an attempt on the part of a friend or even of an enemy to continue relations with us after his physical death. Indeed, for people who have exhausted sensations afforded by the world, there is infinite resource in cultivating an intimacy with intelligent, liberal-minded ghosts. The Van Gelder ghosts are all that one could desire—self-possessed, prompt, serene. They waste little time in words, but when they do speak, it is with a vigorous terseness which seems natural to a Dutch sea-rover or pioneer. The events which demanded assistance from ghost and goblin, and occasionally from the devil himself, are narrated skilfully and pleasantly. There is a good deal of spirit and humor in the manner, and in describing personal appearance the author is uncommonly happy. Though we have a habit of regarding the Dutch period in New York as peculiarly Irving's literary property, some of these stories challenge comparison with Irving's, yet are by no means imitations. They stand so well upon their own merits that the editor may be encouraged to make further researches among Van Gelder's papers.

In the charming little story of 'Penelope's Suitors,' Mr. Bynner also makes an incursion on sacred territory. Inseparably connected with the romance of colonial Massachusetts is that great name, Nathaniel Hawthorne. The day has not yet come when any but a man of exceptional courage or a fool will attempt a tale of a Governor and the Province House. Mr. Bynner has been bold, but not reckless. He has avoided tragedy, even intensity, and has simply told in Mistress Penelope Pelham's own words why she threw over her young lover, Edward Buckley, and wedded the Governor, Richard Bellingham. In the writing of this short diary the author's cleverness is most evident, because the author is nowhere to be detected. Neither Mr. Bynner nor any other man appears in a line of it. Its innocence and unconscious cunning, its simplicity and skittishness, even its neat sarcasm, are all pure maidenly. Penelope knew perfectly well that Madam Hibbins, the Governor's sister, was her enemy, and why. But not an insinuation of that knowledge escapes from Penelope's pen. She contents herself with pelting the good lady with small stones every night after she has said her prayers and got herself into a sufficiently pious state of mind truthfully to record the day's events and her opinions thereon. Penelope doubtless had a few profane thoughts about the Rev. Mr. Colton, and could have said a vigorous word or two about straining at a gnat and swallowing a camel; but she permits herself no indiscretion. What she says of one of his discourses is worth quoting, not only as a good illustration of her manner, but also as a fine example of the weapons used by that gentleman and his worthy successors, the Mathers, for keeping their flock in order. Penelope was visiting Madam Winthrop, and, after supper, the talk turned on the weekly lecture.

"I marvelled to hear," she writes, "that the teacher, the Rev. Mr. Colton, therein inveighed loudly against wearing of lace veils over the face, which is newly the mode. Master Colton, it seemeth, spake bitterly of the practice as sinful and abominable, arguing a corrupt heart. At all this I was much perturbed, as I came hither with a smart new veil cast over my tiffany hood: and though in my blindness I perceive not that my heart is more corrupt, yet may I be deceived, and this mayhap prove a snare of the devil to lure us through vanity on to sin. Alack, how countless are the wiles of the tempter! Nothing, surely, seemeth more innocent than this film of network; 'tis pity if it be a sin, for it marvellously enhanceth the comeliness of an indifferent face."

The periods of life which most attract Mr. Sturgis's observation and imagination are those of youth and early manhood. They are certainly the most interesting because they are full of surprise; yet to catch the meaning of their inconsequence and vagaries and set it forth intelligibly is a herculean labor. In depicting John Maidment Mr. Sturgis was perfectly successful, but in John Maidment's character there was, from the beginning, one reliable quantity—absolute selfishness. Dick Hartland, of 'Dick's Wanderings,' is made up of unknown quantities. You feel that he is honest, ingenuous, a thoroughly good fellow, but to the last you have no assurance that his nature is incapable of distortion, that circumstances may not produce a man who fails to fulfil the fine promise of his youth. For this reason Dick is not so complete a literary creation as is Maidment, yet he is, humanly speaking, far more agreeable and admirable. He is not a conventional hero, nor the centre of a conventional plot. The interest is stronger in his mental wanderings than in his travels and adventures, in what he thinks about people and places than in what he does, in his theories than in his performance. Since the thoughts of generous youth are "long, long thoughts," and its theories all-embracing, the interest is clearly in the right place. Nevertheless, the figure of Dick is elusive. You cannot realize him; you are not sure of him; you can only hope for the best. The case is quite different with most of the other characters. Whether they appear in but one scene, or are intimately associated with Dick's career, they are solid, touched with life. The frivolous London society people, the honest British voter, the wandering Bostonians, have each his distinct individuality. The types are not rare either in life or in fiction, but each one is himself and cannot be confused with another of the same general character, habits, and manners. The exceptional figure is Fabian Deane, who from being Dick's tutor became his fast, adoring friend. The author describes Deane as "a man who was always doing something or going to do something; and the something generally startled the onlookers. . . . He was naturally unlike other people, and liked to be unlike them." Deane is not a typical Englishman, but he is a capital representative of a new class still limited in numbers. Energetic, enthusiastic, enlightened, they lack the balance of common sense which would lead them to make some practical use of their advantages. Frenchmen of similar stamp become famous at barricades; Americans get up a panic on Wall Street; Englishmen only talk, in or out of Parliament, and write long letters to their friends.

Though this is the longest of the author's novels, the style—easy, natural, and polished—is sustained throughout. It is a little remarkable that the English people use the contraction *ain't*, while one Lady Betty attaches herself to *wan't*. Is it possible that what is considered vulgar in America gives one at present the *cachet* of high fashion in England?

In 'The Cruise of a Woman Hater' a judicious widow is seen captivating a rash bachelor who has vowed eternal animosity against her sex. As soon as the situation is developed, the end is clear to the eye of experience. The persistent coyness of the widow, the long wrangles about men and women, are, for the purpose of intrigue, useless chaff. The widow is quite left out of the one really interesting and unusual incident. Of all the sea tales that have been told, we can recall none in which tragedy and comedy approach each other without offence so closely as in that wherein is narrated what befell the ship *Ajax*, the fever-stricken bark, and the Scotch steamer, *Bruna*.

ROMANTIC LOVE AND PERSONAL BEAUTY.

Romantic Love and Personal Beauty: Their Development, Causal Relations, Historic and National Peculiarities. By Henry T. Finck. Macmillan & Co. 1887.

MANY books have been written on the tender passion, lyrical, cynical, philosophical, and literary-historical, but not one, to our knowledge, like this one of Mr. Finck's. It is a perfect cyclopædia of quotations from poets, scientific men, and periodicals, and so might seem a bit of hack-work for the publisher; but it has a philanthropic thesis, which is urged with great perseverance, and in every conceivable light, so again it seems a work of enthusiasm. It is, in sooth, both enthusiastic and journalistic; and Mr. Finck appears to the reader as an optimistic lover of his kind, with an enormous capacity for reading and remembering, who, after beginning to take notes on his hobby, was fired with the ambition to be complete, and so launched himself on what resulted in a piece of market-literature. The cosmetic receipts and denunciations of tight lacing, high-heeled shoes, and the like, which abound in the last chapters, are certainly not original enough to have been written for their own disinterested sakes. As market literature, the work is sure of a great success. The style of it is singularly happy. None of the leering to which a Frenchman would inevitably have treated us; none of the oleaginous sentiment with which a German would have adorned his pages; but a clean, playful touch, which carries one along in the rapidest of measures, and often leaves whole sentences sticking in the memory. It is written *virginibus puerisque*. Cupid with the golden

darts is the hero of it, and of Love's cruelty, and of "Vénus toute entière à sa proie attachée," we nowhere hear a word.

Its purpose, in fact, is to celebrate and glorify that innocent lovemaking, flirtation, and "pre-matrimonial infatuation" between youths and maidens which already has its seat in American life. This pre-matrimonial infatuation is the "romantic love" of which the title treats, and is by Mr. Finck considered to be the source of all health and beauty in races, and the hope of future humanity. Only through "sexual selection" and the "elimination of non-amorous motives to matrimony" can mankind continue to improve; and romantic love being the deepest and subtlest form of sexual selection, societies which oppose artificial barriers to it are doomed to degenerate, while those which allow it free scope and play will evolve. "The French marry for money and social convenience, and their children are ugly; the Americans marry for love, and have the most beautiful children in the world. Is it not more conducive to conjugal happiness to know that one has lovely children and that the race is increasing, than to have ugly children and to know that the race is dying out?" *Pari passu* with the evolution of romantic love, sexual divergence will go on, and the masculine and feminine types grow more and more unlike. The brown type will supplant the fair, the women will grow smaller, both sexes will grow more healthy and beautiful, and the males, strange to say, will lose their beards, while retaining their moustaches. So, at least, we read Mr. Finck, who, it will be seen, is not afraid to plunge into deep waters.

Romantic love, according to him, is a late product of evolution—not only the *fashion* of it, if we understand him aright, but the bare existence of it; although in this, as in other matters, geniuses like Dante and Shakspere have been in advance of their time. Mr. Finck devotes nearly two hundred pages of historical review to showing that love, as a cultivated modern person feels the passion, was unknown in any previous age. Modern love is that compound of enchantment and reverence which makes a woman a goddess until you have married her, when she becomes a woman again. No such bad thing, either, as Mr. Finck says, if you know how to manage her, yet no longer the inspirer of the peculiar passion which the word romantic is meant to describe. In his argument for the recency of this passion, Mr. Finck, we are persuaded, confounds men's feelings with their ideas about them. It is incredible that individual women should not at all times have had the power to fill individual manly breasts with enchanted respect; and Mr. Finck's literary quotations prove it, though meant to prove the opposite. So powerful and instinctive an emotion can never have been recently evolved. But our ideas *about* our emotions, and the esteem in which we hold them, differ very much from one generation to another; and literature (from which, of course, Mr. Finck's proofs have to be culled) is a record of ideas far more than of primordial psychologic facts. In ancient days, to be free from the passions was the goal of reflective aspiration. Philosophic calm, stoic serenity, were the ideal states of mind. Though men were doubtless slaves of pretty faces as much as now, their servitude was something on which they did not pride themselves as we do, nor celebrate in the longest and gravest of books. With the last century, a great change in our ideals took place. Sensibility was then discovered, so far from being a weakness, to be a wealth; and with our susceptibility for nature, our ennui, our despair, and a host of other morbidnesses, our lovesickness also became something admirable and worthy of the most long-winded and eloquent commemoration. Hence modern literary documents abound about a passion concerning which earlier literatures are relatively mute—mute, at least, so far as the modern tone of treatment goes. But as well might one say that chiaroscuro did not exist in nature till Rembrandt's time, as say that romantic love did not exist in human breasts till a couple of generations ago. Literature discovers one sort of effect after another, and the use that can be made of it. "Formerly," as Jules Janin remarks, "the woman between thirty and forty years of age was lost for passion, for romance, and the drama; now she rules alone. The girl of sixteen, as adored by Racine, Shakspere, Molière, Voltaire, Ariosto, Byron, Le Sage, Scott, is no more to be found." But does this prove that, until Balzac and George Sand wrote, no woman over thirty had ever loved or been loved?

As new effects are found, old ones go out of fashion. Friendship exists now as much as it ever did, but we fail to find in it food for the same literary treatment. Young fellows inspire romantic affection still in old fellows' breasts, but the old fellows are a little ashamed of owning to this form of emotional susceptibility now. In ancient times it was the fashion, and they were proud of it. No doubt the way in which we think about our emotions reacts on the emotions themselves, damping or inflaming them, as the case may be. Literature reacts on life; but just how much, it is hard to say. The love-drama is so complex, and contains so many acts, that it is likely that reflective interest in any one of them will alter the proportions of the play. But how much and for how long? is the question—the difficulty of answering which is seen (on a small scale) when we ask what effect the idealization of love for other men's wives in modern Parisian literature may have had on matrimonial constancy in France. The data are not to be had from life, and literature refers us back to literature for a reply—an obviously vicious circle. It is quite conceivable that the all but exclusive interest in love affairs which modern literature shows, will some day give place to an interest in more virile passions—new geniuses discovering new effects. But will there be no more love-making then?

Altogether, Mr. Finck's book illustrates (to the present reviewer's mind) the somewhat fatal effect of Darwinian ideas in letting loose the springs of irresponsible theorizing. Survival of the fittest, sexual selection, cross-fertilization, are phrases which one is tempted to use without restraint; and a sort of à-priori philosophizing is now rife which to a truly scientific mind is disheartening. What proof has Mr. Finck that the children of French interest-marriages are uglier and less healthy than those of American love-matches? Many observers would contradict the fact. But the book is most readable. It celebrates the ideal of American young people, and will help, doubtless, to confirm it. A specimen or two of its lighter style may appropriately end our notice:

"Women in turn are injured by Coyness; first, because it makes them act foolishly. French and German girls are systematically taught to take immediate alarm at the sight of a horrid man (whom they secretly consider a darling creature, with *such* a moustache), and conceal themselves behind their mamma or chaperon, like spring chickens creeping under the old hen at sight of a hawk. This sort of *spring-chicken coyness* does infinitely more harm than good: it makes the girls weak and frivolous; and as for the men, if they are systematically treated as birds of prey, how can they help falling in with their rôle? If men are to behave like gentlemen, they must be treated like gentlemen, as they are in England and America" (p. 119).

"Anglo-American love is Romantic Love, pure and simple. . . . England has many a bright jewel in the crown of her achievements in behalf of civilization, but the brightest of all is this, that she was the first country in the world—ancient, mediæval, or modern—that removed the bars from woman's prison windows, opened every door to Cupid, and made him thoroughly welcome and comfortable. And grateful Cupid has retaliated by setting up English manners and customs as a model which all other nations are slowly but surely copying. Eighteen million souls in the United States, or almost two persons in every five, are not of English origin; yet of these there are not one million who have not given up their old-country methods of courtship as antiquated, and adopted the Anglo-American style. The Germans in America make love not after the German, but after the English fashion. So do the French, though somewhat more reluctantly and tardily. In San Francisco and Chicago, it is said that but one name in ten is of English origin; yet who ever heard of a San Franciscan or Chicagoan making love in foreign style? . . . And now that England is gradually extending her influence to every one of the five continents, Romantic Love—to whose sway, quite as much as to their active outdoor life, the English owe the fact that they are to-day the handsomest and most energetic race in the world—is also rapidly extending its sphere, and will finally oust the last vestiges of Oriental despotism, feminine suppression, and mediæval masculine barbarism" (p. 289).

"German girls also enjoy an advantage over the French in having a literature which is pure and wholesome; and by reading about Romantic Love they train and deepen their feelings. It is often said that Heine's influence has been chiefly negative. The truth is, *Heine is the greatest emotional educator Germany has ever had.* More young men and girls have wept over his lyrics than over any other poetry. His 'Buch der Lieder' has done more to foster the growth of Romantic Love in Germany than all other collections of verse combined; not only by their own unadorned beauty, but through the soulful music wedded to these poems by Schubert, Schumann, and other magicians of the heart. The fact that the copyright on Heine's works was soon to expire, and the country to be flooded with cheap editions, has long caused Master Cupid to rub his hands in gleeful anticipation of brisk business; and he has just given orders in his arsenal for one hundred thousand new golden arrows" (p. 286).

"One thing must be admitted. The Germans are the most systematic and persevering nation in the world. They took music, for instance, from her Italian cradle, and reared her till she developed into the most fascinating of the modern muses. They lead the world in scientific research; and within a few years they have terrified the English monopolists by a sudden outburst of thoroughgoing Teutonic activity and world competition. Let but the Germans once make up their mind that they want Personal Beauty, and lo! they will have it in superabundance. The professorships of hygiene which are now being established at the universities will doubtless bear rich fruit. If Bismarck discovered the full significance of Anglo-American Courtship, he would forthwith order an hour of it to be added to the daily academic curriculum; and if he realized the importance of racial mixture, he would order shiploads of South American and Andalusian brunettes to be distributed among his officers as wives. Nor would female education be any longer neglected, were it fully understood how essential it is to Personal Beauty and true Romantic Love, the basis of happy conjugal life" (p. 527).

One short one to close with. Our author is no believer in the incurability of Cupid's wounds. Second love may be better than first. "*For his size*, a boy may love as ardently as a man; but the man is bigger."

The Russian Church and Russian Dissent; comprising Orthodoxy, Dissent, and Erratic Sects. By Albert F. Heard, formerly Consul-General for Russia at Shanghai. Harper & Bros. 1887.

Our author's intention was to give the general reader—"without any pretence of theological erudition"—"a consecutive account of the Orthodox Church of Russia, commencing with its origin and history," even from the separation of the churches of the East and West, before there was a Russia, Christian or pagan; "then investigating its present condition and that of its clergy, tracing the causes and consequences of the schism which arose in the seventeenth century, and still continues, and, finally, examining the

innumerable sects springing from the schismatic movement, or from the inherent devotional character of the people." The historical account he elaborated after a considerable number of first-class authorities—Russian (translated), French, English, and German; and the view of the Church, the clergy, and the sects, as they are, mainly after Leroy-Beaulieu, "borrowing freely" from the latter. Thus informed in the Preface, we expected to find a compilation, presented by a dilettante in Russian matters, possibly speculating, as a bookmaker, on the almost morbid interest in everything Russian which has arisen in our day. In this we have been very pleasantly disappointed. If Mr. Heard's work is to be classified as a compilation, it is one in the best sense of the word. He has perfectly mastered his subject, and has worked it up in the calmly unbiassed temper of an historian, and in a style at once clear and terse. He offers no original theories, no new views, but plenty of sound observations and interesting details, carefully selected.

The six historical chapters treat respectively of the separation of the Roman and Byzantine Churches, and the differences between them, external and internal; the introduction of Christianity into Russia; the Russian Church from its foundation to its independence upon Constantinople, and the United-Greek and Orthodox Churches in Poland; the Russian Church during and on the downfall of the Tartar sway, and the establishment of the Patriarchate; the Church on the extinction of the Rurik dynasty and under the first Romanoffs, the great reformation of Nikon, and the rise of Dissent (Raskol); and the reunion of the Polish Orthodox Church to the Russian, the substitution by Peter the Great of the Holy Synod for the Patriarchate, and the absorption of the "Unia." All this ecclesiastical evolution is presented in close connection with the state history of the empire of the Czars, lay characters being brought out in equal relief with church dignitaries. Compare, for instance, the sketch of Ivan the Terrible with that of the reformer Nikon, and the peculiar and often changing aspects created by the always active double allegiance of the Russian masses to Czar and creed—a dualism productive of the most fiery enthusiasm when in harmony, and of fanatical antagonism and revolt when in conflict. With the abolition of the Patriarchate, however, by which Peter the Great made himself and his successors virtual autocrats of the Church, the historical narrative is almost ended, only a few pages cursorily referring to the completion of the work of unification under Catharine II. and Nicholas. The results of Peter's reform are summed up thus:

"The radical changes in the ecclesiastical organization made by Peter the Great, and maintained intact by his successors, aided by the extraordinary growth of the power of Russia and of its monarchs, the absolutely autocratic nature of its government, and the singularly submissive disposition of the Russian people, produced in time their anticipated result. The Church lost its individuality and independence, as a necessary consequence of the impersonal character of the Holy Synod, its governing body and head. Composed of many men, holding, with few exceptions, their positions by the will and at the pleasure of the sovereign; severally liable to the influences of different, and possibly conflicting, motives; with a representative of the Emperor, source of all power, in their midst—the Synod no longer possessed the singleness of purpose and the unity of action inherent to the authority of one supreme pontiff. By the suppression of the Patriarchate, all danger of rivalry or conflict between Church and State was averted, but with it disappeared, as well, the independence of the former, and much of its energy and vitality. It became practically, what it now remains, the vassal of the Crown, . . . one of the many powers which make up the State, whereof the Tsar is absolute head."

A general blemish of Mr. Heard's book is its inconsistent, and often in every way wrong, transliteration of Russian names, evidently attributable to indiscriminate copying of sources in various languages. German spellings, like "Dobrutscha," "Lubetsch," "Kasan," "Karamsin," alternate with French ones, like "Donskoï," "Minime," "Pojarsky," and "Voronege." Worse than these is the mongrel "Shouesky." Polish names are also misspelled: "Sobiesky," "Zalusski." The author's knowledge of Polish history, with which his subject brings him in frequent contact, is altogether inadequate, as witness the following slips: Vitold, Grand-Prince of Lithuania, is called "King of Poland" (p. 32), and Bukovina "a province of Gallicia" (p. 227); and "King Stanislas"—meaning Stanislas Augustus, who ascended the throne in 1764—is introduced (p. 129) as Polish sovereign "during the reign of Elizabeth," who died in 1762. "Cossacks of the Don" stands twice (pp. 68, 71) for Cossacks of the Ukraine; and we also find "Vitoft" for "Vitold" (p. 32), "Slovenie" for *Slavianie* (p. 69), "Innocentius" for Innocent (p. 116), and "1852" (p. 135) as a year of "the disastrous war of the Crimea," which broke out in 1853. "Vitoft" and "1852" are, however, probably misprints, like "Khorazian" for Khozarian (p. 17), though the book has been subjected to careful proof-reading.

Comparative Morphology and Biology of the Fungi, Mycetozoa and Bacteria. By A. de Bary, Professor in the University of Strassburg. Translated by H. E. F. Garnsey, M.A. Revised by I. B. Balfour, M.D., etc. Oxford: Clarendon Press; New York: Macmillan. 1887.

GREATLY are we indebted to these two Fellows of Magdalen College—one of them the zealous Professor of Botany in Oxford University—for this good English translation of De Bary's excellent work (published three years ago) on the Fungi, Slime-Fungi, and Bacteria. We judge it to be a model text-book, well-proportioned, and so clear that any one having a fair amount of ordinary botanical knowledge may read it from beginning to end with satisfaction. It should be the *vade mecum* of the special student; for the translators are quite safe in characterizing it as "the most thorough and comprehensive treatise upon these subjects which has appeared in any language." Three-fourths of the volume is devoted to the Fungi proper, including those which form lichens. For, of course, De Bary fully adopts the Schwendener view of the algo-fungal nature of lichens, which, indeed, he was the first to suggest, in a tentative way, and which he regards as completely established by Stahl and Bonnet.

As to the ambiguous Myxomycetes, or the Slime-Fungi and their allies, De Bary holds to the opinion that they belong to the animal rather than to the vegetable kingdom; and he accordingly restores to them his earlier name of Mycetozoa. In any case he will not allow them to be Fungi, nor will he admit into that class the Schizomycetes or Bacteria, holding that they form the connecting link between the flagellate animalculæ (from which the Mycetozoa probably sprang) and the lower Algæ. Only forty-five pages of this volume are given to the Bacteria. Into this narrow space is condensed a most clear and authentic account of the nature and mode of life of these ambiguous and renowned little beings, interspersed with some judicious criticism.

The Rules of Order Governing Public Meetings, together with the methods of organizing and conducting Societies, Associations, Clubs, Unions, &c. By F. M. Payne. Excelsior Publishing House. 12mo, pp. 169.

THIS book seems to be a manual written to order, to supply a presumed want on the part of a public anxious to organize, but unskilled in the forms of meetings. It is much more colloquial in its form than such a manual as Cushing's, and we seem to perceive a Western atmosphere pervading it. There are forms for all kinds of societies, and fire companies may exist anywhere; but detective societies, as explained on pages 138–141, are not much in vogue in New England, at least.

The work is very fairly done, and the compiler has given a very sensible version of the rules most generally acknowledged. He does not apparently profess to be an expert, and he does not discuss the intricate points which harass conscientious presiding officers. His book will not supersede Cushing's Manual, and it is not as instructive as the works of Robinson, Fish, Roberts, or Spofford. Yet it contains much which they lack, and it cannot fail to interest a portion of the public which they do not serve.

BOOKS OF THE WEEK.

A Collection of Letters of Thackeray, 1847–1855. Charles Scribner's Sons. $2.50.
An Operetta in Profile. Boston: Ticknor & Co. $1.
Bayne, P. Martin Luther: His Life and Work. 2 vols. Cassell & Co. $5.
Cabot, J. E. Memoir of Ralph Waldo Emerson. 2 vols. Boston: Houghton, Mifflin & Co. $3.50.
Drake, S. A. The Making of the Great West, 1512–1883. Charles Scribner's Sons. $1.75.
Field, Caroline L. The Unseen King, and Other Verses. Boston: Houghton, Mifflin & Co. $1.
Gneist, Prof. R. Student's History of the English Parliament. G. P. Putnam's Sons. $3.
Hague, Rev. W. Life Notes; or, Fifty Years' Outlook. Boston: Lee & Shepard. $1.50.
Hatton, J. The Great World: A Novel. Harper & Brothers. 20 cents.

Marwedel, Emma. Conscious Motherhood. Chicago: Interstate Publishing Co. $1.65.
Mémoires du Général Cluseret (Le 2me Siège de Paris). 2 vols. Paris: Jules Lévy: New York: F. W. Christern.
Memoirs of Wilhelmine, Margravine of Baireuth. Harper & Brothers.
Müller, Prof. F. Max. The Science of Thought. 2 vols. Charles Scribner's Sons. $4.
Newton, Rev. W. W. The Vine out of Egypt. T. Whittaker. 50 cents.
Noyes, Prof. W. A. Elements of Quantitative Analysis. Terre Haute, Ind. 60 cents.
O'Hagan, J. The Song of Roland, translated into English Verse. Boston: Willard Small. 75 cents.
Parker, Rev. J. The People's Bible. Vol. 6. Discourses on Judges VI.–1 Sam. XVIII. Funk & Wagnalls. $1.50.
Payne, F. M. The Rules of Order. Excelsior Publishing House.
Peterson, A. Songs of the New Sweden. Philadelphia: E. Stanley Hart & Co.
Phelps, Elizabeth S. The Gates Between. Boston: Houghton, Mifflin & Co. $1.25.
Phillips, F. C. As in a Looking-Glass: A Novel. Geo. Munro.
Poor, H. V. Manual of the Railroads of the United States for 1887. 20th year. H. V. & H. W. Poor.
Pratt, Dr. H. Jesus, bar Rabba, or Jesus, bar Abba? London: Williams & Norgate.
Rabelais, F. Three Good Giants. Boston: Ticknor & Co.
Racot, Adolphe. Portraits d'aujourd'hui. Portraits d'hier. 2 vols. Paris: Librairie Illustrée; Boston: Schoenhof.
Redway, J. W. Butler's Physical Geography. Philadelphia: E. H. Butler & Co.
Russell, W. C. A Book for the Hammock. Harper & Brothers. 20 cents.
Sanford, E. B. History of Connecticut. Hartford: S. S. Scranton & Co. $2.
Siller, F. Lieder und Sprüche. Milwaukee: C. N. Caspar. $1.
Smith, Adam. The Wealth of Nations. 2 vols. (Bohn's Standard Library.) Scribner & Welford.
Stevenson, R. L. Underwoods: Poems. Charles Scribner's Sons. $1.
Stewart, A. Seneca on Benefits. (Bohn's Classical Library.) Scribner & Welford.
Stickney, A. M. Tulli Ciceronis Cato Major et Lælius. Harper & Brothers.
Stockton, F. R. The Bee-Man of Orn, and Other Fanciful Tales. Charles Scribner's Sons. $1.25.
The Dialogue of the Gulshan-i-Râz. London: Trübner.
The Lost Wedding-Ring. G. P. Putnam's Sons. 75 cents.
Tolstoi, Count L. N. The Cossacks, translated by Eugene Schuyler. New ed. W. S. Gottsberger.
Tolstoi, Count L. N. What to Do? Thoughts Evoked by the Census of Moscow. Thos. Y. Crowell & Co. $1.25.
Tolstoi Count L. N. La Puissance des ténèbres: drame. Traduction Halpérine. Paris: Perrin; Boston: Schoenhof.
Tourgee, A. W. Button's Inn. Roberts Bros.
Tulloch, Rev. W. W. The Story of the Life of Queen Victoria. For children. A. C. Armstrong & Son. $1.25.
Tyler, Prof. M. C. Patrick Henry. Boston: Houghton, Mifflin & Co. $1.25.
Walker, Dr. J. Health Lessons: A Primary Book. D. Appleton & Co. 56c.
Warden, Florence. Scheherazade: a London Night's Entertainment. D. Appleton & Co. 25 cents.

Whitney's French Grammar

A PRACTICAL FRENCH GRAMMAR. By WILLIAM D. WHITNEY, *Professor in Yale University.* 12mo 442 pp. Half roan. Teachers' price, $1.30; by mail, $1.43.

From *Modern Language Notes:* "It is to be hoped that teachers of French, whether in or out of college, will for the present consider this the very best of grammars in English for use in their elementary classes."

Whitney's Practical French.

PRACTICAL FRENCH. The elements of the grammar with exercises. Taken from the author's larger grammar and supplemented by conversations and idiomatic phrases. By WILLIAM D. WHITNEY, *Professor in Yale University.* 12mo. 304 pp. Teachers' price, 90 cents; by mail, $1.

Sample copies sent, postpaid, for examination, on receipt of Teachers' price.

MRS. SHILLABER'S COOK-BOOK.

By Mrs. Lydia P. Shillaber. Fourth edition now ready. $1.25.

T. Y. CROWELL & CO.,
13 Astor Place, New York.

By the Author of 'Mark Rutherford.'

THE REVOLUTION IN TANNER'S LANE.

12mo, cloth, $1.25.

Of the previous books by this author, W. D. Howells writes (in the "Editor's Study" of "Harper's Monthly"): . . . "books which may yet mark an era in English fiction. We hardly know, indeed, whether to call them fiction, they carry to the reader so deep a sense of truthfulness, they are so far in temper from any sort of mere artistry, so simply and nobly serious. . . . When you have read the books, you feel that you have witnessed the career of a man as you might have witnessed it in the world, and not in a book. We could not give too strong an impression of this incomparable sincerity. . . . These stories are very religious. We do not see how Christianity could be more subtly and profoundly comprehended."

Love and Theology.

A Novel. By CELIA PARKER WOOLLEY. 1 vol. 12mo, $1 50.

A novel and brilliant story by a new and talented writer. "It is not only entertaining as a story, but engrosses interest from the highest ethical standpoint. . . . It is most decidedly a book to *own*, and not merely to read for amusement only and then throw aside."

An eminent critic writes: "It is not only entertaining, but interesting from the highest point of view. It goes on from chapter to chapter with ever-increasing force and power. No book of fiction that Ticknor & Co. have published has had, to my thinking, the depth and value of this; and nowhere has the present study and questioning of theological subjects been more clearly and satisfactorily presented."

TICKNOR & CO.,
Boston.

SEVERAL new editions of 'Les Miserables' are being published this autumn, but by far the most important is the one in the original French, issued by William R. Jenkins, New York. Three of the five volumes are now ready and the other two will be finished by November. They are beautifully printed, cheap, and convenient. Send to the publisher for sample pages.

RARE BOOKS ON AMERICA, DRAMA, etc., is what the collector will find on the September Catalogue of FRANCIS P. HARPER, 4 Barclay St., N. Y. Send for it.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 29, 1887.

The Week.

THE decision of Judges Colt and Nelson, dismissing the bill of the Government in the suit to annul the telephone patents, was to have been expected by all familiar with the facts and the previous ruling of Judge Shepley, the former Circuit Judge of that district. In fact, it was a knowledge of what the court had decided to be the law in that circuit which led those who instigated the suit to influence the Government officials and counsel to make the futile attempt to have the suit entertained in a Western circuit. The first suit was brought at Columbus, Ohio, at a time when it was supposed Judge Baxter would sit and hear it. The sudden death of Judge Baxter, and the appointment of Judge Jackson for that circuit, ended in a prompt decision that the proper place to sue the Bell Telephone Company was in the Massachusetts Circuit, where the company belonged. There the present suit was commenced which has just resulted in Judge Colt's deciding that there is no authority in the Constitution or statutes for the maintenance of such a suit. He very properly says that "the necessity which might possibly arise in some cases for the exercise of this power by the Government seems to be wanting in this case." The same statute that provides for the granting of the patent prescribes defences to any claims under it, any one of which, if sustained, deprives the patent of any force. Almost every conceivable cause for annulling a patent is provided for in these statutory defences, and no single suit can deprive the public of the right to interpose them in any subsequent contest. Again and again the owners of a patent may be compelled to maintain their right against new infringers of the exclusive privileges granted, not merely by presenting their patent, but by proving that it is founded on the law of the land. And this is what has been done in the numerous cases of infringement of the Bell patent which are now under consideration by the Supreme Court.

It was pretended by the opponents of the Bell telephone patents that a new and peculiar issue, not provided for in the statutory defences, had arisen in this case, which called for the extraordinary action of the Government in proceedings to annul the patent. It was said that there had been undue influence with the employees of the Patent Office; that some one else who had an application or caveat in the Patent Office was the first and true inventor, and that Bell and his attorneys managed in some way to obtain knowledge of what was in this other caveat or application, and incorporate it in his own. This may be a new and peculiar issue, but the statute provides that if the court shall find against the inventor, "that he had surreptitiously or unjustly obtained the patent for that which was in fact invented by another, who was using reasonable diligence in adopting or perfecting the same," the patent has no force against an infringer. It is a consideration of these facts that has led intelligent and right-minded people to criticise the action of the Government in instituting and carrying on, at the instigation of rival corporations, the proceedings against the Bell Telephone Company. Every new development in the case shows more clearly that it had a wrong beginning, and can serve no good purpose in its triumph.

The opinion of the Supreme Court of Illinois in the case of the condemned Anarchists fills something more than four pages of the Chicago newspapers. It is a great pity that its length forbids its publication in all of the newspapers in the United States. Having read the whole of it, however, we cannot think that it is a single word too long. On the contrary, it is an admirable example of terse, clear, cogent statement of fact and of legal argument based thereon. So compact is it that no synoptical treatment of it can be other than disappointing to one who wishes to get a clear view of the conspiracy to commit murder, of the evidence by which it was proved, and of the guilt of each participant. There are varying degrees of guilt, in the sense that some of the condemned were brought nearer to the fatal bomb than others, but there is no difference between them in the fact of participation in the conspiracy to commit murder. The idea has got abroad that all except possibly Lingg, the bomb maker, are to be hanged for the speeches they made, and the articles they published, and the hand-bills they distributed. Hence the outcry among the labor organizations against the "attempt to suppress free speech." It is shown by the Court that even if these men had not personally laid the plans which were partially executed at the Haymarket meeting, yet that, being members of a society whose general plan was the killing of the police and militia, and urging others daily, by speech and writing, to commit murder according to this general plan, they were guilty of murder under the statute of Illinois—just as guilty as the bomb-thrower or the bomb-maker. In fact, this statute says that the person who, not being present, has advised, encouraged, aided, or abetted the perpetration of the crime, "shall be considered as *principal*, and punished accordingly." In other words, the Illinois statute abolishes the distinction between principals and accessories in murder, and makes all the parties principals.

The decision of the extraordinary General Term of the Supreme Court in the Sharp case is hard on a good many eminent members of the New York bar, as well as on Sharp, for several of them had propounded the opinion (it is to be presumed without sufficient examination of the case) that he was entitled to a new trial. Oddly enough, Judge Potter, in granting his stay of proceedings, did not base his order on what these gentlemen thought most objectionable in Judge Barrett's rulings, but struck out a line of his own. But the General Term has disposed of all the objections together, with a unanimity and thoroughness which make it very unlikely that any other judge can be induced to grant a second stay so as to keep Sharp any longer out of Sing Sing. One of the greatest hindrances to the prompt administration of criminal justice among us is the tendency of courts of appeal to treat any error as fatal, whether it had or could have any influence on the result or not—that is, whether it inflicted real damage on the prisoner's case or not. For instance, Judge Daniels mentions in his opinion that "the educated and legal minds" who have been disturbed by the admission of Pottle's testimony, "seemed unaware of the fact that the *corpus delicti* had been proved when the evidence was offered." The "evidence was in the direct line," the Judge added, "of the events which led to the securing of Broadway"; but even if it had not been, its admission could not have hurt Sharp.

The Massachusetts Democrats have the honor of producing in the person of Pat Maguire probably the silliest and most impudent demagogue who has ever figured in American politics. The way the Convention applauded and laughed over his insolent bragging at Worcester last week was a great humiliation for all intelligent and thoughtful members of the party, and it was crowned by the poor creature's bursting out laughing himself over the degradation of his audience. Everybody, of course, sees plainly enough that a party which can set up such a boss must be in a bad way. Doubtless President Cleveland will see it too. He cannot go so low in Massachusetts as to allow a man like Maguire to bully a man like Gen. Corse, no matter what he submits to in Maryland. The probabilities are, however, that the party will receive a lesson at the State election which will save him the necessity of listening to Maguire. The Boston *Post* and *Herald*, which probably control all the votes from which the Democratic party could ever get a majority in Massachusetts, have repudiated or condemned the action of the Convention, and it will undoubtedly be still more severely condemned at the polls.

Massachusetts papers report a steady and rapid increase in the number of parochial schools established by the Roman Catholics. In most instances no conflict with the public-school system is involved, but cases are arising where the attempt is making to supplant the old order with the new in sections of cities which are chiefly inhabited by Catholics. In one ward of Malden, for example, the parochial school has so largely depleted the public school that it has outgrown its own building, and now seeks to rent some of the unoccupied rooms in the public-school building. Of course no complaint can justly be made against people who are willing to pay taxes for the public schools and at the same time pay for the education of their children in sectarian schools, and there appears to be an increasing tendency towards the patronage of sectarian schools which is not confined to the Catholics; but the friends

of the public schools do well to oppose all attempts to secure public support for such sectarian schools.

The Roman Catholics of the Northwest appear to be making a carefully planned war upon the public-school system, and they are meeting with enough success in isolated cases to arouse general interest in the question. In one district of the town of Barton, Wis., the Catholics rallied in force at the annual meeting last year, and carried a resolution that no public school should be maintained during the year, and none was held. This year the contest was renewed, but the Catholics took advantage of the new law giving women the right to vote at school elections to bring out all their women, and carried the same resolution again. At Melrose, Minn., the Catholic priests engineered a movement to shorten the school year of the public schools in order to compel children to attend a parochial school. Throughout Stearns County, Minn., the Roman catechism is said to be taught openly in the public schools, and either the opening or the closing hours of the session are devoted to religious instruction given by the priests, all this being in direct violation of the State Constitution, and especially of an amendment adopted in 1877 to meet this very condition. Most of this work has been done so quietly as not to attract wide attention, but the evidences of a determined assault upon the public-school system are now so clear that its friends are becoming aroused to the necessity of action.

The effectiveness of the high-license system as a means of diminishing the number of saloons is freshly demonstrated by the experience of Minnesota. The last Legislature passed a law which makes the fee $1,000 in cities containing a population of 10,000 or more, and $500 in smaller places, and this law went into operation on the 1st of July, except in St. Paul and some other places, where the old licenses do not expire until the 1st of January. The St. Paul *Pioneer-Press* has made a thorough investigation as to the working of the law, and finds that the number of saloons has been greatly reduced—in Minneapolis from 334 to 227, in Duluth from 113 to 64, in Winona from 94 to 33, in Stillwater from 42 to 32, and so on, until in the aggregate out of 1,650 saloons which flourished under the old law only 1,100 have been able to continue in business. This reduction of one-third in the number of saloons has been accompanied by an increase of one-third in the amount of revenue derived from this source, and there is a general agreement that drunkenness has diminished and public order improved under the change.

Another outbreak of race prejudice in a Northern State over an attempt to enforce mixed schools is reported. The law in Indiana authorizes the establishment of separate schools for colored children, but provides for their admission to the white schools in any town where such separate schools are not provided. A respectable colored farmer of Washington Township, in Dearborn County, took his children to the nearest schoolhouse on Monday of last week, and the teacher received them, but the white children immediately left rather than study with "niggers," and unless the offenders withdraw, the session of the school must end. How little partisanship has to do with this matter is shown by the fact that Dearborn County is Democratic by a vote of 3,565 to 2,529, while the Kansas county of which Fort Scott, the scene of another similar outbreak of race prejudice, is the capital, is Republican by a vote of 2,974 to 1,671.

The campaign in Virginia this year is one of the sort, unhappily too frequent in our politics of late, in which neither side deserves to win. The contest is for the possession of the Legislature, and it derives its national importance from the fact that the Legislature will have a United States Senatorship to dispose of. For this reason the Democrats held a State Convention and put out a platform, just as they would have done if the whole State Government had been at stake, and the contest for the political control of the commonwealth could hardly be sharper in the latter case. The Democrats present no reason based on their own merits why they should succeed. Their platform is sharply at issue with true Democratic doctrine on vital issues. On the tariff question it virtually takes the ground of protectionist Republicans. It abandons the traditional Democratic position on a great constitutional question, approving the scheme of Federal appropriations to State schools, and thereby condoning the Federal interference which appropriations inevitably involve. It is the very irony of fate that the Democratic State of Jefferson and Madison should yield its adhesion to this doctrine at a time when a Republican Senator of Gen. Hawley's prominence is vehemently denouncing its unconstitutionality. On the debt question the Democrats have nothing to offer which entitles them to praise. In a word, so far as they are themselves concerned, they ought to be beaten.

And yet the Democrats ought to win because the opposition is so much worse. This opposition is nominally the Republican party of Virginia; practically, it is William Mahone. He absolutely controls the party organization and dictates the management of the canvass. The fight is made solely in his interest, and Republican success will inure solely to his benefit. He will nominate his tools for members of the Legislature, and if a majority of that body are ostensibly Republicans, they will really be only Mahone men, pledged to send him to the Senate. Virginia is the one Southern State which the Republicans have carried since the election of 1876, and, in Virginia, Republicanism to-day means only the despotic rule of an odious boss, who originally rose to power as the champion of repudiation. The one hopeful sign is the development of political independence. A number of the most prominent Republicans refuse to support the party, now that it has become a mere personal machine managed solely for the aggrandizement of a single man. Ex-Gov. Cameron, ex-Congressman Brady, and others who have held high positions, will do nothing to secure its success this year. As Mr. Brady recently said: "The sole issue is Mahone, and there are thousands on thousands of faithful and loyal Republicans in Virginia who will not vote to support him in the coming contest." Fortunately, the Democrats possess a decided advantage in having seventeen of the twenty holding-over Senators, while they are almost certain to elect at least eight of the other twenty, which would give them a majority of ten in the upper branch. Mahone's only hope, therefore, is to get a decided majority in the lower branch, and thus a bare majority on joint ballot. With the disaffection which evidently exists in the Republican ranks it does not seem possible that he can accomplish this. On every ground it is to be hoped that he may fail. A defeat this year ought to end his power for good or evil, and, with this incubus removed, it will not be unreasonable to expect that Virginia politics will again rise to a decent plane.

The Rev. H. O. Pentecost, the Congregational minister of Newark who has become a Georgeite apostle, is getting into trouble with his congregation, a portion of whom do not share his views about land and poverty, and do not approve of his mode of disseminating them. He delivered a philippic against poverty to a small audience in Utica on Wednesday week, in which he called loudly for the abolition of poverty by legislation. He said that it was "exceedingly necessary and important that there should be no poor men in this community," denied that "poverty can ever be a blessing to any one," and requested that "when he said that society suffers from poverty, nobody would contradict him." He defined poverty by saying that "any man who has not enough to gratify any reasonable desires is a poor man." But, like all the other apostles, he refrained from saying where the fund is, out of which everybody's "reasonable desires" are to be gratified. It is capable of mathematical demonstration that if the income of every man who is called rich were divided tomorrow among all the men who can be called poor, and the rent of all the land in the world were divided among them also, the condition of the mass of mankind would undergo no perceptible change. There must, then, be some other mode of removing poverty than a redistribution of wealth or land. What is it? Why do not the apostles and professors speak out? Time is flying, and millions are dying every day with their "reasonable desires" ungratified.

M. Charles Limousin has been trying to answer, in the *Journal des Économistes*, the question, What is Socialism? which most people find rather puzzling, because hardly any two of those calling themselves Socialists agree as to what they want. His explanation is, that the one thing in which all Socialists agree—their common principle of action—is, that the Government should charge itself with the work of applying to the constitution of society their ideas about the production and distribution of

wealth. In other words, no matter what a man's ideas on the subject may be, if he desires to have the Government carry them out, he is a Socialist. Consequently, what all Socialists really struggle for is not so much the dissemination of certain doctrines, as the possession of the Government. Almost as a consequence of this, "the Government" has come, in the Socialistic discussions, to be thought of and talked of as a sort of crank or lever that can be made to produce any state of society which the man who gets hold of it may choose to conceive as desirable. In other words, Socialists not only believe in the existence of a public fund or reserve of money or wealth, out of which all may be provided with a competency, but in the existence of a stock of administrative talent and integrity which the Government can always command, but which has not as yet been revealed to mortal eyes in any age or community.

The usual way of defending these delusions is by maintaining that they are respectable, and that it shows a bad heart to laugh over them. They have, of late years, owed a great deal of their propagation to the clergy of various denominations, including the Catholics, partly through the disposition of ministers to optimism, and partly through their dislike of the scientific or Darwinian view of the conditions of man's existence, and partly, also, through the discovery that the working classes are no longer controlled by the expectation of a future state of existence, and that anybody who desires to influence them in a religious direction must to a greater or less extent fall in with their belief in the possibility of a heaven on earth. Hence the curious success of the George land theory among the ministers, both of this country and England, and the feeble opposition offered to the McGlynn theory that it is no harm to rob a man of money if he has invested it in a farm.

The Government of the Canton of Berne in Switzerland has found itself under the necessity of making an investigation into the operations of the Mormon missionaries within the Canton, as well as in other parts of Switzerland, owing to their apparently remarkable success. The result is, that the Canton asks for the interference of the Federal Government to protect its population against the seduction of the Apostles. The Mission has its headquarters at Berne, and in 1885 made 610 converts in the country at large. Last year it made 336 in the Canton of Berne alone, and all, or nearly all, started for Utah. The investigation has brought to light some curious facts. The Mormon propagandism began in Switzerland in 1851, and had its headquarters in Geneva. But it was soon found that it was not so successful among the French as among the Germans, and the centre of operations was transferred to Berne, where it has continued ever since, and from this point the Mormon missions all over Europe are directed. The head man is a German named Schoenfeld, with the rank of a bishop in the Church, and he has under his orders a considerable number of missionaries, mostly Americans. The expenses are met by collections made at meetings and by tithes levied on the converts. In the beginning of last year the police at Berne made a descent on the headquarters, and seized all the books and papers, but they met with no resistance, and all their questions were readily answered, except those relating to polygamy. The examination showed that the Mission was an emigration agency as well as a religious apostolate, and was largely devoted to exporting children between the ages of five and fourteen, often without their parents, and in charge of an agent, sometimes as many as twenty at a time. One man, a carpenter, testified that he had got rid of four of his children in this way, and another of three of his, aged seven, nine, and fourteen respectively. Their expenses were advanced by the Mormon agents, who were to be repaid in instalments by the parents. One village in the Oberland has been entirely converted to Mormonism by the preaching of a returned emigrant.

In answer to the questions about polygamy, the missionaries declared that it was forbidden to members of the Church to practise it outside Utah. It was also forbidden to the missionaries to preach it publicly in Europe, but private instruction about it was given to any one desiring it. A tract which the missionaries distribute freely pronounces it an error to "declare immoral what the Scripture not only does not reprove, but authorizes and prescribes," and that "no one can violate the moral law in defending the teachings and principles contained in the Bible." No charge of immorality has, however, been brought against any of the Swiss Mormons. Schoenfeld has two wives, but he has prudently left them and his numerous offspring at home. The investigation has convinced the Bernese Government that it is Federal authorities only who can deal with the evil. If the Mission were expelled from Berne, it could, of course, start again in some other Canton. The Federal Government, on the other hand, has several ways of dealing with it. It has the right of suppressing or expelling from Swiss soil any religious order or community which it considers dangerous to the State. It can also proceed against any emigration agencies which are carrying on operations without legal authorization, or it can forbid the emigration to countries which are legally closed to any particular class of emigrants.

Mr. Chamberlain's renewed and very emphatic declaration of his out-and-out support of the Ministry is doubtless an outburst of irritation caused by the general desertion of him by his old followers in Birmingham. But it is doubtless also in some degree due to the continued postponement of an opportunity to produce his own "plan" of home rule for Ireland, to which he has often alluded in his speeches, and which he considers far superior to Gladstone's. He gave a very full account of it to the correspondent of the Boston *Herald* a week ago, which was very amusing, because it appeared that the only hope of a reunion of the Liberal party lay in the acceptance by Mr. Gladstone of the Chamberlain plan, which would be submitted to him, as well as to Lord Salisbury, in a courteous way. In his hearty approval of the shooting by the police at Mitchelstown Mr. Chamberlain has, however, allowed his temper to carry him beyond all the bounds of political prudence, and it must close his career as a politician except in the Conservative ranks.

The fact that Emperor William has spent a number of days at Stettin without receiving a visit from his grandnephew, the Czar Alexander, who is making a long stay in the royal suburbs of Copenhagen, has elicited a great deal of journalistic comment. When it became known that the two monarchs would be in such close proximity to each other, at places so near that a sea visit without danger was open to the Czar, all Europe expected an imperial interview, and many were the speculations regarding its outcome. A renewal of the so-called Three Emperors' Alliance informally concluded at Skierniewice exactly three years ago was less generally looked for than a closer *rapprochement* of Germany and Russia, to the detriment of the third "ally," Austria-Hungary. Bismarck's semi-official organ, the *Norddeutsche Allgemeine Zeitung*, in vain emphatically declared that no such meeting would take place at Stettin. It had given a similar denial to the expected meeting of the same two Emperors at Dantzig on the very eve of its occurrence, in September, 1881. That this time the *Norddeutsche* spoke the truth became patent when Bismarck, instead of preparing to go to the Baltic port, received the visit of Count Kálnoky, the Austro-Hungarian Minister of Foreign Affairs, and day after day elapsed without Alexander meeting William.

The comments now indulged in on this subject generally express the belief that the Three Emperors' Alliance has ceased to be, and that it is Germany and Austria-Hungary that are drawing closer to each other. This note is sounded by the German Chancellor's semi-official organ itself. Whether the Czar's apparent coolness is the cause or the result of such a change of German diplomatic tactics is still a question, but the change itself is of less importance than appears on the surface, for the Three Emperors' Alliance was never anything more than a sham, dictated by various considerations of caution and hesitation, and the momentous diplomatic reality of the present decade has always been the "peace coalition" of Germany, Austria-Hungary, and Italy, formed by Bismarck for mutual security against Russia and France combined. This coalition, based on paramount and lasting interests, is defensive in its character, but very elastic, and those against whom it is directed find it unbearably provoking. This feeling on the part of the Czar may have been heightened by his stay in the Danish court circle, where animosity against Germany is uppermost, and by the unmistakable hollowness of Germany's diplomatic pro-Russian protestations in the latest phases of the Bulgarian imbroglio. It is Germany that prevents Russia from ignominiously driving Ferdinand of Coburg from Sofia. That this is done indirectly, through Austria-Hungary, renders the check the more galling.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 21 to TUESDAY, September 27, 1887, inclusive.]

DOMESTIC.

THE President issued a proclamation September 26 confirming the reciprocal abolition of discriminating tonnage duties on Spanish and American shipping between the two countries.

The President has ordered the allotment of the Indian lands adjoining Baxter Springs, Kan., including the reservations of the Quapaws, Ottawas, Wyandottes, Senecas, Modocs, Miamis, Peorias, and Pottawatomies. The allotment will be made as soon as a commissioner can be appointed. This action of the Government will throw open to white settlers several hundred thousand acres of the most fertile lands in the West. These Indian tribes have sent almost unanimous petitions to Congress asking for the division of their lands in severalty, and the sale of the remainder to settlers.

The stringency of the money market caused a circular to be issued by the Treasury Department at Washington, September 22, offering to buy, until October 8, to be applied to the sinking fund, $14,000,000 worth of bonds. Offers of considerable amounts were made forthwith, greatly to the relief of financial circles.

Circulars have been sent from Washington to all the United States consuls in Canada asking for certified returns, according to sworn statements made before them, of the exports of various articles at each Canadian port to the United States during the past three years.

The reports received by the Post-office Department for the quarter ending September 30 show that the system of special delivery of mail matter has become more popular.

On September 20 another experiment was made by Lieut. Zalinski at Fort Wadsworth, New York Bay, with the pneumatic dynamite gun. A condemned schooner at the distance of a mile was the target. The first dynamite cartridge that was fired exploded under it, and the concussion caused it to leak. A second shot blew it into a wreck instantly. The experiment was witnessed by Secretary Whitney and a number of officers of the army and navy, and by representatives of several foreign governments. The Secretary said of the experiment: "Taking its range and the line of flight of the projectile, it is difficult to say how it can be met. For coast defence it seems to me the most important arm yet invented. I have steadily insisted upon the idea that the company should have an opportunity to show what it could do, and I am gratified that this American invention has not had to go abroad for its first encouragement. It has had it from the Navy Department. Its usefulness on ships is yet to be established, but its importance generally in naval warfare as an arm cannot be overestimated."

In the United States Circuit Court in Boston September 26 a decision was rendered sustaining the demurrer of the Bell Telephone Company in the suit brought by the Government to vacate its patent, and the case was dismissed. As to the principal question, whether, in the absence of any specific statute, the United States, by direction of the Attorney-General, can maintain a bill in equity to cancel a patent for an invention, Judge Colt, who wrote the opinion, held, in accordance with a decision rendered by Judge Shepley in the same circuit on the same point, that the Government, in the absence of any express statement, has no power to bring a bill in equity to cancel a patent. "It is our duty," the opinion continues, "in the present case, unless clearly satisfied that Judge Shepley was wrong, to follow the law as established in this circuit, in the most learned and exhaustive opinions to be found on the subject."

Justice Miller of the United States Supreme Court has appointed Phœbe W. Couzins, the daughter of the late Marshal of the St. Louis District, to succeed her father.

A fight between a band of Texan smugglers and the posse of a United States marshal near Laredo, September 22, ended in the death of four of the smugglers. The rest escaped into Mexico.

Near San Carlos, Arizona, September 22, a trader named Horton was shot by an Indian scout. The scout was pursued and shot, and both wounded men are likely to die. An outbreak of Indians on the San Carlos reservation is feared, and the chief cause of apprehension is an effort by Territorial civic officers to arrest Indians.

The steamship *Alesia*, which arrived at this port September 22 from Marseilles and Naples, with 600 passengers, had Asiatic cholera aboard. Eight of her passengers died on the passage, and on her arrival at Quarantine the Health Officer found four cases on board. She was sent to the Lower Bay, and there is no fear that the disease will be brought ashore.

The Glenn bill, making it a penal offence for any teacher of a school for white children to admit colored pupils, that passed the lower branch of the Georgia Legislature, failed in the Senate; but the Senate, September 22, passed a substitute for it that forbids the payment of money appropriated by the State to any school where children of both races are taught.

The Ohio statute authorizing the establishment of separate schools for colored pupils was repealed by the last Legislature of that State, but the people have not willingly accepted the change. At Oxford the colored pupils nearly all deserted their own school. A public meeting was held, and the School Board was asked to order them to return. The Board complied with the request, and the colored people propose to apply for a mandamus. At Yellow Springs the School Board has ordered the schools closed indefinitely, or until the Legislature can meet and take some action. At Ripley a suit in mandamus has been entered to compel the School Board to admit colored pupils.

The Wood Local-Option Law of Missouri, which gave the right to every county to decide by popular vote whether the liquor traffic should be carried on or prohibited, and under which elections have already been held in twenty-four counties and prohibition established in nineteen, was declared unconstitutional by Judge Burgess of the Circuit Court of Grundy County at Trenton, September 22.

James A. Stewart of Wichita, Kan., September 22, was sentenced to seventeen years and four months in the county jail and fined $20,800, with costs of prosecution, for the violation of the Prohibition Law. He was a clerk in a drug store, and pleaded guilty to an indictment containing 2,080 counts.

The Republican Convention of the Twenty-fifth New York Congressional District September 26 nominated James J. Belden for Congress to succeed Mr. Hiscock, elected Senator.

At a meeting, which lasted for several days, of veterans of the Union and of the Confederate Army at Evansville, Ind., a sham battle was fought September 23. The Confederate veterans were commanded by Col. R. M. Martin, who was a Confederate cavalry officer, and one of the officers of the Union veterans was his brother, T. P. Martin.

The Grand Army of the Republic went into its annual encampment at St. Louis September 27. The parade, which was set for that day, was postponed because of the rain. There is a very large attendance of veterans.

Oscar Neebe, the only one of the convicted Chicago Anarchists who was not sentenced to be hanged, was taken from the jail in Chicago to Joliet September 26, to serve out his sentence of fifteen years in prison.

The Extraordinary General Term of the Supreme Court of New York, convened to hear the arguments in the appeal of Jacob Sharp from his conviction for bribery, on September 26 handed down a decision sustaining the conviction and the rulings of the Judge who presided at the trial in every particular.

Eleven criminals were publicly whipped and two put in the pillory at Newcastle, Del., September 24, for theft, according to the law of the State.

The majority report of the Committee of the New Hampshire Senate to investigate the accusation made by Senator O. D. Sawyer that Mr. Kirk Pierce tried to bribe him to vote on a railroad bill, declares that "upon our construction of testimony and in our opinion the Hon. Oliver D. Sawyer is justified in the conclusion that it was the intent of Mr. Pierce to tender a bribe."

The centennial anniversary of the establishment of Huntingdon County, Pa., was celebrated at Huntingdon September 22–23, and of the town of York, Pa., on the same days.

A hurricane beginning on the night of September 21 and lasting for thirty-five hours blew down many houses and unroofed many more in Brownsville, Tex., and did serious damage also in Matamoras, Mex. It was accompanied by a rainfall of more than ten inches. Crops in its path were destroyed and many cattle perished.

There was a heavy snow-fall September 24 on the White Mountains, and the thermometer registered 15° above zero.

A test of automatic air-brakes on trains of cars, made at Burlington, Ia., September 20, showed that a fifty-car train, 1,900 feet long, equipped with the Westinghouse brake, running at a speed of forty miles an hour, can be brought to a stand in a distance of 695 feet without shock, and at twenty miles an hour in 155 feet without shock. A train of twenty cars, running forty miles an hour, was stopped in 484 feet without shock.

In the first race for the *America's* cup by the American sloop *Volunteer* and the Scotch cutter *Thistle* September 27, in New York Bay, the *Volunteer* won, the time being 4 hours 53 minutes 18 seconds, and 5 hours 12 minutes and 41¼ seconds. The second race will be sailed September 29.

Gen. William Preston died at his home in Lexington, Ky., September 21. He served in the Mexican war, was several times a member of Congress, and was Minister to Spain under Buchanan. He was a Confederate Brigadier and Major-General. Gen. James B. Ricketts, the commander of the famous Ricketts Battery in the Union Army, died in Washington September 22. Joseph Patterson, President of the Western National Bank of Philadelphia, and of the Philadelphia Clearing-house Association, died September 25, aged eighty-four. John M. Campbell, a veteran of the war of 1812, died September 26 at Clinton, Ill., aged ninety-three.

FOREIGN.

The weekly Nationalist papers throughout Ireland last week published the usual reports of the proceedings of local branches of the League, despite the fact that under the terms of the new Crimes Act the editors are liable to imprisonment.

Mr. William O'Brien on September 24 was found guilty, under the Crimes Act, of seditious language at Mitchelstown and was sentenced to three months' imprisonment. When he was taken from the Cork jail to Mitchelstown, September 23, he was loudly cheered, and upon his arrival he was received by a large crowd. Many English ladies witnessed the trial. When the case was opened, several policemen were called as witnesses for the Government, who testified from memory as to his language, which, they asserted, tended to excite his listeners to violence. During the hearing of this evidence a procession, armed with sticks and headed by a wagon carrying a band, marched into town from the country. Mr. O'Brien, replying to the charge of having used seditious language, declared that the Court was not competent to try him, because it was foreign in its composition to the requirements of

the British Constitution. At this point the Judge stopped him, saying the discussion of politics would not be allowed in the proceedings. He thereupon declared that he was a chosen representative of the Irish people, and would advocate free speech. The Court again stopped him. After he was convicted, notice of an appeal was given.

Members of the Irish League evaded the police, and held a meeting at a private house in Mitchelstown September 25. Mr. O'Brien said in a speech: "We are here to tell Mr. Balfour that the branches of the National League will decline to consider themselves suppressed until every decent man, aye, and many decent women, in the community are placed in jail. The suppression of the Irish National League is simply an absolute impossibility. I should like to put before Mr. Balfour a simple rule of three. If it takes Plunkett, with an army of police and military, to suppress one branch of the League, and if he and his army are so easily baffled, thwarted, and hoodwinked as they have been to-day, how many of Plunkett's armies will be required to suppress the 1,800 branches of the League when all decline to be suppressed? Before the watchword Mr. Gladstone has adopted, 'Remember Mitchelstown,' Balfour will fall and Dublin Castle crumble to dust." Dr. Tanner, Irish Nationalist member of Parliament, at Fermoy made a speech from the balcony of his hotel. He denounced the action of the police of Mitchelstown and the trial of William O'Brien. Then the police charged upon the crowd, who stoned them. The police used their clubs and injured fourteen persons. In Belfast on Saturday night a mob wrecked an inn and pelted the police with stones.

Lord Mayor Sullivan of Dublin on September 27 asked to be admitted to membership in the Mitchelstown branch of the National League. At the fortnightly meeting of the League at Dublin on the same day many Englishmen were enrolled as members. Lord Mayor Sullivan declared that the Government's attempt to suppress the League was a dismal failure, and that all the affairs of the organization were in a prosperous condition.

The eviction of an Irish family named Lane, near Limerick, September 27, was so stubbornly resisted that the police beat several members of the family with the butts of their guns until they were helpless before they submitted. One of the evicting force was severely wounded by a woman with a poker. A number of rails on the railway between Cork and Youghal, along which the police were expected to go on the night of September 26, were torn up, and the telegraph wires were cut.

Michael Davitt took passage at Queenstown for New York September 22.

Mr. Kilbride, one of the tenants who was evicted from Lord Lansdowne's Irish estate, and who accompanied William O'Brien to Canada last spring on his anti-Lansdowne campaign, was elected on September 21, without opposition, to represent South Kerry in the House of Commons.

Mr. William J. Evelyn (Conservative), having threatened to resign his seat in Parliament rather than support the Government's cruel measures in Ireland, Mr. Smith, the Government leader, has promised that a full inquiry shall be made into the Mitchelstown massacre. Several English delegates delivered addresses at Cork September 22, the Mayor presiding. An admittance fee helped swell the fund for the relief of the families of the victims.

Mr. Gladstone has written a letter to a Glasgow Liberal, in which he deplores the grave acts of the Irish police against the people of Mitchelstown, and, what is still graver, the approval of those acts by the Government. "I trust the country," he wrote, "will not be slow to condemn that indecent approval, given without awaiting the result of the inquiry, and thereby discourage a repetition of proceedings it was eminently calculated to promote."

Mr. John Morley, in a speech at Newcastle September 24, denied the report that there was any split between himself and the Gladstonian party. As long as Mr. Gladstone adhered to the cause of freedom and justice, so long would he support him. His views on the Irish question were unchanged. The Government had failed to deal satisfactorily with the question. Notwithstanding all their promises and pledges, they had adopted a shameless and an unexampled course. This Parliament would be known as the "unblessed Parliament." In the House of Commons and in Ireland everything had been done to stifle discussion, and the country had returned to government by old Toryism in its worst form. Attempts were made to bewilder and mislead the public mind by legal generalities and political platitudes that were not worth the snuff of a candle.

Mr. Chamberlain, presiding at a meeting of the Birmingham Radical Union, September 23, made a bitter anti-Gladstonian speech, wherein he said that he had hoped that the feud in the Liberal ranks would ere now have been removed, but there was evidence on the Gladstonian side that such was not the case. He characterized the Liberal Association's condemnation of Government interference with meetings in Ireland as an impertinent absurdity. The conflict in Ireland was between the written law of the land and the unwritten law of the Irish National League, and he hoped that the former would triumph. He believed that the League was dying a natural death, but on account of arrant agitators, whose living depended upon it, the organization must be expected to die hard.

Mr. John Bright, in a letter approving the action of the Northumberland Miners' Association in refusing longer to subscribe to the payment of salaries to the representatives of their districts in the House of Commons, says that he does not favor the payment of salaries to members, because he does not wish that Parliamentary life should be made a trade, and that it is nearly enough a trade already.

While a party of French sportsmen and their attendants were following a path on the French side of the Franco-German line, near Raon-sur Plaine, September 24, a German guard from the German side of the line fired three shots at them, killing one of the attendants, named Brégnon, and wounding one of the sportsmen, named Wanger. It was a German soldier, named Kaufmann, who had been detailed to assist the forest guards to prevent poaching, that fired the shots, and he declares that he thought the party were on German soil, and that he called to them to halt three times before he fired. The French Government decided the next day to send a note to Berlin requesting the German Government, in the interest of the continuation of friendly relations, to institute an inquiry into the affair without delay. An official order was made by the German authorities for a detailed report. Count Herbert Bismarck, Secretary of the Foreign Office, has sent a friendly note to the French Embassy, suggesting an early communication of the results of the official inquiry, and the Minister to France is authorized to promise ample justice and indemnity if a German official be found responsible. The incident caused a temporary decline in French securities.

A Strassburg manufacturer named Gast, who is the son-in-law of M. Buffet, formerly French Premier, has been ordered to leave Germany after two weeks which are allowed him for the settlement of his affairs.

The mayors of all French municipalities have been ordered to prosecute persons posting the recent manifesto of the Count of Paris. They have been ordered also to prepare lists of all Germans living in their jurisdiction. It is reported that at a meeting of the Cabinet, September 22, it was decided that the manifesto of the Count of Paris does not justify the expulsion of the princes, unless an endeavor be made to circulate it.

The official report of the recent mobilization experiment with a corps of the French Army severely criticises the staff, and especially the Commissariat. Gen. Ferron, Minister of War, has ordered a minute inquiry into the conduct of the branches of the service criticised.

All the leading German newspapers published eulogistic articles on Prince Bismarck's services to the country, on September 23, which was the twenty-fifth anniversary of his appointment to the office of Prussian Prime Minister. He received a handsome vase as a present from the Emperor.

The Bismarck-Kálnoky interview did not result in favor of a settlement of the Bulgarian question, because Count Kálnoky did not agree with Prince Bismarck as to the removal of Prince Ferdinand by pressure upon Bulgaria.

The Berlin *Tageblatt* asserts that the Czar has again proposed Prince Waldemar of Denmark as Prince of Bulgaria.

Two thousand Austrians have made application to be naturalized as subjects of Russia.

The anniversary of the entry of the Italian troops into Rome was celebrated September 20 by processions and a dinner to the veterans. A statue of the last Roman Tribune, Cola di Rienzi, was unveiled, and Signor Crispi, the Prime Minister, gave $2,000 to a fund for the erection of an orphan asylum in honor of the occupation of Rome by the Italian forces. During the day four bombs were thrown in front of the Vatican, one into the Papal barracks.

Two prefects of Messina in quick succession have died of cholera. A number of chemists and physicians who became panic-stricken and fled were pursued by police and taken back. At Monreale fugitives from Palermo have been met by citizens with guns and compelled to camp in the open air.

The Dutch budget for 1888 shows a deficit that is estimated at $5,125,000, raising the total of the accumulated deficits to $10,400,000, which is chiefly due to expenditures for great public works. In the ordinary service of the current year the revenue shows an excess over expenditure. The deficit in 1888 will be partly met by the surplus in the East Indian budget, and no loans are required for the present.

The Swedish Parliamentary elections assure a majority of free-traders.

The Nizam of Hyderabad, the greatest of the Mohammedan princes, has offered the British Government in India £400,000 to strengthen the defences of the northwest frontier. This is interpreted in London as an indication that the Mohammedan princes in India have made up their minds that a Russian invasion is rapidly approaching.

It was reported from Madrid, September 26, that the expulsion of missionaries from Ponapi, one of the Caroline Islands, had caused a riot, that the Spanish Governor of the island had been killed, and that the insurgents were in possession.

Henry M. Stanley wrote under date of June 23 from his camp that 500 slave-traders had refused allegiance to Tippu Tib, who was reluctant to fight old friends, and asked for a small force of Congo State troops to uphold his authority as Governor. "As soon as fuel has been obtained," Stanley wrote, "the steamers will start, and the last chance of communicating with Europe for a few months will be gone." Advices from the Congo Free State were received at Brussels September 22, to the effect that anarchy prevailed at Stanley Falls.

In a letter from Wadelai, dated April 17, Emin Bey says that he will not return with Stanley. "I have passed twelve years here," he writes, "and have succeeded in reoccupying nearly every station in the country which Gen. Gordon intrusted to me. I have won the trust and confidence of the people, sowing the seed of a splendid future civilization. It is out of the question to ask me to leave. All I want England to do is to make a free trading way to the coast."

THE CULMINATION OF A STRINGENCY.

THE *Times*, now that the Treasury has come to the relief of the money market, says that if the President had waited twenty-four hours longer before issuing the circular, it is doubtful whether he need have issued it at all; because "the much-talked-of stringency in the money market reached its culmination some days ago." It explains this by saying that the people who "were holding large stores of money in expectation of serious distress and high rates of interest," had given up the game, and on Wednesday money was readily obtainable in Wall Street at 4 to 5 per cent., and "the scare in fact was over."

It is a great pity that this subject cannot either be let alone or be discussed with more intelligence. That money was to be had in Wall Street at 4 or 5 per cent. proved nothing about the scare, because the loans which could be had in this way were demand loans on good collateral which could be sold at any moment. What made the scare and kept it up until the Treasury circular was issued, was the difficulty business men had in getting accommodation from their banks in the shape of time loans. It was this increasing reluctance of the banks to part with their money, except on call loans fortified by good collateral, that created the state of things which the Treasury was asked to relieve by releasing a portion of its hoard. The much-talked-of stringency in the money market, therefore, had not culminated on Wednesday, but in all probability would have culminated before the following Wednesday in a panic of greater or less intensity. Abuse of the people who "hold large stores of money" in expectation of a panic is always somewhat amusing. It is the duty of any manager of a bank or other moneyed institution, who thinks he foresees a monetary crisis in the near future, to hold on to his money to any extent that he may think necessary to his own safety. One of the first visible signs of a panic is, in fact, the reluctance of owners of money to lend it for fixed periods. This is a legitimate reluctance. Any manager of a bank who did not show it at such times would be unfit for his place. All banks show it, either as the Bank of England or France shows it, by raising their rates, or as banks here show it, by restricting their loans. To rail at them for doing this with the design of "getting high rates" is simply to be childish. It is like Thaddeus Stevens's railing at the wicked men who, during the war, bought and sold gold at a premium in greenbacks.

The discovery of the *Times*, also, that it now appears that what was needed in Wall Street was not so much money as "confidence," has an air of kindergarten political economy about it. It is confidence more than money which is needed in all panics, just as it is courage more than men which is needed in battles. No battle in war is ever won by killing all or more than a very small proportion of the enemy. A fifth or a fourth are usually disabled, and then the rest run away. It would be very foolish, however, to ask them why they ran away, seeing that they were not hurt. They would answer that they ran because they felt certain they should be hurt before long if they stayed.

So, also, in a commercial crisis. The number of persons who are actually suffering for want of money at the moment it breaks out is comparatively small. It is the fear of the greater number that they shall be unable to get money when they want it, at some future day, which makes the panic—a fear which is suddenly diffused through the community by the failure of one or two noted houses occurring when everybody is feeling nervous. It is in the nervous stage, such as the community has been passing through during the past few weeks, that preventives are possible and ought to be applied, and it is the duty of the Government to apply them, if it has caused the scarcity by hoarding money for which it has no use. To ask the business men to wait for this relief until the panic has actually occurred, so as to be perfectly certain that the relief was needed, is somewhat like the offer of the boy in *Punch* to his grandmother, to take all the wrinkles out of her face if she would let him put her head in the receiver of an air pump and exhaust the air. When a panic has occurred the mischief is done, and can hardly be undone. Thousands of honest men are ruined through no fault of their own, and a distrust has been diffused through the community which it takes years to get over.

Doubtless it is the fault of the protectionists that this hoarding in the Treasury goes on. Doubtless, too, a good rattling panic, occurring as the direct consequence of the Treasury hoarding, would be very serviceable in bringing Congress to a sense of its duty during the coming winter, and forcing it to deal seriously with the reduction of the tariff. But this is very like reforming by revolution. It is not the American method. We cannot afford to burn our house down in order to roast a pig, or spread ruin through the country, or even run the risk of spreading it, in order to open the eyes of the legislators to the necessity of lowering the taxes. It is not yet certain that argument will not influence them. Every year the country is seeing more clearly the dangers of the enormous surplus. As long as it seemed likely to be used simply to play ducks and drakes with, in the shape of extravagant appropriations, the business community did not pay as much attention to it as they ought. Now that they see its bearing on their own interests, we may safely count on greater popular pressure than ever next winter in support of tariff reform.

The numerous protests that have been made in the press against Treasury interference in the money market, are for the most part founded upon a misconception of existing facts, and especially the potent and undisputed fact that the Treasury *is* interfering with the money market daily and hourly and in the most pernicious manner. The Philadelphia *Press* furnishes the following illustration of this interference:

> "Taking the first eighteen days of this month, the Government took in $22,130,000 and paid out for all purposes, including bond purchases, $10,980,000. These operations took $11,150,000 from the channels of trade, which the past four days have raised to $13,000,000."

In addition to this withdrawal the *Press* says that the sums deposited by the Government in depository banks were drawn down to the extent of $5,900,000, without any apparent reason, so that the withdrawal of money from circulation during the short period of eighteen days was nearly $19,000,000. It is quite possible that the withdrawal of money from the depository banks was caused by the banks themselves withdrawing the bonds by which the money was secured. We cannot conceive of any other reason for the reduction of the Government's bank balance at such a time. Whether the withdrawal were $13,000,000 or $19,000,000, the illustration is sufficiently impressive. It shows that the newspaper protests against Treasury interference, meaning thereby the action taken to liberate some part of the imprisoned money, are a perilous kind of jargon.

How far bond purchases can afford relief, how far the intermittent force can neutralize the persistent force, is a question of much moment, and one which has scarcely been touched in the discussion. It has been said that "if money were in very great demand and the distress were as great as represented, the holders of bonds would find it to their interest to sell them to Secretary Fairchild at the price he offers, which price is the highest he can give consistently with a proper regard for the interests of the people." The truth is, that the holders of United States bonds are not generally of the class who feel a stringency in money at all. Moreover, they are generally of the class who cling to a security which they know to be good all the more firmly because money is tight and other securities are declining. There is no speculation in their eyes. What they "find for their interest" is to hold on to their bonds. Further, there is an enormous holding of bonds under trusts which cannot be released or changed, however much the trustees might desire to change the investment. In this State, for example, all trust moneys must be invested in mortgages on New York real estate, New York State bonds, or United States bonds. Of these three kinds of securities only the last are now obtainable in any considerable amount Are the trustees going to "find it for their interest" to sell their bonds to the Secretary of the Treasury when the law makes them personally liable for any resulting loss to their *cestuis que trust?* It is plain, therefore, that the amount of bonds that the Secretary can secure at any price whatever is extremely limited. He is pumping towards a vacuum, and although there may be no time when he cannot get something by extra exertion, yet the difficulty will increase all the time. Finally, the repeal of taxes, when it is actually agreed to and passed by Congress, will be slow in taking effect, for the reason that holders of existing stocks of merchandise, upon which taxes have been paid, must be allowed time to work them off.

THE COLOR LINE NORTH AND SOUTH.

THE Georgia Legislature has at last disposed of the question involved in the much discussed Glenn bill, and in a manner which goes far to redeem the reputation of the State. It will be remembered that the lower branch some weeks ago passed a bill introduced by a politician named Glenn, which proposed to make it a

penal offence, punishable by a year's sentence to the chain-gang, for a teacher to instruct together white and colored children, the measure being aimed at the white teachers in the Atlanta University for the education of colored pupils, who had allowed their own children to recite with their colored pupils. Mr. Glenn is believed to have fathered the bill with the idea that he could thus gain a notoriety which would help him in his ambition to get into Congress, and he succeeded in carrying it through by a vote that was unanimous except for two colored members, by urging that opposition to it was the same thing as admitting the social equality of the two races

The sober second thought of the State, however, revolted against the proposition to condemn anybody to the chain-gang merely for teaching white and colored children together, especially when the white children were his own, and it has been for some time obvious that the bill never would become a law. The question came up in the Senate on Thursday, and strong appeals were made for the passage of the original measure, on the ground that its rejection would be equivalent to a retreat under the fire of the North, which had so strongly condemned it. Such an argument always carries much weight with the average legislator, but it did not avail in this instance. Democratic Senators met and answered it in the manly fashion of Mr. Brantley, who said: "The bill is uncalled for. Why not say that the white children shall not play with the black children or go to church together? They can live together, interchange visits, play together, and finally die together. They can do all things except go to school together? To defeat the Glenn bill is not to back down. It is an assertion that Georgia manhood is not dead, that public sentiment in Georgia is still true to her, that Southern chivalry is yet alive in Georgia." At the close of the discussion a substitute was adopted by a vote of 25 to 13, which merely withdraws State aid from institutions that educate the two races together. This is simply carrying out the policy of the State regarding public education, which requires separate common schools—a policy, by the way, which was adopted when the Republicans were in power. Its effect, if it should become a law, would be to deprive the Atlanta University of the $8,000 a year which it now receives from the State, but, as it is expected that the House will refuse to accept the substitute, the matter will probably lapse without any result, further than to show that the feeling of opposition to the education of the two races together is very strong in Georgia.

If the question had come to an issue when it was originally brought up, Republican organs in the North would have been able to make a strong point of the bitterness of race prejudice which it showed to exist in the South. But recent occurrences in the North have effectually spiked their guns. A fierce outburst of race prejudice in the Republican State of Ohio has followed the action of the last Legislature in repealing the "black laws" and requiring white and black children to attend school together. Oxford is a town of Butler County, conspicuous for its educational institutions, containing Miami University, Oxford Female College, and the Western Female Seminary. Its colored population is small, the whole number of negroes in Butler County, according to the census of 1880, being only 1,140, against 41,435 whites. In short, it is just the sort of Northern town that has always been filled with indignation over any exhibition of race prejudice in the South. But when the time came for opening the fall term of the public schools, and it was discovered that colored children were to be seated beside white children in Oxford, the public, without distinction of party, rebelled. A meeting, consisting of about four hundred white men, was held week before last, and by an almost unanimous vote instructed the Board of Education to withdraw the colored children from the building attended by the white children, a leading banker agreeing to stand between the Board and harm in thus violating the law. The Board thereupon held a meeting and unanimously resolved that, "in compliance with the above request, the Superintendent be and is hereby instructed to assign the colored children to the north building to-morrow."

On the next Tuesday evening another large public meeting was held to express the popular satisfaction over the action of the Board. The *Commercial Gazette* thus describes the gathering: "Quite a number of colored men came to the hall, and were greeted with cries of 'Rats,' 'Take him out,' etc. One might imagine that, for the nonce, instead of being in free and enlightened Ohio, he was in South Carolina or Mississippi. It was a shameful exhibition of unmanliness and bravado, the strong domineering over the weak. If the steps taken were necessary, they should have been taken in a quiet way, without making such a public and race-prejudice-producing demonstration. To the shame of some of these men, it must be stated that they were Republicans, blinded by a fanaticism that cannot but result in harm to this beautiful little town." In calling the meeting to order, the Chairman "asked the boys to be as quiet as possible—that while they had cause to feel jubilant, they could at the proper time give vent to their feelings." The banker who had engaged to defend the School Board made a speech in which he said: "The colored people have the right of suffrage. More than this they cannot expect. As for their social qualifications, there are few of us here ready for that question." Another speaker "expressed himself highly satisfied to know that the children had been driven from the schools." The *Commercial Gazette's* report concludes as follows: "Joshua Fry, an ex-banker, responded to calls next. His exact language was this: 'I don't want to be called upon, for I have kept out of this whole trouble. If I was to express my opinion, I would say that I wouldn't allow a nigger in the town. I won't harbor them in any form or about my place. I've no use for them.' This short speech was cheered and applauded until it seemed that the house would fall. The meeting then adjourned, after passing a vote of thanks to the Board for its 'manliness' in acting as the meeting requested."

At the same time comes news of a similar outbreak of race prejudice in another Republican State at the North. Fort Scott is the capital of a Kansas county which cast 2,974 votes for Blaine to 1,671 for Cleveland, and its Board of Education is strongly Republican. The colored children have hitherto been taught in a separate building, but of late they have insisted upon mixed schools, as they have a right to do under the laws of the State. The Board of Education, however, with the exception of one colored member, resisted this legal demand, and instructed the teachers of the different schools to exclude colored children should they attempt to enter. At four school-houses small delegations of colored children were refused admission; at a fifth, a girl with so little negro blood in her veins that the principal did not know she had any, slipped in the first day, but was turned out as soon as the facts were learned; at a sixth, the colored children marched in fifty strong and took possession, but the teacher refused to instruct them, devoting himself exclusively to the few whites who remained. The matter has been carried into the courts, which appear bound to decide in favor of mixed schools; but it is evident that the great body of the whites will not accept this policy, the opposition being so strong that the local Republican organ protests earnestly against any attempt to enforce it.

It has been a long time since a more impressive lesson on the necessity of charity has been taught the people of this country, and in no other way could it have been so forcibly taught as by such outbreaks of race prejudice in John Sherman's State and in "bleeding Kansas."

THE ALSATIAN COTTON OPERATIVES.

It has been the custom to represent Mülhausen as a sort of laborers' paradise, where many of the problems which are vexing the modern industrial world have been happily solved. In the report on the factory system in the United States census for 1880, the example of Mülhausen is cited in more than one instance as showing how enlightened employers may remove some of the worst evils incident to life in a manufacturing town. Special praise has been given to a system of workmen's homes by which it is supposed that crowding is avoided, and a chance given to the factory operative to secure light, air, and even permanent ownership of the soil. On this and other points there has grown up a sort of Mülhausen myth, which has been accepted without question by writers on both sides of the Atlantic.

Two years ago a young German economist, named Heinrich Herkner, began investigating the real facts of the case, and found them far different from the accepted tradition. Many of the arrangements had had precisely the opposite effect from what was intended. Instead of avoiding the evils of overcrowding, they had simply changed the direction of the pressure. Instead of making the workman more independent, they had acted to increase his dependence. The book in which Dr. Herkner has embodied the results of his investigation has attracted great attention in Germany, and its main lessons are well worth repeating in English. The contrast between the real and supposed workings of the Mülhau-

sen system is a forcible illustration of the difficulty of solving the labor problem, or any part of it, by any merely superficial measures of relief.

The building of workmen's cottages in Mülhausen dates from about 1853. Previously to that date the city had been terribly overcrowded, in spite of the fact that it contained little more than 40,000 inhabitants. An epidemic of cholera had shown the physical dangers of this crowding; some facts connected with the Revolution of 1848 had shown its political dangers. All agreed that something must be done. Some of the more intelligent employers devised a system of semi-detached cottages (*cités ouvrières*), which were to be cheap enough to give the workmen a chance to become gradually the owners of their homes, and which should at the same time afford a far higher degree of comfort and much freer air-space than they had hitherto possessed.

Technically, these cottages were well devised. To be sure, they were not nearly as good as the houses of the same price at Willimantic, and are not to be mentioned in the same breath with the slightly more expensive ones at Ludlow; but they were good enough for their purpose, and far better than anything to which the Mülhausen workman had previously had access. They were built in groups of four, each occupying one corner. They contained two stories and a small garret; each story had two rooms. A garden of reasonable size was attached to each cottage. The cost of such a place was about 3,000 francs. It was estimated that workmen in Mülhausen had previously been paying a rent of twenty-five francs a month for accommodations inferior to these, and that therefore a rent charge of twenty-five francs was not too high. As fast as these houses were built they were offered on these terms, with the additional important provision that any workman who paid 300 francs down, and his regular rent of twenty-five francs a month, should at the end of thirteen years and five months become the owner of his house. It was estimated that this system of payments would remunerate the capitalist for his outlay without imposing any severe burden on the workingmen.

The result was, according to the testimony of the employers, a complete success, and this testimony has been all but universally accepted. The foreigner who visits Mülhausen is taken to see one or two of the best of these dwellings; he finds everything scrupulously clean and well provided with comfort, and he goes away ready to assent to the view of Charles Grad, that the labor question, as far as concerns Mülhausen, is practically solved, and has no longer any existence.

To any one conversant with labor troubles, the solution seems too simple to be true. But it has never been subjected to any critical analysis. The public has heard of these arrangements from one side only—from the employers of labor. And, although these employers include such men as John Dolfuss, they are almost of necessity partisan witnesses in a case of this kind even when they intend to tell the truth as well as they can. Their testimony has long stood unchallenged, because the authorities, first in France and then in Germany, have been interested to secure the favor of the leading men in Alsace by every sort of concessions except political ones, and have feared to weaken the position of the Government by rousing the hostility of the capitalists.

Dr. Herkner tells a different story; and, in spite of all the attempts which have been made to answer him, his version seems in the main correct. It is true, he says, that the *cités* gave better accommodation than had been previously obtainable for twenty-five francs; but how many of the workingmen could afford to pay that price for any accommodation, however good? Only the best-paid workmen—foremen, metal-workers, etc. To these the new system was a grand advantage, of which they were not slow to avail themselves. This class of tenants formed a body of picked men, whose condition contrasted favorably with that of other workmen. But their superior condition was not due to their dwelling in detached houses: their ability to dwell in detached houses was due to their superior condition. The system was a process of selection quite as much as of improvement.

But by no means all the cottages are occupied by men of this stamp. Many of them are occupied by common laborers, earning from two francs to two and one-half francs a day. How is it possible for such men to pay a rent of twenty-five or even twenty francs a month? It can only be done by subletting parts of the house to another family. This is supposed to be prohibited, but in point of fact it is done freely. In the investigation at the time of the cholera danger in 1884, one of these four-room cottages, intended for a single family, was found to be occupied by *six* families and one single man—forty-two persons in all. If this cottage was of the usual size, this means only three and one-half cubic yards of air-space to each person. This was an extreme case; but less flagrant instances of the same practice are by no means uncommon, and the moment a house of this kind is occupied by more than one family, it fails of its original purpose.

But this was not all. Instead of rendering the workman independent, it too often reduced him to more hopeless dependence. When a workman who had been paying fifteen francs a month for rent was tempted by the desire of owning a cottage to pay twenty-five francs, he was apt to run behind, and get into the hands of the money-lender. Dr. Herkner does not hesitate to say that in the oldest parts of the *cité* the laborer has been driven out by the usurer and the land speculator. He declares boldly that the labor question has not been settled by this means; that the great mass of laborers stand precisely where they did before.

He has not confined his attention to houses alone. He deals with questions of wages, combinations, blacklisting, fines; with child labor, and others of the worst abuses to which the factory system is liable. If his story is to be believed, factory towns like Lowell and Lawrence, or even Fall River, are a paradise compared with Mülhausen. Nay, Baltic itself, in the worst days of the old management, shines by contrast when compared with the picture here drawn of the Alsatian cotton operatives. We need not believe the whole of what Dr. Herkner says. He is largely a partisan witness, having obtained his information from the laborers, where it was hard to bring it to the test of cross-examination. Such information is about as untrustworthy as anything can be. But he has said enough to show that there is a side of the story totally different from what Messrs. Dolfuss and Grad have allowed us to hear. The existence of that side shows that the problem is not solved. Nor is it likely to be solved by any simple contrivance, whether for the ownership of homes, or for the regulation of hours, or for participation in profits. The trouble lies too deep for that. Alsace seemed to furnish an example to the contrary; but Dr. Herkner has proved that human nature in Alsace furnishes no exception to the laws which govern human nature elsewhere.

SIGNS OF THE TIMES IN IRELAND.

DUBLIN, September 12, 1887.

FOR some months of late, Irish newspaper reading was colorless and uninteresting. There were no events of special note to record except evictions, and they were described in a manifestly exaggerated and melodramatic manner. One could not regard all the evicted as injured innocents, and all the evictors as heartless tyrants. The speechifying in and out of Parliament was little varied. Enough to note the name of the speaker to know what he would say, what would be his attitude regarding every subject, and his view of each event. And as to the papers, every speaker on "our" side was eloquent and forcible; every opponent, paltry and unintelligible. All this flatness is now changed: putting the Coercion Act into force has been the boiling point, and we may expect lively times this winter; the passions of the people and of the leaders are rising to fever heat. At present William O'Brien, a spare, pale man in spectacles, is the centre of popular interest. Next Davitt and Dillon will probably be involved. Besides these, other prominent public men are likely to resist the Coercion Act and to become the heroes of the hour. Mr. O'Brien is being tried at Mitchelstown under the Coercion Act for some of his speeches. Remembering that they were addressed to an excitable peasantry in the face of evictions, one cannot approve in cold blood all his utterances—for instance, the following:

"If they carry out these evictions, you would not be men if you did not resort to every means in your power to resist and fight for your rights. Set the country in a blaze. I tell you the English people would despise you and say it served you right if you were to be trodden down without fighting for your homes. . . . Remember this, that there is nobody to oppose you except a parcel of broken-down landlord robbers, and the base blood-suckers and hirelings that cling to them. Fight it out with these ruffians like men to the last act."

And so on. Such is the attitude of Mr. O'Brien, and such is the spirit of his paper, *United Ireland*, the newspaper which most influences the masses in Ireland.

Turn from O'Brien to the audience that thronged the largest hall in Dublin, a few nights ago, to hear a lecture from him. The Catholic Archbishop of Dublin presided. The Lord Mayor sat beside him. English and Irish members of Parliament thronged the platform. Several ladies were present. It was essentially a demonstration of Irish national feeling. When I looked at that vast assemblage, and reflected that some ten years ago no such gathering would have been possible—that, for one thing, no Catholic clergyman of the diocese of Dublin would have been permitted to attend—I felt more than ever how futile is the supposition that this Irish national feeling can remain unrecognized. The demon-

stration was in favor of Mr. Parnell's policy. So absorbent is that policy becoming in Ireland that all nationally inclined, however slightly, are being drawn into it. There were men present, and taking an enthusiastic part, who two years ago were indifferent or critical bystanders. It is amazing that any one can delude himself with the theory that the movement is dying down; that Mr. Parnell is losing the confidence of the people; that Irishmen are longing for emancipation from "the tyranny of the League." The demonstration was significant of the ultimate success of Mr. Gladstone's policy in uniting England and Ireland. The English members were most warmly received, and all references to Mr. Gladstone and the English people were vehemently applauded. Beyond all this, it was a demonstration of sympathy with Mr. O'Brien in his approaching prosecution and more than probable imprisonment for language such as I have quoted; and nothing could better illustrate the blindness and stupidity of the Government than their selecting O'Brien as a proper object upon whom to commence the serious enforcement of the Coercion Act.

The reason why O'Brien has the sympathy of thousands who disapprove of much of what he says and does is this. He is a man of singularly pure and lovable disposition in private life, and is entirely unselfish. He has sacrificed all to devote himself to what he believes to be the good of Ireland. He accepted imprisonment under Mr. Forster's régime at a time when the relative to whom he was most attached and who most needed his care was dying of an incurable disease. He is a man of lion-like courage and determination. He is a man of delicate, nervous constitution, upon whom the sorrows and difficulties of the country have preyed. The slow processes, the painful conflicts, through which alone Irish reforms can be obtained have embittered him; but whatever he says will now be condoned, if not approved, by the country at large. He is only one of many similar men I have known in Ireland—men who, in a properly ordered State, would be the supporters of law and order, the very bases of a settled constitution, but who are rendered by bad government advocates of disorder—resisting the law and those who enforce it. This state of things is miserable and harassing, and even the ascendency party here are beginning to be weary of it.

And so O'Brien, as he promised at this public meeting, declined to appear before the Crimes Act tribunal at Mitchelstown on the 9th inst. Mr. Dillon, Mr. Labouchere, and other members of Parliament called a public meeting in the Square to denounce the prosecution. Public feeling was excited. For the past ten years the Government have sent a police shorthand reporter to every important open-air meeting in Ireland. He has as much right as any one else to be present in his individual capacity and take notes. He often appears in front of the platform—guarded by a few police before the meeting fully assembles. Usually he applies to the promoters, and is accorded a place on the platform I cannot recollect an occasion upon which, however his presence may really have been resented, he has not been protected by the leaders of the people in the exercise of his duties. This time the reporter did not present himself until the meeting was constituted and a dense mass of people had gathered. He was known as the principal witness against O'Brien. He appeared, surrounded by police, on the outskirts of the crowd, and he and his escort did what no one has a right to do—forced themselves into a good place near the speakers. This was resented, and a free fight ensued. The police were driven back roughly handled. The people smashed the windows of the barrack. The police fired. Two men were killed and many wounded. And so the circles widen and widen. Men disapproving of his unmeasured language are led into the position of supporting O'Brien, and men desiring to uphold law and order are obliged to oppose law and order so called. O'Brien was put under arrest last night. He has been forced out of his hotel this morning and carried to the train (the Lord Mayor's state carriage was placed at his disposal) and hurried off to Cork. You will know the conclusion of this act in the drama long before these lines reach you.

There are signs that the landowners in Ireland are awaking to the necessity of adopting some other attitude than blind stolidity in order to guard their interests. A meeting of landowners and encumbrancers was lately held in Dublin, under the presidency of the Duke of Abercorn. Resolutions were passed and delegates were called to a future conference, from associations to be formed in every county. The reports of the proceedings at the formation of these associations are now appearing in the newspapers, and are rather cheering, as showing that the ascendency classes are perceiving the import of the situation. The wording of one of the resolutions passed at the Kildare meeting will give a general idea of the spirit of the movement:

"That whereas, by recent act of Parliament, the system of dual ownership between landlord and tenant has been introduced into this country, and funds have been placed at the disposal of the tenant by the State for the purpose of purchasing his holding, we, the landlords of the County Kildare, hereby call upon the Government in common justice to confer the same benefit on the landlords, by advancing them such sums of money as will enable them to pay off family charges and mortgages at the same rate of interest as that granted to the tenant, more especially as the leases and agreements on the faith of which the said charges and encumbrances were made have recently in many cases been broken and interfered with, and the recovery of even the judicial fixed rent made liable to suspension by the County Court."

This is a hopeful movement, more especially as Archbishop Walsh (who presided at O'Brien's meeting) has suggested, in letters to the press, the desirability of a conference between the representatives of both parties. The spirit of these communications is admirable. The Archbishop is a thoughtful and enlightened man, fully sympathizing with the national movement, preëminently interested in the settlement of the country upon a permanent and orderly basis, and he sees that this end could not be attained through the spoliation of any one class in the community. The *Times* has had the incredible stupidity to suggest that the moderation of his tone has been induced, not by a genuine desire for conciliation, but by fear of the Coercion Act!

The discussion upon Sir Charles G. Duffy's conservative and conciliatory scheme of a home-rule constitution for Ireland is, upon the whole, encouraging. It is striking how apparently insurmountable differences disappear when men practically discuss measures which must be settled in the face of present facts. Hitherto we have had the difficulty that opponents of home rule seem disinclined to admit the existence of a party competent to think for, to carry, and to unite the public sentiment of Ireland. At one moment we are told that the Irish people would be peaceable and law-abiding if let alone by the agitators, and the next that the proposals by Mr. Parnell or Mr. Duffy, if moderate, would be binding only on themselves—that there is a ravening and intractable spirit of unrest and disorder behind them which would keep to no engagement and can be curbed only by armed force.

This is the time of year at which we have most of the annual Government returns, and they contain much interesting information. The Registrar-General tells us that the marriage rate is decreasing in Ireland. Ten years ago 26,388 marriages were registered; in 1886 but 20,594. There is a like falling off in the births. A marked diminution in the mortality has been absorbed by emigration, and upon the whole our population has declined by 36,500 in the past year. It is now 4,889,498, as against 5,174,836 in 1881, 5,412,377 in 1871, 5,798,967 in 1861, 6,552,385 in 1851, 8,175,124 in 1841.

The Post-office Savings Bank now holds the saved pence and shillings of the Irish people to the amount of £2,703 074 (Dublin, Antrim, Cork, Down, and Tipperary standing in that order at the head of the list)—an available capital which was not in existence before the establishment of that valuable institution.

We have the return looked forward to annually with eager expectation by thousands of Irish boys and girls—the report of the examinations held under direction of the Commissioners of Intermediate Education. This body was constituted by the Government several years ago, and large funds were put at its disposal (if I recollect rightly, from the Irish Church funds) for the encouragement of intermediate education in Ireland. Subjects for examination are put forward in autumn; the examinations come off in spring. Children, no matter how or where educated, go up simultaneously for examination at centres all over Ireland. The candidates are divided into senior, middle, and junior grades; boys and girls separate. The examinations are in all subjects, from Greek, German, and Irish to reading, writing, and arithmetic. Exhibitions and prizes are awarded to those who obtain the highest marks, and a pass certificate to all those who attain a certain proficiency. Results fees are awarded to teachers. It is an excellent system—taking for granted that such examinations are the wisest and best means of stimulating exertion. The success of the boys educated at Catholic institutions has been marked. Not so with the girls: they suffer from the narrower influences to which they are subjected in institutions regulated by Catholic views of female education. We have a striking example of the impossibility of any system holding to old ideas, and aloof from the enlightenment of the present, in the fact that Catholic opinion here is now demanding that the system of education in these institutions be modified in accordance with the spirit of the age, so that Catholic girls may share the higher honors.

D. B.

MILITANT CATHOLICISM IN GERMANY.

MUNICH, September 9, 1887.

THE Thirty-fourth General Assembly of the Roman Catholics of Germany has just finished its session in Trier. This ancient city, the oldest in Germany, with its tomb of an apostle and its Roman basilicas and traditions of bishops, archbishops, and electors extending through 1,500 years, was appropriately chosen to give *éclat* to this gathering. This assembly is not simply like the English and American Church Congress: it enjoys high ecclesiastical patronage, and, while it discusses questions of importance to the denomination, by subordinate committees, it initiates action and makes reports which lay enterprise carries out. This year the Bishops of Trier and Luxemburg and the Archbishop of St. Maurice were present, as well as the English Bishop Vaughan of Salford. Congratulatory despatches were received from the Cardinal Secretary of State in Rome and from the most eminent prelates in Germany. Many Catholic nobles and members of the Landtag were present from the region of the Rhine and Westphalia.

The gathering did not limit itself to the discussion of social and political questions, but there were auxiliary meetings of Catholic students and religious societies, excursions in the beautiful val-

ley of the Mosel, fireworks, masses, and a stately procession of the guilds and Catholic organizations of the city, seminarists, professors, clergy, and bishops, to the tomb of St. Matthew. The subjects of discussion were preëminently the relation of Church and State, education, Christian art, the care of the poor and sick, the labor question, the education of women, the press, popular literature, etc. The addresses were popular in their character, and calculated to awaken enthusiasm rather than calm discussions of the subjects announced. It is unusual to hear the Emperor's and Bismarck's names praised in Catholic circles as on this occasion. Bismarck's words, uttered this year in defence of his conciliatory measures, were especially commended: "If I were a Catholic, I do not suppose that I should regard the Papacy as a foreign institution, and from my standpoint, which I must retain as a representative of the Government, I concede that the Papacy is not simply a foreign, but a universal institution, and because it is a universal institution it is a German institution and for German Catholics." The irreconcilable and aggressive attitude which the Catholic party in Germany is assuming since the reconciliation of the Prussian Government with Rome, was shown by the fiery speech of Dr. Lieber, upon the Catholic orders, "which are the sole remedy for the evils of the present time. If the social chasm which exists at present is to be healed, all the orders must be called back, all, without exception—even the Jesuits. Freedom for all, and for the Jesuits as well. We may be confident of the approval of the Holy Father if we do not rest until the last man and the last woman who is a member of an order has attained liberty again on German soil, and the greatest possible number of German sons and daughters can again dedicate themselves in full freedom to the life of an order." These sentiments were received with the most tempestuous applause, and have been taken up with enthusiasm by the Catholic press as one of the watchwords of the new campaign.

The speech of Windthorst was the most noticeable, as indicating the future policy of the party of which he is the leader:

"What is the present condition of Church politics? I answer, in the words of our honored President, Count Ballestrem, 'We have now a provisional treaty, with a truce and a line of delimitation,' which must be followed by reëstablishment. Much has been attained, . . . but all has not yet been attained. One vital point, the right of interference [by the Government], has not been disposed of. I shall never be satisfied until the former condition has been entirely restored. The negotiations with the Holy See regarding this right of objection undoubtedly continue. One declaration concerning it has been already reached: it is inadmissible that investigations should be set on foot as to the attitude of the clergy at elections, which are now a civil right.

"The school question is at least as important as the *Kulturkampf*, through which we have fought. Without a change in the present condition, it is impossible to preserve inviolate a Church spirit. Our adversaries rely upon the school as an exclusively State institution, but we cannot leave to them its sole administration. The final decision rests now everywhere with the State: ecclesiastical activity is simply permitted, which is a perverse state of affairs. The Church nourished the schools to greatness, and has now been rejected by them. The school laws are a fruit of the *Kulturkampf*, and must be abolished. It will cost labor, but the *Kulturkampf* has cost labor, and we have accomplished much.

"The right of the family must also be respected. We must raise the imperative demand that all religious instruction shall be intrusted to the Church. I shall put forward definite demands in the next session of the Landtag. If a teacher gives offence in religious instruction, the remedy lies with the bishop and not with the Government. Catholic emancipation was slowly accomplished in England, and we must carry through similarly the emancipation of the school."

Windthorst's speech was warmly applauded. Everywhere he was the hero of the occasion. Loud cheers were raised for him wherever he appeared, and people crowded about to shake his hand.

The discussion of the labor question did not go beyond emphasizing the necessity, in behalf of the home and the family, of forbidding the employment of married women in manufactories; and until that could be obtained, it was proposed to limit the hours of labor in which a married woman could be employed to ten; shortening the day's work of children, advocating the establishment of colonies of laborers, and dispensing with Sunday labor.

A great effort will be made on the part of German Catholics to celebrate the fiftieth anniversary of the consecration of Leo XIII. as priest. A library of 8,000 volumes, containing all the works of Catholic authors that have appeared during his pontificate, will be formed and sent to him; and three great excursions over the Semmering, the Brenner, and the St. Gotthard Passes to Rome were proposed. Great stress was laid on contributions for the German Catholic colonies in Palestine, which have already acquired considerable land in that country.

The resolutions, which were adopted in private session amid great enthusiasm, express the sentiments of the meeting. The right of the Church to impart religious instruction and to choose the appropriate text-books was insisted on, and the reëstablishment of the confessional school demanded; Catholic religious teachers in the higher institutions are the organs of the Church, and are to be so regarded; the restoration of the temporal sovereignty of the Holy See is demanded as essential to its freedom and independence, and every worldly power of divine establishment acts in its own interest and in the interest of permanent social order which sustains the Holy Father in his exalted claims; the recognition of the Pope as a power in political affairs is gratefully recognized. The following resolution, which I will quote in full, was adopted with especial exultation:

"The Catholic people of Germany has the right and the duty not to rest until all remnants and effects of the laws of the *Kulturkampf* are removed, especially all limitation upon the free residence and full and beneficent activity of all the Catholic orders."

In the closing session the Bishops of Luxemburg and Trier and the Archbishop of St. Maurice took part. The Bishop of Trier announced that the exhibition of one of its most sacred relics, the holy seamless robe of Christ, had always been attended by momentous events, affecting the whole world; that the occurrence of such an event rested with God, but the Bishop would not delay to expose the holy coat to the adoration of the faithful.

At the close of the meeting a grand banquet, in which seven hundred participated, was given, and toasts were drunk to the Pope, the Emperor, the Episcopate, the President, Count Ballestrem, and the guests, and Windthorst delivered an additional address. The next session of the Catholics of Germany will take place in Deggendorf, in Lower Bavaria.

The results of the late meeting are variously discussed. The Cologne *Gazette* says that such gatherings tend to demoralize the Ultramontane masses; that the leaders of the party let no opportunity pass to incite them: "They do not observe that their activity gradually becomes farcical. A grand and earnest sentiment did not pervade the Assembly this year." The *National Zeitung* believes that the meeting reveals a distinct purpose to initiate action in the next session of the Landtag which shall have for its object to secure for the Church the control of the public schools in Prussia. The conservative *Post* treats of the matter at greater length:

"What had not been previously manifest is now first revealed, viz., the definite declaration of the purpose to secure the abolition of the law of school inspection, and to confer upon the Church the direction of the schools and the supreme cognizance of religious instruction, and the reëstablishment of Church schools in the strictest sense of the term. 'The teachers must support the bishops.' This is the declaration of Dr. Windthorst. Although this proclamation encountered no opposition in the meeting, yet we may rightfully doubt whether the more moderate elements of the Centre, who assumed in the last parliamentary campaign a somewhat cold attitude towards Dr. Windthorst, will willingly permit themselves to be directed in a way which will place them in sharp opposition to the Government, and again in that position of defence from which they sought so diligently to free themselves, and whether they will again give Dr. Windthorst the supreme direction from which their tactics had removed him. The attempt will in any event be made, and it may well be queried how far their power of resistance will extend, when they run the risk of imperilling their position with the clerical democracy of defenders of the interests of the Church. If simply the radical wing of Windthorst, and not the entire Centre, supports this attack upon the school system of Prussia, it will be the business of all other parties to stand unitedly together and with the Government in behalf of the public schools, and to show the absolute hopelessness of Windthorst's attack, and thereby, in advance, avert a conflict concerning the schools, just as in the session of 1883, when Windthorst's attack upon the duty of all parties to sustain the public schools was unanimously rejected by the German Conservatives."

The *Germania* does not go to the full extent of its associates, but, in place of a one-sided and exclusive State superintendence of schools, demands a common oversight by Church and State.

The pastoral brief of the German bishops, which they issued at their recent meeting in Fulda, has just appeared. It is devoted mainly to a review of Leo XIII.'s services to the Church, and an appeal to fitly commemorate by gifts his fiftieth jubilee as priest in 1888. It complains of restrictions upon the action of the Church in Germany, but is significantly silent in its reference to the State. This is another indication of how thoroughly the Pope has taken the direction of Church politics in Germany into his own hands.

W. T. H.

THE LAST OF THE GOZZADINI.

ITALY, August 28, 1887.

"DIED at Ronzano Count Giovanni Gozzadini, August 25, 1887." So ends in the male line one of the oldest patrician families of Italy, famous in the best sense of the word, foremost as champions of liberty, science, and literature. In 1256 a Caudaleone Gozzadini emancipated 5,807 serfs; Bandilisio Gozzadini, 1334, expelled Cardinal de Pojet, and kept at bay Taddeo Pepoli, who aimed at becoming ruler of Bologna; Calorio Delfino Gozzadini, 1354, defied the tyranny of Oleggio; Pino, 1375, was foremost among those who overthrew the power of Pope Gregory XI.; Nanni headed the opponents of Zambeccari, of Bentivoglio, and of the Viscontis, 1398, 1403; Giacomo and Delfino in the fifteenth century defied alike the Pope and Bentivoglio; Camillo, in the presence of Charles V. and Clement VII., made Antonio de Leyva swallow his insolent threats. The history of the Gozzadinis during the republic presents a tragic spectacle of struggle, exile, imprisonment, and death. The family was extremely numerous: at one and the same time ninety-five males were living, all Guelphs. They gave fourteen professors to the University of Bologna, among these the celebrated Bettisia, professor of jurisprudence, one of the many Italian women who adorned the thirteenth century. The list of Gozzadinis ambassadors and senators is too long to enumerate. Benno Gozzadini, podestà of Milan, in 1257 excavated the Naviglio Canal, leading from Milan to Abbiate-

grasso, where the grateful people, in exchange for the quadrupled worth of their lands, drowned him. But the Milanese historians have done honor to his memory—Litta, in his 'Celebrated Families,' and Verri, the historian; while Raffaele Sonsogno has made him the hero of a bulky novel, the statue of Benno adorns the Gallery of Milan, and a handsome street in that city bears his name. Among the many warriors, Malatesta Gozzadini was the most renowned. Giovanni was the last scion of this noble race, and, if such a plebeian phrase may be used, he was a chip of the old block. Proud of his race for the deeds they had done, Count Giovanni was the type of an Italian gentleman. As a writer Gregorovius has celebrated him, yet only a few intimate friends can tell what was the great attraction of Villa Ronzano. That attraction lay in his charming wife, Maria Teresa di Serrego Alighieri Gozzadini, one of the last descendants in the female line of Dante Alighieri.

Not to weary you with another genealogy, enough that Mark Antonio Serrego, of a noble family of Verona, married Ginevra, the last daughter of the last male descendant of Dante. When Italy in Florence commemorated the sixth centenary of her great poet, the brother of Maria Teresa, Count Piero di Serrego Alighieri, and his male descendants were inscribed among the Florentine patricians as *pronipoti* of Dante; and, moreover, the Municipal Council of Florence, "considering it their duty to confer the highest honors on the greatest citizen of Florence, decrees: The Contessa Maria Teresa Gozzadini, *née* Serrego Alighieri di Verona, is numbered among the Florentine aristocracy, and exempted from paying the tax." "Approved by 27 favorable votes, none contrary." How Maria Teresa bore "all that weight of glory like a flower," her friends can tell. Detesting her baptismal name because Austrian, for her husband and for them she was simply "Nina." Naturally gifted, she was educated with the utmost care, and in her youth was the pet of patriots and of poets, of Monti and Padre Cesari, of Berchet, of Niccolini, of the Ugoni. Of all books, she loved her Dante best, knowing every line by heart; and the same might also be said of the Bible—a rare thing in Italy. All her hate was reserved for Austria, to the great displeasure of her uncle, whose sympathies were with the Pope and the Emperor. When Count Gozzadini, her cousin, was presented as a suitable match, she inquired whether "he was a good Italian." Satisfied on this point, she married him, threw herself into his antiquarian studies, continuing her own, devoting herself to the education of her only daughter, and living on the hopes for Italy. All Italian and foreign celebrities were welcomed at Ronzano. Longfellow's translation of Dante delighted her (and, being a good linguist, she was a fair judge), and she sent him the commentary of Perez entitled 'I setti cerchi del Purgatorio,' which Longfellow in a graceful letter acknowledged.

Villa Ronzano, during the years that preceded 1848, was the resort of the Young Italy leaders. Livio Zambeccari, Pietramellara, Tanari, made it their headquarters—wise counsels and ready money being at their disposal. When Bologna succumbed after her glorious defence, Gozzadini and his wife succored the prisoners, secured the safety of the fugitives. Aleardo Aleardi, the poet, and Alberto Mario were among her then youthful protégés, and on one of the slopes she made them plant a group of firs, stone pines, and beeches. With both, husband and wife kept up a tender friendship to the end, "la Nina" and Alberto Mario writing to each other every New Year's Eve for two and thirty years. When the Austrians returned and the papal authority was reinstated in Bologna, an order was issued for the illumination of all the villas and palaces surrounding Bologna, in honor of Mons. Bedini. "Extinguish every light in Villa Ronzano," was the order of Count Gozzadini; and the Countess, arming her men and maids with buckets of water, passed the night on her terrace to extinguish any lights that the Austro-Papal police might see fit to place there. Villa Ronzano was the only palace on the hills that "shone in darkness"—*splendissima oscurità*, as a local poet, Marchetti, styled it.

The liberation of Bologna in 1859 rejoiced the heart of Gozzadini's noble wife. On the 14th of June, 1859, she writes: "Ronzano, free after eleven years of profanation, I salute thee in peace." Elected Deputy to the Assembly of Romagna, Count Gozzadini voted with joy the downfall of the Papacy, and la Nina, on the same day, wrote to Alberto: "I am proud of Giovanni's vote, with Austria at the gates, with Piedmont, who will not accept us, with Napoleon, who intrigues and compounds at Villafranca." But until all Italy was one and crowned with her crown of towers in Rome, the Gozzadinis were unsatisfied. In 1870 that also became an accomplished fact, and during the last ten years of her life la Nina's letters relate chiefly to literary matters. When her husband's work on 'Le torre gentilizie' appeared (you may remember publishing a notice of it in the *Nation*), Mario, wishing to write a biographical notice, asked her for some notes, of which, under the seal of secrecy, she sent the following:

"It is not without repugnance that I accede to your request to send you some particulars about my husband, because, when I read biographies of living men, the doubt so often proved true arises that they have furnished the leaves for their own laurel crown; but you have good taste and fine tact, and will know how to speak with prudence of a man eminently modest. . . . Here are a few words of mine for you. Up to his eighteenth year Gozzadini hated study, only learned what he was compelled to at school; athletic sports and gymnastic exercises were his only delight. In these he excelled; a perfect horseman, he was also a noted swordsman; at foot-ball and hand-ball [*palla* and *pallone*, the only famous Italian games] he was always the prize winner. At eighteen he felt ashamed of his ignorance, and, without giving up his athletics, set himself to deep and diligent study. At twenty-two he began to frequent the historical archives, and soon became a distinguished palæographist. I subjoin a list of his works, which will tell you more than I can of his studies.

"He was, as you know, Deputy to the Assembly of the Romagna, and voted for the downfall of the Papacy and the annexation of the provinces to Piedmont. Of his own works he is the severest judge. So dissatisfied was he with his book on the 'Towers' that he very nearly burnt it. Surprised by the benevolent reception given to it, he wished he had delayed the publication, 'to make it better.' But if severe upon himself, he is bountiful in admiration and praise of others. Loyal, honest, upright, he never suspects other people's malignity, and of this he very often becomes the victim. He loves silence and solitude, walks for hours during the day, passes hours in writing and reading. His speech is brief, concise, and *well salted*, often witty; at times he descends to a pun. Detesting luxury, he lives modestly and with sobriety. As a lad he determined never to drink wine, lest he should 'lose his head,' and he never touches it. He prefers his own independence to everything else, and in order to preserve it, and also because his timidity renders him taciturn in society, has refused honors and offices innumerable. At home he is always serene and good-humored, never moody or capricious; tolerant and kind to all his dependents. There, this much, and it is too much, is all I can say. Do not let my hand appear."

When Mario's biography appeared, la Nina writes: "The biography is eloquent and beautiful—a real photograph. *Nannetto* grew quite red and confused, and charged me with having helped you to details that you could not have found elsewhere. He says that such praises compromise him, that he does not merit them." The proofs of Mario's 'Garibaldi' were corrected by la Nina. When she came to his account of Aspromonte, she writes:

"I protest against your saying that they meant to kill Garibaldi [alas, Cialdini's order speaks too clear: *bisogna schiacciarlo*]. I don't believe there exists in Italy a monster capable of such a crime; but if even it be true, you ought to hide it for the honor of the fatherland. My blood boils to think that foreigners, who so delight in calumniating us, will read this horror narrated as it is by you. How I should like to upset the inkstand over you!"

Here, I think, is her last letter:

"If you read my husband's last book, you will do me the greatest pleasure to pass judgment on it. He has acted the part of an impartial historian, not hiding the faults of his ancestors, seeking, as he always does, only the truth. We shall see now whether some papist will seek to whitewash Cossa, whose victims, Nanni Gozzadini and his family, now, after five centuries, are avenged by this Nanni."

This noble woman died suddenly on the 25th of September, 1881, while making an effort to be present at her husband's inaugural speech at the opening of the Civic Museum of Bologna. After her death he published a volume of her letters, the interest of which is much lessened by his having excluded all those which speak of himself. A beautiful preface by Giosuè Carducci gems the volume. Since her death he has lived in absolute retirement. His few letters to me after his loss and mine, sending roses from Ronzano to adorn the tomb of his wife's lifelong friend, are too sacred for the public eye. Last year he sent a photograph of the beeches planted by Aleardi and Mario in 1849. Beneath those beeches we spent a long summer day with Carducci, his delightful wife and children; and the poet, as the rarest favor, recited his glorious ballad of "King Theodore." And now yesterday in Villa Ronzano, the last of the Gozzadini was gathered to his fathers, and we may safely say that his last thoughts were for "Nina," his life's one love, without whose presence the last five years have been to him a death in life.

J. W. M.

Correspondence.

REPEAL THE TARIFF ON BOOKS.

To the Editor of The Nation:

Sir: That every college and university in the land should be a means of education, not only for the few that are privileged to frequent its halls, but also for the many to whom this pleasure is denied, and that each should be such an educational centre that its influence for higher, nobler things should be felt in every school-room and family in the region of which it is the educational head, are statements that will probably pass undisputed. The term "college professor" should, and usually does, not only denote a man that gives a part of his time to the instruction of youth in one of the higher institutions of learning, but also should connote one of moral habits, whose leisure is spent in studying, writing, and publishing. This latter portion of his duties, often the more important, is none the less real because unprovided for in his contract and unrewarded in his salary. Nor does the State or the Government reward the valuable work that is done by the many scholars in this country connected with institutions or working privately. No pension awaits him who devotes himself to the scholar's life, nor is one generally desired. "The work rewards." The scholars and students of the country have, however, just ground for complaint if they are at all hampered or restricted by the Government in their studies or investigations. Every one who has attempted to study any subject at all deeply and thoroughly, knows how dependent the student is on books that have been published in Europe and not republished in this country. The latest novel, the bright essay,

the volume of dainty verse—these the American publisher gives us at prices with which his English brother, who works at the disadvantage of having to deal fairly and honestly with his authors, cannot compete; the exhaustive monograph, the exact reproduction of a mediæval text, the report of the latest scientific experiments—these are caviare to the general, and no publisher finds it worth his while to "pirate" them. But these books specialists and students, who are usually men of limited incomes, must have, even though the Government shows its appreciation and encouragement of learning by adding twenty-five per cent. duty to the always high cost of the books. One cannot but wonder what will be the judgment of posterity on a nation that, while claiming to be the most generally enlightened and educated in the world, collected such a tariff on imported books at the very time that one of the most perplexing problems before its statesmen was how to reduce its revenue! What other civilized country levies such a tax?

Professional men are, it is true, allowed to import, free of duty, books to be used by them in their profession; the Government thus recognizing the value of their services. This return is, however, in appearance merely, and is usually nullified. The active professional man imports his books through the mails as soon as they are published, having found that on small parcels of books the expenses for boxing, freight, and fees more than equal the duty on books arriving by post. To the large number of students that cannot claim that the chosen study to which they are devoting all their leisure is their profession, even this semblance of a return is denied, and yet their productions are often of decided value.

But there is another and even broader view of the matter: to increase the facilities of the people for getting books would be to increase the means for general culture. The words "sweetness and light" have been so misused that they have almost a slang effect, but they do embody one of the greatest needs of this great American people, and anything that will tend to the more general diffusion of sweetness and light should be welcomed by our Government instead of being almost shut out by a heavy duty. Has the time not come when the enticing of emigrants from the overcrowded countries of the Old World is secondary in importance to the giving to the citizens of our own country every means for leading a higher, more intellectual, more spiritual life? Would that the Milton that wrote, "As good almost kill a man as kill a good book. . . . Many a man lives a burden to the earth; but a good booke is the pretious life-blood of a master spirit, imbalm'd and treasur'd up on purpose to a life beyond life," were now alive to write of this practice of allowing emigrants—some good, some "burdens to the earth"—to enter freely, and settle our lands, while "good bookes" are forced to pay a heavy duty!

Will not the *Nation* start a crusade, in which every newspaper, every scholar, every student, and every book-lover shall be invited to join, in favor of the total repeal of the tariff on books?

Yours respectfully,

WM. DALLAM ARMES.

OAKLAND, CAL., September 16, 1887.

AN EXPERIMENT IN PRACTICAL PHILANTHROPY.

TO THE EDITOR OF THE NATION:

SIR: Five years ago two Boston gentlemen, moved by the miseries of tenement-house life, undertook to help the poor to help themselves to better homes. To this end they planned carefully and built thoroughly a block of wooden houses, differing from the ordinary tenement-houses by which they were surrounded chiefly in that they provided tenements strictly wholesome from a sanitary standpoint, and strictly private and disconnected with every other, at ten dollars a month, *i. e.*, about a dollar a month more than the same amount of room fetched in one of the old-fashioned tenement-houses near by. The building was only two stories high, but long and narrow. On each floor there were nine tenements; but these were wholly separate one from another, having each a private outside door, reached from the street through a private yard (some ten by fifteen feet in area), and opening into a private entry leading to the three rooms and water-closet, of which the tenement itself consisted. A private cemented cellar also went with each tenement.

The cellars were dry and wholesome; the walls throughout, for greater cleanliness, were painted instead of papered. The sanitary arrangements, ventilation, etc., were planned and kept in order under the personal direction of one of the owners, himself a physician of large experience and sound practical knowledge. Thus these tenements offered at a small cost the great prime factors of a home—seclusion and healthfulness; and it was supposed that, from among the many who are crowded into noisy and filthy tenements, some, at least, of the kind often described as "the worthy poor" would jump at the chance to secure for themselves clean and comfortable homes.

But what has been the result? It turns out that the tenements have never been appreciated and are not sought for. The owners, having spent time and money in vain and without even the reward of appreciation, have become fully persuaded that the dwellers in cheap tenements are not "oppressed," "ground down," or even dissatisfied with their homes; that they love darkness rather than light, publicity more than privacy, the fellowship of the crowd more than the retirement of the home. It is abundantly demonstrated that in that region extra comfort and cleanness is not deemed worth an extra rental—in short, that among these people, however much grumbling there may be, there is not enough dissatisfaction with the existing order of things in tenement-houses to bring about a change when it becomes not only possible but easy. So far as can be learned by the writer, who has been an attentive, though disinterested, observer of the experiment, failure has come, not from any extrinsic causes—such as petty meddling by the owners, indiscreet management, etc.—but wholly and exclusively from the indifference of those whom it was hoped to benefit. Moreover, it would seem to be proved that in that neighborhood the ills of tenement-house life are not superficial, but constitutional; and if this be so, they are probably curable only by some such radical treatment as a change in human nature.

Respectfully, W. T. SEDGWICK.

95 MT. VERNON STREET, BOSTON.

SILVER COINAGE.

TO THE EDITOR OF THE NATION:

SIR: The United States cannot become the dumping ground of silver, for the reason that silver is already cheaper in this country than in any other nation in the world. In England the coinage rate of silver is 14.28 ounces of silver to 1 of gold, in Portugal 14.9 to 1, in the Scandinavian States 14.88 to 1, in Austria-Hungary 15.8 to 1, in Russia and India 15 to 1; in Germany, France, Italy, Switzerland, Spain, and Greece it is coined at 15½ ounces to 1 ounce of gold, while in the United States the coinage rate is 16 ounces of silver to 1 ounce of gold.

France's stock of silver coin is worth in gold at home $553,000,000; it would be worth no more here. None of the stocks of silver coins could be purchased in any of the nations for less than their value in gold, which, as we have seen, is above the coinage value of silver in the United States. So much, then, for the silver coins of other nations.

The silver that has gone into the arts has had labor added to it, and its value is therefore greater than that of the silver coined, which disposes of that source of supply. What have we left? Silver bullion! None of the nations to which "Anti-Silver" refers (in your issue of September 15), except Mexico and South America, produce any silver bullion, but instead are constant absorbers of it, and get their supply from the United States, Mexico, and South America. England, while she fixes the price of silver bullion, keeps no stock on hand—it is a mere hand-to-mouth business with her. India and China demand from England every ounce of silver bullion she can secure from the countries that produce it, and they pay for it at full coinage rates in gold. England is the silver broker of the world, and she carries on her trade at great profit to herself, but at great detriment to the United States, Mexico, and South America.

There is therefore no surplus silver bullion in the world to be had for the purposes of coinage into "facsimile silver dollars," as all the metal is required in the balances of trade for the East. As England has long been getting the 30 per cent. profit, simply because the United States Government does not throw open her mints to the free and unlimited coinage of silver, there is no opportunity for any nation to go into the "facsimile" scheme, even if they were so disposed; and your comment that "coins *exactly* like the genuine silver dollar cannot be produced in a chimney corner," remains true.

This silver-coinage business, to men who fancy all the earth was made for gold dollars, is easily disposed of; but for men who study into the facts of history and of nature, and who, above all, have a little reverence for the wisdom of the Almighty in making both gold and silver for the benefit of mankind, it takes on a might and majesty that some men are not likely to comprehend.

E. J. FARMER.

CLEVELAND, O., September 19, 1887.

[We think that Mr. Farmer has misconceived to some extent the point made by "Anti-Silver." His inquiry, as we understand it, was in substance this: Why may not anybody buy 412½ grains of silver 9-10 fine, paying therefor about 75 cents, the present market price, and fashion it into an American silver dollar exactly like the genuine, and then pass it in trade for 100 cents, pocketing the difference, and repeating the operation *ad libitum*? To do this it is not necessary to go to the European stocks of silver coin or to go anywhere outside of the United States. The metal required for such an operation can be bought any day in Wall Street or at any silver-smelting establishment in the country.

Regarding the designs of the Almighty in making both gold and silver, we have no information that we consider worth much for purposes of controversy. Mr. Henry George and the Rev. Dr. McGlynn are just now making great pretences to know what His designs were in making the earth generally; and since gold and silver are among its component parts, these gentlemen would be able to meet Mr. Farmer on terms of equality.—ED. NATION.]

HENRY CLAY'S ABOLITIONISM.

TO THE EDITOR OF THE NATION:

SIR: Carl Schurz, in his Life of Henry Clay, omits an important point in telling of the peti-

tion of the Quaker Mendenhall and its reception by the great pacificator. When Clay had explained that it would be impossible for him to comply with the petition and free his slaves immediately, Mendenhall asked, "Will you provide in your will that they shall be free at your death?" This question and Clay's negative answer to it were suppressed in the accounts of the incident published in the Whig papers of the time, and Mr. Schurz only follows the current story in making no reference to them. The true account appeared in the *Free Labor Advocate*, issued at Newport, now Fountain City, Ind. The discrepancy between this and the Whig account attracted attention and led to the republication of the complete story over the signature of twenty men who heard question and answer. Of these witnesses at least one, Mordecai C. White of Minneapolis, Minn., is still living.

The failure of the Whigs to repeat this feature of the conversation shows that they did not regard Clay's triumph as so complete as Mr. Schurz represents it; and as for the abolitionists, they regarded Clay's reply to this particular question as the strongest point against him. E. L. D.

WILMINGTON, DEL., September 21, 1887.

Notes.

MR. ALDIS WRIGHT, so honorably and widely known by his long services to literature, is preparing for the press an edition of the writings of his friend, the late Edward Fitzgerald, unpublished as well as published, including, for example, his powerful renderings of "Œdipus Rex" and "Œdipus Coloneus," and also a large number of his letters to various correspondents. The work is well advanced, and may be looked for before very long.

Macmillan & Co. will be the American publishers of a subscription book of singular beauty and curiosity, 'Musical Instruments, Historic, Rare, and Unique,' by A. J. Hipkins, author of the article *Pianoforte* in the 'Encyclopædia Britannica.' The text, as we learn from the prospectus, will not form a connected monograph on the history of instrumentation, yet will approach it, illustrating as it does fifty plates in colors, selected, in part at least, from the cream of the recent loan collection at South Kensington. Specimens of these plates are before us, and are admirably executed. The size is folio. A fifteen-guinea edition on Japanese paper has all been taken up in England.

The same firm will reprint especially for this market Mrs. Noel Hartley's new story 'Ismay's Children,' and F. Marion Crawford's 'Marzio's Crucifix'—the latter uniform with the author's other works; the former in cloth and in paper.

John C. Nimmo, London, will publish next month 'The Life of Benvenuto Cellini,' newly translated by John Addington Symonds, with portrait and eight etchings; 'More Lyrics from the Song-Books of the Elizabethan Age,' edited by A. H. Bullen; and 'De Omnibus Rebus,' by the author of 'Flemish Interiors,' with 100 illustrations.

Geo. Routledge & Sons have nearly ready a translation of Daudet's 'Sapho,' uniform with the other handsome volumes already taken over from the French.

'Living Lights,' a popular account of phosphorescent animals and vegetables, by C. F. Holder; 'Christian Facts and Forces,' by the Rev. Newman Smyth; and a memorial edition of the late Prof. E. A. Sophocles's 'Greek Lexicon of the Roman and Byzantine Periods,' supervised by Prof. J. H. Thayer, are in the press of Charles Scribner's Sons.

Frederick A. Stokes announces 'Señora Villena and Gray: an Oldhaven Romance,' by Marion Wilcox; 'Mrs. Hephæstus, and Other Short Stories,' by Geo. A. Baker; 'Madrigals and Catches,' by Frank Dempster Sherman; 'Thistle-Drift,' by John Vance Cheney; and 'Representative Etchings,' by artists of to-day in America, with text by Ripley Hitchcock.

T. Y. Crowell & Co. have in press 'A Russian Proprietor,' by Tolstoi.

'White Cockades,' a Scotch story of the Pretender, by Edward Irenæus Stevenson of the *Independent*, will shortly be published by Chas. Scribner's Sons.

The New England Publishing Co., Boston, issue directly 'Acts and Anecdotes of Authors,' by Charles M. Barrows; and 'Songs of History,' relating to important episodes in American history, by Hezekiah Butterworth.

A volume of poems by the Rev. Waldo Messaros is in preparation by Rufus C. Hartranft, Philadelphia.

The "Knickerbocker Nuggets" devised by G. P. Putnam's Sons prove to be a very comely addition to the many series of pocket classics. The cover is a combination of dark blue cloth, stamped with arabesques in gilt, for the back, and a pale blue paper with a foliage design partly in gilt, for the sides. The type is not too small, the proof-reading careful (so far as we have examined), and the presswork very good. In the selected 'Tales from Irving,' in two volumes, excessive bulkiness has been avoided by using a thinnish paper, so that better examples are the 'Gulliver' (two volumes, with illustrations), the 'Gesta Romanorum,' and Thos. Love Peacock's 'Headlong Hall and Nightmare Abbey.' Other volumes in prospect show an equally nice selection. The "Nuggets" are to be welcomed.

To Cassell's National Library have been added the second volume of Mungo Park's 'Travels in the Interior of Africa,' Shakspere's "Henry VIII."; and Pepys's 'Diary' for the *annus mirabilis*, 1666.

Nos. 4 and 5 of the 'Battles and Leaders of the Civil War' (The *Century* Co.) have now appeared, carrying the narrative into the battle of Shiloh, beginning with Gen. Grant's own account. As the volumes grow, one is more and more impressed with the inestimable worth of their illustrations in portraiture and topography.

The school-children of Connecticut are, upon the whole, to be congratulated if they are to learn the history of that Commonwealth from the book that Mr. Elias B. Sanford has prepared for them. It is considerably below the level of Prof. Johnston's 'Connecticut,' and is in fact little more than a chronicle; but the story is told in an interesting way and in simple style. The woodcuts with which the book is illustrated are, so far as their subjects are concerned, well chosen. They are, however, badly worn or poorly executed, and children will not get pleasant impressions of the great men of Connecticut from these portraits. In other respects the book is attractive and well fitted for its purpose. It is published by S. S. Scranton & Co., Hartford.

It is unnecessary, in view of the fact that the public has already been made acquainted with Fedor Dostoyevsky's celebrated 'Annals of a Dead House,' through several translations, both directly from the Russian and through the French, to enter into details about that work in connection with Mr. H. Sutherland Edwards's recently published translation, which has been reprinted by Harper & Brothers under the title 'Prison Life in Siberia.' Mr. Edwards's translation is from the French, the only thing Russian about it being the bracketed title. Whatever errors the French translator indulged in are faithfully reproduced. One specimen, taken near the beginning of chapter i., will suffice to illustrate these: "The climate [of Siberia] is excellent, the merchants are rich and respectable, the Europeans in easy circumstances are numerous." If "natives" be substituted for "Europeans," the sense will become apparent. There are also some original errors of carelessness, such as "six years" instead of "six months."

Some years since Mr. Blaine brought forward a scheme for transferring the proceeds of the Federal excise upon spirits to the several States. This proposal found no supporters at the time, but a convert has at last appeared in Mr. W. H. Jones, the author of an essay entitled 'Federal Taxes and State Expenses,' published by G. P. Putnam's Sons as one of the "Questions of the Day" series. His argument is, that the Federal Government has a practical monopoly of the power of indirect taxation, that indirect taxes are less oppressive than direct taxes, and that it is the constitutional duty of Congress "to provide for the general welfare" by distributing among the States, according to population, the money obtained from the excise, in order that they may relieve their subjects from the burden of their local charges. The author is evidently but slightly acquainted with either the principles or the methods of taxation, and his assumptions are of the most extraordinary character. He declares that three per cent. of the population of the country own more than two-thirds of all the property, and pay but one-fourth of the taxes. Under the influence of this conjecture he is perhaps justified in exclaiming, "It is with difficulty that strong nerves and habitual self-control shall maintain their equanimity and self-control in the presence of facts so well calculated to arouse indignation." The credit of this series of publications is damaged by the admission of such matter.

Mr. John F. Baker's 'The Federal Constitution, an Essay' (Putnams) furnishes in an agreeable and convenient form for reading, just at this time, some leading facts relating to the history and adoption of the national Constitution; also, the text of that instrument and its amendments, with the dates of proposal and adoption and a considerable annotation of cases. The comments of the writer are sensible, but not remarkable; and the value and usefulness of the little book lie not so much in these as in the other parts of it. We observe two striking quotations in it. "'The finest fruit earth holds up to its maker,' says Humboldt, 'is a man.'" And again: "At the age of eighty-four the revered Josiah Quincy sent an autograph letter to the writer in these words: 'To promote either individual or general happiness, men should seek (neither for themselves nor the public) power, but virtue.'"

Mr. Charles A. O'Neil's 'The American Electoral System' (Putnams) is an interesting and valuable monograph, giving a narrative of the leading events attending the election of all the Presidents of the United States, "with a view of awakening interest in a subject of the greatest importance." Few things connected with our written national Constitution are so remarkable as the quiet annulling by mere usage of its express and elaborate scheme for choosing our highest official. The events attending this process are highly instructive. The opinion is widely entertained that the present method should be changed, and Mr. O'Neil shares it. He advocates "a uniform district system, approved by illustrious statesmen of all parties: Hamilton and Jefferson, the elder Bayard and Gallatin, the second Adams and Madison, Webster and Story, Benton and Morton—a system which gives to every party in a State and every interest in a State its relative influence in the nation." We heartily commend this book to all students of our national affairs. It does much to illuminate the subject by information now first collected. "The sources of my information," says the writer, "have been the news-

papers from 1788 to 1877 [1887], local histories, lives and letters of public men, Congressional debates and documents, and *Niles' Register*. The recognized standard histories of the United States are almost a blank on this important subject."

We receive from E. & J. B. Young & Co., American agents of the Arundel Society, one of their last publications, the Virgil from the Duomo of Orvieto. It is in the usual style of the Society's reproductions, but we can hardly approve the selection of such a subject from this magnificent storehouse of art, where, in the great frescoes of Signorelli, are such stupendous fragments equally available. We doubt, in fact, if the subjects in the dado, the arabesques, and the small Dante pictures which form part of the decoration, are really by the master, and not scholars' work—part, indeed, of his general scheme, but not by his hand or of his design. They are too inferior in merit to the great work with which they are associated to be readily accepted, and this doubt should have weighed with the Society rather than the convenience of finding an isolated subject of this character. If it be by Signorelli, it has none of his characteristic qualities or power, and on that ground is objectionable. If, as we believe, not his at all, no excuse for reproducing it is given.

Leonardo's "Adoration of the Magi" is further analyzed in its conception and working out, as shown by various cartoons, by M. Eugène Müntz, in *L'Art* for August 15 (Macmillan). M. Paul Leroi prints the list of acquisitions made by the Government from the collection of this year's Salon for distribution to provincial museums, etc., finding much to criticise in the selection of paintings and drawings, and somewhat (if less) in that of statuary, etc. In the latter class he praises the choice of the powerful group by Emmanuel Fremiet, "A Gorilla carrying off a Woman," which received the medal of honor; and M. Leroi takes occasion to narrate the life of the artist. A photogravure of this piece of sculpture accompanies the article, and offers a striking object-lesson in the Development theory.

Le Livre for September introduces a series of articles on the leading French bibliographers and the great bibliophiles of our day, by M. Gustave Pawlowski, who begins with the director of the National Library, M. Léopold Delisle. A fine portrait of this not more energetic and learned than amiable character justifies the writer's praise of him as an admirable organizer: executive force is written in every lineament. He has known, says M. Pawlowski, how to attract private beneficence and to secure exceptional appropriations from the Government. His singular penetration in the matter of the stolen Libri MSS. which found their way into the Ashburnham collection, and the obstacles which have prevented their return to the libraries of France, are duly set forth. M. Delisle's scholarly activity is shown to have been enormous, and to have been unchecked by his promotion, thirteen years ago, to his present responsible post.

The ten volumes forming the second series of the new 60-centime "Collection d'Auteurs célèbres" have now been published (Paris: Marpon & Flammarion; Boston: Schoenhof). They appear weekly, each one containing a complete work very well printed and in a convenient form. The second series contains Théophile Gautier's 'Jettatura,' Jules Sandeau's 'Madeleine,' and Amyot's charming old translation of the Greek story of Longus, 'Daphnis et Chloé' (though why the editors should have included this in a collection which is devoted to the publication, in a good and cheap form, of works by modern and contemporary writers, it would not be easy to say). There are given, from less well-known writers, 'La Mansarde' of Jules Claretie, who is now *directeur* of the Théâtre-Français, and 'Le Roman rouge' of Catulle Mendès, who created, a quarter of a century ago, the poetic school of the "Parnassiens."

A year and a half ago we mentioned the publication of the first volume of Prof. von Holtzendorff's 'Handbuch des Völkerrechts.' The second and third volumes have now appeared, pp. xii, 672, and xv, 797 (Hamburg: J. F. Richter). A fourth volume is expected. We shall recur to this important work.

—Franklin, during the period covered by the fourth volume of Mr. Bigelow's edition of his Works (G. P. Putnam's Sons), viz., from 1767 to 1772, inclusive, was still residing abroad as colonial agent, and made his first and second visits to Paris in 1767 and 1769. Much of his correspondence and contributions to the press relates to the impending separation of the colonies, the opening letter to Lord Kames being a fine example of foresight and prophecy. British advocates, in our day, of Imperial Federation can read his sketch of a like scheme for binding America to the mother country, with the provision of representation in Parliament, when not only the mainland should have its delegates, but the outlying islands—Barbadoes, etc., 4; Bermuda, etc., in rotation, 1; Newfoundland and St. John's, 1; and so on. The practical side of our philosopher finds vent in suggestions for spare eating before going on shipboard; resorting to a silk hammock to avoid lightning-strokes; for learning to swim, making chimneys draw, cultivating silk, selecting glasses for the eyes; for a new alphabet and reformed spelling (with a selection from Addison in phonetic type), and much more. He proves by experiment the greater difficulty of traction when boats are towed in shallow waters; shows, from his own boyish experience, that one might cross the Channel with the aid of a kite; speculates on the origin of coal, and on the absence of dialect and accent in America. He sifts in much sound free-trade doctrine (anticipating Adam Smith), which his Pennsylvania admirers must read with averted faces, if that feat be possible. While writing, on May 14, 1768, from London, "a great mob of coal porters fills the street, carrying a wretch of their business upon poles, to be ducked and otherwise punished at their pleasure for working at the old wages." He witnessed, also, the Wilkes and Liberty tumultuous Middlesex election of 1768; and could report, in addition to the above, within a year, "riots in the country about corn; . . . riots about work-houses; riots of colliers; riots of weavers; . . . riots of sawyers; riots of sailors; . . . riots of government chairmen; riots of smugglers," etc. Visiting Ireland in 1772, he looked in on the Parliament, which "makes a most respectable figure, with a number of very good speakers in both parties, and able men of business"; and by "a loud, unanimous *aye*" he was invited to a seat on the floor. This was against precedent, the privilege being reserved for members of the English Parliament; but the Speaker "supposed the House would consider the American assemblies as English parliaments." Cochin's familiar portrait of Franklin is the frontispiece of this volume.

—While Mr. Brander Matthews is condemning the "condensations" of the British Warnes and Wards, and English authors are sighing over the wholesale appropriations of the American Munros and Ogilvies, the great German publishing house of F. A. Brockhaus has descended into the same galley. In its collection of Spanish authors (published in the original) are included a number of works of the Spanish novelist Trueba, which are sold largely to the Spanish-speaking countries of South America, but for which the author never received any compensation. He at last protested in an open letter to the firm of Brockhaus against the use made of his literary property, and the *Deutsche Schriftsteller-Zeitung* reprinted his letter as an *argumentum ad hominem* at the time the question of concluding a literary convention between Germany and Spain was being discussed. As the writer handled the Brockhauses without gloves, calling them "audacious, not to say shameless," and speaking of their having transgressed the eighth commandment, the members of the firm, Messrs. Eduard, Rudolph, and Albert Brockhaus, sued the editor of the *Schriftsteller-Zeitung*, Dr. W. Lange, for libel before a civil court. The court, however, agreed with the defendant in considering the appropriation of unprotected intellectual property a reprehensible and immoral action, and accordingly acquitted Dr. Lange. From this judgment the firm appealed to a higher court, their counsel alleging that in publishing the works of Spanish authors in the original they had only been following the example of the publisher Tauchnitz in his "Collection of British Authors," and that the letter of Señor Trueba had evidently been published in the *Schriftsteller-Zeitung* with the sole intent of injuring their business. The opposing counsel, however, showed that the example of the Tauchnitz collection was badly chosen, inasmuch as that firm, like Cotta and other German publishers, had invariably paid the English authors for their reprints; and the plaintiff finally added insult to injury by reading Brockhaus's own definition of literary piracy from the article on "Nachdruck" in the edition of the 'Conversations-Lexikon' of 1824. That article defined "Nachdruck" as "that literary piracy which, defiantly mocking at right and custom, seeks its aim in reaping what others have sowed. The business of a reprinter is base, he is publicly despised, his trade is immoral," etc., etc. Dr. Lange furthermore pointed out that the volume containing the article bears, as the motto of the sixth edition of the 'Conversations-Lexikon,' the words of Calderon: "As written by the author, not as printed by theft, whose task it is to ruin the task of others." The higher court has just affirmed the judgment of the lower.

—The Germans have learned something from Donnelly and other Baconians. They would take from Bacon as a philosopher as much as followers of Delia Bacon would add to him as a dramatist. Eugene Reichel has published in Stuttgart a critical study entitled, 'Who Wrote the Novum Organon?' That the writer of that work could not be Francis Bacon, Reichel argues, not without plausibility. His tactics are similar to those of the Biblical critics who trace to Mark alone the original of the other three Gospels, and then in that lowest deep a lower deep or anonymous "Protevangelion." So Reichel, by an elaborate analysis, detects in the 'Novum Organon' an original work, overlaid and often marred by Baconian superfetation—a work more poetical and, indeed, philosophical, than was to be expected from Bacon's make of mind. Satisfied thus that Bacon plagiarized everything worth having in the book which is the corner-stone of his fame, the Teutonic critic next inquires who was the real writer of the manuscript from which Bacon stole his thunder. His first thought was that that original must have been Shakspere. But then he judged that the great dramatist was born a little too late, and must have impregnated whatever he penned with more poetry. The final conclusion of Reichel is, that the true originator of the world-famous and epoch-making 'Organon' was a teacher of Bacon's, who, taken suddenly sick, on his death-bed intrusted his philosophical manuscript for publication to his promising pupil. That Bacon—aware that dead men tell no tales—should have stamped the work here and there with his own finger-marks in order to hide the

real authorship, and, having thus disguised his stealings, should bring them before the world as all his own and "the greatest birth of time," was quite in keeping with the character of a man whom Pope damned to everlasting infamy as the "meanest of mankind."

—'Kitim—Chitim' (*sic* for Kittim, Chittim) is the title of a new treatise (1887) by Dr. Paulus Cassel, the famous Jew preacher of the Gospel in Berlin, and author of scores of books and pamphlets teeming with learning, *esprit*, and erratic extravagance. He now comes forward as the antagonist of the speculations indulged in by some archæologists concerning the great extent of Hittite power and civilization in the times of the Pharaohs and Assyrian conquerors, prior and subsequent to the Israelitish conquest of Canaan. It is not our object here to examine the arguments by which those views, chiefly represented by Prof. Sayce of Oxford—to whom the treatise is addressed as a "Sendschreiben"—are sought to be refuted, but to point out, by a slight abstract, to what length fanciful criticism can pursue the work of spinning hypothetical yarns. The Hittites (sons of Heth), says the Doctor, were Canaanites who lived in fenced towns. *Heth* signified *fence*. The eighth letter of the Hebrew alphabet was so called because it resembled a fence. The numeral 8 is a rounded off imitation of the same form. Such a fenced town was (among others) Luz, which the man who betrayed Bethel built in the land of the Hittites (Judg. i). Luz, in Hebrew, signifies *nut*. The Greek word for *nut-trees*, Caryæ, was the name of a town in Laconia which was destroyed in consequence of a similar act of treason. Caryæ was sacred to Artemis; the Lacedæmonian virgins performed there yearly dances to the virgin goddess. Such were the yearly dances performed by the daughters of Israel in honor of Jephthah's daughter, who was doomed to lifelong virginity. The Caryatides, in Greek architecture, symbolized the life of such victims of devotion. Bœa, another town of Laconia, which grew into one out of three towns, reminds the author of the Hittite Hebron, "the city of four." Near it was a temple of Æsculapius, the son of Apollo. Another Laconian temple of the divine healer was on the river Smenus, and another son of Apollo was Ismenus. These names are "without doubt" related to Esmun, the healing god of the Phœnicians. Esmun signifies *eight* (Heb. *sh'mōnāh*). All these things must be somehow connected. How they are is not exactly explained, and still less many another thread of the critical tissue which we leave out on account of its cobweb-like thinness. The end of the whole becomes homiletical, and partly mystical. The Hasmoneans are converted into servants of "the Eighth" (*sh'mōnī*) and saviours. The hammer (*maqqāb*), whence their designation Maccabees, is the symbol of the healing god, and of the lightning. Abraham saw the coming of a "son of Heth," a son of Eight. Jesus, the Saviour, presents in his name the numeral value of 888, or three eights, and it is "quite wonderful that when he was born, the Roman Emperor, Octavianus, reigned, whose name was derived from *eight*." Whether this is meant as a joke or not, the context leaves us in doubt.

JOHN PICKERING.

Life of John Pickering. By his daughter, Mary Orne Pickering. Boston: Printed for private distribution. 1887. (Copyright by Henry G. Pickering.)

A SINGULAR and somewhat perverse destiny has prevented the due recognition, both during his life and since his death, of one of the greatest scholars and noblest characters that America has produced. Intellectual powers and attainments of the highest order were devoted with incessant industry to purposes of public good. Yet this industry was directed into so many channels, and was accompanied by such an aversion to notoriety, that the distinction attained was less than that which has been gained by talents far inferior, but guided by more concentrated and ambitious effort.

This somewhat remarkable combination of great and varied abilities, strong public spirit, and intense energy, with lack of personal ambition, was evidently inherited by John Pickering from his distinguished father. Among the notable characters brought forth by the Revolutionary struggle, few were more admirable than that of Timothy Pickering. A judge in Massachusetts at thirty, then colonel of volunteers, and afterwards adjutant-general and quartermaster-general during the war; Postmaster-General, Secretary of War, and Secretary of State under Washington and Adams; member of the Constitutional Convention of Pennsylvania, negotiator of Indian treaties, Representative in Congress—he filled all his many offices with the constant success born of well-trained ability and energetic zeal. Yet, when occasion offered, he gladly withdrew from these public offices to his Pennsylvanian and New England farms, careless of distinction, and seemingly unconscious of all that he had done to gain it.

His eldest son, the subject of this biography, was born in Salem on the 7th of February, 1777. His father was then in the field, as colonel of a Massachusetts regiment, in the first winter campaign of Washington in New York and the Jerseys. His mother, Rebecca White, came also of good New England stock, and shared the spirit of her patriotic husband. To be with him in his frequent changes of residence during the war, she willingly encountered the fatigues and perils of long journeys and the inconveniences of a camp. Her little boy accompanied her throughout, his unquiet childhood and his later wandering youth being in rather singular contrast to his placid and uneventful manhood and age. After the necessary schooling in Salem, he entered Harvard College in 1792, graduated with honor in 1796, and in the same year commenced his studies for the bar under Edward Tilghman, an eminent lawyer of Philadelphia. That city was then the national capital, and Col. Pickering was Secretary of State. The studies of his son were presently interrupted. A well-known public man of that day, William Smith of South Carolina, had been appointed to succeed John Quincy Adams as Minister to Portugal. He had, among other qualifications, a familiar knowledge of the French language; and he selected for his secretary of legation young John Pickering, who possessed the same useful accomplishment. This was an unusual preferment for a youth of twenty. The choice proved a happy one. His aptitude for such duties became so manifest that two years later the Hon. Rufus King, Minister to England, was glad to secure his aid as private secretary.

A public career was now open to him, under the most favorable auspices. But his experience and all his sentiments were strongly adverse to such a course of life. "For a man to think of public employment as his sole object," he writes to his father in December, 1799, "I consider as downright madness." Accordingly, in October, 1801, he returned to his native country and to his chosen profession, neither of which he could afterwards be induced to leave.

His four years in Europe were spent in a manner which laid the foundation of his future eminence and usefulness. The time not required for his public duties was devoted to varied studies and keen observation, of which his published letters give ample evidence. He acquired the leading European languages, enlarged his knowledge of the Oriental tongues with a view to an expected visit to Constantinople, read the best textbooks of the civil and common law, attended the English law courts and the debates in Parliament, travelled in France, Holland, and Belgium, and found time for the natural sciences, to which he was always much devoted, particularly "the enchanting study of botany." Probably no young man of his time in America was better furnished in every mental accomplishment than John Pickering when he returned to his native town to resume his law studies. Had he chosen to devote himself entirely to his profession, there was no distinction which he might not have expected to attain. In particular, as a writer on legal subjects, his remarkable powers of acquisition, his philosophical acumen, his diplomatic experience, and his clear, correct, and vigorous style, would probably have placed him in the first rank, beside Story, Kent, Wheaton, and other famous lights of that learning. An evidence of his qualifications in this respect was given by his pamphlet on the McLeod case, when his opinions on that international controversy, which for a time shook the country, were received by the best authorities on both sides as unanswerable and decisive. His aversion to public life prevented him from accepting any Federal office, but he could not resist the solicitations of his friends and neighbors to serve them in the Legislature of his own State. In the House of Representatives and the Senate, to which he was repeatedly elected, his speeches and reports were always received with great respect. He was appointed a member of the commission for revising the statutes of the State. Having removed from Salem to Boston in 1827, he was soon made City Solicitor, an office of trust, involving a considerable addition to his professional duties.

But in the midst of these labors, his allegiance to scholarship was not forgotten. Though he had refused the professorship of Hebrew and other Oriental languages in Harvard, he kept at the same time in view a work of the greatest utility to philological studies. At that time there was no Greek-English lexicon in existence. In all the Greek dictionaries then in use, in England and America, the definitions were in Latin. The absurdity of this cumbrous and pedantic method had long been apparent to him. He undertook the preparation of the much-needed work, basing it mainly on the well-known lexicon of Schrevelius, but adding large improvements, which made it substantially a new dictionary. The condition of classical studies in America in 1826 may be judged by the fact that, to print the lexicon, it was necessary to import a font of Greek type from Scotland. In August of that year the work was published, and was received with unexampled favor. It at once superseded all other Greek lexicons in the schools. In three months a second edition was called for. Acknowledgments from the highest sources flowed in upon him. "It is an honor to our country," wrote one distinguished scholar, B. A. Gould, the head of the Boston Latin School; "you have conferred a blessing on the community." George Bancroft, then Principal of the Round Hill School at Northampton, was equally prompt in recognition. "The lexicon with which you have favored the public," he wrote, "we now use altogether in our school. You have the great honor of having begun the good work of improvement in Greek lexicons among us." The most notable fact in this matter undoubtedly was that a work requiring immense labor and profound scholarship should have been achieved, not in the learned leisure of an English or American university, but in hours snatched from sleep or recreation by one of the busiest lawyers in New England.

From time to time other undertakings of a similar cast occupied his attention. He prepared for the American Academy of Arts and Sciences a memoir on the present state of the English language in the United States, with a vocabulary of real and supposed Americanisms—which afterwards grew into a separate publication of much interest. An essay on the pronunciation of the Greek language, in which he advocated a return to the old Reuchlinian method, based on that of the modern Greeks, attracted much attention, and brought him into correspondence with many eminent scholars of Europe and America. Among the latter was Peter S. Duponceau of Philadelphia, whose well-known Report on the Indian Languages had just laid the foundation of the study of American linguistics, destined to revolutionize the whole science of comparative philology. Pickering read it with delight. He saw at a glance the immense gain to his favorite science which must flow from this study, and entered upon its pursuit with an enthusiasm that never remitted. It is somewhat remarkable that the eminent men who were then engaged in this inquiry, and whose works, achieved fifty years ago, have not been superseded or even equalled by their successors, were nearly all statesmen whose lives had been given to public affairs. Of Jefferson—from whom a striking letter on the subject appears in this volume—and of Gallatin, nothing need be said. Duponceau had been Assistant Secretary of State under Livingston, and was afterwards a noted lawyer and publicist in Philadelphia. Pickering, though belonging to a younger generation, was quickly received into this distinguished company, and the resulting correspondence forms a large and interesting portion of his biography. In Europe, another illustrious statesman and scholar, Baron William von Humboldt, became deeply interested in the same study, and was added to the circle of his correspondents.

Incited by this companionship, John Pickering began a course of studies and publications which soon gained for him a wide reputation. He published in 1820, in the Proceedings of the American Academy, a memoir "On a Uniform Orthography for the Indian Languages of North America," which was received with general approval, and has been the basis of the system on which nearly all the Indian and many of the African and Oceanic dialects have since been reduced to writing. With the aid of an educated native, he prepared a grammar of the Cherokee language, which had been partly printed, when the famous invention of the syllabic alphabet of George Guess put a stop to the work It had, however, advanced far enough to be of much scientific value. He undertook and accomplished the arduous task of deciphering, copying, and editing for publication the 'Manuscript Dictionary of the Abnaki Language,' by Sebastian Rasle, the celebrated and unfortunate Jesuit missionary, who was killed in a battle between the Indians and the English in 1724, and whose work, since it was thus made known, has been a mine of wealth to American philologists.

To enumerate all the productions of Pickering's active and versatile intellect—his lectures and addresses on various subjects, his contributions to periodicals and to the American Encyclopædia, his papers prepared for learned societies, his pamphlets on legal questions, and his many other publications—is here impossible. Two matters, however, should be mentioned in which he took a special interest. He was the founder, and until his death the President, of the American Oriental Society, which for forty years has maintained a most useful and honorable activity; and it was entirely due to his efforts that ethnography and philology were represented in the scientific corps attached to the Wilkes Exploring Expedition, and thus an example was set which, as followed in our own Bureau of Ethnology and by other governments, has furnished important aid for the study and development of those sciences.

His death, on the 5th of May, 1846, in his seventieth year, closed a life which may be said to have been typical of that of the American scholar in the earlier period of our national history. At that time every man of marked ability and large attainments found himself drawn into many lines of activity. He could not be only a scholar; he must be also a worker in public affairs, an organizer, and a pioneer in various ways. He opened mines which others were to work, and laid foundations on which his successors might build. His powers were clearly, if not fully, apparent to his contemporaries, and his many public acts made him conspicuous for the time. But his engrossing occupations too commonly denied him leisure for any great work, worthy of his talents. Perhaps, also, the time was not ripe for such work; and so the memory of his acts and worth faded with the recollection of those who knew him. Those who knew John Pickering had reason to cherish the remembrance of one who united in person and character an unusual endowment of the traits which win admiration and esteem. Of commanding stature, with capacious forehead and well-marked features, expressive at once of intellect and benignity, his aspect was always impressive and prepossessing. Natural benevolence and early familiarity with the most cultivated society gave his manners a thoughtful and kindly courtesy which was exceedingly engaging. Unselfish and unassuming, he shrank from prominence, and accepted unwillingly the precedence which his associates in every assemblage were eager to concede to him. His life may almost be said to have been passed in refusing honors. That he should have declined the office of Provost of the University of Pennsylvania is perhaps most to be regretted. That institution lost a great benefit, and he himself the opportunity of a work worthy of his powers.

Even in his biography, which has been so long delayed, the destiny which has withheld the just recognition of his great merits seems to pursue him. The book is admirably written, and full of interest. Reminiscences of the Revolutionary period and of our earlier diplomacy are followed by personal sketches and letters of noted scholars and politicians of Europe and America, who flourished during the following sixty years. It is impossible not to regret that the same modest pride which in John Pickering himself shrank from public distinction, has induced his descendants to reserve for "private circulation" the story of a life which well deserves to be widely known, as an example to scholars and an honor to his profession and his country.

RECENT LAW BOOKS.

THE fourth edition of Judge Jameson's 'Treatise on Constitutional Conventions' (Chicago: Callaghan & Co.) will be welcomed by students of Constitutional Law and of American politics. And it comes in good time, in this anniversary year of our chief convention. It was originally called out by certain large claims of power for these conventions made in Illinois in 1862, and was published in 1866. The sober, rational, and well-supported views of the author, as regards these remarkable bodies and their subordination to the established legislatures and existing constitutions, are well known: "We are to conceive of the Constitutional Convention . . . as an adaptation to constitutional uses of an institution originally revolutionary, . . . whose methods and purposes were alien and hostile to established laws and constitutions." "It is charged with a definite, and not a discretionary and indeterminate, function. It always acts under a commission, for a purpose ascertained and limited by law or by custom. Its principal feature, as contradistinguished from the Revolutionary Convention, is that at every step and moment of its existence it is subaltern; it is evoked by the side and at the call of a government preëxisting and intended to survive it, for the purpose of administering to its special needs. It never supplants the existing organization. It never governs." Less satisfactory appears to be Judge Jameson's doctrine of sovereignty, or rather of the operations of the sovereign authority in dividing power between the Union and the States (*e. g.*, in sec. 92). The great and solid merit of the book lies in its authentic collection of the facts relating to our conventions, and of the chief cases and opinions bearing upon them, and in the clear and judicious reasoning of the author in discussing them. He has evidently bestowed much pains upon this edition. The questions lately in debate in Rhode Island as to the legislative power to call a convention to make a new constitution or to amend the old one, in cases where there is a provision already existing for amending the constitution in a different way, are discussed in a convincing manner. The author sustains the doctrine of ex-Chief-Justice Bradley and other eminent lawyers of Rhode Island, as against the advisory opinion of the judges of the Supreme Court of Rhode Island, who denied the constitutionality of such a call. We do not observe, however, any citation of Judge Bradley's pamphlet on "Methods of Amending Constitutions," from which the author appears to have drawn valuable material. This is an inexcusable omission. Excellent matter is found in the Appendix, especially in Appendix B, which gives a "complete list of Constitutional Conventions held in the United States," and in Appendix E, where the author gives some of the authorities in favor of the sound view that opinions given, under the laws or constitutions of some States, by the judges to other departments are merely advisory. He does not, however, cite the opinion of the Maine Supreme Court asserting a contrary doctrine.

'A Treatise on the Power to Enact, Passage, Validity, and Enforcement of Municipal Police Ordinances,' by Nelson T. Horr and Alton A. Bemis of the Cleveland bar (Cincinnati: Robert Clarke & Co.), is an instructive and valuable little work in a neglected field of law. "The first aim of this book is to show, in as concise a manner as is consistent with clearness, the extent to which police regulation may be exercised, under general and special powers, and to formulate rules that will be applicable in determining the validity of police ordinances." The authors state that they have given "references to all the decided cases on the subject in the United States, England, and Canada." We are not aware of any other treatise wholly devoted to this subject, although it is in a general way included within the scope of such a book as Dillon's 'Municipal Corporations.' This volume, which seems to be well and thoroughly done, will be found of great use by those who are concerned with the making and interpretation of the local legislation of our towns and cities. Where did the authors find the Latin in their statement that "It was said in a very general way that ordinances must be *fide, legii et rationalii*"?

Mr. A. Parlett Lloyd of the Baltimore bar publishes a small 'Treatise on the Law of Divorce' (Houghton, Mifflin & Co.), which is intended partly for lawyers and partly for laymen, "avoiding," says the preface, "technical language and unfamiliar phraseology as far as practical [*sic*], aiming to make the work interesting

and instructive to persons of the laity who desire to post themselves in the matter." The book is the fruit of a great deal of intelligent labor, and will be found very instructive by both of the classes for which it is intended. There are twenty-five chapters, covering the various topics likely to be dealt with in such a treatise; but about two-fifths of the entire volume is contained in chapter vi, which enumerates in a compact form the "causes for divorce, statutory regulations, and important decisions in the States and Territories," as well as Canada. In this chapter it is curious to read the statement for South Carolina. It is this: "So strict has been the policy of this State against divorce that provision has been made making marriage indissoluble by law; and, since the Revolution, divorce of any kind, either by a court of justice or the Legislature, is unknown. In 1872 a divorce act was passed, but this was repealed by act of 1878, *Grant*, 12 S. C. 29; Mattison, 1 Strob. 387." The reader wonders how this could be, until he remembers that a majority of the people of South Carolina have been slaves, among whom divorce was unknown for another reason, namely, that marriage was unknown. Mr. Lloyd is eccentric in his citation of cases. Largely he cites them without giving the name of the case at all. Sometimes he cites only by one name, in the manner illustrated in the quotation just made; and sometimes in the usual way. A singular statement is made on p. 197:

"Eminent authorities contend that presumption of death after seven years is not conclusive, or that it is absolutely necessary that seven years should elapse before the presumption of death is raised when there are other facts, such as health of the party, etc., which may be proved to show a strong probability that the party did not live that long."

Neither the law nor the English of that passage is satisfactory. And what is meant by this remark on p. 212: "The husband owes to the wife a comfortable support . . .; and when, by wrongful conduct, he *plights his troth*, forcing her to legal remedies, the law will recognize her right of maintenance"? The italics are ours. In various respects the writer might, in another edition, improve his English. And he has good right to look for another edition.

'The Law relating to Banks and their Depositors and to Bank Collections,' by Albert S. Bolles, editor of the *Banker's Magazine* and Professor of Mercantile Law in the Wharton School of Finance (Homans Publishing Co.), is a book which is designed primarily for bankers, "to present, in language which can be easily and fully understood, the law of banking contained in the reported decisions of American and the English courts." But, as might be expected in such an undertaking, the author has had his eye on the lawyers also: "While thus having the banking class at shorter range than the members of the legal profession, I have tried to make a work that would also be helpful to lawyers." The book has not the fulness in the citation of cases that would be found in a pure law book, and it is by no means all that could be desired by a lawyer in its treatment of the cases; but it appears to be accurately and carefully prepared, and will be found by the practising lawyer an important manual. It is an odd slip to present our old friend Lord Justice Turner as Lord *Chief* Justice Turner.

Mr. Richard Wynkoop's 'Vessels and Voyages, as regulated by Federal Statutes and Treasury Instructions and Decisions' (D. Van Nostrand), is a useful and, apparently, a very well-devised and carefully executed book. It includes, rewritten and enlarged, what the author had previously published on the same general subject, and also much else. "Twenty one years' experience," he says, "in the Navigation Division of the Custom-house at the port of New York, and the author's previous books, may serve to commend to the public this work, which is a full presentation of the whole subject as it was in the mind of the author when he began to write upon Navigation." A more useful handbook than this small volume, to all persons who are engaged in navigation, it would be hard to find. Yachtsmen, also, and mere travellers by water would find it instructive and worth their having. The author has arranged his material in a compact form and with a very full index, and has imported very little of himself into the book, except in the shape of an intelligent and well-executed plan.

THE DISCOVERER OF BERING'S STRAIT.

Vitus J. Bering og de Russiske Opdagelsesreiser fra 1725-43 af P. Lauridsen. Copenhagen: Gyldendal.

THIS work, the result of much laborious research among the archives at St. Petersburg (in that old Russian which none but native palæographers can interpret) as well as in Denmark, deserves to be reproduced in English. Bering's explorations relate to some extent to America, and, besides, his life is as fascinating as a romance. Vitus Bering was born in Horsens, a small town in Danish Jutland, of poor parents, on August 12, 1681. He became a sailor, made long voyages, and in 1703, on his return from India to Amsterdam, he made the acquaintance of the Norwegian-born Admiral Cornelius Cruys, the founder of the Russian navy, who appointed him second lieutenant in the Russian marine. Bering distinguished himself in the great northern war, became a captain in 1724, and Peter the Great gave him command of the first Kamtchatka expedition, which was to determine whether Asia was continuous with America. As the author urges, we must remember that the east coast of Asia was not at that time known further than to the Japanese island Yesso, and the west coast of America had not been explored above California, about 43 degrees north latitude. All the northern part of the great ocean, its eastern and western boundaries, its northern limits, and its connection with the Arctic Sea were waiting for a discoverer. The expedition started early in the year 1725, about the time of Czar Peter's death. Bering's first lieutenant was M. P. Spangberg, a Dane born in Jerne, near Esbjerg, in Jutland, who had entered the Russian service in 1720. After an exceedingly difficult journey through Siberia, which lasted about two years, Bering arrived at Okhotsk on the Okhotsk Sea near the end of October, 1726. Here, going on board a new ship, *Fortuna*, and a couple of other slips, the expedition sailed over to southern Kamtchatka, crossed this peninsula, and reached in March, 1728—that is to say, three years after leaving St. Petersburg—the lower Kamtchatka Ostrog, which was to be the base of operations. A new ship, *Gabriel*, was built, and in it Bering started on his first journey the 13th of July, and returned on the 2d of September, 1728.

Bering put back on August 16, because he was convinced that he had doubled the north-eastern point of Asia and consequently demonstrated that the Asiatic and American continents were not continuous. In a paper published in Copenhagen in 1730 we read: "Bering has found that there really is a northeast passage, so that, providing ice does not hinder, one may sail out of the Lena River, thence to Kamtchatka, and thence to Japan, China, and East India." But Bering was not aware that he had sailed through a narrow strait, for the American coast was hid in dense fog. This fact remained to be discovered by an English navigator, Captain Cook, who found that Asia was separated from America by a very narrow body of water, which he, however, named Bering's Strait in honor of the Danish discoverer. When Bering had explored Kamtchatka and the northern Kurile Islands he returned by way of Okhotsk to St. Petersburg, where he arrived on the 1st of March, 1730.

After the Russian reform party had assumed the administration of affairs upon the accession of Empress Anna to the throne, the Government consented to a proposition from Bering to survey the northern coast of Siberia from the Obi to the Lena River and the western shores of America, and also to circumnavigate Japan. But the Senate, Academy, and Admiralty changed the project, as Mr. Lauridsen shows, as the result of an interesting investigation into a much more ambitious enterprise than Bering had dreamed of, though these bodies did not consider with sufficient care whether their magnificent plans could be carried out or not. The great expedition started from St. Petersburg in February, 1733, with Vitus Bering as chief and commander, and with Capts. Spangberg and Tchirikoff as second in command. In the Russian documents Bering is called Ivan Ivanovitch Bering. At Tobolsk they built the barge *Tobol*, seventy feet long and fifteen feet wide, which in May, 1734, sailed down the Irtish and Obi to the Arctic Ocean. From Yakutsk, on the Lena River, two expeditions were sent out in June, 1735, one of which was to explore the coast of Siberia between the mouths of the Lena and Yenesei, while the other was to proceed eastward, explore the waters between Asia and America, and, if possible, run down to Kamtchatka. In the summer of 1737 Bering changed his headquarters to Okhotsk, and Spangberg made in the following summer two journeys, during which he surveyed the Kurile Islands, Yesso, and a part of the east coast of Nipon. By these explorations Spangberg gave this part of the world an entirely new geographical aspect.

Having described those Arctic expeditions which were undertaken at the suggestion of Bering, and exhibited Spangberg's merits in regard to the discovery of Japan and the Kurile Islands in their true light for the first time, Mr. Lauridsen proceeds to relate Bering's voyages to America and his discovery of the Aleutian Islands. Bering's original purpose was to make a two-years' journey, spend the winter on the coast of America, then proceed to the 60th degree north latitude to the present Bering Strait, and then return home along the coast of Asia; but through carelessness on the part of his subordinates, he did not secure enough provisions for an expedition of so long duration. To this must be added that Bering's hands were not entirely free. In obedience to instructions from the Senate, he was obliged to consult the astronomer La Croyère, who, relying on a map prepared by an older deceased brother, urged that the expedition should first proceed to Gamaland, southeast of Kamtchatka. This Gamaland was given on the above-mentioned map, and was said to have been discovered by Don Jean de Gama, after whom it was named. Bering followed La Croyère's suggestion, though he was convinced that no such country as Gamaland existed; and the unfortunate result was that the expedition was carried away into the Pacific Ocean, far from the Aleutian Isles, which, like an Ariadne thread, might have guided the navigator to the coast of America.

On June 4, 1741, Bering sailed with two ships, *St. Peter* and *St. Paul*, from Petropavlosk, on the east coast of Kamtchatka, a town founded by Bering. The German naturalist Steller, of the St. Petersburg Academy, accompanied the expedition. On the 20th of June storm and fog parted the ships, and they did not find each other again—a mishap which was only the beginning of a series, of which the author gives a detailed

and critical description. Bering was on the *St. Peter*, and in the beginning of November he found himself near Bering's Island, east of Kamtchatka, where the sick and weary crew had the final catastrophe before them. Bering, who, since August, had suffered from scurvy, which of course greatly impaired his usefulness as commander, was here attacked by inflammation of the bowels, and died December 20, 1741, in a sand-hole on the beach of Bering Island, where he was buried. On his grave was erected a wooden cross, for which a stone monument was substituted in 1822. The description of the melancholy days spent on Bering Island is one of the most interesting chapters in Mr. Lauridsen's book.

In chapter viii the author speaks of the fauna of Bering Island, and we venture to quote what he says about Steller's sea-cow, which became extinct towards the close of the last century:

"The most interesting animal on Bering Island was the sea-cow (*Rhytina Stelleri*), a very large and ponderous animal, eight and nine metres long and weighing about three tons. It was related to the dugong and lamentin of the southern seas. Its habitat seems to have been confined to the shores of the Commander Islands, where it was found in great numbers. Its flesh was very excellent food, it was most eagerly sought after, and the greed of the Siberian hunters exterminated the entire species in less than a generation. The last specimen is said to have been killed in 1768, and the museums have had much difficulty in securing perfect skeletons. In his '*Vega* Expedition,' Nordenskjöld tries to show that sea-cows were seen much later, even as late as 1854; but as he bases his conjectures chiefly on statements of the inhabitants of the Aleutian Islands, who, according to what Leonhard Stejneger has recently proved, confounded the sea-cow with a dolphin without a dorsal fin, there seems to be no reason for modifying the results arrived at by Baer, Brandt, and Middendorff."

It will be remembered that Mr. Leonhard Stejneger has recently explored the Kamtchatka country for the Smithsonian Institution, and brought home several complete specimens of sea-cow skeletons, which are now in the United States National Museum in Washington.

The results of Bering's voyages the author sums up as follows:

"By Bering's undertaking a great continent was scientifically explored, a vast Arctic coast, the longest in the world, was surveyed, a new route to the western world was found, and the way was paved for Russian colonization beyond the Pacific Ocean, while enormous sources of wealth—a Siberian Eldorado—were opened on the Aleutian Islands for the fur-hunter and adventurer. Bering was for Russia what Columbus and Cook were for Spain and England—a great discoverer, a hardy, indefatigable, and honest pioneer for science, culture, and commerce."

The volume, which contains various facts never before published, and which, by the way, is supplied with four excellent maps and two illustrations, fully justifies the author's conclusions.

Renaissance in Italy: The Catholic Reaction. By John Addington Symonds. 2 vols. Henry Holt & Co. 1887.

THE two volumes of the 'Catholic Reaction' form also volumes 6 and 7 of the "Renaissance in Italy," with which Mr. Symonds closes his great work. In a note to a passage of the second volume, the author describes himself as "an Englishman, writing a popular book for English folk," and gives us herewith the key to any criticism of his work. If one approaches the 'Renaissance in Italy' from the side of the largest demands of modern scientific method, he will find it falling far short of the truest standards. It is not the result of profound investigation into minute questions of historical accuracy. It borrows frankly and freely from the work of other moderns. It has a distinctly literary aim. It proposes to be read, and it does not encumber itself with learning which would make it less acceptable to the intelligent reader. In a word, it is English, not German.

These two concluding volumes bear out the general character of the work. In the list of books employed in their preparation there are but two German titles, and of these one is that of Ranke's 'Popes,' in the English translation, and the other that of a monograph on Giordano Bruno. No better indication could be given of the method of authorship here employed. It is the method of the amateur in the highest sense of that word, of the man who is in love with his subject and would make others love it, too; who sees the great meaning and current of human life, and cares little for dull or obscuring detail; who feels keenly what he writes, and who therefore leaves on the reader's mind a vivid impression of sincerity and devotion.

In the previous volumes Mr. Symonds had shown us the splendid picture of Renaissance culture in Italy under the various phases of politics, pure learning, literature, and art. His narrative had been constantly rising into higher and higher regions of human activity, until it culminated in the splendor of the early sixteenth century. To have stopped there would have been to leave the picture incomplete. It remained to show how the forces of the Italian genius which had carried the race up to such heights of achievement now steadily gave way, or, by over-development, became productive of ruin to their own fair creation.

This is the problem of the two volumes before us. The first impulse of a man so keenly alive to beauty as is Mr. Symonds would naturally be to see in such a period only an occasion for weeping and wailing. He would have to bemoan the decay of original power, the exaggeration of beautiful instincts, the gradual flattening down of every elevation into a great dull level of capable mediocrity. The temptation was to join in with the sorry scolding of Mr. Ruskin and his imitators, and brand every production of the later Italian mind as unworthy the serious attention of thoughtful men. This temptation Mr. Symonds has resisted by seeking to discover, amid the elements of decline and decay, other elements which should give promise of a new life of men. He finds these elements in the newly awakened spirit of scientific research, the true continuation of the early Renaissance, and in one new form of art, which seized upon what was left of the old artistic instinct of the Italian, and gave it scope for a development whose height has not yet been reached—the art of music.

In treating of the decline of pure culture, the keynote of Mr. Symonds's argument is Jesuitism. That word serves him as a formula to sum up all the tendencies of the sixteenth and seventeenth centuries that were forcing the human mind out of the path of free individual development, upon which the early Renaissance had led it, and were cramping and crowding it into certain prescribed channels. Especially hateful to his light-loving spirit is the sham learning and sham morality of the soldiers of Jesus. Words fail him to describe his detestation of their methods. The frank ignorance and brutality of the Inquisition seem to him comparatively harmless by the side of this wily and insinuating agency, forcing itself in everywhere to dim the light and to dull the edge of pure science.

But Jesuitism alone could not have conquered Italy. The Italian mind was still too vigorous and too active to admit any such control. The twin curse of Italy was foreign dominion. Spain, with no tradition of culture behind her, gave herself heart and soul to Jesuitism, and then helped it in the cruel task of enslaving unhappy Italy. This is the thesis of the first volume of the 'Catholic Reaction.' It is developed in chapters on the Spanish Hegemony, the Council of Trent, the Inquisition, the Jesuits, and the Social and Domestic Morals of the Italians. We have here little that is novel. The sources employed are those well known to students, and there is no thorough criticism of them; but the whole presentation is vigorous, clear, and telling. The last two chapters, on Italian morals, present a truly harrowing picture of public and private depravity; yet even here one sees the working of powerful orderly forces for the detection and punishment of crime, and one could wish that Mr. Symonds had gone a little more deeply into the analysis of these conserving powers.

The second volume deals with the literary and artistic life of the period, and here the author is on more congenial ground. He aims to illustrate the character of the period by giving a pretty full account of a few leading men. Tasso is given nearly a third of the volume, Bruno and Sarpi more than a quarter. The lesser names of Guercini, Marino, Chiabrera, and Tassoni are treated in a chapter; one is given to Palestrina and the origins of modern music, and another to the Bolognese school of painters. Perhaps the most interesting chapters of the whole book are those upon the leaders of mediocrity in both literature and art. The great ones of the earth have been praised and worshipped until we are a little tired of it; but so careful and kindly an analysis as is here given of an author like Marino and of painters like the Caracci, one may go far to find. Mr. Symonds does not forget that these men are the heroes of a decaying art, but he is broad enough to see that the art, even in its decay, is majestic, commanding, often noble, always Italian. His vindication of Guido and Domenichino from the absurd violence of the "pre-Raphaelites" is evidence of a judicial temper which in latter-day criticism has often been sadly wanting. Not because he is blind to their defects, but because he is able to see them in their right relation to the period which produced them, is our author able to give these men their true value. It is a grand thing to see a people producing a few supremely great men, but it is a phenomenon well worth the respectful study of the true historian to see capacity of no mean sort so widely distributed among a people that a great multitude of lesser minds have reflected in their productions the universal inspiration.

Thus rounded out by the new volumes, we believe Mr. Symonds's book will prove to be what he aimed to make it, "a popular book for English folk." Itself the product of an age of well-trained mediocrity, it gathers together better than any other single work the complicated phases of a great period into one readable and, in the main, singularly truthful presentation.

The Banquet of Dante Alighieri, translated by Elizabeth Price Sayer. (Morley's Universal Library.) Geo. Routledge & Sons.

ALL true lovers of Dante must wish to protest against the translation of the 'Convito' which Prof. Morley has introduced to the world as the work of a lady who has devoted her life to the study and translation of Dante. If this be true, we can only imagine this translation to have been made in her schoolgirl days, before she had acquired a knowledge of the language of Dante, or the power to appreciate his thought. It is characterized by nearly all the faults that a good translation should be without, and it is especially remarkable for what Mrs. Malaprop would call "a nice derangement of epitaphs." If there is one quality more noteworthy than another in the language of Dante, it is *directness*. But the translator, when in doubt which one of two or three words to use, puts them *all* in, destroying the force of Dante's terse sentences. Thus, having to translate the words *nostre brighe*, instead

of saying "our troubles," she says "our sorrows, or cares, or vexations," or, again, instead of saying "contention," she writes "strife, or contention, or opposition." Then, too, certain words in the Italian she is sure to trip over, such as *per* and *da* and *quasi*, and others of somewhat elastic significance. Dante sometimes uses the same word in different senses in different places, but the context generally shows the right meaning. For instance, the old word *onestà* he uses to mean honesty, virtue, decorum, and disinterestedness; but a little careful attention to the idea of the whole sentence makes it sufficiently evident which sense is the only proper one. Nor does it do to translate *valente* as "brave," because it generally means worthy. These are only specimens of many such errors.

Much worse are the faults of carelessness, such as translating *certi sono* (there are certain men), "I am certain" (which would have been *sono certo*); or "the predicted emperor," instead of the *aforesaid* emperor; or saying "a virgin shall be born of the stem of Jesse," instead of a *rod* (*verga*); or translating *dice Boezio, asino vive*, by "Says Boethius, Let the ass live," instead of "he lives an ass"! But worse than this, again, is it to calmly leave out whole sentences or parts of sentences, or to insert clauses not in the original, which is frequently done by Miss Sayer, generally with the result of making confusion worse confounded. What does she mean by this interpolation, for instance, where, speaking of Divine Philosophy, Dante says that "she abides with the other Intelligences in a less perfect manner, as a mistress whom no lover enjoys entirely," etc.; which Miss Sayer improves thus: "It is in the other Intelligences in a less degree, *as if platonic*, as if a virgin love from whom no lover receives *full and* complete joy," etc.? Dante says of riches, "Truly they bring no peace, but increase of greed, which would not have existed without them"; which Miss Sayer dilates into "Truly they bring no peace, but more care, more trouble than a man had in the first place, when he was without them." Such instances are many, and so are such felicitous expressions as "When I say my soul weeps, it is evident that my *soul is still on its side* and speaks with sadness." If this had read "on the ragged edge," the sentence might have had a meaning, even if it were not Dante's. What Dante wrote was, "My soul was still in the same mood." And again Miss Sayer writes: "If wax could have the spirit of fear, it would fear most to come into the rays of the sun, *which would not turn it into stone*, since its disposition is to yield to that strong operator"; whereas the true rendering is, "If wax could have the sentiment of fear, it would be more afraid to come under the rays of the sun than stone would, because its nature makes it susceptible of a more powerful impression therefrom."

It may be easily imagined from these illustrations that when it comes to a clear interpretation of Dante's metaphysics, or even to an accurate rendering of his scholastic terminology, this translator is hopelessly at sea. She talks in chapter i. of the second Treatise about "*trimming the mizzenmast* of reason to the wind of my desire," but not even that extraordinary operation (in the original it is "setting the mainsail") has enabled her to weather the many difficulties of her voyage. Why does she say "the star of Venus had twice revolved in that circle which causes the evening and the morning to appear"? The circle of Venus causes *her* to appear *in* the evening or the morning. And again: "And this is why *that first moved* —the Primum Mobile—has such extremely rapid motion. For because of the most fervent appetite which each part of it has to be united with that most Divine Heaven of Peace, in which it revolves with so much desire, its velocity is almost incomprehensible. And this quiet and peaceful Heaven is the place of that Supreme Deity who from above beholds the whole." Which should be rendered, "And this is the reason that the Primum Mobile moves with immense velocity, because the fervent longing of all its parts to be united to those of this most divine and quiet Heaven makes it revolve with so much desire that its velocity is almost incomprehensible. And this quiet and peaceful Heaven is the abode of that Supreme Deity who alone doth perfectly behold Himself."

But there is no use in multiplying such instances. They can be found in profusion on almost every page of this book. To translate the 'Convito' demands a special course of study; at least it needs a thorough knowledge of the Italian language *as Dante used it*, some acquaintance with the philosophy of his age and the meaning of such scholastic terms as "form," "substance," "accident," etc., and a capacity to rethink in English the ideas of Dante. Otherwise we get such a hopeless farrago of nonsense as we find on many pages of this book. Such a translation as this is enough to repel any one from seeking to find the many noble and beautiful thoughts which Dante has embedded in much pedantic and somewhat tiresome disquisition, but which amply repay the attentive reader. The 'Convito' was intended by Dante as a sequel to the 'Vita Nuova' and an aid to the interpretation of the 'Divina Commedia'; it contains a summary of his philosophy, his theology, and his ethics, and some of the noblest prose in the Italian language, and he might have said of it (as he did of one of the poems it contains), "O men, who cannot see the meaning of this *book*, at least reject it not, but bear in mind its beauty, which is great." And he tells us that he wrote it in Italian, and not in Latin, for fear lest some one might make it appear hideous in a translation as he made the 'Ethics' who translated it from Latin. O prophetic vision of genius!

Lectures on the Physiology of Plants. By Julius von Sachs. Translated by H. Marshall Ward, M.A., F.L.S. Oxford: Clarendon Press; New York: Macmillan & Co. 1887.

In his 'Vorlesungen über Pflanzenphysiologie,' here fairly well translated into English, Prof. Sachs of Würzburg is seen at his best. Physiology is his forte, and few Germans have his gift of exposition, either with pen or tongue; so, in the redistribution and reëlaboration of the materials of his well-known text-book, he has done wisely in turning over the morphology and taxonomy to Goebel, whose volume is a decided improvement upon the original, and in leaving the vegetable anatomy to De Bary, who did the best he could with it at the time, and helped to better that in the English translation. All three works are now in English, thanks to the Clarendon Press, and in their way are doing good service in England and America. This volume of Sachs's is all the better, certainly all the more readable, for retaining the original form in which the materials were cast, that of lectures.

BOOKS OF THE WEEK.

OLLA PODRIDA, or a well-digested Melange. Being Odds and Ends. No. 24 selected from the "Literary Junk Shop" of A. S. Clark, 34 Park Row, New York City. Now ready A. S. CLARK.

Houghton, Mifflin & Co.'s

NEW BOOKS.

Our Hundred Days in Europe.

By OLIVER WENDELL HOLMES, author of 'The Autocrat of the Breakfast-Table,' etc. 1 vol. 12mo, gilt top, $1.50.

Dr. Holmes's account of his hundred memorable days in England last year is full of interest, not only for the graceful and impressive incidents it recalls, but for its abundant felicities of thought and expression.

Jack the Fisherman.

By ELIZABETH STUART PHELPS. With illustrations by C. W. REED. 50 cents.

This little book presents in attractive form one of Miss Phelps's most powerful and pathetic stories, describing the life, labors, and temptations of a fisherman; the love and constancy of woman; and the pitiful desolation wrought by intemperance.

Knitters in the Sun.

A book of Short Stories. By OCTAVE THANET. 1 vol., 16mo, $1.25.

Freshness of subject, vigor and grace of narration, and simplicity and charm of style render this book peculiarly attractive. It is a proof of the London *Spectator's* generous remark that Americans write the best short stories.

The World to Come.

A volume of thoughtful, vigorous, readable, and devout Sermons by WILLIAM BURNET WRIGHT, recently pastor of the Berkeley Street Church, Boston, and autnor of 'Ancient Cities.' 1 vol., 16mo, $1.25.

Works of Edward Fitzgerald,

The Translator of Omar Khayyám, with some Corrections derived from his own Annotated Copies. With a Portrait of Mr. Fitzgerald, a Sketch of Omar Khayyám's tomb, by WILLIAM SIMPSON, and a Frontispiece to 'Salaman and Absal.' A limited letter-press edition. In two volumes, octavo, cloth, $10.

By those who appreciate Mr. Fitzgerald's genius, notably as a translator, these two volumes will rightly be accounted among the most important and welcome publications of the year.

Well-Worn Roads in Spain, Holland, and Italy.

Or, The Travels of a Painter in Search of the Picturesque. By F. HOPKINSON SMITH. 16mo, gilt top, $1.25.

The descriptive chapters in Mr. Smith's striking holiday volume published last year are now reprinted in a tasteful little book. At the head of each chapter is an illustration reduced from the holiday volume.

Wit, Wisdom, and Beauty of Shakespeare.

Selected by C. S. WARD. 16mo, full gilt, $1.25.

These selections have been made with excellent judgment and taste, and contain complete passages embracing many of the wise, pungent, beautiful thoughts which abound in Shakespeare.

The Works of Thomas De Quincey.

The Nation.

NEW YORK, THURSDAY, OCTOBER 6, 1887.

The Week.

THE action of the Grand Army men regarding pensions at their National Encampment in St. Louis last week is the feature of the gathering which chiefly interests the general public, and its importance is such that it must command the attention of the nation. For some years past there has been a growing tendency towards converting the organization into a machine for getting pensions, and the discussion over the veto of the Dependent Pension Bill rendered its action at St. Louis of peculiar interest. Three or four years ago a movement was started in Massachusetts for securing service pensions—that is, pensions for everybody who served in the Union Army during the war, the rate favored being $8 per month. Its advocates were zealous and persistent, and they soon succeeded in carrying a majority of the Grand Army posts in the State, the State Encampment having since then repeatedly given large majorities for the scheme, and instructed its delegates to the National Encampment to push it before that body. The scandal of such a proposition was so great, however, that the National Encampment has refused to endorse it, the majority of the delegates recognizing the loss of prestige involved in supporting such a grab. The Pension Committee appointed at the last National Encampment shared this self-respecting feeling, and reported last week in favor of united effort to secure the passage of another bill, which is practically the same as the vetoed Dependent Pension Bill. This report was carried through at Thursday's session without discussion, under the operation of the previous question, and therefore stands as the official action of the body.

Although the advocates of the service pension concluded to make no fight in the National Encampment, where they saw that they were certain to fail by reason of the unrepresentative character of that body, they have organized a National Service Pension Association, which proposes to make this "overwhelming majority in favor of a service pension" felt in future. Congressman-elect Hovey of Indiana has been chosen President, and has engaged to push the scheme in Congress, and the members of the Association propose to bring all their influence to bear at Washington to secure its passage. The outrageous injustice of this proposition has been previously set forth in these columns. At the minimum rate of $8 a month it would mean the addition of much more than $100,000,000 a year to the already enormous pension roll, while it would involve a demoralization of the national character terrible to contemplate, if hundreds of thousands of men who are able to earn their own living were to get their support from the public Treasury. In short, it would be hard to imagine a measure more discreditable and dangerous than this scheme which the Grand Army Machine is now shown to favor.

The designation of William L. Putnam of Maine and President Angell of Michigan University to act with Secretary Bayard in the fisheries negotiation with the British Commissioners, settles all doubts, if there were any, as to the nature of the negotiation. There has been a great deal of pother over the question whether this should be called a Commission or by some other name. A great many people on our side of the water had imbibed the notion that no Commission could be appointed without the previous assent of Congress. This strange conception had its origin in the fact that the Senate two or three years ago passed a resolution adverse to such a Commission. The resolution was merely an expression of the Senate's opinion. It might be considered advisory, although even in this mild sense it was extra-constitutional, since the Senate's advice to the President regarding negotiations with foreign Powers does not begin until the negotiations are sent to it in due form. The name and style of the negotiators is a matter of no importance. But as the word Commission is commonly applied to such bodies, there is no reason why this one should not be known as the Fisheries Commission. The gentlemen appointed to act with Secretary Bayard are undoubtedly as well qualified for such work as any who could be found, and we are sure that they are in no wise inferior in either learning or patriotism to the British and Canadian Commissioners whom they will meet.

The letter which Mr. Oberly, Chairman of the Civil-Service Commission, has addressed to the Illinois Democratic Association, made up of office-holders in the Washington departments, declining an invitation to address them, and notifying them that he considers their organization in itself an offence against the Civil-Service Law, marks another step forward in the establishment of the reform principle. Mr. Oberly makes it plain that the establishment of such associations violates the letter of the law, as it obviously does its spirit, and he points out forcibly the scandals involved in their existence and work under Republican administrations. He concludes with this vigorous application of his sermon: "And now may I not be excused for saying that Democrats should not imitate the worst practices of the worst Republicans, by organizing the officers, clerks, and other employees of the departments at Washington into State associations, the purposes of which are partisan, and all the money collected or expended by which is money collected and expended, given, and handed over — received and applied, as the law expresses it—for partisan purposes, and for the promotion of political objects, all of which practices the Civil-Service Law denounces as unlawful, as punishable by fine and imprisonment, when the parties to the practices are persons in the service of the United States? I believe the Democrats should practise in power what they preached while out of power, and that they should not follow the evil example set them by the party they have succeeded in the administration of the affairs of the republic."

The Republicans of Massachusetts have not broken down the Civil-Service Law so completely as they supposed they had when they passed the Soldiers' Exemption Act last winter. That act has been construed by several officials with appointing powers to mean that veterans could be appointed to subordinate positions not only without examination, but without any certification of the Civil-Service Commissioners. The act provides that any honorably discharged soldier or sailor can be appointed to a position in the classified civil service without examination, but it stipulates that he shall file with the Civil-Service Commissioners, together with his application for appointment, a sworn statement of his personal and military record, habits, and moral character, accompanied by certificates of good moral character and capacity for performance of the duties of the office. The Civil Service Commissioners hold that the stipulation for filing this information with them gives them the sole power of certifying veterans for appointment, and that none such can be appointed without that certification. The point was submitted to the Supreme Court by the Governor's Council for decision, and six of the seven judges have united in an opinion that the Commissioners are right.

This decision leaves the Republicans of the State in a very awkward predicament. It will be remembered that a Republican Legislature first passed the Exemption Law during the Administration of Gov. Robinson, and that he vetoed it. At their State Convention in 1886 the Republicans adopted a civil-service plank which directly pledged the party to oppose such legislation. Last winter, however, the Exemption Bill was introduced in the Republican Legislature again, was passed, and signed by the Republican Governor. Under its provisions Republican officials have been appointing veterans to office without certification by the Civil-Service Commissioners. Now, the highest court in the State declares that in passing the law the Republican legislators have not accomplished what they supposed they had; that they have, in fact, broken their party pledge, and secured all the odium of attacking civil service reform without giving the "soldier vote" what it desired; for the soldiers who have demanded this exemption are not the self-respecting veterans who ask only an equal chance with other men, but the camp-followers, who can no more come successfully out of a character examination than they can out of one for clerical fitness.

W. P. Tilghman, who is, according to reports which have been widely published, now under arrest in Berlin for cheating and swindling, was lately dismissed from our consular service. The position he held was that of a

consular clerk, not that of a vice-consul, as has been published. Consular clerks are to be distinguished from office clerks. The former are appointed by the President, and hold during good behavior; the latter are simply employed by the consular officer and dismissed at his pleasure. The case of Tilghman furnishes an excellent opportunity to remind the President of the object of the law which called into existence a class of officers originally designated consular pupils, but now known as consular clerks. By the act of August 18, 1856, which established our consular system upon its present basis, the President was authorized to appoint consular pupils not to exceed twenty-five in number, who should be citizens of the United States, and who should be assigned to such consulates and charged with such duties as the President might think proper. The object of the law was, in imitation of the French, to educate young men of character and ability to be worthy representatives of our country abroad. In short, it meant to make of our consular system a noble profession. An appropriation act, however, two years later nipped this laudable scheme in the bud. But at last, by act of 1864, the original design was in substance restored. The officers were styled consular clerks, and their number was restricted to thirteen.

It is gratifying to relate that even then civil-service-reform principles began to manifest themselves. It was enacted that "before the appointment of any such clerk shall be made, it shall be satisfactorily shown to the Secretary of State, after due examination and report by an examining board, that the applicant is qualified and fit for the duties to which he shall be assigned, and such report shall be laid before the President." It was further enacted that no clerk so appointed should be removed from office except for cause stated in writing, which should be submitted to Congress at the session following such removal. The part, however, which relates to examinations is defective in that it does not require them to be competitive. The result has been, as any one might have foreseen, that these places have not escaped the greedy hand of the spoilsman, though the debates in the two houses of Congress clearly show that the adoption of the measure was pressed by its advocates because it "would give opportunity for the improvement of the consular service by the appointment, without regard to partisan considerations, of young men of education and character." There may have been few as lacking in character as Tilghman appointed to these places, yet no serious efforts have been made to render impossible the selection of such as he. Owing to the excellent opportunities for study afforded by such positions, and to the respectable tenure by which they are held, the best representatives of our best schools and colleges would eagerly seek them if they were thrown open to competition. Now they are monopolized by those who have Congressional influence. It is to the credit of the present officers of the Department of State that they at least require those designated at present for these places to spend months at the Department engaged in the study of our laws and history, under the guidance of a competent teacher. Would it not be still more creditable to appoint in the first place only those who had proved in open, competitive examination their entire fitness to discharge all the duties which might be assigned to them?

The vote on the prohibition amendment in Tennessee on Thursday, like that in Texas a few weeks ago, shows that a question of public policy in which men are really interested will impel them to the polls in larger numbers than any mere strife over the offices. It shows, also, that the defeat of prohibition was due exclusively to the negro vote. A considerable majority of the white men in Tennessee undoubtedly voted for prohibition, and the narrow margin against it comes from the black men. The result in Knoxville tells the story. The population of the city in 1880 consisted of 70 whites to 30 negroes in every 100 persons. The vote for prohibition was 2,312 in the affirmative, to 1,120 in the negative—in other words, 68 for to 32 against in every 100; and the despatches say that "the negro vote was almost solid against the amendment, and represents at least three-quarters of the opposition in Knoxville." It was the same way in Nashville, where the despatches say that "the negroes almost universally voted against the amendment, their cry being 'personal liberty,' which was the watchword of the 'antis.'"

Mr. David A. Wells has been writing a series of remarkable articles in the *Popular Science Monthly* on "The Economic Disturbances since 1873." The original design of the writer was, apparently, not in any sense controversial, but rather historical. Much has been written in a scrappy way about the improvements of machinery, new inventions applied to production and transportation, and the consequent cheapening of the principal articles of human consumption that have been effected within the past fifteen years. There has been no attempt, so far as we are aware, to group all these together, both in general and in detail, so as to make a picture explaining at one glance the great fall in prices during recent years. Such was evidently the author's design, and sole design, when he took up this exceedingly interesting subject. But in the course of his investigations he ran foul of the theory of the bimetallists that the fall of prices in the past fifteen years has been caused by silver demonetization and gold scarcity. This is pure dogma. Mr. Wells, finding reasons quite sufficient to account for all the decline in prices in the world of facts and outside of the land of dreams, and finding also some important articles that have not declined in price, as they ought to have done on the gold-scarcity theory, has been seemingly impelled to give a controversial turn to the later chapters of his treatise. It is evident that if bimetallism is going to stand up against this powerful attack, it must now come out of dreamland and speak a language that common people can understand.

We do not deny Chief-Judge Ruger's right to grant another stay in Sharp's case, but we are bound to say that as a rare, almost unprecedented performance, it is peculiar, and a judicial act which is peculiar is always open to criticism or question at the hands of anybody who thinks criticism or question will do any good. The difficulty there has been in getting Sharp's sentence carried out is, in fact, whoever may be responsible for it, a great scandal, and is inevitably connected in the minds of the unreflecting public with his wealth.

The Springfield meeting of the American Board promises to produce a debate more bitter, if less exciting, than the one at Des Moines last year. In preparation for it the methods of a political campaign have been freely employed. The *Independent* filled its last issue with columns of anonymous letters approving its recent course. On the other side, the *Christian Union*, almost the solitary champion of the liberal view, contents itself with pointing out the position of self-stultification into which the conservatives of the Board are rapidly bringing the denomination. This is the fatal logic of events which is sure to defeat the present policy of the Prudential Committee in the end. Candidate after candidate, pronounced by that body unfit to preach the Gospel in heathen lands, has been endorsed by councils at home, and has been received to positions of trust and influence in the American Church. This cannot last for ever, and though the conservatives have undoubtedly an immense majority in the Board, and can carry any measure they please, the time will soon come when they will have to consent to the sending of such candidates as missionaries. The thing may be done furtively, perhaps, and under cover of some high-sounding resolution to the contrary, as occurred in the case of Mr. Hume, but it will have to be done at last.

The victory of the *Volunteer* was so overwhelming that even Messrs. Watson and Bell are forced to admit that the superiority of the centreboard sloop as a racer can no longer be questioned. It is a gloomy day for cutter men, and we presume they will keep a discreet silence for a long time to come. The *Volunteer's* two victories were singularly decisive, showing so clearly as to make dispute impossible that she was the better boat in both light and heavy weather. She not only beat the fastest English cutter ever built, but beat her so badly that there was really no race after the first few miles. For this remarkable victory the American people are solely indebted to the skill of Mr. Burgess and the public-spirited generosity of Gen. Paine. We trust that this great debt will be paid in some more substantial manner than mere words. It is high time that the burden of defending the cup were taken from Gen. Paine, and borne by the large and rich yachting fraternity of the whole country.

The erection and opening of a club for conductors and other railroad employees through the liberality of Mr. Cornelius Vanderbilt at the Grand Central Station is an excellent step in the direction of identifying the employees with the corporations which they serve, and making them feel that they have a permanent interest in the prosperity of the railroad, and are not mere hirelings. A year ago, when the strikes were raging on the

Southwestern railroads, and on the horse-railroads in this city, we urged upon the attention of railroad managers the immense importance of making their men feel that their employers were as good friends as the unions, and had their comfort and safety at heart. Mr. Vanderbilt has made the first great step in this policy, and it must bear fruit. It is sure not simply to give any corporation which pursues it the pick of the labor market, but to cause intelligent and self-respecting men to cling to its service, as the best thing for their own future and that of their families.

There have been two Catholic Congresses held lately, one at Treves in Germany and the other at Liége in Belgium. The German one devoted itself mainly to the discussion of the relations of Church and State in the empire, but the other occupied itself largely with "the labor problem." It discussed nearly all the solutions proposed by the innumerable lay orators and writers who occupy themselves with attempts to satisfy "Labor," such as "wise laws," coöperation, trades-unions, government socialism, collectivism, communism, anarchy, the nationalization of the land, and what not, and condemned them all. They are all insufficient because the Church plays no part in them. The true and real solution is, the Bishop of Liége said, the following: The old trade guilds must be revived and placed under the guardianship of Christian lay employers and of the clergy. Then each trade or calling must be placed under the special protection of a saint; and brotherhoods of those engaged in it, composed both of employers and workmen, must be formed for the celebration of the saint's fête and for participation in religious processions and funerals and the rendering of mutual assistance in times of need. There was, we believe, no discussion of the probability of the adoption of this solution by the working classes, and probably few, if any, members of the Congress had any expectation that Labor would pay the smallest attention to it. But in propounding a scheme which had no chance of adoption, the Congress only followed the example of ninety-nine out of every hundred who undertake to abolish poverty and discontent. Most of the writing and talking about the Labor problem has apparently no practical end in view whatever, and appears to be intended rather to ease the mind of the authors than to change the face of modern society.

The reverent meekness with which the English allow themselves to be so often lectured on their foreign politics by Prof. Arminius Vámbéry of the University of Buda-Pesth is amusing. Because, a quarter of a century ago, he travelled in disguise through a part of Turkestan then inaccessible to Europeans, and subsequently wrote a number of books on the ethnography and languages of Central Asia, he is deemed a kind of permanent oracle on affairs concerning the countries lying between the Indus and the Caspian. That his accounts of travel and philological studies have been subjected to very severe criticism—the former in Russia, whose armies have since occupied the scenes of his adventures, and the latter by eminent scholars of his own country—and that his oracular utterances are palpably inspired by Hungarian, anti-Russian animosity, has been overlooked in the friendly fervor towards him which his very partiality in matters in dispute between Russia and Great Britain kindles in English breasts. He is credited with knowing the secret springs of action in Tashkend and Bokhara, Kabul and Herat, Teheran and Meshed, Balkh and Kashgar. Afghanistan, of course, is his most frequent theme. His latest communication in the London *Times*—a most ready organ—refers to the flight of Ayub Khan from his Persian custody, which made the Professor foresee direful consequences for Amir Abdurrahman and the British order of things in Asia generally. That the "hero of Maiwand," who is still "the favorite and much regretted Prince of the Afghan nation," and "such an important factor in Central-Asian politics," has been able to escape, "cannot but be ascribed to the machinations of that very Power whose peaceful intentions . . . were of late so much spoken of in official circles" in London. Who brought about that escape? Of course, the Russian Minister in Teheran, Prince Dolgoruki, the Persian Government tacitly conniving "at the newest political trick of your continually stirring rival," O ye British! If your Lord Salisbury, in a recent "post-prandial speech," alluded to Russia's peaceable disposition, "the illustrious statesman had certainly motives in view the far lying political reasons of which we are neither entitled nor able to scrutinize." These are modest words from the mouth of an international admonisher. What saves Lord Salisbury is Ayub's ludicrous discomfiture.

A few days ago a statue of Francis Deák was with great solemnity unveiled at Buda-Pesth. The Emperor-King of Austria-Hungary, Francis Joseph, was present. The statue commemorates the man who made Austria-Hungary—the dual constitutional monarchy that now is, the ally of Germany and Italy—out of an Austria and a Hungary held together by the sword, after a terrible conflict. The sword had been half broken at Sadowa when the Hungarian statesman was called forth from his modest retreat to act as pacificator between his nation and the Hapsburg dynasty. Acting under the auspices of Count Beust, the newly appointed leading Minister of the monarch, he laid the foundation of a new order of things, which was to restore to the Magyar his ancient freedom, give each component part of the empire national autonomy, and create collective strength through voluntary union. Twenty years have passed since the work was consummated, and have tested its worth and strength. The vast majority of the nation and its ruler gratefully acknowledge its excellence. Kossuth, in his voluntary exile, and the party in Hungary which calls itself after him, alone demur, deeming the compromise of 1867 a partial surrender of the legislative independence sanctioned by the laws of 1848. As to the excellence of the man himself, as a patriot, legislator, and orator, there has never been a dissenting voice. When he died, in the beginning of 1876, "the Aristides of Hungary" was honored by a national mourning equalling the mourning over Washington or Lincoln. One of the three men who created or recreated great States in our time, Deák has the advantage over Cavour and Bismarck of having achieved his work by mere suasion and moral guidance, without an army, a treasury, or an ally, without shedding a drop of blood in battle or insurrection, without so much as a stratagem or a threat. Mazzini and Garibaldi, Victor Emanuel and Napoleon III., worked for Cavour; Bismarck wielded the sword of Moltke and Prussia's entire wonderful machine of State; Deák had only passive resistance and the logic of events for his supports. Strangely enough, the three great men, who never acted in unison, did one work collectively: Cavour broke Austria's power in Italy, Bismarck drove her out of Germany, Deák gave her a new centre of gravity in Buda-Pesth.

According to the message of President Diaz to the Mexican Congress, there is no little tension in the relations of Mexico with Guatemala. Early in the year, it seems, the Assistant Secretary of the Mexican Legation in Central America was assaulted by a citizen of Guatemala, and the latter when brought to trial received a punishment far less than the laws assigned in such cases. The Mexican Minister was at once ordered to demand that the magistrates responsible for the evasion of the legal penalty should be dismissed from office. While the affair was pending, the assumption of the dictatorship by Barillas took place, who immediately sought recognition from President Diaz. This was refused by the latter, however, and has not yet been granted; the Mexican Government professing to be ready to recognize any Government established by the people of Guatemala, but doubting if the dictatorship was in accordance with the popular will. Meanwhile, a second assault upon the same Secretary has occurred, and the demand for satisfaction has been met very chillingly. Gen. Diaz's references to the affair amount to a distinct threat that Guatemala must move promptly or expect decided action on the part of Mexico. Those passages of the message bearing upon the financial situation of the country are of interest. The President reports a decided increase in the revenue for the year ending June 30, the total being $28,700,000, as against $26,700,000 in the year before. The difference between this augmented income and the supplies voted by Congress for the same period, $33,000,000, is, the President admits, "alarming," though he says that a severe economy has enabled him to bring the expenses so far within the estimates that the deficit is not so great as the figures just cited would indicate. He says that the new tariff in force since last July has been favorably received by the country, with the exception of the part reducing the duties on cotton goods; that part, he intimates, may soon be changed to meet the wishes of Mexican manufacturers. During the two months of its operation the new tariff has witnessed, the message asserts, a marked decrease in smuggling and a distinct impulse given to commerce.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 28, to TUESDAY, October 4, 1887, inclusive.]

DOMESTIC.

THE President and Mrs. Cleveland and a small party of their friends left Washington on a special train September 30 to visit the West and the South. They stopped first at Indianapolis, where they received a hearty reception, and on October 1 they arrived at St. Louis, where the President and Mrs. Cleveland were entertained until October 3 by Mayor Francis. Thereafter he held a series of public receptions and went to Chicago October 4. The demonstration in St. Louis in his honor on October 3 will long be memorable in the history of the city. In the Merchants' Exchange he addressed some 10,000 persons, and at the hour of the public reception at the Lindell House 40,000 persons filled the adjacent streets. Another great crowd filled the Exposition building and its approaches when the Presidential party arrived there in the evening. The parade in the evening called out some 20,000 men.

The President has appointed William L. Putnam of Maine and James B. Angell, President of Michigan University, to act with the Secretary of State in the negotiation for a settlement with Great Britain of the disputes growing out of the fisheries question. Both have accepted. Mr. Putnam is a Democrat and Mr. Angell a Republican.

The Treasury Department issued instructions to customs officers October 4 in regard to the collection of duties on merchandise arriving by parcel post from Jamaica, in accordance with the terms of the postal convention with that country which went into effect October 1.

The United States revenue cutter *Bear* arrived at San Francisco from Alaska October 2, and reported that on August 24 she seized the British sealing schooner *Ada*, with 1,900 seal skins, and the American schooner *Allie I. Alger*, with 1,600 skins, and a few days later the American schooner *Handy*, with 1,700 skins. Among the passengers was J. B. Vincent, the only survivor of the thirty-six men on the whaling bark *Napoleon*, which was wrecked in the ice in the Arctic in May, 1885. From that time until he was rescued he lived with a small band of Indians on the Siberian coast.

The Naval Board appointed to estimate the cost of building the 6,000-ton armored battle ship designed by the Barrow Ship-building Company of England, reported September 29 an estimate of $2,376,000, which is $124,000 less than the sum appropriated by Congress to build it.

Gen. Crook, in his report to the War Department on the recent trouble with the Ute Indians in Colorado, says that from the outset, with but one slight interruption, the Indians were pursued incessantly, that in every case the whites were the aggressors and fired first, and that Colorow had no desire to fight, and made use of his weapons only in self-defence. Twelve Indians were wounded, and five of them died.

The majority report of the Utah Commissioners published October 2 shows that the Mormon population of the Territory on April 1, was 132,297, the non-Mormon being 55,000. The Gentiles now own of the assessed property of the Territory nearly one-third, exclusive of railroad property. Since the passage of the Edmunds law in 1882, 541 persons have been indicted for unlawful cohabitation, and 279 of these were convicted. The number convicted of polygamy was fourteen. The first annual election under the act of Congress, prescribing a registration oath for voters, was held on August 1. The Mormons elected ten councillors and twenty-one members, the non-Mormons two councillors and three members. The Commission regards the movement to secure admission into the Union as an effort to free the Mormon Church from the toils which the firm attitude of the Government and the energetic course of the Federal officers have thrown around it, and opposes its consummation. In conclusion, the Commission declares that the results which have followed the passage of the Edmunds act have been beneficial to the Territory.

The Illinois Democratic Association of office-holders in the departments at Washington invited Civil-Service Commissioner Oberly to deliver an address to its members. He declined, and wrote in his reply, September 29: "A Civil-Service Commissioner or a civil service examiner as a member of a political committee, or as a member, patron, or encourager of a political association composed of persons in the public service, all members of one political party, organized for the purpose of putting certain political partisans into and excluding certain other political partisans from office, would certainly be out of place, and the public would be justified in the conclusion that, in the discharge of his official duties, he might bear unfairly against political opponents and lean partially towards party friends. I believe the Democrats should practise in power what they preached while out of power, and that they should not follow the evil example set them by the party they have succeeded in the administration of the affairs of the republic."

The Supreme Court of Massachusetts on September 28 gave an interpretation of the Soldiers' Exemption Law enacted by the last Legislature, whereby veterans were made exempt from competitive examinations for positions in the State civil service. Their interpretation is that those who are exempted by the new law from the requirements of the regular examination nevertheless "cannot be preferred for appointment to office . . . without having made application to the Civil-Service Commission." This leaves in the hands of the Commission the sole power of certifying veterans for appointment.

The Republican Convention of Massachusetts September 28 renominated Gov. Oliver Ames, Lieut.-Gov. J. Q. A. Brackett, Secretary of State H. B. Pierce, Treasurer Alanson W. Beard, and Auditor Charles R. Ladd, and nominated A. J. Waterman for Attorney-General. The platform favors the protective tariff, "liberal appropriations for the reconstruction of our navy, for internal improvements, and for proper national aid to education, and pensions for disabled soldiers and sailors," and declares that "the time has come for Congress to carefully consider the question of the internal-revenue system and of the tariff on sugar." The National Civil-Service Law is approved, but the President's record in enforcing it is condemned. The plank on temperance legislation has a strong prohibitory leaning.

The Democratic State Convention of New York, September 28, nominated for Secretary of State Frederick Cook, for Comptroller Edward Wemple, for State Treasurer Lawrence J. Fitzgerald, for Attorney-General Charles F. Tabor, for State Engineer and Surveyor John Bogart. The platform "reiterates" support of the civil-service laws, national and State; but "in view of the radical change in administrative methods which grows out of the civil-service laws, and the differences of opinion which exist in relation thereto, we deem the subject one which might appropriately be submitted to the popular vote." Its demand for revenue-reform legislation is more than usually emphatic.

A mass meeting of Independent Democrats of Baltimore was held September 30, and an address was issued "to the Independent Democrats of the State of Maryland and city of Baltimore," wherein the signers said: "We do, therefore, as *Democrats*, disown allegiance to the so-called 'Democratic' party in this State as a sham and a fraud, and we call upon every true Democrat to join with us this year in defeating the candidates, State and city, of this self-constituted organization. We believe that a real Democrat can be engaged in no better work at this time than in relieving the party from such an incubus and the party name from disgrace."

At an election in Tennessee on September 29 a proposed prohibitory amendment to the Constitution was defeated by about 15,000 votes. At Nashville, on election day, the church bells were rung and prayer-meetings were conducted in the churches by women. Every saloon was closed, and there was a practical suspension of business. There were similar scenes in other cities. The greater part of the colored vote was cast against the amendment.

The report of the Committee on Pensions, presented to the Grand Army Encampment at St. Louis September 29, was adopted with some opposition. It recommends the continuance of an earnest effort in favor of the bill prepared by the Committee, granting pensions to all veterans now disabled or in need, and to mothers and fathers from date of dependence; the continuance of pensions to widows in their own right, and an increase for minor children; a pension of $12 per month to all widows of honorably discharged soldiers and sailors of the late war; increased pensions for the severer disabilities, as presented in the bill prepared by the United States Maimed Veterans' League; pensions for the survivors of rebel prisons, as presented in the bill of the National Association of Prisoners of War; increased pensions for loss of hearing or eyesight; a re-enactment of the Arrears Law; and an equitable equalization of bounties. A resolution that by his veto of the Dependent Pension Bill "the President has violated his pledge made to the soldiers when they flocked to the standard of their country at the time of her greatest peril, has thwarted the express will of a grateful people, and has inflicted irreparable cruelty upon those who should be the objects of the tenderest consideration," was defeated by a large vote

The General Convention of the Knights of Labor assembled at Minneapolis October 3. The Secretary of the General Executive Committee reported that at the last Convention, which was held at Richmond, Va., the order had about 702,000 members, 30,000 of whom were not in good standing, but that this year there are 560,000 men in the organization, every one in good standing. The Secretary during the past year suspended more than 2,300 assemblies for non-payment of dues, but a great many of them have been readmitted.

The dismissal of a foreman in a New York shoe factory, named Haitt, was caused some time ago by the Knights of Labor for dismissing a Union workman. Haitt went to Baltimore, but had no sooner got work than the Knights there caused his dismissal at the request of the New York Knights. He returned to New York and had the Executive Committeemen here who had caused his dismissal arrested. An application for the release of one of them was made to Judge Barrett in the Court of Oyer and Terminer, who decided, September 29, that the case should be presented to the Grand Jury because it seemed to him to be a prima-facie case of conspiracy within the meaning of the New York statutes.

A fine and well-appointed building for the use of the employees of the Vanderbilt roads which run into New York was opened October 4, a gift of Mr. Cornelius Vanderbilt which cost more than $100,000. It is devoted to the uses of the Railroad Branch of the Young Men's Christian Association, and the only condition required of any employee of these roads who uses its reading-rooms, gymnasium, baths, and other comforts and conveniences, is the payment of a specific sum, from 10 cents upwards, per month, for at least a year from the date of application.

The increase in the cost of coal in Vermont caused by the Inter State Commerce Law has forced large consumers there to test other kinds of fuel. A manufacturing concern at Bellows Falls, which formerly used 130 tons a week,

by mixing sawdust with different qualities of soft coal, now uses less than twenty-five tons. A firm at Putney is using crude petroleum.

The American Board of Foreign Missions met at Springfield, Mass., October 4. The Treasurer's report shows that $679,376.90 had been spent during the year for foreign missionary work. The Board will again take up the controversy about probation after death.

The second race by the Scotch cutter *Thistle* and the American sloop *Volunteer* for the *America's* cup, which was set for September 29, but not sailed for lack of wind until September 30, was won by the *Volunteer* by 11 minutes 47¾ seconds, corrected time. This race was outside New York Bay, and the *Volunteer's* victory settled the contest for this year. On October 1 Mr. Muir of Dumbarton, Scotland, the owner of the yacht *Mabel*, published his determination to build a ninety ton cutter to compete for the cup next year, unless Mr. Bell, of the *Thistle*, again challenges for it.

At Brownsville, Tex., and above that point the overflow of the Rio Grande River has caused the loss of crops and much property.

Chief-Judge Ruger of the New York Court of Appeals September 29 granted another stay of the execution of the sentence of Jacob Sharp, to the very great surprise of the public.

Sir Thomas Henry Grattan Esmonde and Arthur O'Connor, members of Parliament, arrived at New York October 3, to speak in the United States in favor of home rule for Ireland.

Dr. Edward D. Kittoe died at Galena, Ill., September 29, in his seventy-third year. He was a surgeon on Gen. Sherman's and afterwards on Gen. Grant's staff during the civil war. William Russell Sever, the oldest graduate of Harvard College, died at Plymouth, Mass., October 2, aged ninety-six years. He entered Harvard in 1808 and was graduated in 1811. Ex Gov. Alexander H. Holley of Connecticut died on the same day at the age of eighty-three. John B. Finch of Nebraska, the well-known temperance lecturer, died suddenly in Boston October 3.

FOREIGN.

Signor Crispi, Italian Prime Minister, had a conference of two days at Friedrichsruhe October 1–2 with Prince Bismarck, and this meeting has been a subject of comment at all the European capitals. The belief is general that the conference is a peaceful omen.

Signor Crispi, in an interview at Frankfort, October 4, said that the invitation to the conference with Prince Bismarck came from the Prince. The negotiations did not include the Roman question, which Bismarck regards as a matter for the consideration of Italy herself. "Italy demands," he continued, "the maintenance of the European balance of power and of peace—like our allies Germany and Austria." It is reported from Pesth that the interview was held with the full knowledge and sanction of Austria, and that the triple alliance thus cemented cannot fail to have a startling effect on those Powers which appear anxious to disturb the peace of Europe.

The Pope's jubilee receptions were begun September 28. The Roman police seized the jubilee medals, which are inscribed: "Papa Leo XIII. Pontifex et Rex."

The Odessa garrison has been reduced to its normal strength, and the reduction is regarded as proof that Russia has abandoned the idea of armed intervention in the Balkans.

It is reported that Russia will not reply to the Porte's last note suggesting that Turkey and Russia each appoint a commissioner of princely rank to govern Bulgaria for three months, and to convoke a new Sobranye for the election of a prince, until the Czar returns to St. Petersburg.

Several French princes have purchased estates at Cracow, Russia, and intend to become Russian citizens and to enter the army.

It is reported from Baku, Russia, that several new petroleum wells give such an abundant supply that large quantities are sent to Bombay at half the price of American petroleum.

The St. Petersburg *Grashdanin* condemns the optimism of the French with reference to the mobilization of their troops, and points out defects in the recent manœuvres, saying that the most successful operations were purely artificial. "If the Germans," it adds, "admitted that the French mobilization was a success, it was simply to leave the French ignorant of their inferior military organization."

M. Ferry, in a speech at Épinal September 29, said that the Republic regarded the manifesto of the Count of Paris with contemptuous indifference. The people did not fear pretenders. They made it a point of honor to leave their enemies full liberty of attack. The manifesto would doubtless furnish a pretext for attacking the Cabinet, and possibly some Republicans would avail themselves of the chance to desert the party. "If a crisis arises," he concluded, "it will be difficult to solve it. Therefore let us be prepared for all evils."

The contention about the shooting of a French sportsman and an attendant by a German guard on the frontier is whether the French party when the shots were fired were on French or German soil. Blood was discovered on the French side of the line, but the German contention is that the wounded man was shot on German soil, and that he dragged himself across the line. In spite of the conflict between the German and French reports an amicable settlement is expected. September 30 Count von Münster informed M. Flourens that the German Government, without awaiting the result of the judicial inquiry, had decided to grant an indemnity to the widow of the gamekeeper that was killed.

The Municipal Council of Paris has decided to grant 5,000 francs to the widow of the gamekeeper, and to protest against her accepting any indemnity from the German Government.

The French lad Schnaebelé, the arrest of whose father by German police on the Franco-German frontier last spring came near being a *casus belli*, was sentenced to three weeks' imprisonment at Metz, September 28, for nailing a French tricolor on a tree on German territory. An appeal was made to Emperor William for clemency, and he was released September 30.

The Public Prosecutor in Paris has ordered that an action be begun against the manager of the Opéra Comique, two assistants, and two firemen, whose culpable negligence caused the destruction of the theatre and the loss of many lives.

The Hungarian Parliament was opened September 29, and in the imperial message it was declared that friendly relations continue with all the Powers, but that the general situation requires the perfection of the army. Surprise was expressed that no reference was made to the alliance with Germany.

A statue of Francis Deák was unveiled at Pesth September 29, in the presence of Emperor Francis Joseph and representatives of several foreign governments. Count Louis Tisza delivered a eulogy.

J. D. Sullivan, Lord Mayor of Dublin, who is the proprietor of several newspapers, and William O'Brien, editor of *United Ireland*, have been summoned to appear at the Police Court at Dublin to answer to the charge of publishing reports of proceedings of the suppressed branches of the National League. They subsequently held a large League meeting on the estates of the Marquis of Lansdowne at Luggacurren. Mr. O'Brien advocated the vigorous continuance of the plan of campaign inaugurated by the League. The Commission appointed under the Land Act had received, October 1, 16,000 applications for revision of rent. Sir West Ridgway, late head of the Afghan Boundary Commission, has been appointed Under Secretary for Ireland, to succeed Gen. Buller, resigned.

A score of League meetings were publicly held in different parts of Ireland on Sunday, October 2, several in the Mitchelstown district. To attend one meeting, people evaded the police and went to a fortified house outside the town. A mass-meeting, which was attended by 10,000 persons, was held at Tower Hill, London, on the same day, and speeches were made from six platforms. The speakers condemned the Government's Irish policy and the conduct of the police at Mitchelstown.

Mr. Joseph Chamberlain, speaking at Birmingham September 29, said that no one was more sincerely animated by friendly feelings towards Americans than he. He regarded the appointment of the Fisheries Commission as affording an opportunity for cementing the union of Great Britain and her colonies. "We granted Canada a Constitution," he said, "making her an independent State save in one respect: we reserved control of her foreign policy. Therefore we are bound to see that the last link that binds Canada to England is not weakened and severed, as it easily might be by our neglect of Canada's interests or indifference to her just rights."

Mrs. Otto Goldschmidt (Jenny Lind) has had a stroke of general paralysis, but her mind is reported to be unimpaired.

Polydore de Keyser, Alderman for Farringdon Without, and a Roman Catholic, has been elected Lord Mayor of London.

The Swiss Bundesrath has decided to subsidize railroads to enable them to run night trains for the accommodation of tourists.

A shock of earthquake was felt throughout Greece October 4.

The death of the Sultan of Morocco was reported October 2. Six thousand Spanish troops were despatched to Morocco October 3 to protect the interests of Spain in case of disorder.

The last news received from the Upper Congo is that Stanley was pushing forward, and the only difficulties he met were the natural obstacles of the country.

By a steamship from Yokohama, which arrived at San Francisco October 3, information was brought of an arrangement between the Chinese Government and the Great Northern Telegraph Company for an extension of lines, which will give a direct telegraphic route from China to the Continent of Europe and Great Britain. Later reports respecting the China-American banking and telegraphic syndicate are conflicting. It is stated that the President of the Chinese Board of Revenue has petitioned the Empress not to grant the proposed concessions, and the China Merchants' Company has repudiated all connection with the syndicate. The English interests in China have been endeavoring to prevent the final consummation of the grant to Americans.

The Corean Government has appointed Ministers to the United States, England, France, Germany, and St. Petersburg.

The deposed King Malietoa of the Samoan Islands has been taken on board a German gunboat and detained, because he did not prevent his subjects from robbing German plantations.

The information brought from the Hawaiian Kingdom September 28 by the steamship *City of Sydney* is, that at the election held September 12 all the members of Parliament, except two representatives in remote districts, were elected on the platform of the reform party, supporting the new Constitution and Ministry.

The trouble between the Provincial Government of Manitoba and the Dominion Government about the building of the Red River Valley Railroad, to compete with the Canadian Railroad, ended abruptly October 1, when the contractor of the new road gave notice to subcontractors to quit work, because he had not received payment. Great disappointment is reported in the province.

THE POWER TO PURCHASE BONDS.

THE conference between Secretary Fairchild and a number of bankers on September 28 had reference to the possible conditions of the finances after the requirements of the sinking-fund are met for the current year, and after that mode of egress for the surplus funds of the Treasury shall have been stopped.

The Sinking-Fund Law was passed February 25, 1862, being a part of the act of Congress authorizing the issue of the so-called 5-20 bonds. It provided that the money received from customs duties should be applied, first, to the payment of the interest on the public debt, and second—

"to the purchase or payment of 1 per cent. of the entire debt of the United States, to be made within each fiscal year, which is to be set apart as a sinking-fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct."

The sinking-fund, it will be observed, consists of two parts: (1) 1 per cent. of the entire debt; (2) the interest on the debt embraced in the sinking-fund. The two sums together amounted for the fiscal year ending June 30, 1887, to something over $35,000,000. For the current fiscal year the amount is something less, owing to the rapid redemption of the principal during the past twelve months. In fact, the Secretary's recent offer to buy $14,000,000 of bonds at a fixed price was intended to fill the requirements of the sinking-fund for the year ending June 30, 1888. What next? The inflow of surplus revenue is not going to stop when the sinking-fund is full. The same causes which are operating now to draw money out of business channels and lock it up will continue to operate.

In the latter part of Secretary Sherman's administration of the Treasury, Congress passed a law to meet the emergency of an excess of revenue over and above the requirements of the sinking-fund. This was a section of the Sundry Civil Appropriation Bill, approved March 3, 1881, viz.:

"That the Secretary of the Treasury may at any time apply the surplus money in the Treasury not otherwise appropriated, or so much thereof as he may consider proper, to the purchase or redemption of United States bonds; provided,

"That the bonds so purchased or redeemed shall constitute no part of the sinking-fund, but shall be cancelled."

It would be impossible to write the English language more plainly than it is here written, and if we turn back to the time and circumstances in which this law was passed, we shall find that the intention was to prevent an undue accumulation of funds in the Treasury. A considerable part of the public debt was falling due in 1881, and it was not known how it would be met or refunded. It was actually met by Secretary Windom's plan for extending the bonds at a reduced rate of interest, and making them payable at call. At the time when this act was passed it was necessary to provide for all contingencies, including that of a possible gorge of money in the Treasury.

This exigency did not arise in 1881, but it is certain to arise soon. It is extremely fortunate that there is such a law. It is quite certain that if there had been no such power in the Secretary's hands, Congress would have conferred it upon him last winter. The subject was considered with much circumspection in the Senate, and the conclusion of the most experienced financiers in that body was that the power to buy bonds, over and above the sinking-fund requirement, could not be conferred more explicitly than it had been by the act of March 3, 1881.

The only objection that has been urged to the exercise of the power is that it is a dangerous power. The answer to this is two-fold: (1) that Congress took account of the dangers when it passed the law, and must have assumed that the danger of not having it was greater than any other dangers in the premises; (2) that it is dangerous only in the hands of a dangerous man. We presume that Secretary Fairchild does not account himself such. But what are the dangers? What do they consist of? Nothing but this, that a bad secretary might use this power for purposes of speculation. Now, the Secretary is fully able to control himself in this behalf, and we may add that he is not under suspicion, even in the smallest degree. But is this danger any greater in the case of purchases under the act of March 3, 1881, than under that of February 25, 1862—the Sinking-Fund Act? To us they seem to be precisely alike. Anybody who can buy bonds under the one without danger can buy under the other. All public officers should, of course, be careful of their reputation, but there is no better protection of reputation than innocence.

But are there no dangers on the other side? Is not the existing state of the public finances itself a menace to all business? If it is not such, why has the sinking-fund requirement for a whole year been filled in the space of two months? Is not that a confession of a class of dangers much greater than any danger arising from the exercise of a power conferred upon the Secretary by Congress after full deliberation, and in view of exactly the state of affairs which has now come about? If there is any other danger in the exercise of this undoubted power than the one we have indicated, we have never heard it mentioned, and we cannot imagine what it may be.

KEEPING THE TREASURY OUT OF WALL STREET.

THE present posture of the Treasury as an absorber and hoarder of money not wanted by the Government has led to some discussion in the press of plans for depositing the public funds in banks, as is the custom in other civilized countries, and as was the custom here until Gen. Jackson's quarrel with the United States Bank led to the breaking down of that institution and the establishment of the sub-treasury system. Very little argument is needed to show that the excess of public receipts over disbursements, whether large or small, ought to be kept at the service of the public, and not hoarded. Whether the hoard be public or private, it is equally deleterious and unscientific. The progress of civilization has nearly done away with private hoarding, which at one time, and not so very long ago, absorbed a large part of the money of Europe. The establishment of banks of deposit and savings has gradually drawn upon the secret receptacles of money in the Old World, and put at the service of mankind immense sums that were formerly hidden behind chimneys or buried in the earth, and not seldom lost altogether by the death of the hoarders, who carried their secret with them to the grave.

Public hoarding is in some respects more deleterious than private, for the reason that it operates upon the imaginations of the business community, and tends to promote distrust and fear. Such has notably been the effect of the small accumulation of money since the last of the 3 per cent. bonds were paid off. The apprehension of danger was greater than the danger itself. Statesmanship has to take account of apprehensions quite as much as of the facts they rest on, and it is pretty certain that there will be a large stock of alarms, whether well or ill founded, until a substantial equality between public receipts and disbursements shall have been reached. But can such substantial equality be reached while there is still upwards of a thousand millions of public debt, redeemable at different periods of time, outstanding? It would be hardly possible to bring about an exact "balance of the budget" even if there were no debt outstanding, the reduction of taxes being complicated with protectionism on the one hand, and with a rapidly growing population and a corresponding "elasticity of the revenue" on the other. When we take into account the still outstanding debt, and the need of preserving sufficient taxes to pay it off when it falls due, we shall see that the jerkiness of the Treasury, of which we are now having a taste, is not likely to be stopped by the magic of a single tax-repealing bill. The readjustment of taxation to the public needs will be a protracted job. In fact, it is the one job that never ends, because the conditions of society and government, of which taxation is a necessary accompaniment, are ever changing.

The need of a public depository of surplus public funds has not hitherto been felt, because the national debt has answered every purpose of a national bank. It has taken the excess of the Treasury's income, whether large or small, and paid it to those who were compelled to turn it over and over in order to make their living. Before the war the receipts and disbursements were so closely calculated to balance each other, and were altogether so small, that no public depository was required. The situation is now changed, and so much changed that consideration must be given to some means for "taking the Treasury out of Wall Street." For it is obvious that so long as the Treasury takes in more money than it pays out, the Treasury is in Wall Street. It only gets out of Wall Street when it gets rid of its surplus. Taking in an excess and getting rid of it is exactly what keeps the Treasury in Wall Street, and there it will be and remain as long as there is a surplus.

Other countries keep out of their respective Wall Streets by depositing all their moneys in a bank of sufficient capital and responsibility to insure safety to the funds. So did we until Gen. Jackson's quarrel with the Bank of the United States. The memory of that great political struggle and its unfortunate ending—unfortunate to all the parties concerned—has

created a prejudice against the very name of a United States Bank. But it is the judgment of impartial history that the first Bank of the United States (Hamilton's) was a wholly beneficent institution, and that the second one was such until Jackson made his attack upon it. The attack was unprovoked, unjust, unstatesmanlike, and unbusinesslike. It is altogether one of the most shameful chapters in our history. Yet the popular conception is that Jackson was right, and that the bank was a "monster." So completely has this idea laid hold upon the public mind that probably no step could be taken at present towards the establishment of such a bank on any terms. Yet the underlying idea that there should be some means by which public moneys may be kept at the service of commerce when not needed by the Government, and yet without involving the Government itself in the business of banking, is sound, and must, we think, force itself more and more upon public attention as years roll on.

A LINE OF DIVISION APPEARING.

THE most striking feature of political developments during the year 1887 is the appearance of a line of division between the two great parties on fundamental issues. Such a line once existed and was clearly defined, but during the last years of Republican Administration it gradually faded out. There was no great question upon which men took sides as Republicans and Democrats so that one needed only to know which party a man favored to know what policy he supported. As regarded pensions, for example, Republicans and Democrats vied with each other in championing the most extravagant measures. So as to the tariff, both parties in their national platforms of 1884 inveighed against the surplus as an insupportable evil, and Republicans as well as Democrats pledged themselves to reduce it by abolishing the unnecessary taxation which produced it. On the question which underlies all others, of the proper scope of the Federal Government, many Democrats had so far abandoned the traditional attitude of the party that membership of the organization did not prevent them from voting for a measure so glaringly unconstitutional as the proposition to take money from the National Treasury to support State schools, or to grant allowances from the same fund for the purchase of seeds for farmers in any State which had had a run of bad luck.

The first clear indication of a change came with the President's vetoes of the Pauper Pension Bill and the Texas Seed Bill last February. Both bills had been very generally supported by Democrats as well as Republicans, and a veto of neither was anticipated at the time of its passage. The exigencies of party discipline forced enough Democratic Congressmen to sustain the Democratic President in these cases to make his vetoes effective, while the Republican managers, despite the general support of Mr. Cleveland's action by Republican newspapers, decided to cast a solid party vote against him. The Republicans thus committed themselves to extravagant pension legislation, while the Democrats, aside from a small contingent of demagogues, ranged themselves alongside of their President in opposition. These respective attitudes of the two parties in Congress have been so fully endorsed by the organizations of the two parties throughout the country, that it is now evident that the only hope of escaping the wildest schemes of the pension grabbers is in a Democratic Congress, or, failing that, a Democratic President ready to exercise the veto power; the Republicans being now committed to compliance with any demand which may be made upon them.

The pension question is only one phase of the wider question of extravagance or economy in the administration of the Government. So recently as 1884 the Republicans still clung to the position formulated in their platform of 1868, that "the Government of the United States should be administered with the strictest economy"; but in 1887 they have entirely abandoned it. Not a word in favor of economy is now ever heard in Republican platforms. Extravagance, thinly veiled under the euphuism of "liberal appropriations," is now the demand—the Ohio platform phrasing it, "liberal pensions to the soldiers and sailors of the Union, adequate appropriations for the improvement of our national waterways, and national aid to education," while the Massachusetts platform puts it thus: "We favor liberal appropriations for the reconstruction of our navy, for coast defences, for internal improvements, and for proper national aid to education; also, adequate pensions for our disabled soldiers and sailors."

The support of extravagance as a national policy in the future is accompanied by the failure of the Republican party longer to advocate a reduction of the tariff. In 1884 its national platform protested against "the burden of unnecessary taxation," which is as heavy now as it was then, and declared that "the Republican party pledges itself to correct the irregularities of the tariff and to reduce the surplus." Now the *Tribune* declares that "no body of citizens anywhere asks for a reduction of the tariff unless in conventions packed by office-holders," and the statement is true as regards Republican conventions. The Ohio platform only recognizes the existence of any surplus, after its "liberal appropriations" are made, as a remote possibility, in which case it favors the abolition of the internal tax upon American-grown tobacco. The Massachusetts platform also regards the existence of any surplus, after its "liberal appropriations" are made, as problematical, and contents itself with the mild suggestion that, "to meet further the question of a Treasury surplus," a reduction of internal-revenue taxation is recommended, and that the time has come for Congress to "carefully consider" the tariff on sugar. The New York and Pennsylvania platforms do not admit the necessity of any reduction of the tariff. Indeed, the plain intention, as it would be the necessary result, of the policy of extravagance is to do away with the surplus produced by "unnecessary taxation" through unnecessary spending, so that there may be no surplus to bother over.

As a part of this policy of extravagance, a dangerous extension of Federal authority is now taken up as a party policy by the Republican managers. Despite the earnest protests of a few Republicans like Senator Hawley against the grossly unconstitutional nature of the proposition, the Republican platforms this year are endorsing the scheme of national aid to education, by which Senator Blair proposes to dispose of $77,000,000 of the surplus. Nor is this all. Here in New York the Republican party proceeds a step further, and asks the general Government to interfere in the matter of State canals in these words: "National support of the Erie Canal, the great highway for the products of the West to the seaboard, is favored and invited."

On all these issues the drift is as strong the other way among the Democrats. While some of the Southerners have been seduced by the $77,000,000 bribe into supporting the Blair bill, the better portion of the party in Congress is against it, and nobody doubts that the Democratic President would veto it as quickly as he did the Texas Seed Bill if it should ever reach him. While a small wing of the Democrats in Congress have hitherto blocked tariff reform by voting with a nearly solid Republican party against it, the bulk of the party is sound on this issue. On the proposition further to extend national authority, as in the Erie Canal aid scheme, the Democrats are as positive as could be wished, their platform declaring that "the State of New York needs and will accept no Federal aid for the improvement or maintenance of its canal system."

It is thus obvious that there is at present a strong drift towards a well defined line of division between the parties on fundamental issues in the campaign of 1888. If the drift continues for twelve months to come, the next Presidential election will be a contest involving great questions of national policy.

THE ASSESSMENT EVIL.

THE annual sale of offices to the highest bidder is now in progress in this city, and we wish very much that public attention could be so concentrated upon the transaction as to create a popular demand for the radical reform of our entire election machinery. There is much talk in the newspapers about various candidates and their strength before the people, but every intelligent student of our system of nomination knows that a controlling test of every candidate is, "Can he pay the assessment?" If he cannot pay it, has he a "hall" that will pay it for him? If the assessment is not forthcoming from some source, the man cannot be nominated, no matter how great his strength may be. If the office to be filled is a Supreme Court judgeship, the price of a nomination ranges from $10,000 to $20,000; if it be a Comptrollership, the price is $10,000; for a united nomination for District Attorney it is $5,000 to each of two "halls"; and for nominations for the minor judgeships, State Senators, and Assemblymen, it ranges from $500 to $10,000.

Unless a candidate for a nomination can pay the price asked, or can get somebody else to pay it for him, he cannot be nominated. This is a scandalous state of affairs, but who is

responsible for it? Not the halls and the politicians, but the people of the city and State. It is the people who, through their law-makers, have failed to make any provision for defraying the expense of printing and distributing the ballots on election day, that are responsible for this annual sale of offices. The State provides for the registration of the vote and for its reception and counting, but makes no provision whatever for the printing and distributing of ballots. What the State has failed to do, the political machines have been built up to do, and as a matter of course they do it in the way best calculated to further their own interests. They meet the expense by a tax levy upon the candidates, and the candidates recoup themselves from the public treasury after election, either by means of exorbitant salaries, or by resorting to some of the methods of indirect pilferings which are so familiar to politicians. If a candidate's assessment is paid by a "hall," he pays back the obligation by quartering a sufficient number of "workers" upon the city pay-rolls, or in other ways enabling them to get living at the city's expense. Every general election in this city, involving the choice of a Mayor and other high officers, requires an assessment fund of at least $400,000. This year it will not be so large, but it will be at least half that sum. Why should the candidates be called upon to pay this tax, which belongs to the city as clearly as the tax for poll clerks and inspectors?

Any man can see that the necessity for such a tax must inevitably affect the character of the candidates. It bars out all but the rich or those who have the support of the "halls." The poor man who stands outside the "halls," and whose personal friends are unable to put up the money for him, has no chance. Even if he were to receive a popular nomination, he could not hope for an election, because there is no existing machinery by which he can get his ballots distributed at the polls. We have a case in point here now. Mr. Nicoll has made a most creditable record as Assistant District Attorney. There is a distinct and gratifying public sentiment in favor of his nomination for the head of the office. But it is a moral impossibility for him to get a regular nomination, and equally a moral impossibility for him to get an election on an irregular nomination. He stands outside the "halls," he is not connected with either of them as "their man," and their leaders will not hear of his candidacy. Suppose, now, that there should be a citizens' movement to take him up, or suppose the Republican Machine were to consent to make him their candidate. If he were the citizens' candidate, an entirely new machine would have to be organized to distribute his ballots on election day. It would cost as much to do this as it has in previous years to run an independent candidate for Mayor—that is, between $60,000 and $100,000. Even with that outlay, the chances would be ten to one that he would be sold out at the polls by the very men who were hired to distribute his ballots; for every one of the 37,000 workers of the various machines, whose business would be at stake in the contest, would be his bitter and most wily enemy from the start. If he were to be the candidate of the Republican Machine, his case would be even more hopeless, for he would be nominated solely to be "sold out."

With an election law providing for the printing and distribution of ballots at the public expense, and allowing the candidacy of any man who could be named for a position by a specified number of citizens, this could all be changed. Mr. Nicoll, or any other capable official, could snap his finger at the "halls," and could take the field as a candidate without submitting to an assessment and without fear of "knifing" at the polls. It is the grossest neglect of our own interests for us as a community to go on year after year under the present system. It is putting a premium upon misgovernment. It bars from office the men most fit, and opens wide the door for dishonesty and extravagance. We cannot get more than two or three honest men out of the thirty-one which represent us at Albany each year. The others buy their nominations for from two to ten times as much as their salaries amount to, and get their money back by selling their votes or by favoring the most vicious kinds of "hall" legislation.

The project for a new election law, which attracted so wide attention through the debates of the Commonwealth Club last winter, is to be revived this year, and we are assured that a carefully prepared measure, applying to the large cities of the entire State, will be presented in the next Legislature soon after it comes together. A more laudable work could not be undertaken, and every citizen, whatever his politics, who has the welfare of popular government at heart, ought to give it his most earnest support.

THE DREAM OF THE COMTE DE PARIS.

THE great vision of the Comte de Paris, the narrative of which he published two or three weeks ago in the form of a manifesto "to the representatives of the Monarchist party in France," may thus be epitomized in his own moods and tenses: France will pass through one of her periodic violent crises. This crisis will be the work of Republicans, when demagogy shall have led to civil strife, or faction attempted the seizing of the supreme power by force. The monarchy will be hailed as the restorer of order and concord. That monarchy will not mark a retrograde step. It will but steady French democracy. It will renew the old pact between the nation and the Capet family. This pact will be recalled into force by a constituent assembly, or by the more solemn agency of a popular vote. As an act for ever, it will be carried out on the basis of universal suffrage. The country will desire a strong government. To fit this the method of election will have to be modified. The King will govern with the concurrence of the Chambers. The Senate will be in part elective, and have equal authority with the Chamber of Deputies. By both royalty will be enlightened and guided, but not enslaved, leaning for support on either the one or the other. The budget, instead of being voted annually, will be an ordinary law. The annual financial project will contain only modifications of it. New taxes will require the consent of the representatives of the nation, who will also have the right of discussing all subjects of national interest and of listening to complaints of abuses. The monarchy—thus the story of the vision goes on—will have to reestablish financial economy, administrative order, and judicial independence. It will have to raise by peaceful means the position of France in Europe, to make her respected and her alliance sought after. The Ministers will in this work be free from the fear of an omnipotent Chamber, as they will be responsible to three branches of legislative power. The monarchy will be strong abroad, and yet able to relieve ruinous military burdens. It will protect all religions, guarantee respect to the clergy, restore the freedom of Christian education, and insure liberty to religious as well as secular institutions. It will raise the discipline of the army. It will study industrial problems, work for the amelioration of the lot of the laboring classes, endeavor to bring about social pacification, leave the new strata of society in the enjoyment of the advantages recently obtained, maintain universal suffrage, and leave unpretending and honest Republican office-holders in their positions. That the King will be the first servant of France is the last word of the dream.

M. Ferry, in a speech on Thursday, declared that the Republic regarded this dream with "contemptuous indifference." If he had said "ignorant indifference," it would doubtless be true of the country at large, because we presume nine-tenths of the provincial voters do not even know who the Comte de Paris is. But he admits that it is not true of the Chambers, for he says it will probably be made a pretext for attacking the Cabinet, and an excuse by some Republicans for deserting their party, and expresses a fear that a ministerial "crisis" may arise out of it. The meaning of this is, that the Cabinet has owed its capacity to hold its own during the past six months to the support of Royalists who had come to the conclusion that the weakness of successive ministries, the facility with which they were overthrown, and the instability thus introduced into the management of public business, constituted a great danger for the country. It is feared that the Comte de Paris's manifesto may have sufficient influence on these men to make them feel that they ought not to do anything further to save the Republic from discredit or danger, and that as soon as they fall away from the Ministry the Radicals will attack it fiercely for ever having had their support.

On the other hand, the manifesto, in adopting the Bonapartist plan of substituting the popular vote for divine right, or "the grace of God," as the source of sovereignty, has profoundly afflicted a large body of the Monarchists, while it has filled Paul de Cassagnac and the other surviving Bonapartists with glee as a grand vindication of the main plank in their own platform. The adoption of it is certainly the most serious step, and at the same time the most absurd, that the head of the house of Bourbon has ever taken, for it is clear that no two things can be more opposed than the hereditary principle and the bestowal of the crown by popular vote. If the Comte de Paris were restored to-morrow by a plébiscite, he might be the choice of the majority as the best man available for the chief magistracy. If his son were to succeed him by inheritance, however,

without obtaining the confirmation of a popular vote, it would be a violation of the principle of popular sovereignty. If, on the other hand, every heir to the throne had to be elected, what would become of the hereditary principle? And then there would be something manifestly absurd in asking people to vote simply to put on the throne a particular man who was always designated beforehand by his father, or grandfather, or uncle.

This curious combination of two irreconcilable theories was a device of Napoleon III., but he had no chance of putting it into practice. Nor would the Comte de Paris have the chance, even if he got back to the throne of his ancestors. If the people are allowed to elect monarchs at all, they cannot be compelled to choose the candidates always from among the members of a particular family, and still less to vote only for the eldest male of a particular family. No such device would ever have been thought of, in fact, in any country in which the monarchical tradition had any strength, and nothing is more certain than that the popular vote cannot in our day make what kings call a king. It can make dictators and Presidents, but it cannot make that curious mediæval magistrate whom people reverence and obey, without reference either to his character or capacity, on simple proof of a certain descent. There is something pathetic in the Comte de Paris's attempt to get the French majority to crown him as a descendant of Louis XIII., for he is an able, conscientious, and honest man, who would make an excellent chief magistrate, but the bulk of Frenchmen have ceased even to understand the royalist claim. They understand the claims of a ruler who has an army at his back, and has "got the drop on them," as they say in the West, or of a ruler whom they have chosen because they consider him the best man for the place; but they do not understand the claims of a man who says they ought to crown and obey him, and pay him a large salary, because he was born of certain parents.

THE ETHICS OF LITERARY CRITICISM.

"WHAT ought a writer to do when another mutilates, falsifies, and radically misrepresents his ideas, and then, after having made him out different from what he is, falls upon him for the purpose of bringing his character under suspicion?"

"What ought we all to do to the end that the effort to get at the truth, the effort which inspires our scientific research, may also at last become the guiding star of our literary criticism?"

These are the two questions to which Wilhelm Wundt, the well-known professor of philosophy, addresses himself in a recent brochure entitled "Zur Moral der literarischen Kritik." The pamphlet is interesting less for its substance of doctrine or for the novelty of its results than for its mode of treatment. The "case," as stated by the pamphleteer and by him made the starting-point of a general discussion which has interested us, is this: In the *Preussische Jahrbücher* for March, 1887, appeared an article by Hugo Sommer upon "Wilhelm Wundt's Ethical Evolutionism." In this essay, written by a professed representative of Christian ethics, the writer commits, as Prof. Wundt pretty conclusively shows, nearly all the gravest sins of which a critic can be guilty. He writes without any adequate knowledge of the book he is criticising; ascribes to his author views which the author not only does not hold, but has been at pains to criticise adversely; adduces expressions of opinion and omits essential qualifications; manufactures quotations, either out of whole cloth or by garbling the text, patching together sentences and phrases that do not belong together, changing important words and interpolating matter of his own; charges his author with ignoring or having no conception of matters which the author has in reality discussed at length; gives, in short, an utterly false and distorted impression of the man he is talking about, and then indulges in intimations calculated to injure him with certain portions of the public.

After having thus set forth the facts, Prof. Wundt invites his assailant to a calm consideration of the case as an ethical problem. Come, he says, let us inquire what a man ought to do who has been treated as you have treated me. Let us reason together, your ethics against mine (Herr Sommer is the author of a book, 'Conscience and Modern Culture'); you who think that the idea of evolution is for ethical purposes empty and worthless, and I who think it of the greatest importance; you who hold in substance that the advent of Christianity said the last word in the process of man's moral improvement, and I who think that it was only the beginning of a new era; you who represent individualism and passive submission to the will of God, and I who stand for evolutionism, and look for improvement in the future through active resistance to evil.

Having thus laid out his work, the author first gives us a chapter entitled "The Test of Individualism," the philosophy of which he reduces to something like this: It is all of no use, things will only go on as they were going before; we should submit to the inevitable and get what comfort we can from the consolations of religion. Prof. Wundt disclaims any intention of casting a stone at the consolations of religion; but making, as he does, a sharp distinction between religious motives and ethical ends, he finds that this philosophy holds out a cheerless prospect. Applied to the case in hand, he argues, it will simply help to bring on an era in which the malicious or ignorant critic shall go on doing his wretched work without let or hindrance, and in which the attacked party shall seem always in the wrong. Such a state of affairs must react unfavorably upon the progress of knowledge, particularly where the critic is an acknowledged authority, and the object of his attentions a writer who has yet to win his spurs. In such cases criticism may do immense harm by chilling the ardor and poisoning the life of those who might otherwise do creditable work. It is of little use, so Prof. Wundt thinks, to say, as is so often said, that if the writer's work really be good, hostile criticism cannot in the long run harm him. This is cold comfort, because we are not here for the long run, and one of the most potent incentives to good work is the approval of contemporaries. Naturally our author concludes at the end of his reflections that the "test of individualism," the philosophy of quietism and passive submission, fails. For ethical purposes, and as applied to the case in hand, it declares its own bankruptcy in advance.

Then we have the "Test of Evolutionism." Under this head the writer glances at the evolution of the literary conscience as we now know it; remarks upon the history of plagiarism, forgery, and such like frauds; also upon piracy, and upon the change that has taken place quite recently in the tone, if not in the spirit, of literary controversy. From all this he concludes both that there has been great improvement in the past, and that this improvement is, in part at least, due to well-directed effort. The final upshot of the matter is, therefore, that it is the duty of a person circumstanced like himself to reply to his critic, expose falsifications, and restore the defaced image of the truth; not, indeed, in the hope of convincing his censor or turning him all at once from the error of his ways, but in the hope of inspiring in him a faint sense of shame, which may perhaps serve to render him a little, even were it but infinitesimally, more careful the next time, and which, being then duly passed down to his children and his children's children, may at last grow into a thrifty and sensitive literary conscience.

As before remarked, there is nothing novel in this conclusion, considered as a practical maxim of conduct. It simply recommends the course which writers are very generally in the habit of pursuing when they deem themselves unfairly treated by a critic who is worth replying to. And evidently, in applying the rule, this last consideration cannot be left out of the account, since, if authors of repute should, out of tender solicitude for their misguided critics and for future generations, undertake to reply to every criticism which seemed to them unjust or something worse, many of them would have little else to do, and original production would languish.

From the above outline, which is tolerably exhaustive, it will be seen that our German philosopher is not a pessimist and not a radical. He sees hope, and sees it this side of the guillotine; and so we venture to commend him to those of our Anglo-Saxon friends who take so dark and even desperate a view of the critic evil. How deeply many people feel on this subject is well known. Of what use is your critic anyway? we hear them asking from time to time. Are not his praise and his blame alike impotent to affect the course of events? Does not the world go on its way precisely as if he had not been? Does not the arbiter of letters at any particular time become, with all his personal rules and standards and decisions, simply a more or less amusing reminiscence for the next generation? What importance can possibly attach to the dicta of a guild whose craft is in such a condition that if you take three representatives of it, all of them apparently equally competent, and submit to them the same work, the work will very likely touch the heart of one, the spleen of another, and leave the third untouched? And then, is it not nobler to have made the poorest original effort than to have written the best imaginable criticism of it? Is not this business of *talking* about what other people have *done*, a tiresome and foolish business, which it would be well to do away with?

Questions of this kind are most likely to arise when the mind is overheated and in a state of ferment; and for the purpose of cooling and clarifying the mind, nothing is better than the study of history. To the mind thus calmed, it can but seem rather foolish to regard anybody's opinion as worthless simply because the next generation has no need of it. The opinions of critics about books are, in the process of the suns, neither more nor less nugatory than the opinions of other people about other subjects. The opinions are themselves a part of the historical process. Nor is it very philosophical to try to cast contempt upon the critic as a parasite, a being who lives and thrives upon what is given him by others. We are all of us the children of those that have gone before, and criticism at its best is a fine art which is just as truly creative as any other art, and is also, like other fine arts, capable of affording a high kind of intellectual enjoyment. This is the right point of view from which to look at the subject.

But when is criticism at its best, and what is to be done to better it? It is of no use to indulge in outbursts of despair which hint at no other

remedy than the total abolition of the critic tribe. Abolition is impracticable. The critic is here, and he can neither be legislated out of existence nor led up by remonstrance to the point of self-extinction. The only thing to do is to improve him by cultivation. Among practical suggestions looking to this end, the favorite one at the present day is to convert him into a reporter, whose business it shall be to depict, and if necessary explain, but not to pass judgment. Now there is undoubtedly some plausibility in such a recommendation, from the very fact that the world seems to be actually moving in that direction. Much of what passes for the best criticism in our day is little else than portraiture and what is called historical interpretation. Taking the literary world as a whole, and allowing for occasional exceptions, which may be scientifically classed as atavisms, we are certainly drifting away from that dogmatic and self-assertive *Besserwisserei* which our fathers looked upon as the perfection of the art critical. And so it is perhaps natural that we should allow the imagination to range forward to the time when this process of evolution shall have been completed, and a literary millennium shall have arrived in which the critic, and even his humble cousin the reviewer, shall appear as a simple reporter engaged in telling the public, as gracefully and as urbanely as possible, what certain authors are and how they came to be so, and studiously keeping aloof from the delicate questions of what the said authors ought to be and how they might improve themselves.

But really we cannot persuade ourselves that this dream is likely to be realized. The recent past has been characterized by a marvellous awakening of the scientific historical sense. The best minds all at once found before them a new and enormous task in the effort to understand the course of intellectual phenomena, and this task has proved vastly more captivating than that of dealing out praise and blame. But the scientific work is only of the first importance; it is not everything. When it is done, and even while it is doing, there is everywhere room for personal opinions, and there is no occasion for keeping these opinions back. They may become antiquated in a decade, but none the less they are, as was remarked before, a part of the historical process, and it is the resultant of their clashing which largely creates what we call the historical perspective. They will not affect the past, yet they will, though perhaps in unseen ways, affect the future. In dealing with contemporary work, moreover, a critic or a reviewer may always indulge in a reasonable hope that his opinion, if capable and honest and based on stated grounds, may be at once and directly serviceable to the author criticised as well as instructive to the public at large. The world is full of writers who do not hesitate to acknowledge their indebtedness to their critics.

In short, the best criticism will continue to be hereafter, as it has been heretofore, the candid and well-expressed judgment of a good judge. It is not the critic's opinions that are objectionable, but his dishonest or ignorant opinions, or perhaps his offensive way of expressing himself. To correct his dishonesty he needs more conscience, and here, as Wundt suggests, an occasional flagellation may be useful, even if the remedy act but slowly. To correct his ignorance he needs knowledge, which comes of research. To improve his mode of expressing himself he needs many things, but chiefly, perhaps—well, to avoid a simple repetition of Mr. Matthew Arnold's familiar prescription, let us say that he needs—horizon. It may be that in the very plenitude of his knowledge, and with all his devotion to truth, he will fail occasionally to lay hold of and take home what there is of truth in these words of Wilhelm Scherer, himself a great scholar as well as a very capable critic:

"Scholarship sometimes renders men proud, self-sufficient, jealous, and cantankerous. It is apt to destroy plain common sense and clearness of vision. It propagates intellectual subtleties and its own artificial taste. It has poisoned entire literary epochs by its boastful assumption of superiority and its conceited exclusiveness. It creates false standards for men, and, employing the delusive name of culture, it estimates a quantity of some particular kind of information at a higher value than the old mysterious power of the heart."

GENERAL IMPRESSIONS OF AN IRISHMAN IN ENGLAND.

AMBLESIDE, August 28, 1887.

IT is difficult to exaggerate the interests of travel in England to an English-speaking person of mature age, whose mind is open to unbiassed impressions. The thorn in the flesh which most Irishmen have hitherto carried about with them, and which naturally rankled most when in England, is being rapidly removed by the good sense of the English masses aroused by the present agitation, and an Irishman comes here now in a state of mind to appreciate and enjoy as he never could before. Here he finds a perfected civilization, order, progress. At home, little is settled or determined. Ireland is, as it were, a country in which a harrow had been drawn over the land and over the surface of society every few generations. Most that is old is crumbling into ruin or rotting in decay—most, save the vigorous life of the Roman Catholic Church, now asserting itself in all directions under the perfect religious equality we enjoy.

These facts were renewedly and painfully borne in on me some weeks ago by a visit to old haunts in the County of Wexford—one of the most interesting counties in Ireland, strangely neglected by ordinary tourists. The land itself looked lovelier than ever, the people (those that remain) better off than of yore; but the hand of ruin was apparent everywhere. The bad old order of things has passed away; a new has not shaped itself. On all hands appeared neglected and deserted farms, crumbling homesteads, deserted highways. No one that remembered the district forty-five years ago could shut his eyes to the change that has passed over it. Changes are most perceptible in localities visited at long intervals. Perhaps it was even more apparent to one brought up a member of the Society of Friends, who found the meeting-houses of his youth deserted or in ruins, the graveyards covered with weeds, the sect almost unknown in a portion of the country once largely inhabited by its votaries.

Society has not as yet found its level and its basis in Ireland. In my opinion Ireland was behind the rest of western Europe when it was occupied by the Anglo-Normans. It was not their interest there to settle down as they settled down in England. They broke up what remained of the old Celtic civilization, they effectually arrested its possible growth without implanting a civilization of their own. The castles and churches they built over the length and breadth of the land were, for the most part, poor imitations of the piles with which they beautified England, and which have remained the pride and glory of succeeding generations. The resources of the country were from the first applied to the building up of another nation. Then came the Reformation. The Irish people held on to the old religion. Their conquerors, who adopted the reformed, were strong enough to prevent them from using the church buildings which they themselves were not numerous enough to occupy. These buildings went to decay. The wars of the seventeenth century did for the residences of the upper classes what the oppressions of the Tudors had done for ecclesiastical property. The Cromwellian and Williamite settlers, among whom the land was parcelled out, then built towns and villages and country residences. The people emerged from the bogs and mountains and from beyond the Shannon, erected their mud hovels, and commenced the reclamation of the country for which they and their descendants had to pay in increased rents. The penal laws laid their heavy hand on Ireland. The jealousy of English competitors threw its manufactories into ruins. A brighter day again appeared dawning. The Union again threw everything into confusion. Steady progress was impossible in a society which did not rest upon the good-will of the masses. Ireland became the plaything of English parties, the sport of political experimenters. And so it has come to pass that as the land is covered with the remains of the raths and stone monuments of pagan times, so is it dotted with the ruins of castles and churches, and of the mansions and manufactories and cottages which each succeeding experiment and system has called into being and cast into decay; and this material ruin is but a type of the social and political chaos which exists. In Ireland one sees but the broken, elementary fragments of that high form of civilization which exists in England, and which doubtless it was the desire of many of her statesmen and many of the bands of settlers that crossed the Channel to implant in the sister island.

I have every confidence in our future. In many respects, the social order that will be evolved by Ireland will be different from that existing here. What forms it will take, it is impossible to predicate. In the spiritual nature and many noble characteristics of our people, left free to develop themselves under self-government, amid the difficulties and breezy influences of competition with other peoples, which cannot be evaded in the present age, we surely have grounds to hope for something high and good.

Travel where you will in England, unless in the slums of her great cities, you feel that you are in a long-settled land, one of "old renown," where freedom has "slowly broadened down from precedent to precedent." And if you study the criminal and educational statistics, look at the Board schools everywhere, and can compare the appearance and demeanor of the masses with what they were forty or even twenty years ago, you will realize the immense strides she has of late made in civilization, and the greater possibilities of the future. At the same time, we must guard against being too much carried away by outward appearances. It is out of these lovely old villages, with their abounding flowers, bright window-panes, snowy curtains, and spotless doorsteps; from out of the shadow of these cathedral closes, fresh from the influences of church, and grammar and Sunday-schools, and a thousand ennobling and hallowed associations, have come the politicians and soldiers, ready for any unjust and bloody work abroad, among subject races and peoples of lesser intelligence, when the supposed material interests of England were concerned. And those intimately acquainted with the social life of the masses in Ireland and in England will tell us that beneath all this fair exterior there are at work debasing influences and characteristics existent in but a small degree in Ireland, under all our discouraging externals. Nevertheless, we must not compare the English people with our ideal of what a great people should be, and what doubtless they will yet attain to, but with the spectacle presented by other equally great and vigorous peoples in the past and present who have had equal opportunities of influencing the world for good and evil. And we in Ireland shall make a great mistake if we let self-satisfaction at certain qualities upon which we justly

pride ourselves, blind us to the incontestable superiority of the English in many respects in which it is within our power to imitate them. I look forward to that as being one of the greatest benefits that will be conferred upon us by the withdrawal of English interference in Irish local affairs—that we shall then be ready to admire and imitate all that is great and good and admirable in them.

Travelling is cheaper here than in Ireland. The third-class carriages attached even to nearly all express trains are as comfortable, and for the most part, more comfortable, than most of our second-class. We have travelled by none other, and have met but cleanly and decent people. And here smoking and its unpleasant concomitants are confined to special compartments. In personal cleanliness the masses of the English people are as yet infinitely before ours. In Ireland there are good (in the British, not in your or the Swiss sense) first-class hotels in the larger towns and most of the tourist centres. It is never safe, without special information, to try a second-class establishment. Generally speaking, our hotel accommodation, often dear, is of the worst quality. Lodgings for short periods are not to be had; and for long periods, of a satisfactory kind, difficult to procure. Unless we mend our practice in these respects, we shall, with all our magnificent scenery and charming health resorts, lose much of the tourist custom even of our own people. Everywhere in England we have found clean and cheap second-class hotels. The increase of the number of comfortable temperance hotels and refreshment rooms is significant of the increase of temperance habits among the people. For a stay of three or four days, as at Oxford, Cambridge, and here, we have without difficulty procured cleanly and comfortable lodgings for a very moderate charge. One cannot but admire the self-respect and decency of these English lodging-house keepers. The results of their incessant striving are delightful; but it may be they are attained at almost too great wear and tear of body and mind. They look more anxious and worn and old, according to their years, than those of the same class with us. Life must be one long toil. Have we a right to expect such results at such a cost? Is there not something in the plan of life of the Italians and French, and even of many of our people, more in accordance with reason and nature? Take our landlady here. We were never in a more exquisitely clean little house. She is at all times correspondingly neat in person. The kitchen is like a parlor. The fuchsias and geraniums in the windows would do credit to many a greenhouse. The little garden is full of lovely flowers. The husband is a journeyman shoemaker. He cleans the boots and trims the lamps. Beyond this, she appears to do all the work. This Sunday morning she was on her knees washing out the flagway in front before breakfast. Her three little girls have just passed out to Sunday-school as fresh-looking and prettily dressed as need be. There is another lodger. During winter, she tells us, when there are no tourists, she takes in plain sewing.

Not alone in railways and hotels, but in many extras, is travelling cheaper here. Much wear and tear and annoyance is avoided, in that you can generally ascertain the full cost of everything beforehand. Our experiences upon this tour confirm us in the conviction that the English are, mainly from their past history and present circumstances, a more open and confiding people than we are.

These considerations forced themselves upon me as I sat down intending to give some of my impressions regarding a few of the less generally visited, and yet deeply interesting, localities in England. Such I must now reserve for a future occasion. The scenery of this lake district surprises and delights us. It is more like Switzerland than any place we have ever seen out of Switzerland. True, there are not snow-peaks or glaciers; but how many of the most crowded resorts in Switzerland are out of sight thereof. Scenery depends more upon the balance and proportion of its component parts than upon actual measurement, and such balanced proportion is here in a high degree. D. B.

THE PARIS EXPOSITION OF AGRICULTURE AND GENERAL INSECTOLOGY.

PARIS, September 8, 1887.

WHILE the time-honored orange trees of the garden of the Tuileries are still left out to profit by the autumn sun, their house, situated on the terrace bordered by the Seine, has been loaned to the Society of Agriculture and Insectology for the purpose of an exhibition of insects hurtful and useful to natural products. This is the seventh exhibition since the organization of the Society. Four years have elapsed since the last one took place in one of the obscure rooms of the Palais de l'Industrie, which attracted little notice and few visitors. Great improvement is remarked this year in the interest of the public as well as in the attendance. This is due to other causes than the more agreeable site of the exhibition. Firstly, the exhibits are much more complete, which is partly owing to the increasing zeal of certain country schoolmasters, who of late years have shown themselves desirous of becoming savants, and who have contributed largely to the most interesting specimens of the exhibition. Then the public has become more interested, and begins to understand that insectology does not mean a collection of *bugs* with high-sounding names without appropriateness.

A striking feature of this exhibition, and the *point de mire* of every visitor, is certain collections accompanied by voluminous copybooks in which all the families of insects exhibited are duly classed and registered; and as these copybooks are the result of the researches of very young school children, they produce a profound impression and arrest respectful attention. Some of these collections—according to a distinguished naturalist with whom I talked—are far above the learned amateur, and deserve a word of homage from the gravest savant. The patient schoolmaster who imparts to his pupils, mostly destined to become farmers, the practical knowledge of natural history by the interesting method of illustrating thus their own researches, deserves the rank of a naturalist along with the great ones. It is pleasant to remark the appreciation of these faithful men by the French Government. To reward and encourage teachers showing a disposition for agriculture, the department to which they belong will send them, free of expense, for a year to an agricultural school or a training farm before being placed in charge of the country class they are to direct. It is easy to see what services they will be able to render in agricultural districts in primary teaching.

But to return to the collections displayed under the name of teacher and school: those of the schools of Toury and St.-Cyr-sous-Dourdan, and that of the pupils of M. Cazet from the Côte-d'Or, are really above par. The classification adopted by the latter is the double division of "useful" and "destructive," which, if a variation of the order followed in natural history, is a very harmless one, and helps the not over-learned visitor to understand more readily the contents of the glass cases thus labelled. It will please him to be able to comprehend at a single glance those insects destructive or protective of man's hopes. Thus he will see that the family of *Carabides* are labelled "useful" because they feed on caterpillars, larvæ, and slugs; while with another glance at the cases labelled "destructive," he will recognize the *Sylpha obscura*, enemy of beet-roots, the *Sitophilus cossonus*, the damager of wheat, or the *Zabrus gibbus*, that dwells in the marrow of the stem of wheat.

I must say that in a great measure it seems to have been a point of endeavor with the collectors to present the insects in what might be called a picturesque and illustrative scene. Such is the collection of M. Falleu, who shows pieces of natural wood on which, or in which, the destroying insects are at work. The inroads of the larvæ of the *Cossus* on the poplar, the tunnels of the *Cerambyx Cerdo* in the cherry tree, and the scars of the *Cryptorhyndus Lapathi* in the oak, are vivid reminders of what can arrest the flourishing growth of trees. One forgets to be grateful to the woodpecker who, when accomplishing his mission of preservation, augments the damage with the augur-like hole he bores in the tree. In that same department, however, I noticed a very simple and efficient remedy to rescue a tree, promising to be valuable either for timber or fruit, when attacked by those insects. A small wad of cotton steeped in unclarified benzoin is forced, with the aid of a small wire, into the hole, which is stopped with a cap of cement to prevent contact with air.

The Savard collection attracts great attention on account of that picturesqueness of presentation to which I have alluded. Only it has the fault of not illustrating direct utility: too many of the specimens are borrowed from Asia and Africa. So the useful galls productive of dyes are not quite what would greatly enrich the knowledge of the young French cultivator. This leads us to mention as a typical and unique work the collection of M. Daguin, which, under the label of his Department, Haute-Marne, is a perfect monument of the fauna of this district. Every specimen has been his own capture, and, heedless of the numerous curiosities he often met in neighboring districts, he resisted adding them to this collection, which is a perfect guide-book for the agriculturist who operates in this Department. All are there—coleoptera, lepidoptera, othoptera, hemiptera—besides molluscs. This collection bears an uncommonly scientific aspect, not only from its exclusiveness, but because there is a catalogue adjoined which gives, independently of the Latin or dictionary names, the vulgar appellation of the insects—an appellation as indispensable to make the insects recognizable to the countryman as the notes indicative of habits.

There are other collections seeming more important—that of M. J. H. Menier, for instance; but I doubt if they impress the connoisseurs with such respect as the one from the Haute-Marne. Dr. Trouessart, a well-known correspondent of American scientific papers, sends a modest glass case, flanked by two ponderous portfolios of text, to initiate the real gourmet into that as yet so little observed and so little talked of variety of Acarus called the *Sarcoptidæ*, the parasite of fowls.

I may safely say that admiration is complete in the chapter of silk-worms. This may be a little unfair, as many of them are alive and at work, and for that reason excite more interest. Those in glass cases, in every grade of transition and of every variety of family, by the side of their spoils, form a museum next to which even the lively bees have no chance.

Of these much has been said in *conférences* which take place every other day in a private room next to the exhibition hall. These lectures are the complement, or indispensable embroidery, of what one sees. The next topics announced are the cockchafer, the classification of insects according to the unexplained law of Linnæus, and

the phylloxera! I had the good luck, on the day of my visit to the exhibition, to be present at an altercation—if I may use that word—which shows how far one may still be from certitude in the means of combating this formidable foe, and how irascible those sternly interested in the subject may become when suspecting that a rival is closer to the real remedy. Let the reader draw his own conclusion. I will simply ask leave to call his attention to one of the tables in the exhibition, which, instead of supporting glass cases, is ornamented with three pairs of very fine china vases filled with strawberry leaves. On close inspection the strawberry leaves bear the stains indicative of the phylloxera. I had just stopped to consider the tainted foliage when a gentleman near me remarked: "Ah, the phylloxera!" "Yes, sir," promptly answered an elderly lady who was sitting near, "the phylloxera on the ananas strawberry, where the trombidium dwells ready to kill it." The gentleman looked somewhat astonished. "The trombidium is his natural foe. Each *puceron* has its parasite; the trombidium is that of the phylloxera." "But, madame," said very calmly the gentleman," it is recognized that the phylloxera is also eaten by the *Tyrophylus phylloxeræ*, which Dr. Charles Riley, the American entomologist, discovered and gave specimens of to M. Planchon to experiment with on French vineyards afflicted with phylloxera. This was in 1873. You know with what results." The lady very authoritatively answered that the tyrophylus was an acarus and the trombidium an arachnid. She pointed to the small diagram of the trombidium, which clearly outlined a spider. After this the gentleman had but to ask what relation there might exist between the trombidium which inhabits the strawberry and the phylloxera which dwells on the root of the vine.

I will repeat the theory of Mme. de Bompar, which is beginning to receive more attention. In 1852, after the declaration of free trade, the farmers transformed their culture and planted vines. Belonging to a vine-growing district, Mme. de Bompar noticed that vineyards where the strawberry was planted with the vine did not suffer from phylloxera. From the remotest antiquity, strawberry intermixed with the vine is recorded; but in those districts which changed their mode of culture, they omitted to plant the strawberry, and in due time all were attacked. She strengthened her observation by canvassing numerous municipalities, writing letters to the mayors, who invariably replied that where the strawberry was planted phylloxera was unknown. Further, she saw that in Corsica, Italy, and parts of Switzerland, where strawberries grew with the vines (or even in neighboring fields), there was no phylloxera. But it was not until 1879 that she discovered the trombidium on a strawberry leaf, and in 1882 the winged phylloxera on the strawberry leaf also. Previously to this, she had placed two or three trombidiums on a vine root severely attacked by phylloxera, but her microscope was not of sufficient force to allow her to watch satisfactorily the result. Under a more powerful lens, she discovered that the trombidium is wonderfully efficient in killing the phylloxera—ten-fold swifter than the tyrophylus of Dr. Riley, since it does not eat, but sucks the coloring matter of the *puceron*. Experiment proves that in twenty seconds he pierces fifty phylloxera!

The gentleman asked, with despairing civility, if the lady was well acquainted with the habits of the phylloxera. "Enough to state that the ananas strawberry rids the vine of its presence," she answered, "in this way: The strawberry harbors the trombidium, which weaves its meshes on the fuzzy side of the leaf. The phylloxera, when full grown, prefers this tender leafage to the grapevine, and in autumn ascends the strawberry to deposit the winter egg. The trombidium sucks his coloring matter, and thereby kills it. As for those larvæ which have escaped the enemy and descended to the roots of the vine, they are pursued under ground by the trombidium in June, July, and August, as he seeks them for food. In September the phylloxera, full grown, reascends on the new leaves of the strawberry, and about the same time the trombidium reappears also. Thus vine and strawberry have the same *puceron*, and it is on the leaf of the strawberry that nature has taught him to deposit his egg, and not on the stem of the vine."

This theory widened the gulf between the two searchers. The gentleman, who advocated the Algerian remedy—that of drenching with poison a plant when a prey to phylloxera—was not to be convinced that the enemy was first to be attacked above ground, especially by an agent that has no relation with chemistry. Words of incredulity on one side were combated with very earnest belief in the laws of elimination; and the lady, disdaining to bring forth other arguments, concluded: "Ah! I see what you are: you are an inventor."

By the way, it is noticeable that few inventors exhibit at the Exposition means of combating destructive insects. A number of successful experiments, dating from 1887, are advertised by the Compagnie Phylloxérique Française. A chemist of Versailles shows how sulphide of carbon can be dosed and distributed in the ground, without loss or danger in manipulation, through the medium of capsules weighing five, ten, or twenty-five grammes. For horticulture and greenhouses, a liquid, of which ten centilitres are put in a litre of water, sprinkled over the plants with an atomizer, is an easy and cheap remedy against hurtful insects. For fruit trees, a preparation to be applied with a brush rids them of the *lanigère*, so destructive, especially to the apple tree. Besides these, a fertilizer, with a basis of mineral tar, which has been applied in a public garden at Marseilles at the rate of two kilogrammes per square yard, has renovated lawns, shrubbery, and flower-beds which for years had been abandoned to the moles. And, lastly, a preparation christened Bromine, hitherto experimented with in market gardening, is, in a new form, to be applied to agriculture. This will be profitably combined with superphosphates without much increasing the price.

In the midst of the scientific investigations of man, we recall what the poet Lamartine said, that "an insect is worth a world." Let those who seek the remedy for evil remember this. Research has proved that in every country each species has the same duties—*similia cum similibus officiis*. Then, does it not seem that the smallest agent—if brought again where nature willed it—would soon restore those disorganized laws of equilibrium that have for years baffled man's calculations? L.

Correspondence.

THE TARIFF ON BOOKS.

To the Editor of The Nation:

Sir: The sentiments expressed by your correspondent with regard to the tariff on foreign books of a learned character will meet with the hearty approval of all scholars, as well as of those anxious for the advancement of scholarship in this country. It is a well-known fact that learning can only flourish where learning is encouraged. In Europe it is the governments that uphold the great institutions of learning. With us, what encouragement has been given to science and art has come almost exclusively from private sources, while the Government has put an obstacle in the way which is more serious than may appear on the surface, by taxing unduly those who choose to devote themselves to pursuits which, from a material point of view, are most unprofitable.

Let me give an illustration to show how unjust it is, besides, to tax imported books according to the *purchasing* price. Some months ago I received from Germany a book of 118 pages, on which I had to pay a duty of $1.75. The book was printed, for the greater part, in plain Latin characters, and the only unusual feature about it was that it was quite liberally interspersed with cuneiform (and some Hebrew) characters, which could not, however, have added very materially to the expense of printing. Ordinarily, such a book would be published in Germany at a cost of $1.50, but this book could not be purchased for less than $7. Why? Simply because the sale of the book was necessarily a very limited one, and the publisher was obliged to cover his expenses with, say, seventy-five or a hundred copies. But is that a sufficient reason for the Government to make me a double sufferer, except on the principle that a greater folly deserves a still greater punishment?

In conclusion, permit me to make a practical suggestion. The Association for the Advancement of Science, at its recent meeting in New York, passed a resolution in favor of memorializing Congress on the very same subject brought forward by your correspondent. Would it not be timely for other literary and scientific bodies to endorse officially the action of the A. A. A. S., and thus strengthen a cause which can only be won by united action?—Very respectfully,

Morris Jastrow, Jr.

University of Pennsylvania, October 2, 1887.

THE NATIONAL BANKS.

To the Editor of The Nation:

Sir: Apropos of the fate of the national banks, a feasible plan has occurred to me for continuing them with something of the security they at present enjoy. The method was suggested to me last winter by a study of the old State banks, in connection with our present system, but I did not feel confident of its merits. This summer I casually mentioned it to two bankers, who were impressed with its possibilities, and I venture to reproduce it here for consideration and criticism, hoping that some one may find it worthy either of approval or of condemnation.

The method was suggested by the "New York system," as it is generally known, and which has some claim to the parentage of the national banks. That system required a deposit of bonds, stocks, etc., to secure the redemption of the paper issued. But it is notorious that this arrangement was almost as bad a failure as the one it supplanted, although designed to correct or prevent the evil so successfully overcome by the present system. The national debt will not much longer allow the extension, and its liquidation will prevent the continuance, of the national banks, so that in a near future we must face the problem of reorganizing the banking system of the country in some way to preserve the admirable efficiency of the present system and the stability of the currency. When the national debt can no longer be depended upon for security, we suggest the old "New York system," but with three important modifications, which are designed to remove the defects incident to its former application. They are:

(1.) The limitation of its control to the Federal Government.

(2.) Redemption and issue at specified periods, according to the changes in the market value of the securities on deposit. Redemption must be compulsory in case of a decline in values, but

new emissions may be left to the pleasure of the bank, although carefully regulated by law.

(3.) In cases of insolvency, advanced redemption by the United States Treasury, and sale of securities under circumstances which will prevent loss by decline in their value.

The first of these conditions needs no comment. As to the second, I have not seen anywhere that the old "New York system" made any provisions against the contingency of loss by a fall in the value of the security. The condition requiring at least a portion of the issue to be redeemed at special periods, if the value of the securities has declined, will keep the issue within the limits of the value of the deposit, and loss may be as successfully prevented as at present. In the third case, when insolvency occurs, the advanced redemption by the Treasury, with a loan from itself, will prevent that decline in the value of the securities which is incidental to a sudden and enforced sale.

You, Mr. Editor, may be able to discover defects in the method above proposed, and, if so, I hope they will be pointed out. It is, perhaps, anticipating a discussion of the problem to mention it at the present time; but the favorable reception given the method by the two bankers referred to is the apology for bringing it into wider notice. Carlyle somewhere remarks that a man's opinion gains infinitely when he gets some one to agree with him; so I wish to know whether I can have a vote of confidence or not.

J. H. HYSLOP.

NEW YORK CITY, September 26, 1887.

[The question here raised is mainly this: Will the United States assume the duty of selecting, buying, and selling the stocks or bonds that are to take the place of its own bonds as security for the circulating notes of the national banks, and will the United States, having such securities in its hands, then guarantee the notes? It is safe to say that the public will never agree to any national system that does not include a Government guarantee of everything circulating as money. There is room for considerable differences of opinion when it is proposed to make Treasury officers the umpires between different classes of securities offered for sale in the market. The opportunities for favoritism (for one thing) would be enormous. But as the question is not now exactly a pressing one, we do not examine it at all points.—ED. NATION.]

INFANT DESIGN.

TO THE EDITOR OF THE NATION:

SIR: You were kind enough last year to call attention to an article of mine on Art in the Nursery, printed in *Babyhood*. I purpose making a serious and somewhat elaborate study into this subject, with reference to the philosophy of art development, and shall be glad if parents or guardians, having charge of children below five years of age who may show a tendency to the use of the pencil, will send me any drawings by their charges, accompanied by notes of age, sex, occupation of parents, if any, and what cases of artistic activity may have occurred in their ancestry. Only the entirely spontaneous efforts of the little ones will be of any use to me, and any form of instruction by elder persons will vitiate the conclusions I might draw from the work. As the object is not to discover the presence of great artistic promise, but to study the growth of baby observation and communication of concrete ideas, the work of children old enough to have been influenced by the art work of their adult friends will be useless to me.

Any such drawings may be sent to me in care of the *Nation* within the next six months, and will be gratefully received. It is not of importance that they should be remarkable in any sense as art, but simply the unstimulated result of child thought; in some cases the rudest may be of the greatest value to me.—Yours truly,

W. J. STILLMAN.

LAMENNAIS VS. McGLYNN.

TO THE EDITOR OF THE NATION:

SIR: Although I am not a member of the Anti-Poverty Society, yet I am a well-wisher of it. I am a well-wisher of it because I hope to benefit by the triumph of its principles. I have read, and tried to make my own, the theories of George and McGlynn, but I find that I cannot accept them. I find my objections to the Anti-Poverty theories best expressed in the language of Lamennais:

"The Son of Man became poor in order to teach you how to support poverty.

"It is not that poverty comes from God, but it is a consequence of the corruption and evil lusts of men; and therefore will there always be some poor.

"Poverty is the daughter of sin, whose germ is in every man; and of servitude, whose germ is in every society.

"There will always be some poor, because man will never destroy the sin that is within him.

"There will always be less poor, because little by little servitude will disappear from society.

"Do you desire to labor to destroy poverty? Then labor to destroy sin, first in yourself, then in others, and thus servitude in society.

"It is not by taking that which is another's that poverty can be destroyed; for how, by making some poor, will the number of the poor be lessened?

"Each has the right to preserve that which he has, without which no one would longer be able to possess anything.

"But each has the right to acquire by his labor that which he has not, and without which poverty would be eternal." Y.

A CONTRAST.

TO THE EDITOR OF THE NATION:

SIR: The return of the battle flag of the Sixteenth Connecticut Volunteers by Col. Thomas G. Jones recalls to my mind an incident which occurred at a soldiers' reunion at Marietta, Ohio, some years ago. Col. Jones was present, and was called upon by the crowd for a speech. He came forward, and in a few moments' talk expressed his sincerity in entering the Confederate service, his thorough acquiescence in the results of the war, and his love for the reunited country and for his former antagonists, in such a straightforward, manly way as to win the hearty applause of almost the entire audience.

Soon after, a man who had been an officer in the Northern Army, but whose name and rank I cannot now remember, was called for and made a speech even more conspicuous for sectionalism and bitterness than that of Col. Jones's for its patriotism and brotherly love. The way in which the two speeches were received showed plainly that the sympathy of the audience was with Col. Jones and the Union.

If partisan prejudice could be eliminated, there is not much doubt that patriotism would be generally recognized, from whatever source it came, and that disloyalty to a genuine Union of sentiment would be severely condemned, even in men who fought to preserve legal Union.

OCTOBER 1, 1887.

THE SCIENTIFIC REVIVAL IN THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: Whatever else may be the signs of improvement in the South, there is a certain progress now going on in the direction of teaching the natural sciences in the colleges that bids fair to do more for the true intellectual advancement which must accompany the industrial than any other factor.

In several of the States the question of elementary physiology and hygiene in the public schools has come before the Legislature this year, and, though generally decided adversely, opinion in its favor is growing, and it is a most active leaven. In the colleges there is a great advancement, and technical studies and natural history may be said to be enjoying a "boom." The University of North Carolina has a small but modern natural-history department. The University of Tennessee is also waking up in this respect. The Mississippi State Agricultural College is exceptionally modern, and the Arkansas State Industrial University has recently added a competent naturalist to its faculty. Tulane University of New Orleans is also paying attention to biologic studies. The most interesting struggle, however, is in Texas, where, owing to an inexplicable tangle, we have the spectacle of the most progressive university in the South handicapped by the most unreasonable embarrassments—the rivalry of another State institution and many sectarian colleges. But there is no room to doubt that in a few years the struggle will end in the University being unfettered, and becoming a centre from which will radiate much intelligent thought.

One great obstacle to biologic teaching in the South—opposition to the importation of teachers from the North—is being in part obviated by the fact that young Southerners are beginning to be found who have been abroad or North; and for all these who are fitted good places are made. But there is room for hundreds more than those who now go beyond their narrow environment for educational advantages.

Several of the Southern States are endeavoring to secure scientific investigation of their resources and natural possibilities, and it can be said to the credit of Arkansas, generally reputed to be one of the most backward of the group, that she has spontaneously established a geological survey, and that her Governor has had the courage, despite opposition, to appoint non-residents of education and ability to the positions, rather than the clamorous local knights of the divining rod. It may be said that nearly all the appointees were Southern young men who have sought a foreign education and obtained prominence in their profession in other regions.

I believe this scientific revival will be the salvation of the South, and have much hopes for its future. R. T. H.

ARKADELPHIA, ARK., September 23, 1887.

THE SHAME OF IT.

TO THE EDITOR OF THE NATION:

SIR: To one who has had an opportunity to watch the men who participated in the late reunion of the Grand Army in this city, nothing is more remarkable than the sober, self-reliant dignity of their countenances, unless it be the unanimity with which these same sturdy veterans voted for the Pauper Pension Bill. Presumptively, these men represented the best element of American life. They fought for the preservation of the Union at every sacrifice of personal interest, and, after finishing the great work, resumed their former pursuits, apparently content with the glory of having saved the country. The disinterested zeal which then inspired them seems still to inspire them. No one can doubt this who has watched the long line of proud men who defiled through the muddy streets of St. Louis in a pouring rain, hoarsely singing the old tunes which commemorate their victories.

These same men crowded into a hall decorated

with the flags of the Union, and, without a dissenting voice, voted to ask the Government for $12 a month for every man who served in the war, now or hereafter unfit for labor, whether or not the incapacity is due to his improvidence or even vice. Such rapacity, in such a body, is without example in the history of the country, and is another proof of the widespread demoralization which has succeeded the war. It is unpleasant to recall the eagerness with which Southern members of Congress caballed to secure appropriations from the general Government for unimprovable "water-ways," after having fought for State sovereignty and State responsibility, or to recall the unanimity with which certain Southern States are now seeking aid from the same source for their public schools; but surely the fact which an American will hereafter recall with greatest shame is the recent action of the Grand Army of the Republic.

PRO PATRIA.

ST. LOUIS, October 1, 1887.

IN THE SADDLE.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for August 4 was a very readable article entitled "Holiday Equestrians," in which some good points are made by the writer that every rider will appreciate. Permit me, however, to take exception to some of the statements made by the writer of this article, who is evidently accustomed to the saddle.

In the first place, in speaking of the difference between the seat of the cow-boy and that of the Cossack or Turcoman, he says, "All three are superb riders." There is perhaps no more common error concerning the West than the popular idea that the cow-boy is a good rider. I know nothing of the Asiatic seat, but many years among the cow-boys have long since proved to me that they are far from being "superb" riders, or even good riders in the proper acceptation of that term. Of course, among them you do find good riders, and in such a party as Buffalo Bill's combination there are riders who are very expert. But even among these I think a close observer will discover that the success of the rider is due as much to the merits of the horse as to those of the rider. There is not, perhaps, in this State a mining camp or prairie town which could not produce better riders than you will find on any of the ranges between the Rio Grande and the Platte.

And again, in speaking of riding in an English saddle, the writer properly says that the principle of "rising" in the trot is to relieve the horse; but he adds, "He keeps his weight steady on the horse by throwing it into his stirrups." Every "park rider" accustomed to an English saddle will agree with me, I think, in saying that *as little weight as possible should be thrown into the stirrups.* With the stirrups of a proper length, the feet well thrust in, and the knees clamped tight against the sides of the "pig-skin," the rider rises, naturally and easy, not from the stirrup, but from the knee. The horse is thus relieved from all weight, as it is distributed down the sides; and the rider secures a firmness of seat which he can get in no other way. The knee is the pivotal point; and the knee-grasp is the great desideratum in a seat on the "pig-skin."

HORACE VAN TRUMP.

DENVER, COL., September 27, 1887.

DEN AND BOUDOIR.

TO THE EDITOR OF THE NATION:

SIR: I have just received your paper of August 11, in which "M. N. S." asks that "equal rights" be accorded to men in the furnishing of the parlor, assuming that, with the disappearance of ribbons and meaningless knick-knacks, the to her obnoxious "den" will also vanish. Do away with the frippery with all my heart; have "the large table with its corner for newspapers, without which many a man's happiness is wrecked," the inkstand and dictionary within arm's reach—but will these round out the sum of his happiness? And, when spittoon and pipe are added, what becomes of "equal rights" for the feminine portion of the household? They must learn to endure the puffs of smoke coming from the other side of the table; with all the resources of housewifery must wage a daily, losing war against its stale odors, which cling to curtains and walls, go abroad with them in the folds of their gowns, are sent to friends in the paper on which they write; they must accept the disorderly ashes, the offensive spittoon.

An Englishman only smokes in the rooms appropriated to his use, but the American man has too long been in the habit of smoking all over the house; and the heroine of former times "retired into her boudoir," I suppose, because there only could she breathe a pure air. Is it not a distinct advance in civilization when the hero now "retreats into his den" to enjoy his fragrant weed, and afterwards rejoins his family in the neutral region of a smokeless atmosphere? As I write, my chamber is full of the odor of tobacco, creeping round the edges of a locked door, on the other side of which is the bedroom of a young American couple. Would not "equal rights" give that wife—and me—an untainted atmosphere to sleep in, and the "den" be a means to that end?

So long as man is constituted as he is, sister-woman must endure the distasteful tobacco when there is but one living room in the house; but, so soon as there are others than the parlor, gentle breeding demands that one of them shall be the "den," whose *raison d'être*, as I take it, lies not in the frivolous furnishing of the present day, but in the growing amenity of family life. Therefore, while in our homes fancy work wanes, may dens remain and multiply; but could not men invent some other nomenclature for their especial sanctum than one which suggests the wild beast and all savagery? I. C. N.

ST. MORITZ, SWITZERLAND, September 17, 1887.

RELIGIOUS DOCUMENTS FOR THE CONTINENT.

TO THE EDITOR OF THE NATION:

SIR: Absence from home kept me from seeing your journal of the 11th ult. before to-day. It was a pleasing surprise that the extract from my letter should have been thought worth forwarding to you for publication. It was also a proof of the interest the matter has for thoughtful Americans.

Only those who have lived on the Continent can realize the lack of information there touching religion in America. The unusual complications of social and religious conditions in the United States, and the multitude of churches of commanding interest, make the knowledge of and the acquisition of the literature and statistics peculiarly difficult. This difficulty would be permanently relieved if every religious body, besides sending to the University Library at Leipzig the documents already in print, would forward regularly its reports of all kinds as they appear. With thanks for your aid, I am your obedient servant, CASPAR RENÉ GREGORY.

LEIPZIG, LIEBIGSTRASSE 9, iv. l,
September 12, 1887.

Notes.

THE Rev. W. E. Griffis's 'Life of Commodore Matthew Calbraith Perry' will be issued directly by Cupples & Hurd, Boston.

Mr. William Cushing's supplement to his 'Initials and Pseudonyms' will go to press this fall. Subscriptions may be sent to the compiler at 18 Wendell Street, Cambridge, Mass.

Subscriptions for the 'Poems of Frank Forester (Henry William Herbert)' may be sent to Mr. Morgan Herbert, who edits the work, in care of John Wiley & Sons, New York, or Trübner & Co., London. It will make a small quarto, will contain a sketch of the author's life, and will be illustrated from photographs and paintings. The "Prometheus" and "Agamemnon" will not be reprinted.

'Faint, Yet Pursuing, and Other Sermons,' by the author of 'How to be Happy though Married'; Dorner's 'System of Christian Ethics,' translated by Prof. Mead of Andover; Pünjer's 'History of the Christian Philosophy of Religion,' translated by W. Hastie; Prof. Sayce's Hibbert Lectures for 1887, on the 'Origin and Growth of Religion as illustrated by the Religion of the Ancient Babylonians'; 'Pictures from Holland,' in the "Pen and Pencil Series"; and 'The Printed Book: its History, Illustration, and Adornment,' are among the latest announcements of Scribner & Welford.

Funk & Wagnalls will have ready in the course of a month a photographic facsimile of the first Shakspere folio. Oddly enough, they offer it as a convenient test of the Donnelly-Bacon lunacy.

Thomas Whittaker republishes directly William Sharp's collection of English and American 'Sonnets of this Century,' and Samuel Waddington's 'Sonnets of Europe'—translations with notes.

The building of the great Central Asian Railroad by the Russians is related from official documents by Dr. O. Heyfelder in a work shortly to appear—'Transkaspien und seine Eisenbahn' (Hanover: Mierzinsky; New York: Christern). It will be amply illustrated. We may remark here that a preliminary report of an expedition sent by the Russian Government in 1886 to the Transcaspian region and North Khorasan is published in the August and September numbers of *Petermann's Mitteilungen*. Its special aims, besides the study of the physical geography and geology of the country, were to examine the deposits of naphtha, salt, and sulphur, and to collect specimens of the fauna and flora. An admirable map of the region explored, including the line of the Transcaspian Railway, drawn from Government sources, accompanies the report.

Miss G. Mendum of Stapleton, N. Y., is engaged on a translation of Lamartine's 'Harmonies.'

A new edition of Count Leo Tolstoi's Caucasian sketch, 'The Cossacks' (William S. Gottsberger), comes to remind American admirers of the great Russian writer that it is to Mr. Eugene Schuyler that they were indebted for their first introduction, nine years ago, to the author whose name is now a household word in this country. The majority of readers will hardly agree with Turgeneff's estimate of the work, as the author's best, although it possesses, on a small scale, many of the qualities which distinguish his more complete works. It takes rank in importance after 'War and Peace' and 'Anna Karenina,' and people who know Tolstoi only through the latter should read this book in its revised form as now issued.

Prof. Gneist's work on the English Parliament, lately reviewed by us (*Nation*, No. 1135), has appeared in "a fresh translation" by A. H. Keane,

Vice-President of the Anthropological Institute. The former translation was so exceedingly bad that this new edition will be welcome to all students of the English Constitution. It is certainly very much improved—not so much so, however, as if Mr. Keane had not made the old translation the basis of his work, but had gone to work unembarrassed by it, and made a wholly independent version. A piece of really bad English is incapable of being made really good by any amount of revision, and had better be put at once in the fire. Two decided merits of the new edition are an index and the removal of the notes from the end of the chapter to the foot of the page. The style of the new book is somewhat more attractive than the old, although it is not really better printed. The Messrs. Putnam are the American agents.

Mr. John Ashton's mode of writing history with the aid of newspaper clippings and broadside and caricature art is well known and is uniformly employed in his numerous works—perhaps nowhere more satisfactorily than in his 'Dawn of the Nineteenth Century in England: a Social Sketch of the Times.' The political events of the first decade are dismissed in nineteen chapters, and what follows is a very interesting and curious presentation of the manners of the time, beginning with roads and transportation. The whole text is freely sprinkled with contemporaneous illustrations traced by Mr. Ashton's own hand. A popular edition of this work, in one volume, just published by G. P. Putnam's Sons, promises it a new lease of life.

From J. B. Lippincott Co., Philadelphia, we have two more volumes in the pocket Thackeray, to which "Barry Lyndon" and "Lovel the Widower" furnish the titles, covering also other minor pieces. The same firm sends us the seven concluding volumes of the fine Library Edition of the Waverley Novels, making twenty-five in all. The last of these contains several features of much value and convenience—tables of the tales in alphabetic order, and again in the order of their internal chronology; a list of the characters introduced in each, with a synopsis of their leading incidents; an index to the names; another to the notes; and finally a glossary. This portion of the work merits separate publication.

Mrs. Lydia Hoyt Farmer has followed up her 'Boys' Book of Famous Rulers' with the 'Girls' Book of Famous Queens' (T. Y. Crowell & Co.). That she has found encouragement to do this is sufficient evidence that the earlier work gained acceptance with the class for whom it was designed. She tells a story, indeed, with much animation of style, and conveys a good amount of historical information in an agreeable way. There is, however, a lack of discrimination in her moral judgments, and an utter absence of the critical faculty. The reader of the book will probably get the impression that Semiramis and Dido are as real historical personages as Mary Queen of Scots and the Empress Eugénie. The illustrations, which are numerous, are execrable.

From the office of the *Publishers' Weekly* in this city issues for the fifteenth time the bulkiest and cheapest book published in America, 'The Publishers' Trade List Annual' for 1887. Every bookseller knows its indispensableness, as does every head of a literary department or newspaper, and not a few readers in our public libraries who have access to it. The various firm catalogues here bound together alphabetically do not, as time goes on, show any tendency towards uniformity except in size.

An address entitled "A Legal Mummy; or, the Present Status of the Dartmouth College Case," delivered before the Vermont Bar Association by its President, Mr. Aldace F. Walker of Rutland, Vermont, in October, 1885, has been reprinted (Montpelier, Vt.). The title is not entirely colorless; it intimates the lack of satisfaction that the writer entertains with the great case referred to. There is a good deal of sense and vigor of thought in the pamphlet, and it is worthy the attention of the student of constitutional law.

Those who remember Prof. Langdell's very striking address at the dinner of the Harvard Law School Association last November, in which he enforced the view that our law should be taught after the methods prevailing on the continent of Europe, and that in this respect "we should not longer follow in the footsteps of England, but should bring ourselves into harmony with the rest of the civilized world," will be interested in reading a short article on the English modes of teaching law, in the *Revue Internationale de l'Enseignement* for August 15 last. The writer, George Blondel, "Chargé de cours à la Faculté de droit de Lyon," is giving some account of a recent address at Berlin, by P. F. Aschrott, a German magistrate and Doctor of Jurisprudence and Philosophy, before the Société Juridique, in which he finds several points in the English methods that are worthy of consideration in Germany. It seems that they suffer in Germany from pedantry, dulness, a lack of the "aptitude pédagogique," and from "ignorance de la pratique." These are the natural defects of the Continental system, and it may be that Germany has something to learn from England; but it is very certain that England has much more to learn, as regards the teaching of law, from Germany. The writer of the article referred to (and, as it would seem, M. Aschrott also) appears to be ignorant of the notable advances and reforms lately made in teaching law at the English universities.

We commend to those interested Dr. Albert Bushnell Hart's paper on the teaching of history in high and preparatory schools in the Syracuse *Academy* for October. It is both a discussion and a bibliographic index.

The summer numbers of the *Antiquary*—for July, August, and September—must be passed over with a very summary examination. The first article that strikes the reader is a continued one, opening the July number and running through the other two, by Prof. Hodgetts, entitled "The Smith and the Wright." These two words, of diverse etymology but similar meaning, are examined, and a history given of the various mechanic arts included in their definition. The writer is an ardent eulogist of everything Germanic, and seems to us to exaggerate the independent skill of his early countrymen. Nevertheless, the articles contain much curious and interesting matter. It is to be wished that the passage in Tacitus were cited which "speaks of a delicately executed kind of ribbed tile of a semi-cylindrical form made by the northern Germans, which possessed a beauty of color and a brilliancy that no Roman tile could present." Another continued paper, in three numbers, is "On Some Garters King-at-Arms," by John Alt Porter, consisting mostly of short biographical notices. Mr. Round's article, "The Early Custody of Domesday Book," begun in the June number, is continued in July, with the conclusion that, "during at least the first century of its existence, the official resting place of Domesday Book was within the walls of Winchester Castle." "Notes on Incidents in Folk-tales," in the August and September numbers, contain many interesting details and discussion. Of the single articles, perhaps the most valuable are that upon "John Hodgson, the Antiquarian" (July), "A Visit to Mount Athos" (September), and "Bone Caves," by H. P. Malet, in the same number. This last, to be continued, undertakes, from the writer's own observations in India, to disprove the theory that the animals whose bones are found in caves were dragged thither by hyenas. "Whatever ancient beasts did, the modern hyena always dines where he finds his food, never dirties his den, and never dies there, except by accident."

L'Intermédiaire, the French *Notes and Queries*, for September 10th prints extracts from a brochure by M. Henry Mosnier on the "Château de Chavaniac-Lafayette," showing the amount of money expended by the Marquis de Lafayette during our war of the Revolution. The figures are taken from the papers of his intendant. His income during the years 1777–1783 was 50,000 livres annually, all of which he spent. But in addition he raised, both by loans and by selling portions of his estate, 741,000 livres, making a total of over a million of livres, the greater part of which was devoted to the support of the war.

A special number of the *Illustrazione Italiana* is wholly given up to the late universal competition for a new façade to the cathedral at Milan. Sixteen elevations are reproduced on a large scale, besides the existing front. Numerous plans and subordinate elevations also, with the letterpress, eke out a very complete conspectus of the problem, and of its attempted solution, both now and formerly.

In the eleventh part of the supplemental volume of Brockhaus's 'Conversations-Lexikon' there is an interesting chart, showing by different colors and shading the extent of the cultivation of the principal plants and grains throughout the world. Wheat, of course, leads the other food plants, but rye, barley, and oats do not fall far behind. Next to these, apparently, comes rice. It is surprising to note how small the wheat-fields of the United States appear compared with those of Europe and Asia, as well as the very wide extent of the cultivation of cotton.

The Parisian publisher, M. Édouard Rouveyre, having made a hit last year with M. Octave Uzanne's brightly written and admirably illustrated essay on modern bookbinding, has now sent forth 'La Reliure de Luxe,' by M. L. Derôme (New York: F. W. Christern), in the same form as M. Uzanne's 'Reliure Moderne,' with the same cover, and with abundant illustrations, most of which look as if they had been left over from the earlier and better book. M. Derôme's text has even less connection with the plates than had M. Uzanne's, and the plates are inferior in value and interest. The frontispiece is a vellum binding painted by M. J. Adeline—rather confused and muddy, and yet suggestive and promising as a specimen of a mode of decorative bindings likely to meet with increasing favor. The severe and monotonous, and yet dignified, bindings of plain morocco, tooled in parallel lines with broken corners in the style of Trautz-Bauzonnet, are perhaps the best things in the book. The influence of Japanese art is shown happily in one or two of the illustrations, where the rigidity of European design has been abandoned. A curious novelty is the binding of a pair of volumes together, one opening to the right, and the other to the left—but this is more curious than useful or beautiful. From these plates it is evident that the use of silk stuffs, brocades, etc., for book-covers is growing in France; and also that the Parisian binders have not yet availed themselves of the alligator, seal-skin, and snake-skin with which our binders have familiarized us.

— The *Atlantic* for October, with an abundance of other matter of interest which makes the number one of unusual excellence, has a singularly thorough criticism of Jean François Millet, called out by the recent exhibition of his works in Paris. One does not need to agree with the critic to recognize the all-round character of his view of Millet; nor, though one should acknow-

ledge that his observations are just, need he therefore accept the critic's conclusions. The report is highly unfavorable to Millet's reputation. "Millet is not a great painter, worthy to be ranked with the great masters of the past; and even when we compare him with his contemporaries, Delacroix and Théodore Rousseau, he sinks to a modest level which it may be well not to attempt to qualify too precisely." This verdict is rendered on the score that the painter was in default on the artistic side, and on the theory that, in art, defects of this sort are eventually fatal to a claim to real greatness. Millet's character, it is said, was mainly "moral and literary," and so are his works; and it is "by the intentions, by the subjects, by the preachings" in his works that he succeeds with the public. He was "not only a peasant, but a Norman, and therefore half an Englishman—a serious and contemplative man, who read his Bible with the convictions of a millenarian of the time of Cromwell"; he is "a révolté"—a peasant who has made a cult of the contemplation of the fate of the peasant; a "sort of melancholy Burns." He leaves out the cheerfulness of the country life, all its festive side, and dwells only on its hardships; he is preaching always the lot of man, son of the earth; he is preoccupied with this, and though he is "a profound thinker" compared with Paul Potter or Cuyp, "a captivating dreamer" compared with Terburg and Metzu, "incontestably noble" compared with Jan Steen, Ostade, and Brouwer, yet he is "far inferior to one and and all of these" in "purely artistic qualities"; and the end falls—"not a great painter." Such a criticism is of the sort that inform and stimulate, and it is seldom that the artist when judging has so clear an eye for qualities "not artistic," and so much frankness in admitting their value; but the sentence passed is to be set down as a verdict of the schools, not of the disinterested mind—much more not that "intuitive judgment of the world" to which the critic alludes as "final." The schools have been so often mistaken; man, son of the earth, is so integral with the landscape for ever, that those to whom Millet is the artist of the true democratic spirit, in one of its purest and humblest as well as most enduring moods, need not yet despair of his being reckoned "a great painter." There is a note on Realism in the "Contributors' Club," for which we beg unusual attention.

—In the *Harper's*, Mr. Henry James has a lengthy and highly appreciative notice of the young portrait painter, John S. Sargent, who was born an American; but the national claim to him is modified by the facts that the places of his birth, his education, and residence are European, while his artistic quality, Mr. James says, is Parisian. He is given the praise of having attained the one great quality—style—and the future predicted for him is brilliant. The few illustrations of his work given, though wholly inadequate as a basis for such judgment as the text contains, are of use in bearing out the statement in which lies the kernel of Mr. James's praise, namely, that his portraits are also pictures. The republic of Costa Rica is treated after the thorough fashion which we recently commended in the case of the similar article on Chili, and we observe that the hope then expressed that there is to be a series of such papers on the Southern countries of this continent is to be realized. A second travel article describes the old Portuguese mission station, Bassein, in India. Of other articles not especially noticeable it will be well to single out Dr. Titus M. Coan's paper upon "The Curative Uses of Water," which contains a considerable amount of practical information on the functions of water in the body, and on the use of baths of different temperatures and their various effects, together with details of special value to those who seek water-cures. The writer remarks with truth enough that "an invalid who would not venture to prescribe a grain of quinine for himself, will placidly elect a bath-treatment, or even a whole course of mineral waters at a foreign spa, without the least qualm of doubt as to his own fitness for self-direction." The healthy man, as well as the invalid, will find the suggestions of the article relative to ordinary bathing well worth attending to. In the Easy Chair Mr. Curtis has one of his best-touched papers on the subject—somewhat a matter of mere wonder to Americans—of "Buffalo Bill's" vogue in the last London season.

—*Scribner's* also has a leading art paper—one of those encyclopædic articles to which the magazines have now accustomed us—in this case, upon the Paris School of Fine Arts. Prof. Shaler continues his scientific papers, discussing in this issue the attractive subject of caverns. He calls attention to the value of observation of the character of life in these dark places as affording a great natural experiment to determine the influence of other elements than selection by survival in modifying the organisms, and thus supplementing and limiting the Darwinian theory of descent. Mr. Brownell contributes a criticism of the French in respect to the good sense which is their characteristic, and the absence of sentiment, broadly speaking, which is their defect. As in most generalizations there is much over-statement of the case proper. He thinks the old Romanized Gallic element in the nation more important than the Celtic ingredient, and attributes to it the fundamental moderation, temperance, and allied qualities in the people; he denies that they have the fanatic spirit, and he affirms that they hate excess. While this may be true in the main, we wish he had at least glanced at the apparent contradiction to all this in the revolutionary spirit which still retains something of noise and fury. In fact, it is by this revolutionary spirit, and not by the intellectual and literary regard for limits to be found in the French, that they have stood forth to the world at large and made "the foolfury of the Seine" a byword among the English. Mr. Gamaliel Bradford, in an article which deals with the always timely matter of how to govern our cities, returns to his theory of personal responsibility as a main element in democracy, on the ground that the people can vote better for men than for measures. The paper deserves to be carefully read by those whom the subject concerns.

— An English correspondent writes us from Wadebridge, Cornwall, with reference to our remarks on the definition of *biscuit* in the 'New English Dictionary' (*Nation*, No. 1155, p. 138):

"The word *biscuit* always has been used here (locally) and probably throughout Cornwall in the sense in which you use it in the States, *i. e.*, the Webster-Worcester sense. Twenty or thirty years ago it was usually used in this sense, and hard crisp biscuits (except ship-biscuits, which were always called biscuits) were called 'hard biscuits.' In many families biscuit is still applied to both the soft and hard, but for the most part I notice it used now in the ordinary English sense: but it is still so much used for the soft sort that my wife (an Essex woman) when she came here could not understand what they meant when they used the word."

— The English Dialect Society shows, by its thirteenth report, that there is no lack of material either for collection or for publication. The folk-speech of South Cheshire, of certain localities in the West Riding of Yorkshire; a dictionary of the Kentish dialect; glossaries of Berkshire, Norfolk and Suffolk words, and, most interesting, perhaps, of all, a collection of sea words and phrases made by the late Edward Fitzgerald among the seafaring men of the Suffolk coast (revised by him upon the original contribution to *East Anglian Notes and Queries*)—such are some of the newest offerings to the Society. Prof. Skeat is now urgent that a fund be raised for the printing of an English Dialect Dictionary by the University of Cambridge — a worthy parallel and complement of the great enterprise of the sister university. He offers to give a hundredth part of the least sum of $25,000 for that purpose, and we should hope that his example might be followed, or bettered, in this country, where, indeed, there are many who could, with ease, bear the whole charge, with much glory. Accompanying this report is the second by Mr. Alexander J. Ellis, on his dialectal work from May, 1886, to May, 1887, which consists in mapping England according to the pronunciation of certain vowels and consonants, *e. g.*, in the case of the word *some*, the "sum" and the "sŏŏm" districts. To this report he adds a long bibliographic - historic calendar of his labors in early English pronunciation from 1848 to the present time, accounting for the apparent gaps with a list of intermediate excursuses, in mathematics and in music, which alone would be a monument to his enormous diligence.

—Two issues of the Society's series accompany the foregoing, bearing, as usual, the imprint of Trübner & Co. One is a most systematic exhibit of the range, meaning, pronunciation, and etymology of four dialect words, *clem*, *lake*, *nesh*, and *oss*, by Thomas Hallam. *Clem* means to perish of hunger, or to starve; and *starve* is compared with it in a separate section, in which Webster is cited as stating that the word is, in the literary usage of the United States, applied to death from hunger only, not from cold. This is true, but, in the dialectic usage here in the first quarter of the present century, "I'm 'most starved" could mean "I'm almost frozen." *Lake*, to play, is a variant of our word *lark* (frolic). *Nesh* (or *nash*), delicate, is probably still used among us over a wide area. *Oss* (or *ause*), to attempt, is an interesting derivative from the Latin *ausus* through the French *oser*. Mr. Hallam's conspectus is richly illustrated with literary quotations. An excellent piece of work, also, and good browsing-ground for the amateur, is the Rev. R. E. G. Cole's 'Glossary of the Words in Use in Southwest Lincolnshire.' *Nesh* alone, of the group just noticed, is found in it. Familiar to Yankee ears is *nation* (the oath-adverb of intensity), and to Southern, *peärt;* to journalistic, *newsy*. Southern, too, in our own association, is *naturally* in the sense of really, as in the negro "spiritual"—

> "Let me tell you what is nat'rally de fac',
> Who is on de Lord's side," etc.

Heartslain (heart-broken) and *pinē-house*, "a place where animals are shut up to fast the night before being killed," are distinctly poetic and pathetic; while for a rough metaphor commend us to *market-place*, "the front teeth: as, 'I'll knock your market-place down your throat.'" Of the verb *snickersneeze*, it is remarked: "A term without meaning, used to frighten children." But when, in Thackeray's ballad of "Little Billee," gorging Jack "pulled out his snickersnee," we have a very clear suggestion of a cut-throat knife. We observe, finally, the word *challenge*, "to claim acquaintance with," which we may compare with the use of the word by Pepys when his wife, on February 14, 1666, receiving a call from one Mr. Hill, was disappointed to find he had not come to be her Valentine, yet nevertheless bade him come up, and "challenged [*i. e.*, claimed] him." So we read in 'Gulliver': "— which was, therefore, a character we had no pretence to challenge [*i. e.*, lay claim to]."

—Tylor (in his 'Early History,' p. 45) says:

"Shaking hands is not a custom which belongs naturally to all mankind. We may trace its introduction into countries where it was before unknown. The Fijians, who used to salute by smelling or sniffing at one another, learned to shake hands from the missionaries." Tylor is, however, in doubt whether the red Indians learned the hand-shaking custom from whites. His doubts would have been dispelled if he had read Col. Garrick Mallery's treatise on Dactylology in the first report of our Bureau of Ethnology. We there read (p. 385): "The practice of shaking hands was not until very recently used by Indians, and is even now seldom used by them among each other." It was clearly an importation. Col. Mallery, writing, no doubt, after unsavory experience, calls the practice in dealings with Indians "an annoying etiquette." He adds that this gesture is senseless, inconvenient, and, in the extent to which it prevails in the United States, a subject of ridicule by foreigners. In the hope of displacing the Yankee usage, he describes Japanese salutatory etiquette thus: "As acquaintances come in sight they approach with downcast eyes and averted faces, as if neither were worthy of beholding the other, and then they bow so low as to bring the face on a level with the knees, on which the palms of the hands are pressed." This procedure is not unlike the Egyptian as described by Herodotus (ii, 80). But the style of greeting which finds most favor with Col. Mallery is that in vogue among the Chinese, who shake each his own hands. When two polite Celestials meet, standing a few feet apart, each places the fingers of one of his hands over the other doubled up into a fist so that the thumbs meet, and then shakes his hands up and down in front of his breast. This kind of manipulation will show a higher conception of politeness than ours, in the view of all Presidents. The man who can give the Chinese fashion currency during the Presidential journey now in progress may be sure of the best office in the gift of Mr. Cleveland which the civil-service rules will allow him to bestow. Yet the truth is, that hand-shaking runs down its roots too deep for them to be easily extracted. It reminds of the right hand of fellowship which other apostles gave to Paul. It was already common in the Homeric era. When Ulysses and Diomed returned to the Grecian camp with the horses of Rhesus they had stolen, Nestor welcomed them back, not only with honeyed words, but, before that, "with his right hand," which means, say commentators, a shaking of hands. Not only is this physical contact a medium of sympathy and a gauge of character, it is felt to be an outward and visible sign and recognition of human equality.

A MODERN DIPLOMATIST.

St. Petersburg and London, 1852–1862. Reminiscences of Count Charles Frederick Vitzthum von Eckstedt. Translated by G. F. Taylor. 2 vols. London: Longmans. 1887.

THE author of these memoirs was for a number of eventful years Saxon Minister at the Court of St. James's. In this capacity he was in London during the Crimean war, the long campaigns which followed upon the outbreak of the Indian mutiny, through the entire process of the unification of Italy under one sovereign, our own civil war, and the Austro-Prussian campaign which terminated the existence of Saxony as an independent kingdom. His office brought him into close and constant relations with all the leading statesmen of the day in London, and a natural genius for society enabled him to turn his opportunities to the best account. The volumes before us consist chiefly of letters written from London during the period of his residence there, and reflect in a lively and not uninteresting fashion the shifting aspects of political opinion in the fashionable circles in which he moved. The Count dignifies this political gossip by calling it "la haute politique"; but "drawing-room politics" would be a more correct description of the contents of his book.

The society to which we are introduced is of the most august description. Kings, emperors, princes, ministers, and ambassadors jostle one another on every page; and talk, it must be acknowledged, in a manner which does eminent discredit to their foresight and discretion. The press is generally credited with the authorship of the many groundless panics which startle the world, and with fear of change perplex the stock exchanges. But if Count Vitzthum's revelations are authentic, this supposition must be given up as calumnious. Sovereigns, statesmen, and diplomatists are the exclusive manufacturers of their own panics. The "ethics of the political bandit" appears to be the accepted rule of conduct among them, and the consequence is that whenever a war breaks out anywhere, they at once leap to the conclusion that all governments will clutch at the opportunity to fish in troubled waters, and seize upon something which is not legitimately theirs. These predictions, happily for the peace and happiness of the world, are rarely verified, because the prophets take no account of the resistance offered by the nature of things. They regard the civilized world as held together by nothing possessed of greater resisting power than "the treaties of 1815," and certain fictions contained only in the books of jurisconsults, and described collectively as "international law." They make no account of the people and their wishes and interests. Arguing from these premises, we find that when the Emperor Louis Napoleon entered upon the campaign of Magenta and Solferino, Count Vitzthum, and all those "who were in a position to know," were absolutely convinced that, after driving Austria out of Lombardy, he would assail Germany on the Rhine, then annex Belgium, and ultimately revenge Waterloo by an invasion of Great Britain. The Count has no patience with the infatuation of the British people who, indifferent to the warnings of the professors of *la haute politique*, chose this critical time of all others to enter into a commercial treaty with France. The design of the Emperor in this transaction was, by a show of friendliness, to lull his intended victims to a sense of a false security; at the same time that, by the cheaper importation to France of British coal and iron, he would enjoy unlooked-for assistance towards completing his preparations for an invasion.

Neither to the Count nor to any of his sagacious friends in London did it occur that this vast scheme of universal aggression could not be carried through a single stage without entailing sacrifices upon the people of France which would drive them to offer a resolute opposition to its further development. The people of France counted for nothing in their vaticinations. They argued that whatever the first Napoleon might have dreamed in his most ambitious moments, his nephew would be able without difficulty to execute; that armies would spring up at a stamp of his foot, all properly organized and disciplined; that France would cheerfully endure any quantity of taxation, and so forth. Actually, as all the world knows, a month's campaign in Lombardy and two great battles so crippled the army of Napoleon that he had to patch up a peace in order to save France from invasion. It is Europe's misfortune to be governed by men so placed that they rarely, if ever, feel in their own persons the sufferings which the silliness of their *haute politique* inflicts upon others. It is barely possible for them to get nearer to the realities of things than a printed representation in an official report.

"Half ignorant, they turn an easy wheel,
Which sets sharp racks to work to pinch and peel."

How completely the author of these Memoirs has surrendered his mind to the belief that Europe and all that it inhabit is an artificial product put together by sovereigns and statesmen, is seen in his moral indignation at any breach, actual or threatened, of "the sanctity of treaties." He describes as "a piece of thoughtlessness" Lord Palmerston's ingenious device for relieving himself of the responsibility for the disastrous issue of the first invasion of Afghanistan. That war had been undertaken by the noble Lord in the teeth of the warnings of Sir Alexander Burnes, the British resident at Kabul. But Burnes having been killed, Lord Palmerston so doctored his despatches, before laying them on the table of the House of Commons, as to make them appear to advise an invasion which they earnestly condemned. To Count Vitzthum's unaffected astonishment, the House of Commons, when they discovered this "half-forgotten piece of thoughtlessness," became highly indignant, and were with difficulty restrained from turning the culprit out of office. The Count sees nothing worthy of condemnation in this transaction; but the expulsion of Austria from Lombardy and the invasion of Sicily by Garibaldi are described by him as crimes of exceptional enormity. They struck a blow at "the sanctity of treaties." What obligation there was on Garibaldi to respect a treaty to which he was not a party, Count Vitzthum does not say. He takes for granted that every right-minded person will accept, as an adequate ethical ideal, the diplomatic view of the universe.

We cannot commend these volumes as throwing any new light upon the great events with which they deal. They systematically ignore the veritable causes of them, and depict as causes the changing eddies on the surface. But no book is to be despised which illustrates with what a small amount of wisdom the world is still content to be governed; and few books with which we are acquainted do this so copiously as the Memoirs of Count Vitzthum. For American readers it has some specially amusing passages, and we take leave of the book with the following extract (vol. ii, p. 169), merely expressing our surprise that it should have been allowed to pass by Mr. Henry Reeve, who is responsible for the editorial supervision:

"With regard to the man who saved the North at this crisis [the outbreak of the civil war in the United States], I heard afterwards some characteristic details dating back to 1862. In the rising commercial town of Chicago were living, when the civil war began, three friends. One of them was foreman in a tan-yard, at a monthly wage of ten to fifteen dollars. The second was head of a boot-and-shoe shop, and thus was brought by his business into daily intercourse with the first. The third and best-to-do of the three, one Washburne, had some influence with the State authorities. When the war broke out and volunteer corps were formed, and the first misfortunes roused the people, Russell Jones, the shoemaker, reminded Washburne that their friend the tanner, Grant, had been to the military college at West Point, and could possibly render good service to the State by his knowledge of strategy. Washburne mentioned Grant to Governor Yates, who took him into his office. But this did not satisfy Grant. He told his friends that he would return to his tannery unless he was given active employment against the enemy.

"Among the young men who offered themselves as volunteers, there were a number of low fellows and loafers who were ripe for any mischief, and gave much trouble and difficulty to the already overworked police. The Governor proposed to Washburne to appoint Grant as Colonel, on condition that he would at once rid the town of the rabble collected there, form out of this rabble a regiment, and take it away by the next train to join the army. Grant accepted the offer. He was popular with the working classes, and in two days he had a complete regiment under his command, which he purposely led by a circuitous

route to meet the enemy in ten to fourteen days. Thanks to the iron discipline he enforced, the regiment held its ground in the first brush with the enemy, and soon learned to fight admirably. Before a month was over, Washburne and Russell Jones had the pleasure of seeing their friend's name extolled in all the newspapers. At the same time they received a letter from Grant stating that he had been made a General, but had no money to buy an outfit. The friends consulted together, opened a subscription, and soon raised enough money to enable them to send him the necessary uniform and horses as a present from the grateful patriots of Chicago.

"Grant rose step by step till, as Commander-in-Chief of the Northern army, he brought the Civil War to a victorious close, and subsequently was elected President of the United States. As such he applied again to Washburne, requesting his friend to undertake the post of Minister to Paris. This request came to Washburne unseasonably. He was unwilling to go to Paris unless his friend Russell Jones was appointed Minister at Brussels. Grant promised accordingly, and thus Washburne became Minister at Paris, while Russell Jones was my [the author's] colleague at Brussels. The latter showed me at that time more than once some autograph private letters from Grant, indicating clearly the intimacy existing between the former tanner and former shoemaker."

Life Notes, or Fifty Years' Outlook. By William Hague, D.D. Boston: Lee & Shepard. 1887.

DR. HAGUE was born nearly eighty years ago at Pelham, Westchester County, N. Y., and, when a boy of five or six, could see from the piazza of his home threatening English war-vessels in the Sound. When, shortly after the peace of 1815, he was put to the best school in New York city, he attended one on Chatham Square, then a little park. His mother was related to Aaron Burr, and this gave the lad an opportunity to see him familiarly when Vesey Street was still the haunt of the ex-Vice-President. On July 4, 1843, he officiated as chaplain in Faneuil Hall, Boston, on the occasion of Charles Francis Adams's first public oration. Dr. Hague listened to John Quincy Adams's expression of joy in the event, which succeeded by just half a century a like performance by himself in the same city. The clergyman responded: "Having committed and declaimed a part of your own great oration when a school-boy in New York, I could without effort repeat it to you now." About the same period, at the State House in Boston, before a teachers' convention, Emerson was to be the orator; and, says Dr. Hague, "having finished my appointed service as chaplain, and offered the introductory prayer, he at once, stepping into the place I had occupied, commenced his address with a brilliant paragraph containing a parenthetic affirmation of the uselessness of prayer."

Dr. Hague dwells upon his relations to Emerson, which were friendly but not close, and which illustrate his own defective sectarianism, though a pillar of the Baptist denomination. Conversations with Emerson before he withdrew from the ministry, or "from all churchly organism," had shown him to be in the difficult position of having outgrown his ostensible creed. His coming out from the church ruined him in some minds, but not in Dr. Hague's. "As soon as this step of his early career had been taken, my personal interest in his course and style of action as an independent man, an original personality, was greatly quickened; my communication with him became more free, unembarrassed by any degree of sensitiveness as to the proprieties pertaining to official or clerical relations." In connection with this topic, Dr. Hague relates, apparently of Boston: "Thus, as I now remember, passing near the shipyards one day, about eleven o'clock, a workingman hastily stepped forth, crossed the street, and then, having asked the favor of a minute's talk, earnestly put his question as one 'meaning business,' 'Sir, what is Transcendentalism?'"

Son of a sea-captain, Dr. Hague's career was fitly marked by frequent changes of base. He got his academic instruction at Hamilton College, his theological at Princeton and at Newton, Mass. His first pastorate was in Utica, his next in Boston, his third in Providence, and he was twice settled in New Jersey. In Providence he was, of course, denominationally at home, and of this city he gives a most attractive picture:

"In awakening memories of the social life of Providence during my ministry, from 1837 to 1840, I am impressed with its geniality, freedom, and intellectual activity. Never in that city had there been, comparatively, much recognition of ecclesiastical and denominational distinctions in social any more than in civil life. For more than two-thirds of a century the university had been a source of intellectual quickening to the community, modifying the character of the beautiful little capital. At the same time, there had been a diffusion of wealth, refinement, and culture sufficient to impart to general society a tone and spirit quite cosmopolitan. Men and women, representatives of almost every school of thought—evangelical, transcendental, theological, philosophical, literary, or scientific—might be found, even in small clubs or social gatherings, drawn together by a common interest in mental acquisition."

No one would imagine, after reading this, that Providence has been one of the most spiritually barren and least public-spirited cities in the country, among those approaching it in wealth and population, and the seat of one of the most despicable political machines known in our history. We cannot go here into the causes of the discrepancy between Dr. Hague's rosy view and the undeniable failure of Roger Williams's "soul-freedom," the university, abundant wealth, and agreeable social conditions to make of the city and of the whole little State of Rhode Island a model of republican purity and vigor.

Some portions of these 'Life Notes' appeared first in the *Watchman and Reflector*, of which Dr. Hague was at one time an editor. They offer a large amount of personal interest, particularly to the Baptist denomination, and of local and personal interest in the case of the Huguenots of Pelham and New Rochelle. They strive to generalize great drifts of thought and theological and philanthropic activity, and lose not a little definiteness in consequence. Dr. Hague was by nature both genial and optimistic. His reminiscence glided over what it was disagreeable to recall, and not a villain or a culpable character, not a faithless Christian church or reprobate religious newspaper, is seen in "fifty years' outlook." No one, therefore, will come to this little book for history, but for pleasant anecdote, a filmy panorama of scenes in the author's varied experience, a gratifying sense of his amiability, humane instincts, and freedom from bigotry. It is a curious circumstance that, like the late Henry B. Stanton, whom he must have known in Boston, Dr. Hague died while his autobiography was passing through the press.

John Sevier as a Commonwealth-Builder: A Sequel to The Rear-Guard of the Revolution. By James R. Gilmore (Edmund Kirke). D. Appleton & Co. 1887.

MR. GILMORE proposes to cover the field of early Tennessee history in three books. In his first work he related the services of the settlers upon the Holston and Watauga in acting as the rear-guard of the Revolution, when they held the savages in check beyond the mountains, and annihilated the left wing of Cornwallis in the pivotal battle of King's Mountain. In this narration the name of John Sevier, leader among these "over-mountain men," was conspicuous. In the work before us the author continues the story of Tennessee's progress towards the West, its struggles with the Indians, and its difficulties with the State of North Carolina, resulting in the formation of the short-lived State of Franklin. A concluding volume is promised, to be devoted to Robertson (leader of western Tennessee) and the threatened secession of the West from the Union. The author has chosen a most interesting and important department of United States history. In the battle of King's Mountain, the trans-Alleghany country first stoutly asserted its growing strength, and turned the tide of war in the South in favor of the American arms; in the formation of the State of Franklin there was revealed not only the weakness of the general Government, but the strength of the principle of local self-government in the West; while the movement of the settlers in the Mississippi Valley towards independence was a most critical episode in the history of the country.

Spite of the far-reaching consequences of these events, they are but little known by the average reader. It is the merit of Mr. Gilmore that he has selected the essential facts in these occurrences from sources where they are likely to receive attention only from the specialist, transformed the actors from documentary characters into living men, and presented their story in a spirited narrative. In doing this he has taken a much-needed step in calling attention to the fact that the history of the valley of the Mississippi is a too much neglected branch of the history of this country. The work cannot lay claim to important original research; it is, on the whole, a dramatic presentation of material chosen from Dr. Ramsey's 'Annals of Tennessee.' The part played by the relations of the settlers to the Indians, in respect to encroachment upon the lands of the latter, is well exhibited as one of the leading causes of the revolt of the settlers from the jurisdiction of North Carolina.

In criticism of the book it is to be said that Mr. Gilmore's desire to present a readable and vivid account of these events has led him at times to prefer boldness of characterization and smooth narrative to the accuracy and cautiousness of statement that should mark historical composition. John Sevier, the leader of the settlements against their savage foes, and the Governor of Franklin, as well as first Governor of Tennessee, is doubtless entitled to as enthusiastic a biographer as Mr. Gilmore, and yet one would be glad to know more of the other side of the question. In presenting the correspondence of Sevier, the author has not hesitated to correct grammatical and rhetorical errors. While this may conduce to the smoothness of the narrative, it is certainly unwarrantable, giving as it does a wrong impression of Sevier's capabilities. In other correspondence a sentence that reflects upon the abilities of Sevier is omitted. (Compare pp. 86 and 87 with Ramsey's 'Annals,' pp. 348 and 350.) Such changes, without notice to the reader, lead one to desire to consult his authorities in places where he differs with the accepted view of men and events, but the omission to give specific references renders this impossible. Mr. Gilmore's style is frequently strained and florid, and his manner of composition too often reminds the reader of the newspaper model.

Saratoga Chips and Carlsbad Wafers. By Nathan Sheppard. Funk & Wagnalls.

IT is not given to every one to write a book which you can read half through without finding out what it is all about. "Stray Wafers," "All the Cures," "All the Baths," "Mineral-Water Treatment," "Saratoga Treatment," "Flying Chips," "Chips and Wafers," "The Saratoga Winter Cure"—these are some of the rubrics under which the author has gathered an extremely heterogeneous mass of material into a very scat-

tering little book. He aims to contrast Saratoga with Carlsbad—a laudable object if honestly carried out; but the real argument here is, that of all known places and cures Saratoga is from all points of view the best. Mr. Sheppard's knowledge of balneo-therapeutics is made clear in the following sentence: "I do not believe there is enough difference between the waters of Carlsbad and those of Saratoga to make any difference in the efficacy of the mineral-water treatment." On the contrary, the waters of the two localities are essentially different in constitution, and in consequence adapted to different cures and cases. Those of Saratoga are strongly saline, and adapted to anæmia and nervous affections; those of Carlsbad, while laxative, are more or less of a specific for liver complaints. The fagged-out invalid who would gain strength at Saratoga would be depleted and weakened at Carlsbad. The preappointed visitor to Carlsbad is the *viveur*, the dyspeptic, the man who has eaten too well and drunken too much. For him the depleting treatment is of real value. To confound the two to be ignorant of the first principles of treatment either at these springs or elsewhere.

The author concludes by saying: "The mineral-water treatment may be tried by any one who knows which water is best for him." But this is another essential point; which is the best? Mineral waters, like other medicines, are only valuable when prescribed in accordance with the needs of the particular case. Unappreciated as yet in their full value in our country, they will be more profitably used as they are more intelligently prescribed. The waters of Saratoga, in particular, are taken in excessive quantities by the majority of those who take them at all, and they will be found to have real value when taken as they should be, in small and long-continued doses and under medical prescription.

The Lost Wedding Ring. By Mrs. Winter and Mrs. Boy. G. P. Putnam's Sons. 1887.

THE reviewer has a painful task before him when the writer of a book plainly says that she shall kill herself if what she has to say is not favorably listened to. His honesty is subjected to a greater strain than it ought to be called upon to bear, and the present reviewer pronounces it distinctly immoral on the part of writers to utter such painful threats. In the case of the 'Lost Wedding Ring,' however, the writer herself gets tired of her work before the end, and calls her production "a horrid little book," which it is not. Its tone is thoroughly good, and that is something to be thankful for in a book which treats of marriage. It is a subject that sometimes calls out all that is base and vulgar in the writer of a much more pretentious volume.

This is a book within a book. Mrs. Winter writes a series of essays on the relations of men and women, and Mrs. Boy makes various lively comments on them as they are read aloud. It is a very pleasant picture that is given of the two friends, and the flat in which they live, with broad window-sills on which their things never get scattered, and an adjoining picture-gallery roof, which they have converted into a garden. The first half of the book is a vigorous and sensible assertion of the independence which modern women have won for themselves, and of the change which it has necessarily made in the marriage relation. It is shown that marriage, like any other adventure, needs constant and painstaking effort to make it a successful undertaking, and that to let things go as they will after the honeymoon, instead of cultivating the virtues and graces that have sprung up during courtship, is to invite discord and unhappiness. It is made plain that the wife fills a different rôle to-day, and a more desirable one than that of the submissive creature of yore, who had no thought nor motion of her own; and that the Church, in making the wife's promise to obey a condition of a religious marriage, when it is well known that no wife intends to obey, is encouraging wilful lying.

It is the second part of the book that arouses the vindictive spirit of the critic. This seeks to find the panacea for marital unhappiness in certain mystical interpretations of the story of Adam and Eve, which have just been communicated to the writer by some people whom she met in the Catskills. These theories have strong theosophical leanings, and are of the kind that are to be believed or disbelieved immediately on being heard, without any aid from reason or argument. Mrs. Boy, when she has listened to them, says, in effect: "It is pleasant—it suits me—therefore it is true." This sort of thing emphasizes the necessity of giving to young girls whose heads are full of fertile ideas, out of which they may make a book at some time, thorough training in physics and mathematics and whatsoever other studies may serve to illustrate the good and legitimate and efficient fashion of convincing a person of the truth of what you say.

Some Things Abroad. By Alexander McKenzie. Boston: D. Lothrop Co.

IT would not be difficult to give conventional rules for the making of books of the kind of 'Some Things Abroad.' They would run this wise: Take of Baedeker, Murray, or, at the last resort, Fetridge's Handbook, two parts; of Mark Twain, one part; of school geography and English grammar, each a little; and fill up to four parts with any good encyclopædia. Neither taste nor originality is requisite, and the mixture may safely be made in a good easy chair, at no expense beyond that of ink and paper. An ingenious workman could in this way manufacture books which to the ordinary comprehension could not be distinguished from that which Mr. McKenzie has written; and by a careful study of the guide-books, the writer might avoid some blunders which the author of this has fallen into, while its most disagreeable feature might be avoided by taking the Mark Twain a little fresher and more sparkling. The following is a good sample of what we are given in 'Some Things Abroad':

"In one building is a famous well. A venerable woman is in charge of this, and on her authority I give its depth as three hundred and thirty-five feet. She did all in her power, short of a personal descent or actual measurement, to impress us with the truth of her figures. She poured water from a dipper, and bade us listen till it struck the water below. It was a considerable interval. She lighted candles and lowered them into the darkness, and then with a mirror threw the reflection of the lights upon the surface of the water. We were convinced that it was a very deep well. It must take the truth a long time to come up from such depths, and this may explain some tales one hears."

Perhaps as a sample of how the writer's pen runs on, the following, from the account of Milan, in which the Mark Twain component is less apparent, will serve. The italics are ours:

"The monastery of S. Maria delle Grazie was *suppressed into barracks* for cavalry. The refectory was saved from such sacrilege, and remains a bare and deserted room. Upon the wall at one end is one of the chief glories of Milan in the painting of the Last Supper by Leonardo da Vinci. No painting has become more familiar. It is well that it has been in some manner preserved by photographs and engravings. The monks cut a door through the table, and time has carried their inroads upon the picture still further. The paint was not adapted to the wall on which it was placed. But it is nearly four hundred years since the colors *were laid in oils upon the plaster*. The faces are marred and faded, but much of the beauty of the work remains. It was not without difficulty and delay that it was executed. The artist told the impatient prior that he had not been able to find a face which he could copy for Judas. The prisons and the haunts of vice had no model for the traitor. He silenced the prior by suggesting that he should sit for the likeness. So the story runs. The central face does not satisfy. No picture of Christ has contented his friends. Da Vinci waited long before he could *create a conception* of it. His conception is not on the wall. Others have touched what they have not adorned," etc., etc.

In Venice Mr. McKenzie sees "the *four* lions from the Piræus, *one of which* is fabled to come *from Marathon*." He does not even consult his guide-book to profit, for he says of Trieste that it "is mentioned as a *Roman* town fifty years before the Christian era, when it was known as Tergeste." He makes some curious additions to the wonders of Athens: "Pausanias saw also the sacred olive tree, the crooked 'citizen' of the height. We also saw the olive tree, a mere shrub, without impressiveness, save that which its romantic history lends it." One can have little patience with this mixture of stale badinage, careless observation, and commonplace diary writing.

Letzte Gänge. Von Johannes Scherr. Zweite Auflage. Stuttgart: W. Spemann; New York: Westermann. 1887.

AT the time of his death in November, 1886, the indefatigable Scherr, author of mediocre books enough to make a small library, was engaged upon a new work which was to bear the title, 'Jesuiten und Freimaurer: Drei Bücher Kulturgeschichte.' He had finished only a part of the first essay when the illness which finally proved fatal interrupted his labors. The volume before us seems to have been made, like the razors in the well-known ballad, to sell: it contains of Scherr, first, the torso of the essay upon the Jesuits; secondly, some sixty pages of matter headed "Im Hörsaal," and consisting apparently of miscellaneous extracts from lectures to students. The remainder of the book is by other hands, embracing a short sketch of Scherr's life and two memorial addresses which were delivered at his funeral. As to Scherr's part of the volume, it contains nothing that he had not said many times before. We find the same style, the same philosophy, the same religious and political prejudices; and yet the most caustic and exacting critic could not on his conscience pronounce the book dull.

The fact is, that in spite of all the harsh things that have been said, and said rightly, about his literary work, Scherr was in many ways a remarkable man. His great rhetorical skill has always been freely conceded, even by those who disliked him. His industry and fertility speak for themselves in the list of his works, and his honesty of conviction no one has ever questioned. He belonged, too, to a group of highly interesting persons, who are rapidly passing away—the talented German exiles of 1848. We are, therefore, really grateful to Prof. Mähly for his biographical sketch of Scherr, which contains more information about the man than we have heretofore chanced to see in print. Scherr was born in 1817 of Catholic parents in Suabia. It was a part of the irony of his fate that in his childhood he was for a while boy ministrant to a Catholic priest. He was an heir of poverty, and used to relate complacently to young men who seemed to him possessed of Sybaritic propensities, how he once passed at school a whole winter during which his daily ration was, with no variation whatever, a portion of poor sauerkraut and a piece of bread. His biographer gives but few details with regard to the incident which led to his expatriation. He was living at Stuttgart in the winter of 1848–49, and, having an ardent temperament, a fondness for leadership, and, withal,

much of the talent of the orator, he naturally took a rather prominent part in the political agitation of the period. He delivered numerous fervid speeches in behalf, as Mähly says, of German "unity and greatness" (surely, no great sin from a modern point of view). When the reaction set in, a committee was raised by the Stuttgart Liberals which was to have charge of the people's clubs (*Volksvereine*). Of this committee Scherr was a member, and, as such, he organized in June, 1849, a mass meeting at which he himself acted as orator of the day. His utterances on this occasion were so radical, so outspokenly republican, that the Government determined to prosecute him. He, however, through a chance acquaintance of his wife's, got wind of what was coming; so that, as the police were entering his front yard, the would-be tribune of the people escaped by the back door through an adjacent burying-ground to the railway station, from which he took the train for Switzerland. His wife soon followed him, and the pair passed the remainder of their days in exile—an exile which soon became very comfortable. In 1860 Scherr was appointed Professor of History at the Zürich Polytechnicum, a position which he occupied until his death.

Scherr's talent was that of expressing with vigor and dash, and upon occasion with brutal directness, the kind of ideas which are dear to a liberally inclined but half-cultivated and superficial *bourgeoisie*. To the choicer spirits of his nation, even among the liberals, Scherr's books have always been unpalatable. His works testify to a prodigious range of reading, and he certainly did not, as has sometimes been charged, altogether slight the "dead work" of investigation; he simply formed his opinions too easily, and made books too rapidly, to permit his spending very much time in pure research. His criticism is usually crude and commonplace, and quite devoid of suggestiveness, for the reason that his range of thought and feeling was only a little above that of the rationalistic, self-confident *bourgeoisie* which constitutes his public. To a person of some philosophy he really has but little to say, but even to such a person his manner of expressing himself prevents him from being altogether uninteresting. For it is not to be denied that Scherr handled the German language with great dexterity. Without imitating his occasional coarseness, or sharing his *penchant* for matter of doubtful propriety, many a better critic and better historian than he might well take lessons of him in the art of clear and forcible statement.

A History of the University of Oxford. By the Hon. G. C. Brodrick, D.C.L., Warden of Merton College. [Epochs of Church History.] Anson D. F. Randolph & Co. 12mo, pp. 235.

Mr. Maxwell Lyte's history of Oxford University, recently noticed by us (*Nation*, No. 1157), is, within its range, an exhaustive treatise; but its plan excludes several matters upon which the general reader will certainly desire information. It is incomplete in respect to time, and designedly omits several important phases of university life and work. Mr. Brodrick had already given to the world a valuable work upon the early history of the University, in his 'Memorials of Merton College'; in the present book we have the fruits of his early labors, and along with them an admirable account of the modern history of the University. It is complete in its general plan, and as full in detail as will be desired by most readers. Being composed upon the basis of very thorough knowledge, and written in an interesting narrative style, it is a book which will be widely welcomed. We note, nevertheless, the omission of two topics which we might expect to find fully treated—the character of university instruction and the internal organization of the universities during the Middle Ages. These, if not wholly passed over, are very inadequately dealt with.

BOOKS OF THE WEEK.

Adams, C. F. Dialect Ballads. Illustrated. Boston: Houghton, Mifflin & Co.
Barr, Amelia E. A Border Shepherdess. Dodd, Mead & Co. $1.
Baskervill, Prof. W. M. Outline of Anglo-Saxon Grammar. A. S. Barnes & Co. 75 cents.
Bellamy, E. Miss Ludington's Sister. Boston: Ticknor & Co. 50 cents.
Butterworth, H. Songs of History. Boston: New England Publishing Co. $1.
Butterworth—Root. The Pillar of Fire: A Cantata for the Sunday School and Choir. Cincinnati: The John Church Co. 30 cents.
Cotillion Almanac for 1888. Geo. Routledge & Sons. 25 cents.
Craik, Mrs. D. M. An Unknown Country. Harper & Brothers.
D'Aulnoy's Fairy Tales. Geo. Routledge & Sons. $1.50.
Finley, Martha. Elsie's Friends at Woodburn. Dodd, Mead & Co. $1.25
Gomme, G. L. The Gentleman's Magazine Library. Romano-British Remains. Part II. Boston: Houghton, Mifflin & Co. $2.50.
Hale, Rev. E. E. Lights of Two Centuries. A. S. Barnes & Co. $1.75.
Holder, C. F. Living Lights: a Popular Account of Phosphorescent Animals and Vegetables. Charles Scribner's Sons. $2.
Howells, W. D. Modern Italian Poets. Essays and Versions. With Portraits. Harper & Brothers.
Hugo, V. Les Misérables. Vol. 2. Cosette. Vol. 3. Marius. Translated by Isabel F. Hapgood. Boston: T. Y. Crowell & Co.
Johnson, Laura Winthrop. The Longfellow Prose Birthday Book. Illustrated. Boston: Ticknor & Co. $1.
Knox, T. W. The Boy Travellers on the Congo: Adventures of Two Youths in a Journey with Henry M. Stanley. Illustrated. Harper & Brothers.
Love, S. G. Industrial Education: a Guide to Manual Training. E. L. Kellogg & Co. $1.75.
Meiklejohn, Prof. J. M. D. The English Language: its Grammar, History, and Literature. Boston: D. C. Heath & Co. $1.40.
Modern Juvenile Classics, by the Best Authors. Cincinnati: The John Church Co. $1.
Modern Soprano Songs, by the Best Authors. Cincinnati: The John Church Co. $1.

The Nation.

NEW YORK, THURSDAY, OCTOBER 13, 1887.

The Week.

THE Chamber of Commerce of this city on Friday passed a resolution to the effect that "business men of all parties should unite in demanding speedy action by Congress looking to such a reduction of our revenues as will make the income of the nation conform as nearly as practicable to the necessary expenditures of the nation." This demand is certainly not radical. It is not one of those things that set the river on fire. It even strikes one at first sight as rather tepid and commonplace. Yet it contains the thought of a vast majority of the business men of the country, and it is much more weighty than it seems. For if the revenue is to be reduced to the necessary expenditures of the nation, it must be reduced nearly or quite $100,000,000; and in order to reduce it by that amount the tariff must be reduced by at least $50,000,000. But it is not possible to reduce the tariff $50,000,000 without reducing protective duties to an extent greater than was proposed by the Morrison bill of the last Congress, because small tariff reductions (and Mr. Morrison's was very small indeed) tend rather to increase than diminish the revenue. It is only large ones that accomplish the object. All these links in the chain of cause and effect follow the simple resolution adopted by the Chamber of Commerce, provided only that the excise duties on distilled and fermented liquors are maintained. Very few persons are bold enough to advocate a repeal of the whiskey tax or the beer tax. If those are continued in force, the protective tariff must yield at some point, and probably at more than one point. All the non-protective duties except a few were repealed some years ago. Duties on live animals and on food products and fruits are mainly non-protective, but they have been retained in order to fool the farmers and make them believe that their interests were looked after by the tariff sanhedrim. It might be possible to knock off $5,000,000 of revenue here. It might be possible to knock off $15,000,000 by enlargements of the free list, which would not really touch the protective features of the tariff except in appearance. Yet, after reaching in every direction for sources of non-revenue, we shall find it impossible to meet the requirements of the Chamber of Commerce resolution without some decisive cut at protective duties.

Looking about for some lamb to slaughter or some pig to shear, the protectionists have fixed their eyes upon the sugar-planters as the class likely to yield the largest fleece with the least squealing. The revenue from sugar is upwards of $50,000,000; the number of planters is very small. Although they have been reinforced to some extent by the manufacturers of glucose and a few sorghum and beet-root enthusiasts, they amount altogether to a very feeble contingent. Sugar is an article of prime necessity. It enters into the consumption of the poor to almost as great an extent as flour, and, if it could be had free of duty, would be almost as cheap as flour. Accordingly we find such admirable defenders of protection as Senators Sherman, Dawes, and Hiscock advocating a reduction or repeal of the duties on sugar, with a compensating bounty to the growers of cane, beets, etc., at home. The bounty is hardly to be taken seriously. Protectionism could not stand long if it were compelled to defend itself by direct payments from the Treasury. It has held its ground only by concealing the bounties that were really paid. A bounty of $7,000,000 a year to the sugar planters paid by warrants drawn on the Treasury would be a very different thing in appearance from a like bounty paid under the operation of the tariff, although it would be the same thing in fact. A bounty of $17,000,000 to the steel-rail makers, if paid directly from the Treasury, could not last a year. Yet that bounty has been paid during the present year in the indirect method of customs duties. We can think of nothing more likely to expose protectionism to irresistible assaults than the adoption of the bounty system in any single instance. We cannot believe that the high-tariff fraternity will be so short-sighted as to sanction it as part of their scheme of "tariff reform." We are persuaded that they will offer up the sugar planters and the beet and sorghum cranks as a sacrifice without more ado, and be glad to get off so cheaply.

Senator Evarts made, according to the *Tribune*, the "forcible speech" of the Republican meeting on Saturday night. His points were, that election day ought not to be "sneezed at, laughed at, or scoffed at"; that the Republican party is "absolutely united"; that the candidates in this State are "known by their neighbors and beyond the boundaries of their neighborhoods," and that "no suspicion of manipulation attaches" either to them or to the platform; that somebody has said that "one of the candidates was not as great as his father, but who is as great as his father?" and "was the father any greater than his sons at their age?"—that this sneering and "disparagement" and "contumelious comparisons" directed against "a feeble attempt to do honor to Gen. Grant in the person of one who survives him," are very low and bad; that the Republican party has made great progress since 1884; that it has "revolutionized Virginia," and is strong "in North Carolina and other parts of the South"; that it will "carry this State this year," not by force and violence or fraud, but "by suffrage as regulated by the Constitution and the law"; that "every man shall have a right and liberty to vote," and, having voted, his vote shall be counted; that power was transferred to the Democrats in 1884, not because the Democrats had most voters, but because the Republicans lent them votes; that "the general judgment of the American people is that you must vote for your principles and for those who agree with you in principle"; that civil-service reform in Democratic hands is a baby in the hands of a cruel nurse; that the two "great topics" of the day are Labor and Temperance; that these are also "real sentiments, real interests, both of to day and to-morrow"; that "Labor is all within the competency of all our people"; that "it has revolted from the subjugation of the Democratic party," and the Republican party has been "the bolsterer and protector of American industries"; that "the little white and red schoolhouses" are anti-poverty societies, and "the founders of our institutions meant that the culture and development of character, of duty, and of intellect should be supplied equally to the poor and the rich"; that "if you have a pie to divide between six schoolboys, you don't begin by sending half the pie over to another school," and therefore "certainly the voters will not support the Democratic party, whose purpose is first to make a division with Europe before a division is made with Americans"; that even if $100,000,000 too much taxes are raised by the Government, what is this but $1.66 a head per annum, or only three cents a week? We have made this summary as carefully and fairly as we can, and we do not think, as a "forcible speech," it calls for comment. It reads as if it were delivered to very young Americans in a little white and red schoolhouse.

Mr. Evarts may profit by our reminder that his speeches at rural fairs are reported, and that therefore it is necessary to maintain a certain likeness between what he says on those occasions and what he says here in town. The other day, at the Franklinville Fair in Cattaraugus County, speaking to the farmers who are staggering under the burden of tariff prices on everything they buy, with no "protection" for anything they sell, Mr. Evarts did well to be angry about the surplus. He said: "It is a Democratic doctrine that a nation is only half free that is in debt. Now, both political parties feel that if we can show foreign nations that we have paid half our debt, we shall not need standing armies or a great surplus." But here in New York at Chickering Hall on Saturday night he said:

> "The Democrats say that $100,000,000 have been raised by taxation unnecessarily for the support of the Government of the country, and that that unnecessary burden of taxation must be taken off because of its burden. Let us look at the weight and pressure of this hundred millions and see how it agonizes the people who pay it. One hundred million dollars to be paid by 60,000,000 of people is $1.66 a head. [Laughter.] And as there are fifty-two weeks in the year, that is as near as may be three cents a week. What a pressure from taxation upon the people of this country! If this $100,000,000 be wasted or used for corruption, that would be a good reason to prevent its uses and its perversions. But you cannot make this people believe that three cents a week is a groaning oppression that they suffer under."

"Steve" Elkins and "Bob" Ingersoll are out in favor of the Gorman ring in Maryland. As they are Republicans, some surprise is expressed, but there is really nothing surprising about it. The fact that the opponents of Gor-

man demand reform in government is enough to make the Elkinses and Ingersolls support Gorman, for they have a well-grounded prejudice against reform everywhere. The course of these Blaine Republicans in endorsing a Democratic spoilsman is a fit response to the enthusiastic support of Blaine by 55 out of 60 delegates from the Boston Democratic ring to the recent Massachusetts State Convention. A fellow-feeling makes the Boston Maguires feel wondrous kind towards Blaine, and the Elkinses and Ingersolls very sympathetic towards Gorman.

The Maryland Democrats carry on the "assessment" business with a brazen frankness which makes all efforts of Tammany in the same direction appear timid. The following advertisement was published recently in the Baltimore papers:

> Democratic Candidates for any State or Municipal Office who desire to be voted for at either of the Primary Elections to be held, by order of resolutions of the Democratic City Convention, on September 27 or on October 4, 1887, respectively, are hereby notified that, in accordance with the terms of said resolutions, *they are required to inform the Chairman of the Executive Committee, Room 6, Hoen Building, at or before* 5 *o'clock* P. M. *Tuesday, September 20, the office for which such person is a candidate, his residence and ward; at which time he will be advised of the amount assessed for the expenses of such elections and the time limited for the payment of the same.*
>
> *Any person failing to comply herewith will not be eligible to be voted for as a candidate, and, if voted for at such election, the votes will not be counted.* FETTER S. HOBLITZELL,
> *Chairman Democratic Executive Committee,*
> JOHN M. DULANY, *Sec.*

Here is a distinct threat to throw out votes cast for any candidate who fails to pay his assessment. The Maryland bosses not only levy a tax on candidates, but they refuse a nomination to any man who declines to pay; and if anybody votes for him after that, they refuse to count the votes. They thus assume power to disfranchise voters as well as to decide upon candidates. And they are so shameless in this outrageous conduct that they advertise it in the newspapers!

The high hand with which the Conservatives carried all their measures at the Springfield meeting of the American Board, and the complete failure of their opponents, would give a wrong impression as to the comparative strength of the two parties to one unacquainted with the history of the denomination for the past twenty years. The truth is, that this fight over the missionary question is but the last of a series in every one of which, up to the present, the Conservatives have been beaten. They have before raised the same cries of alarm, have made the same dire predictions, and have used the same arguments, only to succumb in the end. It is about a score of years since they had to see their denomination lose its distinctive Calvinistic theology in the public recognition of the clear right of an Arminian to take service in its ministry. Ten years ago began the agitation over the right of a Congregational minister to hold the theory of future probation. The Conservatives withstood this with all their might, and were at first as triumphant as they now appear to be; councils at Indian Orchard, at Littleton, and at Quincy refusing to ordain men professing the new view. But those victories were soon followed by an unbroken series of defeats, and the question is no longer even discussed. The Progressives, then, may well argue that the future is theirs on the last issue, just as it has been on the others; and the hard fighting of the Conservatives is but the desperation of men defending their last stronghold after having been driven from all others.

The Nashville (Tenn.) *American* of Friday contains a column of decidedly interesting matter in the shape of "a true and correct statement of the receipts and expenses of the late Prohibition campaign in Davidson County," by the treasurer of the organization which conducted the fight for the amendment. The receipts consist of voluntary contributions from a large number of persons, ranging in size from 25 cents to $100, but mostly in sums not exceeding $5, amounting in the aggregate to $1,205.40, which was afterwards supplemented by the payment of $105.45 by a single person, to meet the balance of the total expenditures of $1,310.85. An itemized account of these expenditures is presented, from bills of $200 for hacks used on election day, and $100 for the rent of a theatre at a Prohibition meeting, down to 40 cents for a broom and sprinkling-pot for use in keeping the headquarters clean, and 30 cents for a pitcher and glass. In short, everybody who contributed anything towards the prosecution of the campaign is given the chance to see exactly how his money was expended.

This is an object lesson in politics which ought to be studied by everybody who is interested in reforming our election system. The statement of the Nashville Prohibition manager is almost without precedent in our politics, except for the similar statement of the Independent National Committee in 1884; but such a report ought to be the invariable rule for all persons intrusted with the disbursement of funds for any organization in any election. Publicity of "campaign expenses" is an essential prerequisite to any thoroughgoing reform of our present corrupt system. A requirement that an itemized statement of all expenditures should be rendered under oath would of itself sweep away the larger part of the bribery and fraud which thrive in secrecy. With the requirement of publicity should be joined a rule limiting the amount which shall be allowed for legitimate expenditures. Then let the State provide for the printing and distribution of the tickets, and thus do away with all excuse for the employment of "workers," and we shall have a system of elections worthy of our theory of government.

A gratifying sign alike of the fading out of the color line in politics and of the growing strength of the non-partisan policy in municipal administration is found in Nashville, Tenn. Disgusted with the rule of party workers, the business men joined hands to elect a government pledged to conduct city affairs on a business basis. Its term is about expiring, and on Tuesday week a mass meeting of citizens was held which renominated the present Mayor, and filled out the ticket with men committed like him to a non-partisan administration, including a representative of the negroes. The resolutions declare that experience with the present form of municipal government has demonstrated its superiority; that "all political parties, without distinction of race or color, should participate in the management of our municipal affairs"; that both races ought to be represented in the Council; and that "the management of the city government is business, not politics, and that honesty and capacity are the only qualifications for Councilmen." The Nashville *American*, the leading Democratic newspaper of the city, heartily supports the ticket, and declares that "it may now be regarded as the settled policy of Nashville not to make party politics a feature in city government."

The most creditable thing done by the Knights of Labor at their Minneapolis Convention was the rejection on Monday by a two-thirds majority of a resolution of sympathy with the condemned Anarchists. The resolution offered and voted on was a weak protest against the infliction of capital punishment in general, tapering off with an expression of "sorrow" that the bomb-throwers in Chicago had been condemned to death, and committing the Knights to use every endeavor to secure a commutation of the sentence pronounced upon them. Mr. Powderly made a speech against it, and it was voted down by 150 to 50 This is one of the signs, but not the only one, of the sobering influences that have come over the spirit of their dream since the great Southwestern strike. The Knights are finding out that the United States, although a very large country, is not large enough for three kinds of government at once. Federal government and State government occupy the entire field. When Knight of Labor government seeks room for exercise in the same territory, the field becomes inconveniently crowded. When the Knights gain a realizing sense of this fact, as they seem to be in the way of doing, they will be on a better foundation for usefulness to themselves and others.

There is now a great strike of the book and job compositors of this city, not about wages, but in order to compel the book and job printers to employ nobody but members of Typographical Union No. 6 in their composing rooms, or, in other words, to drive out of their employment every man or woman who does not choose or is not allowed to join the Union, and enable the Union to hunt them like wild animals from one city to another, and prevent their earning their bread without sacrificing their liberty. The employers decline to yield on this point. Nobody questions the right of the compositors to strike for any cause that seems to them good, or to quit any office in which persons are employed who are for any reason objectionable to them. But any employer who, at their dictation or request, drives from his office any person, male or female, for any cause except incompetency or bad character, will not only be guilty of a very base and cruel act, and con-

nive at a very odious form of tyranny, but may rest assured that from the day he yields he will be a mere cipher in the management of his own business. On the other hand, he may be equally well assured that, if he will have a little patience, and submit to a little temporary loss and inconvenience, he will secure, by firm resistance, such peace and comfort as he has never known. A great improvement will have to take place in the quality of the men who manage trades-unions in this city before employers can either negotiate with them successfully or live in harmony with them. They live by trouble, and prolonged peace is therefore what they most dread.

There has been a great deal of curiosity to know where the funds were coming from to carry out the Mitkiewicz contract with the Chinese Empire. The magnitude of the scheme as darkly disclosed by its promoters was so colossal as to alarm any but the most daring investors. It embraced pretty much every financial and industrial undertaking known to civilized life—banks, railways, telegraphs, steamboats, mines, army and navy contracts, the collection of public revenue, etc., etc. It was a comprehensive plan to civilize an empire of 400,000,000 people by a grand rush. Of course, much money would be required. Mitkiewicz did not have it. Neither did Mr. Wharton Barker, although the latter is reported to be a rich man. Nor could the "Philadelphia Syndicate," whatever it may consist of, be expected to flood the Chinese Empire with capital to the extent indicated without disastrous consequences to the local circulation. The Shanghai *Celestial Empire* of August 19, which seems to be wholly in the Mitkiewicz interest and the possessor of its secrets, supplies the key to this Chinese puzzle. Two articles are directed to the defence of Mitkiewicz and his projects. From one of these, entitled "The Philadelphia Syndicate," it appears that the source of the civilizing fund, as understood in China, or at all events by the Mitkiewicz party there, is the stock of silver dollars in the United States Treasury. What will Mr. Bland say to that? What will Senator Beck think of a "general scramble" for our dollars in the interior of China? Is it for this that our mint has been working during the past nine years on its grist of two millions per month? Mitkiewicz was wise to persuade Li Hung Chang that silver is such a drug in this country that any means of getting rid of it would be speedily embraced, and that we should be only too glad to see the Chinese in their native land, "one and all," civilizing themselves by scrambling for it!

We learn also from the *Celestial Empire* that "the malcontents" are trying to stir up "provincial opposition" to the Philadelphia syndicate by preaching against centralization—very much, we suppose, as opposition might be raised in this country to any good thing on the ground of State rights. But such opposition, we fancy, may be appeased in China as easily as here by a liberal appropriation and a general scramble. It will be very strange if, with three hundred million silver dollars at command, the Viceroy Li cannot silence all malcontents of this description, both native and foreign. We would undertake to put it down for much less. There is another class of opposers who might not be so easily dealt with. These are represented by the *Chinese Times*, a rival newspaper, which has been making insinuations, or, as the *Celestial Empire* puts it, "descending to calumny," in its comments on Mitkiewicz. We should recommend the instant application of the bamboo to all such. The latest news seems to imply that the opposition have triumphed after all, and have got the Mitkiewicz contract rescinded. But the end is not yet, because Mr. Wharton Barker intends to ask Secretary Bayard what he thinks of a Government that breaks its contracts with American citizens. We should hope that Mr. Bayard would be chary in opening a discussion that might lead to embarrassing questions in reference to the treatment of Chinese in the United States. Above all, let him avoid committing himself in respect of the 300,000,000 silver dollars in the Treasury.

The London *Morning Post* has a strange conception of the nature of the fisheries dispute. "The main contention of the Americans," it says, "is that no nation has the right to jurisdiction over the sea beyond a three-mile limit. On the Pacific, America is acting in flat contradiction to any such principle of inter-State comity or treaty rights. British vessels have been arrested far outside of the limit and their captains fined and crews imprisoned. In some cases the vessels and cargoes have been forfeited. America's Pacific claims form an excellent counter argument to America's Atlantic claims, and as such will be of great and direct value to Mr. Chamberlain." The Americans have never denied British jurisdiction beyond the three-mile limit, simply because Great Britain never claimed or asserted such jurisdiction. If such a claim had been asserted in the cod and mackerel fisheries, it would certainly have been contested. The dispute relates altogether to what are called trading privileges on land, the contention on our side being that the right to buy bait and to ship seamen in Canadian territory was among the privileges conferred by British law and proclamation subsequent to the Treaty of 1818, and concurrent with American law and proclamation on the same class of subjects. The headland question, which was once the most fruitful source of contention, has sunk into comparative insignificance, although not wholly lost sight of. The contention on the Pacific Coast is upon grounds so entirely different that the situation on the Atlantic cannot possibly be affected by any decision in that quarter. It is not even known what our contention is in respect of the seal fishery in Behring Sea, the State Department having very judiciously refused to allow its hand to be forced by the Massachusetts fishing interest.

The situation on the European continent has become clearer than it ever has been for many a year. The successive interviews of Count Kálnoky and Signor Crispi with Prince Bismarck at Friedrichsruhe, following upon Emperor William's failure to receive a visit from Czar Alexander at Stettin, are now universally understood and declared to signify a close tightening of the Austro-Italo-German peace alliance, with a turning of front against Russia. That the German Chancellor, in spite of his often repeated declarations that Bulgarian affairs had no concern with his empire, and notwithstanding the harsh utterances of his inspired organs in regard to Alexander of Battenberg and Ferdinand of Coburg, was never inclined to let Russia have her way in the Balkans, could be doubted only by those who forget the importance of the Austro-Hungarian alliance for the security of Germany, and the danger to Austria-Hungary from the subjection of the South Danubian States to the guiding influence of the Muscovite policy. Bismarck, in severely condemning all infringements of the Berlin Treaty, used words implying a condemnation of all interference for which there was no distinct warrant in that compact, and he reckoned upon Austria-Hungary, if not also on Italy and England, for the prevention by force, if need be, of such interference on the part of the Czar.

The statesmen of Russia were probably never deceived by his tactics, which had, nevertheless, for a time a soothing effect upon Russian susceptibilities, while similar diplomatic blandishments were profusely lavished from Berlin upon the nervous moods of the French whenever there was a particular reason for irritation, as in the Schnaebelé affair. And there was also the shadow of the "Three Emperors' Alliance" still lingering on the diplomatic scene, which made some people believe that there was, beneath or above Bismarck's political network, an overruling influence formed by the personal inclination of Kaiser and Czar, to which Bismarck and Kálnoky would have to yield in an emergency. These delusive appearances have now completely vanished. Czar Alexander, losing patience, refuses to continue the rôle of an apparent dupe of an intrigue, and Bismarck has been enabled, by firmly established intimate relations with Austria-Hungary and Italy, to throw off the mask of a friend of Russia in obedience to the will of his master. This new attitude will probably weaken the grip of Russia on Turkey, and strengthen the hands of Ferdinand in Bulgaria, though it may not prevent his overthrow by a conspiracy. But even such an event would not, under the present circumstances, bring Russia a step nearer the end she contemplates in Balkan affairs.

The drift towards looser divorce laws, which shows signs of being arrested in this country, is making itself felt at the antipodes. New South Wales has passed a bill which makes separation for three continuous years sufficient ground for a dissolution of marriage, as also seven years' imprisonment, or habitual drunkenness for two years, which leaves the wife without means of support. The clergy are reported to be up in arms against the bill, and they are trying to secure a veto of the measure by the Government in London.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 5, to TUESDAY, October 11, 1887 inclusive.]

DOMESTIC

PRESIDENT CLEVELAND and his party arrived at Chicago on September 5, and were escorted through the streets by a great procession. He made a brief address, gave a public reception, and on October 6 went to Milwaukee. At a dinner given in his honor there he said, in speaking of his office: "There is a patriotic sentiment abroad which, in the midst of all party feeling and all party disappointment, will assert itself, and will insist that the office which stands for the people's will shall, in all its vigor, minister to their prosperity and welfare." October 7 the President went to Madison and was entertained by Postmaster-General Vilas until October 10. Thence he went to St. Paul and Minneapolis. He and Mrs. Cleveland are met everywhere by demonstrative crowds.

The Secretary of the Treasury has approved the course of the Collector of Customs at New York in refusing to release the goods of a number of persons who tried to smuggle them till they had paid the Government the full assessed value thereof.

A disease thought to be yellow fever made its appearance at Tampa, Fla., October 6. The people were panic-stricken and many fled. The Secretary of the Treasury granted the use of Government tents for the sick, and precautions were taken to prevent the spread of the disease. There have been several deaths, and a considerable number of people are sick, but it was subsequently reported that the disease is not yellow fever, but dengue fever.

Judge Bond in the United States Circuit Court, sitting at Richmond, Va., rendered a decision October 7 that the act of the last Virginia Legislature called the "Coupon Crusher," which provides for instituting suits against persons tendering coupons in payment of taxes, is unconstitutional and void. He granted a perpetual injunction restraining the State from bringing such suits. On the next day he fined Attorney-General Ayres of the State $500 for bringing suits in disobedience of his injunction, and committed him to the custody of the Marshal until the fine is paid, and he fined the Commonwealth's Attorneys of Fauquier and Loudoun Counties for disobeying the same order.

The minority of the members of the Utah Commission have submitted a report, which differs from the report by the majority chiefly in expressing belief in the sincerity of the Mormons' desire, as expressed in the proposed constitution, to abandon polygamy and to punish those guilty of it.

A Mormon conference has been held in Salt Lake City, which adjourned October 9, but no President of the Church was chosen. Wilford Woodruff was sustained as the President of the Twelve Apostles and ex-officio of the Church.

A number of prominent preachers and lay members of the Protestant churches have called a general conference of all evangelical Christians in the United States, to be held under the auspices of the Evangelical Alliance, in Washington December 7–9, to consider the present perils and opportunities of the Christian Church and of the country, and to discuss whether they can be met best by a hearty co-operation of all evangelical Christians, which, without detriment to any denominational interests, will serve the welfare of the whole Church, and what are the best means to secure such coöperation.

The New York Chamber of Commerce, October 6, adopted a resolution "that business men of all parties should unite in demanding speedy action by Congress looking to such a reduction of our revenues as will make the income of the nation conform as nearly as practicable to the necessary expenditures of the nation."

The State Civil-Service Reform Association of Indiana held a meeting at Indianapolis October 7, and in its report said: "We recognize the fact that in Massachusetts, and in some large offices elsewhere, civil-service reform has been maintained and advanced by the President. For this he is entitled to the thanks of the country. But we do not believe that reform by localities is all that ought to be expected, or that the President may distribute reform or spoils according to a sectional demand. In Indiana the administration of the law has been left by President Cleveland in the hands of its declared enemies, and as a consequence it has been rendered inoperative. The President has known the facts, but he has afforded no relief. It is his duty, by the exercise of his power of removal, to restore public confidence that the law will be enforced in spirit and letter."

The Governor of New Hampshire has called the attention of the Legislature to a deficiency of $135,000 in the State Treasury caused by the expenses of its prolonged session. The Judiciary Committee of the House has been investigating charges of bribery made against members, to vote for one or the other of the railroad bills, the discussion of which has chiefly occupied the Legislature.

A Territorial Division Convention of Dakota, at Fargo October 4, was attended by 104 delegates from thirteen counties. Resolutions were passed favoring the plan to submit the question of the division of the Territory to a popular vote in November, and asking for the admission of both divisions into the Union.

Chief-Judge Ruger of the New York Court of Appeals October 6 granted Jacob Sharp a stay of proceedings until the final decision of the Court of Appeals is given in his case, which will be argued October 19.

The Progressive (Socialistic) Labor party held a meeting in Union Square, in this city, on the night of October 8. A disturbance was caused on the outskirts of the crowd by members of the United Labor (the George) party, and an appeal was made to the police by the managers of the meeting. A body of policemen who misunderstood the orders of their officers, attacked the crowd and drove them from the square, causing a riot.

A large meeting was held in Cooper Institute October 5 to welcome Sir Thomas Henry Grattan Esmonde and Arthur O'Connor, members of Parliament who have come to the United States to speak here for the Irish cause.

A large collection of paintings illustrating the life of Gen. Grant are on exhibition in this city for the benefit of the Memorial and Relief Committee of the Grand Army of the Republic.

The Western Union Telegraph Company has bought the Baltimore and Ohio Telegraph system, including the wires and the exclusive right of way of the Baltimore and Ohio Railroad Company, paying therefor, it is reported, $5,000,000 in Western Union stock, with an annual rental of $60,000 for the use of the railroad telegraph lines and offices. The sale was consummated October 7.

The voluntary-prayers system at Harvard College has worked so well that it is now considered stable. The standard of scholarship required to pass in the classes has been raised by 20 per cent.

A freight train ran into the rear of a passenger train, which was standing still, near Kout, Ind., on the night of October 10. The cars, one of them a sleeping-car, caught fire and as many as ten persons perished. Many more were hurt.

William B. Washburn dropped dead at Springfield, Mass., October 5, while attending the session of the American Board of Foreign Missions. He had long service as a Representative in Congress, was three times Governor of Massachusetts, in 1871, 1872, and 1873, and he succeeded Charles Sumner in the United States Senate. October 6 George James Webb, the well-known teacher of music and choral leader, died, aged about eighty-five, at Orange, N. J. For many years he was Professor in the Boston Academy of Music. On the same day the mother of Thomas Hughes died at the English colony at Rugby, Tenn. Lemuel Bangs, for many years a prominent publisher of religious and school-books in this city, died October 7. Nathaniel L. McCready, President of the Old Dominion Steamship Company, died on October 3 on the Cunard steamship *Etruria*, which reached this port October 8.

Prof. John H. Wheeler, formerly Fellow of the Johns Hopkins University, Professor of Latin in Bowdoin, and Professor of Greek in the University of Virginia, died at Newbury, Vt., October 10.

Thomas C. Manning of Louisiana, United States Minister to Mexico, died suddenly October 11 while on a visit to this city.

FOREIGN.

The recent Bismarck-Crispi interview resulted in a definite alliance between Italy, Germany, and Austria for five years. Italy has full power to take independent action in the Mediterranean, and should Italian interests conflict with those of France or Russia, Italy will rely upon the support of Germany and Austria. In an interview Signor Crispi is reported to have said: "Italy, like the other Powers, has reason to fear an advance by Russia towards Constantinople, and she could not permit the Mediterranean to become a Russian lake." When he arrived at Rome, he was met at the railway station by one of his associates in the Cabinet, to whom he said: "I bring peace." The *North German Gazette*, the official paper at Berlin, says: "The interview is a fresh proof of the old and tried friendship existing between the rulers and people of Germany and Italy, and has established the fact that both statesmen have one determination, in conjunction with Austria—to preserve peace and prevent a European war, and in case of necessity to ward it off altogether." In England the principal purpose of the new alliance is thought to be the maintenance of peace next year. *Le Nord*, the Russian organ published at Brussels, says: "Prince Bismarck knows that no European alliance can compensate Germany in the future for hostility on the part of Russia. Signor Crispi, it will be found, has been treated very courteously, but has received recommendations of prudence rather than encouragement to undertake adventures or promises of territorial aggrandizement."

Elections of members of the Sobranye were held in Bulgaria October 9, and 250 Government and 40 Opposition Deputies were chosen. The elections at Sofia were orderly, and all the Government candidates were elected there. Bloody election affrays are reported from several places. In an election riot at Plevna twenty-four persons were killed and thirty wounded. A crowd of citizens made an enthusiastic demonstration on the evening of the election at the palaces of the Premier and Prince Ferdinand. The Government organ declares that the Russo-Turkish negotiations have been labor in vain, and that it should be known once for all that Bulgaria will never be abandoned by the Prince it has chosen. The election provoked severe criticism of the Government by the leaders of the Opposition, a number of arrests were made, and one leader was expelled from the country.

M. de Giers, Russian Minister of Foreign Affairs, has written to the Turkish Ambassador to Russia accepting the Porte's proposal to send an Ottoman Commissioner to Bulgaria to act in conjunction with a Russian Lieutenant-Governor of princely rank; but on October 6 M. de Giers declared that nothing could be done towards giving practical shape to any agreement until the Sultan should have summoned Ferdinand to leave Bulgaria, and this the Sultan has not done. The advice of England, Austria, and Italy to him is to abstain from violence. The Moscow *Gazette*, October 7, said that whatever decisions were reached at Friedrichsruhe by Bismarck and Crispi, they will have no influence on the Bulgarian question, which is entirely in the hands of Russia.

M. Delianoff, the Russian Minister of Public Instruction, is reported to have been dismissed from office because of his rigorous exercise of power over students in the gymnasia, which caused general discontent among the people.

A minor state of siege was declared at Berlin, under the Anti-Socialistic Law, October 5. The sale of certain newspapers was prohibited on the streets, and the editor of the *Reichsfreund* was sentenced to three months' imprisonment for publishing an article sharply criticising Bismarck.

John Neve, an Anarchist, has been sentenced at Leipsic to fifteen years' penal servitude for "preparing to commit and inciting others to commit high treason, contravening the Explosives Law, circulating forbidden prints, and committing perjury."

A meeting of Socialists and Anarchists was held in London October 7 which adopted a resolution protesting against the sentence of death passed against the Chicago Anarchists. William Morris, the poet, presided, and he said that the Chicago cases showed him how soon the thin veneer of civilization over mere brutality was removed and the human beast exposed.

Two hundred of the homeless, unemployed persons who sleep at night in Trafalgar Square, London, paraded in a body through the principal streets in the West End October 8, and afterwards held a meeting in the square. The speakers described their hardships, and declared that their only means of drawing public attention to their condition was such a demonstration.

The Irish police, in evicting resisting tenants at Gweedore October 5, were so hard pressed that an officer ordered them to prepare to fire upon the crowd. One constable threw down his rifle and declined to obey the order, and it was subsequently reported that a number of others made a similar refusal. The man Callihan, who turned Queen's evidence against his confederates in the murder of Constable Whelehan, in his testimony at Ennis, Ireland, October 6, said that he had been an informer for six years past, and that his expenses had been paid by the Government. On the 8th his confederates, on his testimony, were committed for trial, and bail was refused. An Irish League mass meeting was held at Longford Sunday, and a platform collapsed and a Government reporter was injured. T. M. Healy in a speech said that there would soon be no landlords left in Ireland. He would deal with them in securing their rights as he would in driving rats from a haystack. Several of the suppressed branches of the League in County Cork held meetings on the same day.

The trial of Lord Mayor Sullivan of Dublin and William O'Brien for publishing in the papers controlled by them reports of meetings of suppressed branches of the National League was begun October 6. Sullivan went to court in his robes of office. The City Marshal, wearing a cocked hat and a sword, led the civic dignitaries in a procession to the court-room along streets thronged by demonstrative people. After the case had been called, a dispute arose between the police and Mr. Sexton, High Sheriff of Dublin, because Sexton wished to place the city sword and mace before the magistrate, which came near provoking a fight. The Court dismissed the case of Sullivan on the ground that the Crown had not proved that the meeting reported in the *Nation* was a meeting of a suppressed branch of the League. On the next day the case of O'Brien was adjourned, pending the appeal to the Superior Court by the Crown in the case against Sullivan. On the day of the Sullivan trial the *Freeman's Journal* published four columns of reports of League meetings held on the preceding Sunday in proclaimed counties. October 8 the *Nation* announced that several influential English and Scotch newspaper proprietors had offered the use of their premises, machinery, and staffs if the Government closes its office in Dublin. The London *Standard* inveighed against the "gross stupidity of the officials," and the *Times* declared the fiasco serious enough to warrant Mr. Balfour's instant return to Ireland.

John Bright, in a letter, published October 5, on the attitude of the Liberals and the government of Ireland, wrote: "I supported Mr. Gladstone's acts of 1881 and 1882 for the suppression of the Land League and disorder in Ireland, and I now support the Government in its efforts to suppress the National League, which is the Land League under another name. My sympathy for Ireland was not born of a faction in a struggle for place and pay. It was as strong as it is now thirty years ago, before Messrs. Gladstone, Harcourt, and Morley, and their noisy followers had a word to say in favor of the Irish tenantry or the sufferings of any portion of the people. Recent events have strengthened my sympathies. . . . I would save the Liberal party, with which I have been much longer associated and for which I have worked more than any of the present acting leaders, from the humiliation with which it is menaced."

Mr. Joseph Chamberlain began a tour of Ireland October 11. In his speeches he declared that the time would come when the tillers of the soil would be its owners. At a town in Ulster, in response to a call for a speech, he said: "With the help of our Liberal Unionist colleagues and the support of the whole Conservative party, we have at all events saved the Union, thereby preserving Great Britain from injury and Ireland from ruin and disaster. Although the danger has been temporarily averted, it seems possible that this great issue will again have to be faced, when a great deal will depend upon the attitude and determination of the men of Ulster."

Mgr. Persico, the Papal delegate to Ireland, in a sermon in Dublin on Sunday, said that he was gratified at the devotion of the Irish to the Pope, which was manifest throughout all Ireland, even including Ulster.

The London *Post* on October 10 intimated that the American-British Fisheries Commissioners would consider the cases of trouble with sealers in Alaskan waters. "America's Pacific claims form an excellent counter argument to America's Atlantic claims," it said, "and as such will be of great and direct value to Mr. Chamberlain." Mr. Putnam and Mr. Angell, the two American Commissioners to act with Secretary Bayard, have been in Washington in consultation with him; and it is declared at Washington, though no official statement has yet been made, that consideration of the cases of captured sealers in the Pacific will not come within the scope of the Fisheries Commission's powers.

It is feared at Shanghai that the British gunboat *Wasp*, from Singapore, was lost in a recent typhoon. A Bavarian steamer was sunk by a collision October 9 on Lake Constance, and a number of passengers were drowned.

A treaty of union has been concluded between the South African Republic and the New Boer Republic. Henceforth they will be one State and under one President. The first Chief Magistrate will be S. J. P. Kruger, who is now President of the South African Republic; but England's formal sanction of the union has not yet been given. The "New Republic," as the Boers call it, was founded in 1885 by freebooters from the Transvaal. It occupies the western part of Zululand, and does not reach the coast. Its area is about 1,800 square miles.

It is reported that the influence of Ayub Khan has so seriously affected the situation in Afghanistan that the Amir's position in Cabul has become one of extreme difficulty, and that he is sending his treasure away.

It was reported October 11 that eight of the associates of Ayub Khan in his flight from Persia had been captured, and that Ayub, accompanied by a few men, was suffering on the frontier from want of water. A later report is that he perished in the desert from wounds received in a recent battle with the Amir's troops.

In a report to the State Department on the production of wheat in India, the United States Consul General at Calcutta declares that the developing of wheat-growing in India depends chiefly on means of transportation to the seaboard, and expresses the opinion that with the cheap native labor and the constantly growing facilities for transportation, India will become a formidable competitor with the United States. During the fiscal year ended March 31, 1886, the area planted in wheat was about 27,500,000 acres, and the total yield 289,000,000 bushels. The export of wheat from British India, the Consul-General reports, has increased from 300,000 cwt in 1868 to 21,000,000 cwt. in 1886, and the increase of 1886 over 1885 is about 5,000,000 cwt.

The negotiations between Italy and France for a treaty of commerce have been unsuccessful, the demands of Italy being inadmissible by France.

It was reported from Massowah October 5 that the Abyssinians had determined to attack the Italians as soon as they emerged from Massowah, and that several skirmishes had already occurred. The Italian Government is making active preparations for a campaign in Abyssinia.

A great military and social scandal was caused in Paris October 7, when Gen. Caffarel was suspended from the position of Chief of the War Department staff, and committed to a military prison to be tried by a council of war for selling civil decorations. A woman and a German were also arrested, and it was reported that Caffarel had been in constant communication with a Prussian nobleman, and that there was fear lest many War Office secrets had been sold to Germany. In the house of Mme. Limousin, the woman who was arrested, there were found about 300 letters to M. Wilson, son-in-law of President Grévy, and others from M. Herbette, Gen. Thibaudin, and Gen. Boulanger. Gen. Ferron, Minister of War, in a speech at Chartres, October 9, said: "You need not anticipate from me the slightest weakness in dealing with faults against honor and discipline. The higher the military position of the guilty parties, the more severely I shall deal with them. The errors of one man do not stain the honor of the whole army. Keep intact the consideration and esteem in which you hold it."

Maurice Strakosch, the opera manager, died in Paris October 9, aged about seventy. He directed the early training of Patti, who is a sister of his wife, and she made her first public appearance under his management.

It was reported October 8 that the Sultan of Morocco, whose death had been announced, was still alive. On October 7, M. Flourens, French Minister of Foreign Affairs, informed the Spanish Ambassador, that France reserved to herself complete liberty of action in defending her interests on the eastern frontier of Morocco, and that if Spain made a military demonstration on the north coast, a French fleet would be sent there.

The stockholders of the Hamburg-American Packet Company, at Hamburg October 6, decided to increase their capital stock by 10,000,000 marks to construct two steamers for the New York service, which are expected to be ready by the spring of 1889.

It has been reported and was subsequently denied at Baden-Baden, where the Emperor of Brazil now is, that he has announced his intention of abdicating his throne because of impaired health.

The customs officer at St. Thomas, Ont., October 8, seized a consignment of Louisiana Lottery tickets, and is holding them to receive instructions from Ottawa.

The amendment to the Mexican Constitution permitting the reëlection of the President has been ratified by two-thirds of the States, and is now before Congress for final passage.

DILEMMA OF THE MASSACHUSETTS INDEPENDENTS.

It is clear from the opinions expressed by the Independents in Massachusetts that it would take very little to cause them to nominate a candidate of their own for the Governorship of the State. The unanimous determination is to strike at the ring which has captured the Democratic party the severest blow possible. To give an overwhelming vote to the Republican candidate is obviously the most direct and practical way of accomplishing this end. But many cannot bring themselves to vote for a man who has proved himself both weak and untrustworthy. Gov. Ames's treatment of the bill exempting soldier veterans from the State Civil-Service Law has aroused in every Independent a feeling of profound contempt. Upon Mr. Ames's nomination for the Governorship last autumn, a member of the Reform Club waited upon him and asked whether he would veto a soldiers' exemption bill should one be brought up again. Mr. Ames in reply asked what the Republican platform said upon the subject, and when he was told that it specifically pledged the party to resist all "open or covert attacks upon the reform," said he would carry out that declaration to its fullest extent. When a few months later such a bill did come before him, he was again waited upon by members of the Reform Club in their private capacity to request him to veto the bill. He showed these gentlemen a veto which he had already prepared and signed, and they went away feeling fully satisfied. They should never have left him until the veto was beyond recall; for as soon as their backs were turned he unhappily met a State Senator who told him that such a veto would lose him 10,000 soldier votes, and he thereupon promptly tore up the veto.

Having to choose between a Republican of this sort and a Democratic demagogue, the Independents naturally hardly know which way to turn. Some of them would actually vote for the Prohibitionist candidate, although they favor only high license combined with local option. Others would not vote at all. In such a state of affairs, it is not surprising that the more aggressive Independents should demand that a citizens' meeting be called to nominate a respectable candidate. The Democrats would probably rejoice in such action, since they have no hope of the Independents' vote being cast for Lovering, and would like to see it switched off from Ames. The Republicans, on the other hand, would probably be angry enough to take pleasure in legislating away, next winter, the late decision of the Supreme Court, which greatly curtails the evils of the Soldiers' Exemption Bill. In short, the surface effects of nominating an Independent candidate would be bad, and the so-called practical men of the two parties would smile in pity at what they would term the fanaticism and impracticability of the Massachusetts Mugwump.

But we trust that the Massachusetts Independents will take no such action, however deep their disappointment may be with both of the existing parties. They must not fall into the state of mind of those Blaine men who think that one use of party organizations is to enable people to give vent to feelings of love or hatred, hope or despair. The object of parties is to win victories at the polls, so as to get certain ideas carried out in administration or legislation. Organizations which have no such expectation, and are merely intended for the mutual edification or comfort of the members, are not parties, but churches. No independent party running tickets of its own could expect to have any influence on politics except that which any man has who preaches the value of virtue and the loathsomeness of vice. They could not elect any candidates of their own, and they would very probably, indirectly and in spite of themselves, aid in the election of the worst candidates of the Republican or Democratic party. This might not be true if they had a broader platform, and one of more general interest, to offer to the public. But the issue they present is a narrow one. It is quite broad enough to stick into the platforms of the great parties, but it is not broad enough to furnish the Independents with a platform of their own. They would be compelled to piece it out with various things besides civil-service reform and administrative purity, about which Independents are either divided or feel with different degrees of warmth; and it would then have that worst defect of a creed, an air of patchwork. Besides this, they would have to set up candidates of various degrees of merit, whom they would be compelled to defend through thick and thin in the usual party fashion, and about whom some of the weaker brethren would probably lie or prevaricate freely, after the manner of the Blaineites. From all this would come first great scandal, and then the utter discredit of the very name of Independent or Reformer.

Moreover, it is needless to point out the risk in these days, when the mass to be moved at every election is so vast, which the reformers or preachers of a new political gospel run in standing up to be counted. The history of the Liberty party, which certain Abolitionists started in Garrison's day, is full of warning and instruction on this point. Their strength lay in their moral force. This force was enormous, and, as the result proved, great enough to tear the Union to pieces. But as a party they were contemptible, and when they went to the polls seemed ridiculous. In fact, the only way for the Independents to make themselves felt in politics is to keep themselves an unknown quantity, and give their help at the polls to the party which is least bad, until the time comes when they will be able to ask the question, Which of the two is the better?

THE BALTIMORE REFORMERS.

The Baltimore reformers are hard at work under the most trying circumstances. The whole machinery of election is in the hands not simply of their opponents, but of unscrupulous partisans who stick at nothing to carry their ends. The greatest frauds with which they have to contend are found in the registration list, on which it is estimated there are at least 30,000 illegal names. What illegal registration would not do to carry elections has been done by fraudulent counting of ballots after election, an art in which Higgins, the Treasury Appointment Clerk, and Rasin, the Naval Officer of the port, are said to be special experts. The Reform League has recently succeeded in securing the conviction of ten judges and clerks of election for frauds, but, curiously enough, could get no aid from the police on the trial. These judges are appointed by supervisors who are appointed by the Governor, and they are all of one party. Three grand juries in succession have declared that these supervisors have abused their trust or have been imposed on, but this has had no effect on the Governor, for he continues to select them from one party exclusively.

The organization in Baltimore which presides over the commission of election offences, and with which the reformers are now fighting a hard battle with a fair prospect of success, is, as is well known, patronized, if not directed by, Senator Gorman, who was Chairman of the Democratic Executive Committee in the last Presidential campaign, and through whose instrumentality Higgins was given employment in the Treasury and Rasin put into the Naval Office. Now, for some reason or other which nobody that we have heard of has ever been able to give, all attempts to bring home to the President's mind the exact nature and operation of Senator Gorman's machinery in Baltimore have proved ineffectual. The facts have been laid before him more than once by members of the Reform League, including Mr. Cowen, but without making any apparent impression. Higgins still holds his own, and so does Rasin, and so does Thomas, and so do others of the gang, who carry into their operations the authority and weight and immunity derived from the holding of Federal offices. Apparently the reformers have not been able to satisfy the President that the account Senator Gorman has probably given of them, that they are a small knot of cranks or malcontents, who are dissatisfied because they get none of the patronage themselves, is untrue. At all events, he pays no attention to their groans, and receives their remonstrances in more or less impressive silence.

The coming election, therefore, will not only be important for the influence it will have on the local government in Baltimore, but for the influence it will have on the President's mind touching Maryland politics. If the charges made by the Independent Democrats against the Gorman Machine are true, there is a state of things in that city which has probably had no parallel in an old Christian community since the Middle Ages. If it be a fact that "seven men have been appointed to office under city, State, and national governments within a few months, who have taken human life, and that these appointments have not been made by oversight, but in spite of all protest," and that Senator Gorman sees nothing wrong in such a state of things, and has persuaded the President that there is nothing wrong, we shall have to go back to the Merovingian period in France to find a match for Gorman as a Christian politician.

Should the reformers succeed in obtaining a fair vote and count, and should the election result in the defeat of the Gorman Machine, we trust it will be received at the White House as proof which cannot be gainsaid that the time has come to throw Gorman and his agents over-

board. We do not care what the nature of Gorman's hold on the Administration may be. We know nothing about it. We generally find that even the best informed treat it as a great and insoluble mystery. Some say it is a pledge which Gorman got during the campaign and from which the President cannot honorably depart. But even if it be a pledge, it is a pledge which can only be binding as long as Gorman can show successfully that his methods in Baltimore do not involve offences against social morality and the law of the land. President Cleveland would be the last man to acknowledge that any political promise could compel him to wink at or condone fraud or violence, or to reward men who, when accused of either, had no answer to make, except that their guilt was of long standing, and that their opponents were as bad as they. We take it for granted, therefore, that should the efforts of the good people in Baltimore, who are now trying to rescue their city from this great shame and sorrow, be crowned with success at the polls, President Cleveland will no longer hesitate, no matter at what cost, to rid his Administration of the great stain which Gorman has undoubtedly inflicted on it, and which every additional hour of Gorman deepens.

RELIGIOUS POLITICS.

THE proceedings of the American Board of Foreign Missions at Springfield during the past week have been very interesting and, in some respects, very instructive reading. The Board is a close corporation, that is, an incorporated body of 220 members, who fill their own vacancies, and administer an enormous revenue—about $600,000 per annum—collected in the main from the Congregationalists, but to some extent from the Presbyterians, and used in support of missions to the heathen, chiefly in Africa and Asia. The active work of administration is done by the Secretary and the Prudential Committee, composed of ten members. About three years ago this Prudential Committee began to take the alarm about the "new theology" which seemed to be creeping into the Church from Andover and other places, and more particularly about the opinion that after death everybody will have a second chance of salvation, or, in other words, will pass through a period of probation in the next world before he is finally condemned or absolved. This opinion was thus described by the Rev. Dr. Walker in a speech at Springfield on Thursday:

> "I sit at the feet of an eminent historical instructor, who can correct me if I am in error; but if I have read history aright, this conception of the possibility of divine grace extended in another world to men is as old as the second century of Christian history. It has been entertained by some of the noblest and saintliest fathers of the Christian Church. It pervades to a very great extent the views and conceptions of the noblest representatives of evangelical religion in England and in Germany to-day. It is set forth by men who have done more than any others to roll back the tide of German infidelity during the past thirty years—such names as Tholuck, Lange, and others whom I could name. This I say, then, is no novelty, and it is a simply misleading assertion which has been reiterated and sent broadcast on the wings of almost all our religious journals into the minds and hearts of the members of our churches, innocent as children upon this matter."

So much for its novelty. As to the extent to which it is held in the Congregational churches, Mr. Mackenzie of Cambridge said, speaking on the same day:

> "I am going back to my home to-morrow, and in a Sunday or two we are to take up a collection for this American Board. My people know that I am asking them to give their money to a society which, if I offered myself as a candidate, would spurn me from their doors. (Great applause. 'Hear! Hear!') But I am not a 'new-departure' man. I am not any departure man. I hold by the old Gospel and the whole of it. But these brethren of the Prudential Committee would not let me go, if I were young enough to go; they would not let my brother Gordon go. There is not a pastor in a church in old Boston to-day, with possibly one exception, who could go. I ask why the time has not come when we may say, what is good enough for the churches at home is good enough for the churches abroad, and when men shall be judged by their possession of the Gospel—its words and its spirit—and if they are found in an unselfish love willing to teach it, they shall be allowed to teach it."

In fact, all the available testimony seems to show that it is held by at least one-half the professing Christians who subscribe to the funds of the Board, and by all, or nearly all, the younger theologians, of whom Prof. George P. Fisher of Yale College may be considered a fair representative.

Now, the ten members of the Prudential Committee took it into their heads, about three years ago, that this opinion was erroneous; that they knew more about what was to happen to the souls of men hereafter than those who believe in the period of probation, and that they would not allow the doctrine to be communicated to the heathen to whom the Board sent missionaries. They therefore ceased to accept good and regular standing in an orthodox Congregational church as a qualification for missionary work. They made themselves a theological court, and examined the young men who asked for appointment as missionaries touching their views about probation. Any one who believed in probation they rejected, so that they established a state of things in which Prof. Fisher and at least half the Congregational ministers of the United States would be unfit for missionary work, however anxious to engage in it, and in which a heathen introduced into most of the American Congregational churches would hear things which he ought not to hear, and which would be injurious to his soul's health. When they were assailed in this position they fell back on the full Board, and the full Board has sustained them by a majority of 95 to 43.

The Board has filled thirteen vacancies with men who agree with the majority, and has rejected the claim of the probation party—or Progressives, as they call themselves—to any representation on the Board. No political caucus could have done this kind of work more neatly, or with bolder disregard of the wishes of dissentients. The members seem to have asked themselves what would be the use of being a close corporation, and filling their own vacancies, if they had to pay any attention to the protests of non-electors. How they come to know so much of the future life that they need not mind what any other Christian says about it, they have not explained, and yet there is no point in the controversy so important as this. A full revelation of the source of the Board's certainty would probably be an unspeakable gain to the religious world.

This revelation is especially important as touching the management of the missions, because nothing but certain knowledge can excuse the Board for concealing from the heathen the fact that probation is believed in and expected by half at least of the Christians who send the missionaries to them. If the Board *knows* there will be no probation, it ought to justify itself before the world by telling how it knows it. If it does not know it, if its opinions about the matter are of precisely the same value, and no more, as the opinions of those who think there is probation, the concealment of this fact from the heathen is what is called in secular affairs a fraud, which is aggravated by the ignorance and simplicity of those on whom it is practised. That a missionary should, at the outset at least, make no mention to a heathen of the division of Christendom among various denominations is comprehensible and excusable, but that he should, by means of concealment, deceive the heathen as to the opinions held by the very body of Christians who send and pay him, on a point of vital importance to the heathen's spiritual welfare, is something which every system of morality would condemn in the severest terms. That professing Christians should fight stoutly for liberty to practise such a deception, while preaching the Gospel, is a marvellous illustration of the lengths to which pride of opinion, and especially theological opinion, will lead men. Any man who practised analogous deception about the views or interests of the promoters in putting a commercial company on the market, would in some countries go to jail, and in all incur the severest social reprobation. We trust nothing but the necessary restraints of discussion in a professedly religious meeting prevented the Progressives from characterizing the proposals of the Board in the terms which they deserved.

THE BRITISH MINISTRY.

THE British Ministry is apparently on the eve of another "crisis," owing to the failure of the Irish Coercion Bill. The great expectations entertained about the effect of the proclamation of the National League under the act have not been fulfilled. The meetings of the League continue to be held in the proclaimed districts in spite of the efforts of the police to prevent them, and in defiance of the penalty of six months' imprisonment which hangs over all who attend them. Worse still, reports of these proceedings continue to be published in all the newspapers, in defiance of a similar penalty. Wishing to make an example of one of the newspapers, the Government prosecuted Mr. Sullivan, the Lord Mayor of Dublin, for publishing one of these reports in his paper, the *Nation*; but the case broke down before the magistrate on the preliminary examination, for want of proof that the meeting reported was really a meeting of the National League. Then the prosecution of O'Brien for incendiary language hangs fire, for he has appealed, and, pending the appeal, makes more incendiary harangues than ever. Moreover, an attempt to put a Government reporter on the platform at a meeting at Mitchelstown ended in a riot, in which the police fired without orders and killed two unoffending men. Though last, not least, it appears that a moonlight outrage, ending in the murder of a constable, the news of

which was used very effectively in the House of Commons before an important division on the Coercion Bill by Mr. Balfour, was got up and headed by a man of the lowest character, who had been five years in the pay of the police, and who turned informer as soon as the job was done. The evictions, too, at Bodyke and elsewhere, carried out with the assistance of a large military and police force, sometimes under circumstances of great cruelty, and reported in thoroughly sensational style, have deeply moved the British public, or at all events the democratic portion of it.

These things, combined with the feeble leadership of the Conservative party in the House of Commons last session, with the uncertainty and weakening of the support given to the Ministry by the Liberal Unionists, with the open desertion of such prominent ones as Sir George Trevelyan, Mr. T. W. Russell, and even the Secretary of the Liberal Unionist Association, Mr. Maude, and with the approaching disappearance of Mr. Chamberlain across the Atlantic just when matters are at their worst, have spread a sort of panic through the Conservative ranks. Their writers are, in fact, in this last month's magazines almost throwing up the sponge. Mr. Matthew Arnold, who sang a song of triumph over them last May, confessed sorrowfully in the September *Nineteenth Century* that they have proved a failure. In the October number of the same periodical Mr. Edward Dicey, one of their most ardent eulogists, who also promised great things for them, confesses that although all is not lost, the outlook is very dark indeed. But he has no remedy to offer except the adoption of the name of Conservatives by the Liberal Unionists, and the formation of a coalition Ministry by the entrance of others of their number into the Cabinet. How this will mend matters does not clearly appear. It will not make the Irish more submissive, nor will it do anything to make the Irish policy of the Government more acceptable to the English constituencies, whose growing disgust with coercion is now no longer denied.

But some kind of Cabinet reconstruction appears to be resolved on, and the approaching conference of the Liberal Unionists, at which Lord Hartington is to preside, will probably determine what part they are to play in it Most of them think if he would enter the Cabinet, it would have a wonderful effect on the country, while the despondent Conservatives are equally assured that if Lord Randolph Churchill were put back into his old position of leader of the House, it would restore the fortunes of the Cabinet in Parliament. If nothing satisfactory can be accomplished in this way, it is admitted that the game will be up, and that the Ministry will be unable to face another session of this Parliament, and will have to dissolve

Mr. Dicey's article in the *Nineteenth Century* is very interesting reading as a revelation of the exact nature of the Liberal Unionists' disappointments and deceptions. They were all thoroughly persuaded that home rule threatened the very existence of the Empire, and felt sure that the whole Liberal party would, if not at first, very soon share their fears and abandon Gladstone. Mr. Dicey admits that this was a delusion, that the hold of Gladstone on the bulk of the Liberal party has not been shaken by anything that has occurred, and that those Liberal Unionists who still call themselves Liberals are threatened with total exclusion from public life at the next election. For this reason he advises them to become Tories at once, in name as well as in reality, and thus give themselves a chance of Conservative seats at least. He says very truly that the reasons they give for not going plumply into the Conservative camp are too metaphysical and fine-drawn to be understood or appreciated by the bulk of the voters.

THE CIVIL SERVICE IN FRANCE.

ONE of the complaints against the present republican form of government in France is, that it is a great deal more expensive than its imperial and royal predecessors. This finds expression in a recent number of the *Revue des Deux Mondes*, a very Orleanist journal, from the pen of M. Cucheval-Clarigny, an old literary workman under the Empire. He starts out with a reference to the good old times of the restoration of the Bourbons in 1814, when the whole force of the Law Department counted only thirty-five officials. To-day, with no more courts or lawyers or notaries, although there are a great many more criminals, the clerical force has increased enormously. The expenses of administering the Government of France have risen in fifty years from two hundred to over seven hundred millions of dollars. The Government of July in eighteen years only added sixty millions to the old outlay, and the Imperial Government in nearly twenty-two years as much more, although it provided railroads and telegraphs and other such important public services. The Republican Legislature has multiplied the number of public employees and has increased their pay. Thus, in the Post-office, where letter-carriers used to receive six dollars a month, of which the first month's pay was retained for the pension fund and three dollars was deducted for the expenses of their oath of office, by 1880 the outlay was just double that of 1869, and in the last six years it has been increased again by fourteen millions of dollars. An annual disbursement for salaries in 1869 of fifty millions of dollars, and in 1876 of fifty-six millions, had grown in 1886 to eighty millions of dollars. Two Commissions have investigated the subject, but, beyond a recommendation to reduce the expenses, nothing has been done.

France still has twenty-six courts of appeal, although before 1789 she got along very well with her fifteen parliaments. Three fourths of the litigation is now settled in assize courts, in commercial tribunals, and by the prefects, while railroad facilities would make it easy to dispense with a large proportion of the subordinate local courts. The War Department of France holds more than forty million dollars' worth of buildings and building sites, utterly useless for any military purpose, but only serving for an army of officials to take care of; and two thirds of its small forts, etc., which have been ordered by the Legislature to be abandoned, are still used to furnish luxurious quarters for officers of high rank. Every prefect in France has a sub-prefect to enhance his dignity, without regard to the amount of work to be done, and a council, which only helps to perpetuate that interference of the Government in many strictly local matters which had better be left to the ordinary tribunals. At least two hundred engineers are employed in the prefectures for work that could easily be done by experts engaged in business for others, on better terms and in a better way than by the present force. Naval and army officers on leave could take the place of the large body of civilians employed at navy-yards and forts and arsenals.

France, in claiming for its Government a monopoly of the business of education, according to M. Cucheval-Clarigny, is doing that which does not belong to the task of administering the laws, and is entirely on the wrong tack. Before 1789, in some of the provinces of France there were fewer illiterates than there are to-day. The country was full of schools of all kinds, from the modest parish school to colleges and special scientific schools of a high order of excellence. Education was almost gratuitous, and without expense to the royal treasury or to taxpayers, for all these establishments were supported by old endowments. There was a lively emulation between the universities and the great teaching bodies, the Oratorians, the Jesuits, and the masters from Port Royal, to whose methods modern pedagogy has made little real addition. The Revolution made a clean sweep of all; the buildings were sold, the libraries burned, the masters sent to the scaffold and into exile. Napoleon undertook to restore them, and for this purpose used the resources of the Government. The Republic has put an end to the liberty of instruction which made France famous, and the cities are following the example of the national Government by extravagant outlays; and no sooner are these made than they appeal to the Treasury for enormous sums to complete their college and school buildings and maintain them. The high schools for boys cost $200 and those for girls $300 for each pupil, a sum far beyond the fair average that ought to be thus distributed. Thirty of these schools ought to be suppressed, leaving fifty vigorous establishments, and from these the costly outlay for board and lodging ought to be taken, so that more money could be spent on the proper business of a school—education—and not, as at present, on an army of employees, and in providing for girls and boys luxurious homes, far better than those of their own families. The teachers in the primary schools are condemned to misery by reason of their wretched pay, over 30,000 getting less than $160 a year, over 23,000 less than $200 a year; and the Legislature, so lavish in other directions, refuses the $50,000,000 asked as far back as 1883 for an increase of their salaries.

The Post-office and Telegraph Department exhibits the curious anomaly of an increase of receipts and a diminution of service. In 1886 it cost $30,000,000, and showed a profit of $3,000,000; yet in 1869, with expenses amounting to $12,000,000, it earned a surplus of $4,000,000, a profit of over 25 per cent., and it had established a daily postal service in every commune, paid over $4,000,000 in subsidies for mail service at sea, and had to pay for a great many postal routes by wagon which are now all served without expense by rail. The railroads do for nothing work that saves the Government more than $4,000,000 annually. The post-office and the telegraph services are badly managed in France and fail to meet the public necessities, while the outlay is steadily increasing. To meet the demands, not of the people, but of their representatives in the French Legislature, with a view to increasing their political influence, the number of post-offices and post-office employees steadily increases, and even in Paris the cost of delivering letters in the suburbs is six times the amount of the postage collected for the service. The tax department has been injured by the forced retirement of a large army of old employees, to make room for a vast body of men whose only recommendation was the political influence of members of the Legislature. Instead of securing honesty by rewarding long service, the tendency of late

years has been to employ new men at low salaries, with increased duties, larger facilities and temptations to dishonesty and inefficiency, and hence an almost universal complaint from taxpayers of annoyances, and from the Treasury of frequent peculations.

Paris is the centre of all the favoritism that has grown out of the necessity of consulting the wishes of members of the Legislature in a matter with which, in England and other well-governed countries, they have nothing to do—the purely administrative business. Thus it is that what used to be merely divisions of this or that department have grown into independent departments, with new officials of all grades, new quarters, and new expenses. The Department of Fine Arts now has its own minister, with a large corps of inspectors, clerks, etc., at a large annual outlay, doing work that was just as well done by a small body of experts in old times. Three new departments have been formed out of the old Department of Finance and Public Works; and, under a Minister of Agriculture, the expenses of the old Division of Forests have increased 40 per cent. and the receipts diminished 20 per cent. In 1869 it produced a revenue of $8,000,000 at an expense of $2,000,000, but in 1883, under a Minister of Agriculture, it yielded less than $6,000,000. In Algiers the expense was doubled, and to-day it is fourfold the receipts. The expenses for the Post-office have increased, from 1875 to 1886, 45 per cent., and its surplus is steadily decreasing, so that the balance in favor is likely soon to disappear altogether. The expense of the Department of Agriculture has increased 8 per cent., and that of the Department of Commerce has doubled in the same period—1875 to 1886—the former costing $144,000 and the latter $110,000, just for bureau expenses, while those of the departments from which these were taken have also increased—30 per cent. for the Treasury and 40 per cent. for the Public Works. In 1886 the Post-office Department in Paris consisted of 5 directors, 15 chiefs of bureau, 35 sub-chiefs, 306 clerks, 40 assistants, 146 second assistants, 72 porters and messengers, and 25 special officers, costing $350,000 in salaries and $75,000 for material used. Besides this item there were special allowances in addition for inspectors, telegraphic instruction, post-offices and telegraph offices in Paris. The Department of Agriculture gives its minister an assistant, three chiefs of division, 10 chiefs of bureau, 5 assistants, and 62 other employees, costing nearly $200,000—$125,000 for salaries, $25,000 for material, and nearly as much for printing. The care of the woods and forests costs about half of the six millions produced by the revenues of the forests still owned by the Government—967,000 hectares (about two and a half million acres). The Department of Commerce paid $2,500,000 in subsidies to the merchant marine, and $500,000 bounties to fisheries, and about $1,000,000 for its other expenses—15 per cent. of it for its office at Paris, $100,000 in salaries, $30,000 for material, and $50,000 for printing. In 1886 it consisted of the Minister, (our secretary), three directors, three sub-directors, fourteen chiefs of bureau, thirteen sub-chiefs, thirty-two clerks, and forty other employees. By making this, as it used to be, a simple bureau of the Department of Public Works, there would be a saving of at least $150,000 a year, and a like saving might be effected by restoring the Post-office and the Forests to the Treasury, Commerce and Agriculture to the Public Works, and thus cutting off three expensive and useless staffs, without detriment to the public service and with a substantial gain to the taxpayer. The Minister of Public Works in 1876 had one chief and one assistant; but, although the Department had lost some important bureaus, which became independent ministries, by 1886 it consisted of 1 chief, 1 assistant, 1 sub-chief, 4 reporters, 4 special clerks, 1 secretary, and 2 assistant secretaries—14 instead of 2 employees. In the same period of ten years there were added 1 director, 3 heads of division, 11 chiefs of bureau, 34 sub-chiefs, and 200 clerks and employees. The Department of Public Instruction in 1869 consisted of 136 employees, in 1876 of 133, and in 1881 of 273, and the expenses had doubled, too, from $100,000 to $200,000. The Department of the Interior and that of Public Works have both found means to increase the number of their employees and the amount of their outlays, without waiting for parliamentary action and in despite of the adverse decree of the Cour des Comptes, the auditing department, which is supposed to hold French officials to a very strict obedience to law. The War Department consists of 24 superior officers, 186 officers or others holding assimilated rank, 204 officers detached for this special duty, 557 civilians, 147 messengers, and an indeterminate number of temporary employees, besides a large force in other bureaus throughout the various branches of the service. The expenses of the central office exceed a million dollars, for salaries, materials, printing, and other outlays. The Navy Department spends $200,000 on its own bureaus and $100,000 on the colonies—which are soon to be assigned to a new department, with a minister and a bureau of its own.

The steady increase of high officials is exhibited in a curious table showing that there are of this class in the Bureau of Manufactures, 15 chiefs for 22 clerks; Bureau of Registration, 36 chiefs for 42 clerks; Bureau of Taxes, 11 chiefs for 19 clerks; Bureau of Agriculture, 31 chiefs for 62 clerks; Bureau of Commerce, 37 chiefs for 72 clerks; Bureau of Fine Arts, 25 chiefs for 65 clerks; Bureau of Religion, 15 chiefs for 31 clerks. Another elaborate series of tables for each department show that all ten have increased in cost from 1876 to 1885 about 55 per cent., from $4,000,000 to $6,500,000.

The question of how far these great offices do their work and that of the Government really well, is also a matter of discussion. The War Department, it is true, sells every now and then its waste paper, 30,000 kilos (about 75,000 pounds) at a time, but this hardly makes any visible diminution of the vast amount of writing crowded in its walls, now by order of Gen. Boulanger closed to the public, no one being allowed to enter the office except by a special permit from the Minister himself. The Navy Department has plenty of work to do in its official correspondence with the fleets and the colonies, although much of its business is disposed of by the maritime prefects, the officers in charge of navy-yards, etc. The Treasury has vastly increased its work in order to keep pace with the growth of the national debt and its wide distribution, the increase of civil and military pensions, and the methods of insuring annuities and other matters of supervision of saving funds, etc., special to French governmental ways. The heads of bureaus and those who have to help the ministers answer questions put to them in the Legislature have plenty to do, but in the Department of the Interior and in that of Justice the clerks are said to have a real El Dorado—plenty of leisure and an abundance of time in which to do the little work that is expected of them. A recent novel by M. Theuriet throws a great deal of light on the occupations of the clerks and high employees of the French Civil Service: playwrights, novel writers, poets, newspaper correspondents, all find time for their literary compositions in office hours, and M. Cucheval-Clarigny gravely adds instances of whist playing, grocery-store keeping, music copying, all carried on by clerks quite openly. Some reform was made by requiring the clerks to work in large apartments, instead of in the small rooms that used to be the paradise of the favored ones, each with its fireplace and its special attendant, and the privacy that enabled every clerk to work for the public in his own way. The excuse that Government work requires solitary and separate quarters will hardly avail when banks and railroads and other great employers of clerical forces require them to work in common, under constant supervision. A porter for every three clerks, separate fires and lights are items that invite expense and risks which may well be avoided in the interest of economy and security.

A serious fault in the French civil service is the absence of any permanent regulation prescribing the conditions of admission, promotion, and retirement upon pension. In all other European countries the number, rank, salary, and other conditions of civil service are regulated by law, creating the *cadre* or skeleton organization; but in France nothing of the sort has yet been successfully adopted, although it was attempted in 1843 and again in 1871. A minister at the head of any department can by simple decree change the organization, create or suppress bureaus, increase the number and alter the amount of the pay of the employees. In 1882 a law was passed to regulate these matters, but in 1884 it was reported to the Legislature that there was no attention paid to it. There is no security in France for the permanency of any of its civil-service employees. In 1848 more than thirty Inspectors General of Public Works were put on the retired list by a new Minister, and in 1853 a law was passed to regulate this, so as to avoid the abuse of the pension which is provided by law for every French employee after a certain term of service; but that is not much of a safeguard at present. The civil pensions have increased over $8,000,000 in the ten years from 1876 to 1886, and the Budget for 1888 adds nearly half a million to meet this heavy outlay. In England there is an annual increase of pay averaging 10 per cent. for the lower and 5 per cent. for the higher class of employees, and this wholesome rule is adopted generally in Europe, thus securing the pecuniary advancement of faithful services without that personal solicitation which is one of the worst features in the French civil service. The uncertainty of the tenure of office is one of the characteristics of the modern republican government of France. Napoleon gave the greatest permanency to all civil offices, and thus secured the efficiency and fidelity of the civil as well as the military army; he established and maintained the irremovable quality of the judiciary, of the clergy, of every branch in turn; but all these barriers against tyranny and hardship have been thrown down by the present Government of France. The civil service has lost much, and the Government has gained nothing. The subordinates lose their courage, the debtor of the Government abuses his claim upon the protection of some member of the Legislature, and votes are gained or lost by favoring the neglect or worse of a poor clerk, who sees his profit in blinking at dishonesty and perhaps in being a party to it.

The important task of gathering the taxes is left largely to old soldiers, and to new recruits gathered from those families in which the service of the State is a tradition. Heads of departments, instead of being chosen from the best employees, are largely appointed out of those in the Paris central offices, on the score of political influence with the members of the Legislature whose votes are thus secured. As far back as 1850, Berryer spoke of the ruinous effect of the public service upon the young men who chose it, instead of risking competition in life in other employment. Energy and capacity are used up in waiting for advancement, and when it does come, it is too often the reward for services other than those done in office. To throw open the

civil service to the test of public examination is recommended as the solution of the present stagnant condition of the French civil service. It is in use in the choice of residents in hospitals and teachers in high schools, and might well be applied to other departments. To make the period of entering the public service thirty years of age, and of retiring on a pension sixty, with an increase if it is asked for only at sixty-five or seventy, would secure the flower of the nation for its offices. With such a body, a very great reduction in number would prove an inducement to increased efficiency; and an actual exclusion of all political influence in making appointments and promotions would add to the security of the civil service and to the credit of the Legislature. Reform would thus be twofold—below among the workingmen of the Government, and above among those who are intrusted with the high and solemn duty of legislating for the country.

EMPRESS MARIE-LOUISE.

PARIS, September 20, 1887.

THE correspondence of the Empress Marie-Louise, between 1799 and 1847, has just been published in Vienna. The anonymous editor begins his short introduction with the words, "Sic transit gloria mundi." In the memoirs of Prince Metternich are found all the details of the negotiation which ended in the marriage of Napoleon I. with the young Archduchess Marie-Louise, who was only eighteen years old. The Austrian Emperor sacrificed her in order to obtain better conditions from his conqueror; and he does not seem to have suffered too much in making the sacrifice. Archduchesses are not born to gratify the instincts and the wishes of their hearts; they are taught from childhood to obey, to accept without a murmur the husbands that are given them. Marriage is one of their duties, and often a painful duty. When Marie-Louise knew what her fate was to be, she did not protest, and—shall we say, like a heroine, or shall we say, like a good child?—she merely answered: "I am ready to sacrifice myself for my father and for my country." Her feelings must, however, have been very mixed. It was something to be the Empress of France, to be the wife of a man whom friends and enemies represented as a military genius equal to Cæsar or to Alexander. On the other hand, this Cæsar, this Bonaparte, was a usurper; he had always been represented to the young Archduchess as a monster who was not much better than a Robespierre, as a "Robespierre à cheval." He was known to be violent, arbitrary, cruel—the blood of the young Duc d'Enghien was on his hands.

In the volume which has just appeared are found the letters which the Archduchess wrote as a child, and which are addressed to her governess, the Countess of Colloredo. The correspondence begins as early as 1799. The letters are almost all in French, and are full of faults of grammar and of orthography. They are the letters of a very ordinary child—a dry account of her walks, her drives, her amusements, her lessons. She sometimes speaks of Napoleon, and calls him "the Corsican." She makes extracts from Rollin's History, learns nine languages, works at a portfolio for "dear papa," and at a petticoat for "dear mamma"; every country she sees is a pretty country, and every town a pretty town. In 1809 she begins to speak oftener of Napoleon: "Since the divorce of Napoleon I open every number of the Frankfort *Gazette* with the hope of finding the announcement of the new spouse, and I confess this delay gives me involuntary disquietude. I put my fate in the hands of divine Providence, who alone knows what can make us happy. But if my misfortune will have it so, I am ready to sacrifice my individual happiness to the welfare of the State, persuaded as I am that true happiness is only found in the accomplishment of duty, to the prejudice of inclination." This was written while the French Army was in Austria. Marie-Louise gives news of the war to the Countess Colloredo, of the battles around Vienna. She is herself at Buda, and writes May 29, 1809: "Sundays we go to a garden where there are many people, but we have there a horrible spectacle; we see floating in the river half-decomposed and naked Frenchmen." On the 8th of July she writes: "I hope that your prophecy will be realized, and that the House of Austria may rise from its present state; but a secret instinct makes me doubt it, and I have often thought that we are approaching the end of the world, and that the man who oppresses us is the Antichrist." She describes the life of Napoleon at Schönbrunn surrounded by his guards, while Vienna is full of wounded—there are 69,000 of them; all the convents and the hospitals, and even the Imperial Burg, are full of them.

She is still at Buda on October 24, 1809, and I find in a long letter a curious commission to buy for her a "duo pour le piano-forte, dédié à Madame Bonaparte." She is afraid this last name will not please the commissioner, "but, nevertheless, I find this piece charming." On January 10, 1810: "I believe people are naming me as the person who will replace the wife of Napoleon, but they are mistaken, as Napoleon is too much afraid of being refused, and needs still to do us much more harm before he can make such a proposition, and papa is too good to force me on a point of so much importance." The same day she writes to another: "Everybody talks of the divorce of Napoleon. I let it go on and don't care about it. I only pity the poor Princess he may choose, and I am sure that I shall not be the victim of his politics." A few days after (January 23, 1810) she writes again: "I know that at Vienna they are marrying me already with the *great Napoleon*. I hope this will remain mere talk. I thank you for the wishes you form on this subject; I form counter wishes in the hope that it will not take place. If it do, I think that I shall be the only person who will not rejoice at it." Three months afterwards, she writes no longer from Buda, but from Compiègne, and I doubt whether there is anything in the 'Metamorphoses' of Ovid which can compare with this transformation. She thanks her dear Victoire for "the wishes formed on the occasion of her marriage. Heaven has blessed these wishes. May you soon enjoy a happiness equal to the happiness I enjoy" (April 24, 1810). On the 10th of May, 1810, she is at Middleburg. She has seen the ocean for the first time, and picked up shells with the Queen of Westphalia. "Perhaps you are already married," she says to Victoire, "and you enjoy a happiness as unalterable as mine."

In all likelihood, all her letters to her family and friends passed under the eyes of the Imperial police and of the Emperor. This may explain the total absence of any political news in her correspondence, as well as its optimistic character. All the memoirs of the time concur in saying that Napoleon was invariably kind to her. He was proud of his young Archduchess, and when she became a mother he delighted in the young "Roi de Rome" at Prague. She writes June 11, 1812: "You cannot imagine how happy I am in finding myself in the midst of my family, for you know how much I love it; but my happiness is spoiled by my separation from the Emperor. I can only be happy near him." I could cite several such passages, which read at first like the effusions of a tender and loving heart, but which have a certain monotony that raises doubt in the mind. The terrible police of Fouché were probably looking over her shoulder when she wrote, and she was conscious of it. She also wrote such phrases very much in the spirit of a school-girl who writes a *devoir*. Everything was artificial in her, and we must perhaps not blame her too severely when, on the day of trial, this dream of conjugal and motherly love vanished in a moment. As soon as a new duty or the appearance of a new duty was shown her, as soon as her father called for her, she ceased to be the French Empress, she became at once and without a struggle the Austrian Archduchess. She hardly tried to save appearances. She was on her way to join her husband when she was arrested and conducted to Vienna. Napoleon wrote to her and called her back; it was all over—she was an obedient daughter, she was an Austrian. It is said that when Queen Caroline asked her why she had abandoned Napoleon so easily, she defended herself by saying that she had been prevented from joining him. Queen Caroline replied: "My dear, in such a case you must jump through the window"; and Queen Caroline was the most bitter enemy of Napoleon.

It must be said that Marie-Louise had been shamefully abandoned by all the courtiers. She had arrived almost alone with her son at Blois, and afterwards at Rambouillet. There she saw her father, the Emperor Francis, who had no difficulty in convincing her that she would find a suitable asylum in Vienna. She started immediately with her son. Baron de Vitrolles says that at the first moment nobody was surprised—that Bonaparte himself felt that the protection of the Emperor Francis had many advantages for his wife and for his son. He claimed them both in 1815, but they were refused him.

"People," says Vitrolles, "have reproached this Princess for not having sacrificed everything, but they ought not to view in the same way the daughters of kings and the wives of common men. Those who are born near the throne do not find in their education the ordinary sentiments of our families. They learn from infancy that they are condemned to separate themselves from their friends, and to be given away to princes whom they never choose. The sister of Marie-Louise, the Archduchess Léopoldine, died Empress of Brazil, six thousand miles away from her family. Marie-Louise had been a victim offered as a holocaust for the salvation of her house. It would be unfair, in such conditions, to exact from princesses the duties of those who have chosen their destiny, and to exact them to the verge of heroism."

It is, perhaps, not very surprising that Marie-Louise could easily bear to be separated from Napoleon; it is more difficult to understand how she accepted so easily her separation from her son, the King of Rome, who had become the Duke of Reichstadt, remaining in Vienna while Marie-Louise was sent to Parma. The little duchy became her retreat. She was still a sovereign, but her sovereignty was proportioned to her own individuality. She was not long in choosing a favorite, a gentleman belonging to a Würtemberg family, Gen. Count Neipperg. He was over forty, and wore a black patch over one of his eyes, which he had lost in battle. He was handsome, and he became the real administrator of the duchy. She had three children by him, and married him morganatically as soon as the death of Napoleon allowed her to do so.

On July 19, 1821, she writes to the Countess Crenneville:

"I am in a state of great uncertainty. The Piedmont *Gazette* announces so positively the death of the Emperor Napoleon that it is almost impossible for me to doubt it. I confess that I have been greatly shocked by the news. Though I never had for him any strong feeling of any kind, I cannot forget that he is the father of my son, and, instead of ill-treating me, as everybody thinks he did, always showed me great consideration, the only thing one has a right to expect in a political marriage. I am consequently much grieved, and though we ought to congratulate

ourselves that he has ended his unhappy existence in a Christian manner, I could have desired for him many more years of happiness and of life—provided it was away from me."

Is it not probable that the letters written while she was Empress in France were written under a sentiment of fear, and that the expressions which she then used in speaking of Napoleon were mere forms? We find her real sentiments in this letter written from Parma. She was not made to be the companion of a man of genius, of a wild, strange, extraordinary, terrific man like Napoleon. She was contented with her modest part in Parma, with the polite and insignificant Neipperg; and when Neipperg died she replaced him by another, equally polite, equally insignificant—M. de Bombelles. She was essentially what the Germans call a "Frau," and she was nothing else. She lived till 1847, and the world had completely forgotten her when it heard of her death. History would have ignored her altogether if fortune had not placed her during a few years at the very centre of the great focus which filled the beginning of our century with its lurid and dazzling light.

THE ASCENT OF FUJI-SAN.

C. P. S. S. *Port Victor*, Sept. 14.

JAPAN is already in the background—of the actual horizon at least—and the open, tossing sea beckons us homeward, with foam-tipped fingers. The sun has just set in a glory of yellow light, and Fuji-san, the great sacred mountain, raises its symmetrical purple peak clearly into the evening sky.

Beautiful as this sight is, we can hardly look at it without a too vivid remembrance of the days and nights so lately passed upon its summit, during which I can say most confidently that we did not join the ranks of its worshippers in any sense. Many other mountains in Japan are also dedicated to different gods and goddesses, and pilgrimages to their summits are made yearly by the devout, not to obtain forgiveness for any sin—that idea and the word to express it being almost unknown to both the Buddhist and Shinto worship—but to gain favor touching health, crops, or general mundane prosperity. There is, however, a prayer made frequently on such occasions, which is, in substance, "Purify me from my six roots of evil—the eyes, ears, nose, mouth, touch, and thoughts."

Fuji, the highest mountain in Japan (according to the latest measurements being about 12,400 feet in height), is dedicated to the goddess Ko-no hana saku-ya himé, and it is thronged with pilgrims all summer. Until the revolution of 1868, which changed so many old customs and prejudices, foreigners were not allowed to ascend this great peak, as they were looked upon in the light of mere beasts. Neither were women permitted to go higher than the sixth station. If any luckless pilgrim made the great mistake of dying upon the summit, after his laborious climb, it was an indication from the gods that he was too wicked to live—his criminality was proved by his death at the very shrine of an avenging goddess.

These superstitions have not at this day quite as firm a hold upon the minds of the people as formerly, but the pilgrimages are made almost as constantly as ever. All of the inhabitants of every village are supposed to ascend some sacred mountain annually. But as this is impracticable, a selection is made from year to year, and those chosen to go have their names and the villages from which they come inscribed upon banners, which are adorned by an outline of the mountain to be climbed. Fuji is easily recognized—its exceeding regularity taking the shape of a truncated cone—and the banners of its pilgrims adorn all the tea-houses and stations upon and near the mountain. It was not, however, solely for purposes of devotion that Prof. Todd and his party made the ascent of this frowning peak after the eclipse was over. In 1879 an elderly gentleman, Uriah A. Boyden, died, leaving his fortune of over $200,000 for the purpose of carrying on researches into the properties of caloric, and publishing the results of such investigations. As this subject seemed somewhat vague, and those who were consulted as being supposed to know the most of it seemed to know very little, the trustees, after struggling with this unpromising department a proper length of time quite without success, felt themselves at liberty to turn to the second provision of the will. This was, in effect, that, failing with reference to caloric, those having the money in charge should devote it to the construction and maintenance of an astronomical observatory on some mountain peak. If the trustees did not consider the sum of money sufficient for the purpose, Mr. Boyden directed that it should be allowed to accumulate until it became large enough—or any one might add to the original sum, with the same object in view. After a time Harvard College added $100,000 to the bequest, and the whole was put into the hands of the Trustees and Fellows of the University. The two combined are now known as the Boyden Fund of Harvard College Observatory, in charge of Prof. E. C. Pickering, Director. Already active work has been started in the line of testing various mountain peaks for astronomical purposes.

The lower strata of the atmosphere are too apt to be filled with smoke, clouds, and general unsteadiness, and it is believed that a large proportion of these impediments to satisfactory observations may be avoided by getting above perhaps the lowest third of the air. The eclipse expedition, in charge of Prof. Todd, seemed to give an opportunity for experimenting upon some of the higher Japanese mountains. Accordingly, a sunny morning late in August saw us leaving the train from Tokio at the little seaside station of Kodzu, and taking up our line of march, as it were, in a long procession of jinrikishas. We were fortunate in having with us Dr. Knipping, the celebrated meteorologist of the Imperial Japanese Weather Service, who was detailed by the Department of the Interior to accompany us. He had ascended Fuji already a number of times, and has surveyed and mapped the whole region about the mountain. He is, perhaps, best known to the public by his large map of Japan, published in London in 1879. After a railroad ride of two or three hours, we found ourselves, as I said, starting out from Kodzu in *kurumas* towards the great mountain. The road at first followed the line of the shore, and there were bewitching glimpses of the sparkling water and sandy beach. But we soon turned away from the sea and entered a wide and fertile valley, which held a dashing stream. Past rice-fields at first, and high, wooded hills later on, the stream became more boisterous as the road beside it grew steeper, until, with a backward glance, we could see the whole green vista opening to let in the wide view of gray-blue sea. The road was very fine and smooth, and the ascent gradual though continuous.

All mountain roads and passes have similar features, whether in Switzerland, British Columbia, or Japan. And so all day we wound in and out and around mountain sides, with steep rocks and much greenness above, and precipices descending abruptly to foaming torrents below. Mountains, near at hand and far away, were clothed to their softly rounded summits with long waving grass and low shrubs. Closer to the road the groves of bamboo gave a peculiar beauty to the landscape. The masses of foliage in this wonderfully graceful plant are almost angular in general shape—the whole effect exquisite and airy. We met many companies of travellers, chiefly Japanese, descending the smooth roadway in *kagos*, or small swinging cars, carried by two men. They occupy these cars with much grace and apparent comfort, but to a foreigner the *kago* seems very limited in space. After about twenty-five miles of beautiful views and occasional villages, where fascinating tea-houses refreshed both masters and coolies, we came in time for dinner to the little town of Miyanoshita, which is a favorite summer resort, as well for foreigners as the native Japanese. It is not only very delightfully situated, but has, in addition, baths from a natural spring of hot sulphur water. At this charming spot, with its excellent European hotels, and glimpse of the sea between mountain-peaks, we should have liked to linger, but the next morning's sunrise saw us far on our walk towards Subashiri, at the foot of Fuji.

The distance is called seven *ri*—a *ri* being about two miles and a half. The beauty of this day's walk—through shady bridle-paths, over breezy moorlands, past a few rice-fields and thatched houses in a valley, with a rushing stream all the way—up, up, until the stream was left five hundred feet below us—I can only suggest. The reality was lovely almost beyond description. At length the path began to ascend steeply, and our powers of climbing were put into strong requisition for a time, to reach the top of the O-Tomi togé pass, which is more than a thousand metres in height. From here we had hoped for our first near view of Fuji, but, alas! that sovereign mountain was veiled, as usual, in clouds, and we were forced to content ourselves with looking at the wide expanse of peaceful farming country spread out below, and the masses of soft white cloud which hid our great destination from sight. After lunch on the breezy pass came a pleasant descent into the valley, and through fields abounding in wild flowers and the warm fragrance of grass and grain, we reached the small village of Gotemba. Here another tea-house offered various dainties for the weary traveller, and we set off refreshed for the last stage of our walk—five miles to Subashiri. The only hotel there which will receive foreign guests is the Yonayama, which furnished pleasant hospitality, and a dinner wholly in native style. Many Japanese dishes are really appetizing, but there are others at which it is wisest to look only. The little maids in attendance here were particularly pretty and attentive, and the dinner passed off merrily.

The moon was setting peacefully behind the gigantic shoulder of Fuji himself when we started for his summit the next morning. Twenty-two miles lay between us and the tenth and last station, where we should sleep—and we must be well on our way before sunrise. For the first seven miles we were accompanied by a pack-horse upon which were the heavier instruments, while twelve coolies took the remainder, and our provisions and personal baggage as well. But when the real ascent finally began, the horse was left, and only the coolies took the burdens. With a little pale yellow tea here, as usual, to start upon, and a glance at the hundreds of pilgrim banners hanging in the little building, our procession reorganized itself and started. For a long distance the path lay through the woods—birch trees and beech, and mountain ash, chestnuts, evergreens, and the pretty maples with their many-pointed leaves. Through this greenness the sun shone warmly, glinting down through the foliage upon the flowers below. Over the edge of the path, and the giant roots which often protruded, nodded clusters of purple asters and delicate white wood asters. Monk's-hood grew in rich purple clusters, and tiny bell-like lilies show-

ed their orange-colored faces above the tall grass. Scarlet seed-vessels, purple seed-vessels, and a great variety of ferns filled this lovely wood. Our own familiarly beautiful maidenhair, with others as delicate, clustered in every available crevice, while a somewhat coarser variety showed seven or eight plumes springing from one root, which, following Japan's universally artistic and decorative tendency, shaped themselves like a low bowl or jar. The sweet little single white rose, which had long since gone to seed at the old castle where the eclipse station had been located, here turned still a few delicate blossoms to the light—side by side with their scarlet hips. The path frequently led us past small temples, many of which were deserted for the season, but, with a sublime trust in all possible travellers, the poor little altars stood exposed, without protection, to every passer-by. In one of these lay various pairs of chop-sticks, above which an inscription in Japanese informed the wayfarer that for the sum of eight *rin*, deposited at the altar, he could carry away a pair of these table luxuries. Many of the *rin* had become rusty in their safe publicity.

So far the ascent of Fuji was idyllic. The temples and tea houses had their thick thatched roofs overgrown with grass and flowers—the path was only easily ascending, and the lights and shadows flickered tenderly around us. But at length we came out from this woodsy shelter, and beheld the indefinite acres of fire-baked lava ahead and around us. The wild wind here blew free, and we saw what lay before us. "Wind swept, sunshine flooded" heights—but frowning and black and pitiless. All the beauty and dreaminess were dropped in a moment, and no poetry remained, but grandeur alone, except where some little flowers of one kind and another, hardily following the cinders, laid their pink cheeks and their white cheeks caressingly against the black lava. Acres and acres of it lay spread around and above. Up, up the great regular cone extended into the sky, black and dull red, with here and there a little dingy snow—probably tons in reality—lying in long ravines straight down from the summit.

I once wrote that the mountains of Ireland were embodied desolation, and bleak and lonely enough they were; but no one can know what real desolateness means until he has been in a volcanic region over which nature has not yet spread her kind mantle of greenery. The last eruption of this cold volcano was in 1709, on which occasion the ashes were six or eight inches deep in Tokio—about sixty miles distant in a straight line. The legend of the mountain says that it arose in a single night, and simultaneously with the birth of Lake Biwa, not far away. The free-blowing wind struck us pleasantly as we emerged from the trees and started over the cinders, and the sky was brilliantly blue. But the wind grew stronger as we went on and up, until it became little short of a hurricane It swept down into our faces from the highest peak, and seemed intent upon dri ing us back and downward. Steeper and steeper grew the path; many times there was no path apparent, only huge blocks of irregular lava, offering foothold fit for a chamois or mountain-goat, and each of us took his own course, clambering up and over as best we might. With the increase of the wind to a gale, the way became appallingly steep. Blasts of such fierceness swept down upon us that we had often to crouch low upon the red lava till it had rushed by and on—holding fast lest we should be blown downward over the steep, cruel sharpness of the slopes below. Then suddenly we became enveloped in a soft white cloud. Down it drifted, all around and over us, and its touch was moist and chilly. Many a time, when looking up at the thrilling masses of white cumulus in a summer sky, I have imagined how softly one might repose in their sunny depths, and float through the blue air in an ecstasy. But I wish for that no more.

The cloud around us grew thicker and whiter—we were completely wet through by its moist caresses, and were able to see hardly a yard ahead. The dampness greatly increased the discomfort of the climb, and we were in constant danger of losing the way entirely. So long as we continued in our upward course, we could hardly fail of reaching the summit, but there was danger of missing some of the little stations, which, in spite of their increasing poverty and barrenness, were very comforting. Some of them were closed, the real pilgrim season ending with August; but enough were still occupied to give us tea and a little rest. They are merely huts built of lava blocks, lined inside with rough boards, through the crevices and cracks of which the wind whistled dreavily. Banners left by pilgrims decorate the walls and hang from the ceiling, which is barely high enough for a person to stand upright. A fire of charcoal usually burned in a hole in the floor, and as there are no chimneys, and almost never any window or opening other than the entrance, the smoke was stifling. Near the stations the path and ledges of lava were almost covered with the cast-off *waraji*, or straw sandals of the pilgrims.

As we plodded on through the thick white mist, the small tinkle of a bell was frequently borne to us—faint at first, then louder and nearer, as the form of some pilgrim came dimly into view plunging downward through the soft lava of another path. Then the little bell would ring more and more softly, until its sound and his form were swallowed up in the encompassing whiteness. After a time we climbed out of the cloud, and it was a great comfort to come into bright sunshine again, with blue sky above and all the cloud left below. The great ponderous summit looked almost directly over our heads, and a scrap of filmiest cirrus hovered tremblingly above the crest. It fluttered a moment, caught on the mountain by one end, twisted itself from that end in a delicate spiral, stayed one moment as if loath to leave its birthplace, and then floated off, a dainty, highest-air cirrus. Truly it seemed as if we had come into the mighty workshop of the skies.

As the cloud through which we had climbed gradually blew away, the steepness of the path over which we had just come became apparent. Down, down, dizzily, it ran, and above as steeply. We seemed all but hanging in mid-air. Resting on a block of lava until a fierce gust of wind had passed by us, we gathered our forces for the hard pull up to the eighth station, which seemed to be almost overhanging us. Reaching it at length, walking over a carpet of *waraji*, we were met by Dr. Knipping, who, with his usual thoughtfulness, had gone ahead, and had cups of hot chocolate prepared for us, which seemed the most delicious refreshment ever offered to mountain climbers. We were quite rested and ready to proceed when the remainder of our party appeared toiling up to the entrance of the station with great fatigue and disgust depicted upon their faces; they refused to go any further, although we were now only about fifteen hundred feet below the summit. The eighth station consisted of one room, fortunately high enough to stand upright, with a fire burning in one corner, around which crouched a circle of natives, of whom a large proportion seemed to be our own coolies. The air was heavy with smoke, and the idea of spending the night there was far from pleasant; but we finally decided to remain, and, unpacking our *futon*, prepared to sleep as comfortably as might be in the further corner. Just before sunset we put on all our supply of winter garments—for the cold by this time was intense—and stepped outside to see the magnificent panorama spread out below. Far to the right lay the curved seashore and the pale blue sea—then the Hakoné Lake and Mountains, and the range we had crossed by the O-Tomi togé Pass the day before. Three or four clear green lakes, the Nikko Mountains and scores of other peaks, filled the distance, for Fuji stands almost alone in its majestic isolation. Scattered far below us were the remnants of the white cloud through which we had passed. Over all this glorious picture the light of sunset lay softly, while the gigantic shadow of Fuji itself, a dark triangle, rested on the near fields and foothills. One of us at least will never forget it—nor the strange, rare air which had at this height ceased to exhilarate, and only induced a curious and heavy dulness in the head.

That night is an uncomfortable memory—the close room, the stifling smoke, the hanging lamp making a small circle of light over our supper, which was served chiefly in its primeval tins, and the unsupportable heaviness of head which turned into a sharp pain immediately upon lying down. But it was over at last, and the morning looked in at us faintly from the midst of another cloud, thicker and wetter than yesterday's. But we started bravely upward, and became thoroughly drenched within ten minutes. We passed the deserted ninth station very soon, and, keeping on over the wet and slippery lava, arrived at the top in just an hour after starting. The tenth, or summit station, consists of twelve small huts in a row; but the mist was too thick to see anything clearly, and our first care was to secure one of these dwellings for a temporary shelter. Many of them were closed and their owners gone, but enough remained open to give us a small choice. They were all about equally dark and dismal, but any shelter in which to put on dry clothing was welcome; so we very soon arranged for our stay in one of the huts, and that the owner should not allow any chance pilgrims to sleep there. He rebelled somewhat at this last requirement, but finally yielded, and we tried to collect our baskets and *futon* in one corner.

Every motion seemed weighted with lead; the slightest exertion sent the heart-beats far above a hundred; and contemplating the change of soaked and dripping garments for dry ones seemed an effort too great to be accomplished. I had anticipated an increased ease of motion as the air became thinner—that a pleasant lightness might fill the body, which would more than counterbalance a slight oppression on the lungs. And, indeed, when we had reached a height of about eight thousand feet, the air was exceedingly stimulating, and little fatigue resulted from the hard climbing. But above that point this strange heaviness settled down upon us as if the air were made of lead, and to raise a finger meant lifting pounds. There was comparatively little difficulty in breathing, but the increased motion of the heart made living itself almost too great an effort to be continued. After a long time, however, we gradually arranged our baskets and satchels, and found ourselves in dry garments. Resting awhile upon the pile of *futon* after this exertion, I looked about the forlorn little room. The lava blocks outside and the rough boarding within were but poor protection against the cold wind and the drifting fog. There was no window and no chimney, and a slow fire smoked heavily in one corner. Almost over the fire, which he was forced to blow continually through a bamboo tube, crouched the owner and proprietor of all this luxury, curled up on a small fur skin. A few plates and cups on shelves behind him, a kettle trying to boil over the smoke in the corner, and two or three *kakimono* hanging on the wall comprised his worldly goods. He watched me stolidly in my small efforts towards

order, smoking a tiny Japanese pipe meantime. Creature comforts seemed so far away! I longed dully for warmth, for sunshine, for even a blade of grass—most of all for air to breathe.

In the afternoon the fog began to blow off, and the blue sky appeared in spots, which gradually became larger, until we were left high and clear in sunshine, the fog-cloud drifting away below us. The superb view emerged slowly, and we went out to take a general survey of our surroundings. Immediately below the path which runs along in front of the huts the mountain descends almost perpendicularly, and we lost its slope below in the drifting fog. Following the path for a short distance, we reached a point slightly higher than the station, from which we could look directly down into the great crater, nearly five hundred feet deep. Then the whole immensity of the desolate scene became apparent: the dense white cloud on one side of us, through which distant mountain-tops were slowly lifting themselves, and a strip of silvery ocean emerging far to the east—on the other a steep descent into the mighty crater. Cold, extinct, lifeless, it still showed what awful, irresistible force must once have shaped its gloomy recesses. The lava is everywhere, both black and dull red, and the side facing the north was half covered with heaped-up, grimy snow. Near us stood a little shrine, in front of which the cinders were covered with rusty *rin*, thrown there by devout pilgrims. Indeed, a few of these travellers continued to arrive all day, deposited their *rin*, and apparently made straight for the lower regions again, while their little bells grew fainter as they plunged into the soft lava and hastened down with heavy strides. I must confess that I envied them, and should have been glad to follow. The few steps to the hut seemed miles, even in the fresh wind and bright sunshine. I could scarcely drag myself back, and, after reaching it, I lay down almost too exhausted to speak, with my heart beating more times in a minute than I could count.

The night was brilliantly clear, and the observers were hard at work from sunset until dawn. The wind howled across this lonely mountain-top, and moaned dismally through the crevices in the hut, while the thermometer went continually lower, and half an inch of ice formed on water standing in the poor little room. The sunrise was a glorious spectacle. We were high in air of crystal clearness, while six thousand feet below us rolled an almost level plain of thick cloud—soft, deep, white, extending apparently over all the world except ourselves. Beautiful, remarkable, grand as the scene was, I cannot imagine a more hopeless, desolate, and terrible fate than to be forced to stay on that barren peak, where even the necessary amount of God's own air is denied.

While we were taking our coffee, up over the edge of the path before our door emerged the rest of our party, whom we had left the day before in the eighth station, with coolies pulling them in front and pushing from the rear. Wan, worn, gray, seamed with wrinkles and haggard-eyed, that one night had worked sad changes in our erstwhile jaunty companions. They were disgusted with the mountain, which they declared a fraud and not worth risking their lives for any longer. This spectacle should have impressed us as very pathetic, no doubt, but seemed instead, for some reason, exceedingly funny. However, as they intended to start down again very soon, I prepared to accompany them, the pain and heaviness in my head having become well-nigh insupportable. After descending about four thousand feet, these uncomfortable feelings disappeared almost instantaneously, and looking upward once again, just before plunging into the mass of white cloud below us, we saw our astronomers standing upon the summit, clearly outlined against a sky of deepest blue, and waving their hands to us in farewell.

The downward path is, for most of the way, entirely different from the ascent. The lava is deep and soft, and we found our long sticks of much greater assistance than in the climb. With fresh pairs of *wiraji* over our boots every few hundred feet, we made the descent very rapidly, with waterproofs tightly buttoned against the driving mist. The coolies ahead and the coolies behind became invisible. Each of us seemed to be alone on the black mountain-side. At length we reached the trees, and the delight of being once more in the midst of flowers and verdure was unspeakable. The whole walk was through an enchanted region. The mass of mist was growing slightly thinner, but it lurked in the tree-tops and played at hiding with the shrubs and ferns. It turned all the distance into varying shades of softest gray, through which the trees retreated into regions mysterious and remote. The end of the path merged into a vista of beautiful, indefinite whiteness, and, although the way was now the same as that over which we had passed only a few days before, everything seemed changed. Then, the morning was sunny and warm, and the wood was full of tenderest tints of genial green; now, it was enveloped in a fairy mist, under whose magic fingers even the gnarled old trunks of white birch, and the very flowers at our feet, seemed transfigured. The little deserted temples and shrines looked strangely lonesome this gray day, and the sweet odor of balsam-firs filled the air.

We soon reached the station from which horses are available, and, mounting the heavy, cumbrous pack saddles, we found ourselves jogging onward towards Subashiri, while the last remnants of fog floated off, high above our heads, and a brilliant sunset flooded the earth and sky. How luxurious seemed the little hotel, and how elegant the chairs which were brought, in deference to our curious foreign ideas! And how comfortable to sit down by the *hibachi*, filled with glowing red-hot coals, and feel that we had air to breathe in plenty! There we waited peacefully for the descent of our astronomers, who, in spite of most satisfactory observations and results from their stay on the desolate mountain, were not averse to a return to the creature comforts which could be found even at the Yonayama Hotel in Subashiri.

MABEL LOOMIS TODD.

Correspondence.

MODEL WORKINGMEN'S TOWNS.

TO THE EDITOR OF THE NATION:

SIR: An article on Alsatian Cotton Operatives in the *Nation* of September 29, in which allusion is made to the "Mülhausen myth," forcibly reminds me of a similar myth grown up in our own country, which is connected with the town of Pullman, Ill. Just as Mülhausen, Pullman is praised in magazine articles, and even in scientific writings, as a sort of workingmen's paradise, in which the labor problem is said to have been practically solved. These claims are just as little justified as in the case of the European town. Less than two years ago I had occasion to investigate the condition of affairs in Pullman, in the interest of a Chicago daily paper. I found the very same evils which are enumerated in your article as existing in Mülhausen. There was the same overcrowding of dwellings by subletting, although, to be sure, nowhere did forty-two persons occupy four rooms. The chief complaint of the inhabitants of the Illinois model town is, however, the absolute dependence on their employer, the Pullman Company. Not only rents, but also the cost of repairs (which are made without consulting the tenant), are deducted from wages. Leases are terminated at will without the customary legal notice. Complaints about petty chicanery on the part of the agents of the landlord are heard on every side. In short, the Pullman idea is merely the notorious truck-system applied to dwellings instead of groceries. It gives the workingman a very slight increase of material comfort for a tremendous decrease of manliness and independence.—Yours respectfully,

E. BRUNCKEN.

MILWAUKEE, WIS., October 3, 1887.

AN EXPERIMENT IN PRACTICAL PHILANTHROPY.

TO THE EDITOR OF THE NATION:

SIR: The letter with the above title from Mr. W. T. Sedgwick in the *Nation* of September 29 will give, I fear, a wrong impression. I live within a few rods of the houses to which he refers. They are in the well-to do suburban district of Jamaica Plain. "The miseries of tenement-house life" are the exception in this district. Moreover, the condition of the poor here, in spite of the evils incident to intemperance, has visibly improved within ten years. The new houses, which your correspondent describes, have been, and are still, as fully occupied as other houses of equal rent. If they have not been a distinguished success as an investment, they cannot be called a failure, having netted a safe four per cent. above charges and cost of management, through a period when cautious capitalists had money lying at interest for lower rates. The present agent, a practical man, and well acquainted with real estate, is sanguine that the property can be made to net six per cent. or more. While wealthy people are often quite inconsiderate of sanitary conditions, it is not strange that the poor are apt to ask, Which house is cheap? instead of asking, Which is wholesome?

In saying this I wish heartily to recognize the good intent of the friends who built the houses. If disappointed in the measure of success and appreciation which they hoped for, they may nevertheless, take honest satisfaction in having helped perhaps to increase the healthfulness of their district, as well as in contributing to raise the standard of comfort and decency for the poor. This kind of work is not the less worthy because it is slow and is not at once measured by dollars.

C. F. D.

JAMAICA PLAIN, October 4, 1887.

A POSSIBILITY.

TO THE EDITOR OF THE NATION:

SIR: The quorum of the English House of Lords consists of three members. The attendance in recent years has often been exceedingly small, and it is quite within the range of possibility for the Duke of Marlborough, the Marquis of Ailesbury, and the Earl of Lonsdale, by attending on an off night, to exhibit the curious and edifying spectacle of the legislation of a great nation being temporarily under the control and direction of social outcasts.

A. B. W.

PHILADELPHIA, October 6, 1887.

PROHIBITION IN THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: In all the Southern States prohibition is weakest where the Republicans are strongest. The reason is simple. The Republican party is chiefly supported in the South by the colored laborers, and the Democratic party by the white employers of labor. The latter expect to get all the liquor they want, whatever the law; but, by prohibitory legislation, they hope to prevent the negroes from drinking, and thus to make them, as

employees, more trustworthy and effective. The negroes understand the situation and vote against prohibition, not only because they want whiskey, but because they don't want the whites to prevent their using it. "De jay bird don't rob his own nes'," is one of their proverbs, and while the decanters are full they will not empty their bottles. No other explanation is required of the recent vote in Texas on the prohibition amendment.

SUE HARRY CLAGETT.

MURRAY, IDAHO.

Notes.

WE think it reasonable to expect that when international copyright among the English-speaking nations is assured, and the competition for authors becomes general, houses having transatlantic branches will possess certain advantages. Announcement is now made that Longmans, Green & Co. of London have established a branch house at No. 15 East Sixteenth Street, in this city, following the example of Routledge, Nelson, Macmillan, Cassell, Warne, etc. Their list of forthcoming publications includes 'Modern Theories of Chemistry,' from the German of Prof. Lothar Meyer; 'Astronomy for Amateurs,' edited by J. A. Westwood Oliver; a 'Text-book of Elementary Biology,' by R. J. Harvey Gibson; 'Educational Ends; or, the Ideal of Personal Development,' by Sophie Bryant, D. Sc. Lond.; 'Studies in Naval History,' biographies, by Prof. J. K. Laughton; 'The Life of the Rt. Hon. Sir Stratford Canning, Viscount Stratford de Redcliffe,' by Stanley Lane-Poole, author of 'Studies in a Mosque' and 'Social Life in Egypt'; 'Tory Democracy; or, Selections from the Speeches and Letters of Lord Randolph Churchill,' edited by Frank Banfield, who also furnishes an essay on the principles of Tory Democracy; 'An Inquiry into Socialism,' by Thomas Kirkup; 'Johnny Nut and the Golden Goose,' from the French of Charles Deulin, by Andrew Lang; and 'From a Garret,' by Mary Kendall, one of the authors of 'That Very Mab.'

Frederick Warne & Co. will issue for the holiday season new illustrated editions of 'Grimm's Fairy Tales' and the 'Arabian Nights.' 'A Modern Hoyle,' by Prof. Hoffmann, is also on their list.

George Routledge & Sons have had translated into English Gérard de Nerval's 'Sylvie,' and will issue it in a form like that of Mérimée's 'Carmen,' with etchings by Rudaux.

Canon Farrar's new volume entitled 'Everyday Christian Life, or Sermons by the Way,' will be published immediately by Thomas Whittaker.

The leading announcement of J. B. Lippincott Co. is the 'Odes and Sonnets of Keats,' illustrated by Will H. Low, in a volume to match his 'Lamia.' It will contain sixteen full-page drawings, and floral embellishments amid the text. Other holiday books in press are Goldsmith's 'Deserted Village,' with etchings by M. M. Taylor; 'Faust: The Legend and the Poem,' by W. S. Walsh, with etchings by Hermann Faber; Miss Wetherell's 'The Wide, Wide World,' with etchings by Frederick Dielman; 'Eudora,' by M. B. M. Toland, illustrated on wood by H. Siddons Mowbray and W. Hamilton Gibson; 'Prince Little Boy, and Other Tales out of Fairyland,' by Dr. S. Weir Mitchell, illustrated by F. S. Church and H. Siddons Mowbray; 'Three Poems' (viz.: Gray's "Elegy," Goldsmith's "Deserted Village," and T. Buchanan Read's "The Closing Scene"), illustrated; 'The Sportsman's Paradise; or, the Lake Lands of Canada,' by Dr. B. A. Watson, illustrated; and 'From Pharaoh to Fellah,' by C. Moberley Bell, illustrated. Finally, the same firm has in press 'Construction of Bridges,' by T. Claxton Fidler; 'Botany for Schools and Colleges,' by Annie Chambers-Ketchum; 'Legends of the Susquehanna, and Other Poems,' by Truman H. Purdy; 'Over the Divide, and Other Verses,' by Marion Manville; and sundry novels—'Too Curious,' by Edward J. Goodman; 'The Terra-Cotta Bust,' by Virginia W. Johnson; 'The Duchess,' by the author of 'Molly Bawn'; and 'Country Luck,' by John Habberton. The same firm have arranged with W. & R. Chambers of Edinburgh for the issue of a new edition of Chambers's Encyclopædia. The work is to be thoroughly revised, entirely rewritten, and printed from new stereotype plates. Active collaborators in both countries are busily engaged on the revision, and the first volume is announced for publication early next spring. The work will be copyrighted in both countries.

Charles Scribner's Sons will shortly bring out 'A History of the Christian Church,' by Prof. George P. Fisher of Yale; 'Fifteen Years in Yale Chapel,' discourses by ex-President Noah Porter; 'The Story of the Psalms,' sermons by the Rev. Henry Van Dyke; 'Guatemala: the Land of the Quetzal,' by William T. Brigham, with illustrations from photographs; 'The Modern Vikings,' stories of life and sport in the Norseland, by Prof. H. H. Boyesen; and 'Seth's Brother's Wife,' by Harold Frederic.

'Under Pine and Palm,' poems by Mrs. Frances Mace; 'Fools of Nature,' a novel by Alice Brown; and 'My Old Kentucky Home' and 'The Swanee River,' Stephen Collins Foster's famous negro melodies illustrated, each in a quarto volume, will be issued directly by Ticknor & Co.

In the 'Italian Grammar' by C. H. Grandgent of Harvard University, to be published by D. C. Heath & Co., the author has attempted to put into convenient form and the smallest possible compass all the grammar that the ordinary student of Italian needs—moreover, to make the book represent the Italian language of to-day; the exercises being taken chiefly from reading books lately prepared for Tuscan schools, though as many obsolete forms are given as students of Italian classics will need.

George H. Ellis, Boston, has in press 'Science and Immortality,' a reproduction of the discussion by many eminent scientists on "What Science says about Immortality," which attracted wide attention in the *Christian Register* of April 7. The contributions have been carefully revised by their authors, and have received several notable additions. Biographical notes give a brief outline of the scientific career of the writers.

Lee & Shepard are preparing Scott's 'Bridal of Triermain,' with fourteen full-page illustrations in photogravure, by Percy Macquoid.

T. Y. Crowell & Co. announce for immediate publication 'The Boyhood of Living Authors,' by William H. Rideing, mainly designed for young readers. They will also be the publishers of the Supplement to Mr. William Cushing's 'Initials and Pseudonyms,' early in 1888.

The Johns Hopkins University proposes to issue during the month of November a limited letterpress edition of 'The Teaching of the Apostles,' with a complete facsimile text (from the MS. of the Holy Sepulchre, Convent of the Greek Church, Jerusalem), accompanied by a commentary by Prof. J. Rendel Harris. It has been printed at the Cambridge (England) University Press, and the photographs of the manuscript have been reproduced by the Autotype Company of London. It contains 110 quarto pages of text and commentary and 10 plates, and the price has been fixed at $5. Orders and remittances should be addressed to the Publication Agency of the Johns Hopkins University, Baltimore, Maryland.

Mr. Appleton Morgan's forthcoming 'Shakspere in Fact and in Criticism' (Benjamin & Bell) will contain a chapter dealing with the Donnelly cipher.

'The Life, Journals, and Correspondence of the Rev. Manasseh Cutler, LL.D.,' by his grandchildren William P. and Julia A. Cutler, is in the press of Robert Clarke & Co., Cincinnati, and should possess a high historical interest and importance. It will make two volumes 8vo, and these will not be stereotyped, the edition being limited.

Payot, Upham & Co., San Francisco, publish this month 'Grape-Culture and Wine-Making in California,' by George Husmann—a practical illustrated manual.

A pleasant announcement in England is 'Aucassin and Nicolette: a Love Story,' edited in Old French and rendered into modern English, with an introduction, glossary, etc., by Mr. F. W. Bourdillon. It will be printed on Dutch hand-made paper and bound in buckram.

In the English shilling series of "Great Writers," issued monthly by Walter Scott, in which lives of Longfellow, Coleridge, Dickens, Rossetti, Dr. Johnson, Darwin, Charlotte Brontë, Carlyle, and Adam Smith have already appeared, Mr. Wm. Rossetti's 'Keats' and Mr. William Sharp's 'Shelley' will be the next volumes; to be followed by Mr. Austin Dobson's 'Goldsmith,' Prof. Blackie's 'Burns,' and books by Mr. Edmund Gosse, Canon Venables, and Prof. Knight.

Charles Scribner's Sons (New York) have published in an elegant volume the Letters of Thackeray which have been running in *Scribner's Magazine* the past year, and of which from time to time we have already expressed our high admiration. It is illustrated with remarkably good portraits and the sketches and facsimiles which appeared with each number, and the volume is as excellent in workmanship as could be made. The collection itself is a most important contribution to English literature, and will endear Thackeray still more to his lovers, and spread the knowledge of his kindliness and honesty more widely, and destroy his reputation for cynicism in the evil sense. Of the wisdom of the publication there is no question; it is a great service to his memory.

The 'Longfellow Prose Birthday Book,' edited by Laura Winthrop Johnson and published by Ticknor & Co., is a very readable collection, and a fair mirror of the poet's intellectual physiognomy. Much of nature is found in it, many poetic similes, not a few pleasant anecdotes, jottings for the commonplace book, etc. The absence of dates leaves one generally in the dark as to what Longfellow is speaking. That this child of the North always shrank from the cold and the winter west wind, for example, is not to be supposed. Under January 19 and 31 we observe a repetition of the same extract.

A very pretty book has resulted from the reduction of F. Hopkinson Smith's 'Well-Worn Roads of Spain, Holland, and Italy' (Boston: Houghton, Mifflin & Co.). The small duodecimo, with its 121 pages of text in large print, shows how little matter went to the making of the original folio. A number of head and tail-pieces and initial-letter motives adorn the volume. The binding is fresh, simple, and well conceived.

Mr. J. H. Hickcox, in his monthly catalogue of United States Government Publications (Washington, vol. iii., No. 4), remarks on a bill presented too late at the last session of Congress for the establishing of one to three depositories of public documents—adjunct to the National Library—that this library is not and never has been such a depository, its failures to receive being even more conspicuous than its acquisitions. There is not in existence a file of bills and resolutions introduced in Congress, or a collection of the hundreds of maps issued yearly by six bureaus.

Connecticut has a chief interest in Mr. Henry F. Waters's "Genealogical Gleanings in England" in the *New England Historical and Genealogical Register* for October. The sum of his abstracts of wills, etc., relates to the Disbrow family, eminent on both sides of the water. A valuable letter from Gov. Leete to Samuel Disbrow is among the new pieces. Mr. Waters promises at an early date much information regarding the Whitfields of Connecticut, and of the Holworthys, connections of the Disbrows by marriage.

Mr. W. E. D. Scott concludes in the *Auk* for October his series of papers on the present condition of some of the bird rookeries of the Gulf Coast of Florida, confirming the picture of wholesale devastation and extermination already drawn. Incidentally he reports that the hunting of the loggerhead turtle for food and for its eggs is so overdone—in the breeding season—that in this kingdom also there is every prospect of virtual extinction.

The next issue of *Appalachia* will contain an illustrated article describing a visit to the recently discovered glacier on Mummy Mt., in northern Colorado, by Mr. F. H. Chapin of Hartford, Conn. Mr. Chapin, who has made many Alpine ascents in Switzerland, was the first to pronounce the supposed snow-field a true glacier. He also secured several fine photographs of it.

The *Studio* for August presents its readers with a copy of the only engraving ever made of the portrait group by Sir Joshua Reynolds lately presented to the Metropolitan Museum by Mr. Junius S. Morgan of London. One of the three trustees pictured bears the name of Inigo Jones, and is perhaps of the famous architect's posterity. We cannot agree with the editor in thinking Mrs. Anna Lea Merritt's portrait of Dr. Holmes, also reproduced for this number, "an excellent likeness of the man endeared to us by so many titles."

Has Volapük come to stay? The prospectus of the *Volapük-Almanach für* 1888 alleges that in Germany and Austria alone there are some 20,000 amateurs or masters of this eight-year-old *lingua franca;* and our almanac is a sort of grammar of the language. Moreover, there lies before us a 'Grammar with Vocabularies of Volapük,' by W. A. Seret (Glasgow: Thos. Murray & Son; London: Whittaker & Co.; New York: B. Westermann & Co.), and we read that "Volapük (the Language of the World) was invented by Mr. J. M. Schleyer of Litzelstetten, in Baden, Germany, and published in the year 1880. Since that time it has made rapid progress, and has already gained a firm footing in Germany, Switzerland, Holland, Hungary, Italy, France, Sweden, and especially in Austria and in Syria and Arabia, having been introduced also into Russia (south), America, Asia, and the north of Africa." "Menade bal, püki bal"—or, One mankind, one language—adds the editor. We observe in Mr. Seret's grammar no account of the process of original word-formation and development. The vocabulary fills about 360 pages. A portrait of Schleyer will be found in the *Illustrazione Italiana* for Sept. 25.

At the recent meeting of the British Association, Canon Isaac Taylor, following and extending the investigations of Fick, Geiger, Cuno, Penka, and Schrader, sought to establish the theses that the home of the primitive Aryans was in the Baltic provinces of Russia, and that the Aryans and Finns were originally identical in respect of blood, of language, and of rudimentary civilization. The *Academy* of September 17 gives a good abstract of the paper, which is soon to be printed in full.

In the Bibliothèque des Écoles et des Familles, published in Paris by Hachette, there has just been issued 'La Case de l'Oncle Tom,' by "Mme. Beecher-Stowe," a new and abridged edition, with eighteen illustrations—probably not more fearfully and wonderfully French than the cuts in a recent English edition were English. Has not the time come for an annotated edition of 'Uncle Tom's Cabin,' with illustrations by some American artist who has studied the American African with loving care—Mr. A. Kappes, for example, or Mr. E. W. Kemble?

The last little volume by M. C. A. Chardenal, 'The Rules of the French Language' (London: Hachette; Boston: Schoenhof) would be almost perfect if it had a suitable index. It is simply a short French grammar, concise and clear, and in every way trustworthy. It could be used as a reference book by any one, by whatever method he might have acquired his French.

The *Nouvelle Revue* for September 15 contains the announcement that M. de Cyon has resigned his position as editor in consequence of his nomination as "délégué du ministère des finances de Russie pour mission spéciale." Mme. Adam will again assume the editorial charge of the *Revue*, which she gave up to M. de Cyon more than a year ago. The same number also announces that a new novel by M. Guy de Maupassant, "Jean et Marie," will be begun in the number for October 15, when "Mensonges," by M. Paul Bourget, now in course of publication, shall have been completed.

The second annual meeting of the New England Association of College and Preparatory Schools is to be held in Boston on the 28th and 29th inst. This association was the first of its kind, the initial meeting having been held in the autumn of 1885. Similar ones have since been formed in New York and Pennsylvania. They represent the natural desire for a more complete unity in the plan of the higher education, and afford opportunity for free interchange of views between collegiate and secondary instructors. The New England Association numbers in its membership nearly all the presidents of the colleges, several of the professors, and upwards of thirty of the principals of the leading academies and high schools which prepare for college. At the approaching meeting Prof. George T. Ladd of Yale will read a paper on "The Place of the Fitting School in American Education," and Mr. Samuel Thurber one on "Aims and Methods in Modern Language Teaching."

—The principal paper in the September Proceedings of the Royal Geographical Society is an account of a "Journey in Mantchuria," by H. E. M. James. A special interest attaches to this country, not simply because it is the cradle of the present ruling Chinese dynasty and the recruiting ground for the imperial army, but mainly from the fact that within the past twenty years a tide of Chinese emigration has flowed in of such an extent that the population has risen from between three and five to over twenty millions. This has naturally caused a great change in the country, the Chinese outnumbering the natives twenty to one. In consequence, the Mantchu dress and customs have disappeared, and the language, even, is spoken only in the remote mountain valleys. This is singular, considering the statement made by Sir Thomas Wade, formerly British Minister at Pekin, in the discussion following the reading of the paper before the Society, that "the authorities of all the three eastern provinces were obliged to present their reports to Court in Mantchu as well as in Chinese." He added, also, that "the whole Court at Pekin used the Mantchu language *en famille.*" The love of the ruling family for its native country is also shown by the fact that, though they were unsuccessful two centuries ago, on their accession to the throne, in their efforts to abolish the cruel custom of compressing the feet of the women, still, "to this day, no woman with crushed feet may enter the Imperial Court." The climate of Mantchuria is described as delightful, though the pleasures of travelling are much diminished by the midges, which exist in such frightful numbers that even "the ploughmen carry circlets of iron on their heads, on which are stuck pieces of burning touchwood, and pieces of it in their hands as well." The mineral wealth appears to be very great—iron, silver, and gold, as well as coal, being found in considerable quantities. The mining of gold, however, is strictly prohibited by the Government, a man being executed for it the day before Mr. James arrived at Sansing. Notwithstanding this, in the remote districts much gold is washed; but the chief occupation of the people is agriculture, the poppy especially being already so extensively cultivated as not only to have "almost completely ousted the Indian drug" in Mantchuria, but to be supplanting it in northern and central China. All previous writers on this country have told of lofty mountains covered with perpetual snow, but Mr. James ascended the highest peak and found its altitude to be not over 8,000 feet, the whiteness of its summit being caused by the vast quantities of pulverized pumice scattered over it. Among these mountains he met with companies of men, twelve or fifteen strong, searching for the wild ginseng, which is so valuable that one or two roots will repay them for a season's labor, being worth from £10 to £20 an ounce. Other parties were hunting for deer's horns—those which have just sprouted (that is, are about a foot long and full of blood) having a great value for medicinal purposes. He was shown one pair worth more than £50. The great obstacle to the progress of a large part of the country is the organized bands of robbers which infest it. Not only are the towns fortified, but all important shops have high walls and small fortifications to protect them against brigands.

—In 1843 Prof. Elias Loomis closed one of his meteorological studies with a brief suggestion of the interesting results that would follow from the preparation of a year's series of two daily weather charts of the United States. Now we may congratulate this veteran scientist not only on having lived to see and study the object of his early desire, but still more on having revised and systematized a great part of the essays on our weather maps that he has published semi-annually during the last twelve years. The revision appears in a fine quarto memoir as a part of the third volume of investigations published by the National Academy of Sciences, and forms a model of inductive research. An examination of its simple and cautious method, so free from the unwarrantable theorizing that characterizes much of our popular meteorology, would be profitable to the student of any science. Indeed, the student of the history of meteorology, as it has been developed in this country, will perceive in Loomis the successor of Redfield, as he finds in Ferrel the successor of Espy. Redfield said that storm-winds *do* blow around a centre, for he had charted them and discovered this fact of circulation. Espy said that storm-winds *must* blow towards a centre, for his theory taught him that they were impelled by a centripetal force. Fifty years ago there was not sufficient material at hand to settle this question, now open to determination by every schoolboy, and it was not unnatural that our early leaders, each following his own way, came to different conclusions. With fuller physical and mathematical knowledge, and a marvellous array of systematically collected data at hand to-day, it is most gratifying to find that the strongly deductive methods followed by Ferrel receive their clearest confirmation in the results of the purely inductive studies by Loomis. Prof. Loomis states in the introduction to his memoir that other chapters of the revision

shall follow as rapidly as his strength will permit. Would that his health and long life might depend on nothing less sure than the hearty good wishes of meteorologists the world over.

—Mr. Matthew Hale's address delivered before the New York State Bar Association at Albany, January 19, 1887, on "Needed Reform in the Organization of the Courts," draws attention to the scandalous denial of justice occasioned by the block in the Supreme Court of the United States. "No case can, in the ordinary course, be expected to be heard within four years after an appeal is taken or a writ of error allowed"—a shameful fact, which brings disgrace upon Congress and every member of it. Other more local reforms suggested are an increase of judges to remedy the delay in the New York Court of Appeals, where "the business of the court is over two years behind, and the delay is constantly increasing"; the cutting down of the system of double appeals, "so that upon questions of law in cases appealable to the Court of Appeals, an appeal may be taken directly, in the first instance, to that court"; the abolition of the system of preferring cases on the calendar for trial by legislation; and the abolition of the Court of Oyer and Terminer. Mr. Hale also urges, upon grounds which appear to us sound and sufficient, the adoption of an amendment to the Constitution of New York by which the Legislature might be authorized, in the trial of civil cases, to reduce the number of the jury, to allow "a judgment to be entered upon the verdict of a majority of the jury in case of inability to agree unanimously after a certain number of hours; and to provide that jurymen should not be required by night deliberations to sacrifice their sleep and perhaps their health." Mr. Hale's points are made briefly and well, and they should secure the attention of the bar and the Legislature.

—M. Léon Say, the Academician, political economist, and former Minister of Finance, has given the readers of the September number of *Les Lettres et les Arts* (Chas. Scribner's Sons) a foretaste of the volume on Turgot which he is preparing for Hachette's series of essays on the great writers of France. The article, though called "Les Poésies de Turgot," seems to be but a portion of a more comprehensive view of the subject, for it treats only of his translations from Virgil and Horace; but it is enough to show the great political economist and Minister of Louis XVI. in an entirely unexpected light, as the literary rival, as well as adviser, of the Abbé Delille. Whatever the reader may think of Turgot's theories of what he calls metrical verse for translation from the classic poets, and of the success of his own attempts to put them into practice, he will certainly enjoy the story of his anonymous correspondence with Voltaire upon the subject, which M. Léon Say has told so well. M. Charles d'Héricault, who seems to have abandoned early French poetry since he became director of the *Revue de la Révolution*, begins what may be a very interesting story of that period, "L'Idylle du Prairial," of which the scene is in Lyons just after the surrender of the city to the Republican Army in 1793, and into which he has introduced with much skill representatives of all the varieties of political opinion arrayed against each other at the time. M. Victor Fournel, in "Physionomies disparues: Le Racoleur," gives an account of the personage who corresponded to the English recruiting sergeant under the French monarchy in the last century. For those who are interested in such revivals of the past, this paper, with its numerous reproductions of engravings and handbills of the period, will be found very attractive. Still more so to many will be the long article of M. Antony Valabrègue, "Les Princesses artistes: La Maison de France," which might almost have been called "La Maison d'Orléans," since all that precedes the Orleans princesses occupied but little space. There is a curious medallion portrait, in this introductory part, of the youthful Marie de Médecis, after an engraving on wood attributed to her, and an equally curious picture, in the Romantic style of 1830, of the Duchesse de Berry at Blaye, from a lithograph by herself, and a very amusing account of the peculiar artistic methods of the neglected Queen of Louis XV., Maria Leszczynska; but the interest of the paper is principally in the account of the artistic productions of the daughters and granddaughters of Louis Philippe, from the Princesse Marie, whose statue of Joan of Arc is so well known, and of whom a charming sketch from a design by her teacher of drawing, Ary Scheffer, is given as the frontispiece of the number, to the Princesse Blanche, the daughter of the Duc de Nemours; and the Comtesse de Paris, the daughter of the Duc de Montpensier, and her young daughters. The most spirited of the designs by these princely artists is from a water-color by the Duchesse de Chartres, the daughter of still another son of Louis Philippe, the Prince de Joinville. It is called "Gaffe," and is the very life-like and expressive head of a beautiful dog.

—The history of the bibliography of Oriental studies is a very checkered one. The prospectus of the latest venture in this field is at hand. The journal is to be edited by Prof. August Müller of Königsberg, with the coöperation of several other scholars, and published by H. Reuther's Verlagsbuchhandlung in Berlin. It is to be called *Orientalische Bibliographie;* but we would suggest the *Phœnix* as a much better name for this and its possible successors. We should thus have unity of name to offset, in a measure, the unhappy diversity of plans, editors, and publishers of the works devoted to this subject. Almost since its very foundation, the German Oriental Society has labored and agonized to produce a series of scientific annual reports on the progress of Oriental studies which should be complete on the one hand, and prompt on the other. A history of these efforts is given by Gildemeister (*Zeitschrift der Deutschen Morgenländischen Gesellschaft*, vol. xxxviii.), and is amusing or pathetic as you choose to look at it. He calls it a "Tragedy," and ends the first section (or "act"?) with the words: "If the reports are to be prompt, they cannot be complete; if they are to be complete, they cannot be prompt." Such as they were, however—often tardy and fragmentary, and yet admirable in plan and execution—reports were rendered for most of the years from 1846 to 1881. Meantime, the extremely valuable and convenient little annual of Friederici, the *Bibliotheca Orientalis*, had been started, and was published regularly, one volume for each of the years 1876 to 1883 inclusive. Unfortunately, this series was brought to an end by the *Literaturblatt für Orientalische Philologie*, which was begun in 1884, when the Society's reports (*Jahresberichte*) definitively lapsed. The bibliographies in the *Literaturblatt* are the work of Dr. Klatt of the Royal Library of Berlin, and are models of accuracy and exhaustiveness. But now, with the completion of the bibliography for 1886, this publication also is to be suspended. Its place is to be taken by the *Orientalische Bibliographie*, a quarterly, whose first number is to appear this month. Prof. Müller hopes to overcome the difficulties of his predecessors by the superior organization of his editorial staff. His field extends over the religion, manners and customs, language, literature, and history of the peoples of Asia, Oceanica, and Africa. He already has direct connections with Egypt (Dr. Vollers of the Khedive's Library in Cairo is one of the editors) and India; and is establishing connections with Constantinople and other great literary centres of the East. In the name of the mutual interests of all concerned, we would most heartily second Prof. Müller's request that the publishers (or authors) of Oriental books or essays would promptly send a copy to the editorial office, at Königsberg, in Prussia. The annual subscription is six marks; this should be sent to the publishers.

—A lengthy communication in the Munich *Allgemeine Zeitung*, by the Egyptologist, Georg Steindorff, gives a detailed account of a curious papyrus acquired by the Royal Museum of Berlin from the collections of the late Prof. Lepsius (to whom an English lady had given it), and deciphered—though with some gaps, and not without some doubts as to accuracy—by the reporter. The papyrus, which is 1.70 metres long and comprises twelve columns of twenty-six lines of writing each, contains an historical-mythical tale, or rather series of tales, presumed by the decipherer to have been composed in the early period of the New Empire, about 1600 B. C. Pharaoh Khufu, Herodotus's Cheops, the builder of the great pyramid of Ghizeh, is the central figure of the narrative. To amuse himself he makes his princes tell him wondrous stories of the times of his ancestors. Prince Khafre (Chephren), the future builder of the second pyramid, tells a story of conjugal infidelity punished on the seducer by a crocodile formed of wax and magically endowed with life. This happened during the reign of Pharaoh Nebka. Another prince relates how Pharaoh Snofru, through the magic art of his chief reader-priest, recovered a precious thing dropped by one of his wives into the waters of a lake during a royal pleasure sail. But Prince Hardadaf prefers to tell of a wonderful man of Khufu's own time, the voracious magician Dedi, 110 years old, and residing in the south of Egypt. Khufu, astounded by what he hears, sends Hardadaf for Dedi, who appears, decapitates in the sight of the Pharaoh first a pigeon and then a bull, and restores the head and the life to each. Khufu now demands of the wonder-worker to procure him by his occult art the treasures of Thot. Dedi replies that only the oldest of the three sons to whom Reddedet is to give life could do that. Khufu asks who Reddedet is, and learns to his dismay that she is the wife of a priest of Ra, who is to bear to this sun-god three sons, all destined to reign over Egypt. Dedi promises relief against this calamity, by flooding the region of Sakhebu, where Reddedet dwells. Another chapter takes the reader to Sakhebu, and shows him how, at the bidding of the god Ra, the goddesses Isis, Nephthys, Mesekhnet, and Heket acted as midwives in delivering Reddedet of her triple burden, and then secretly dropped three diadems into the corn store of the priest's wife, who, however, soon after so incenses, by a chastisement, one of her female servants that she starts to betray all that has happened to Pharaoh Khufu. Here the papyrus breaks off, and we are left to guess that the author depicted at the end the triumph of Ra and Reddedet, and that his aim was to cast a halo of divine legitimacy over the dynasty that succeeded the house of Khufu.

THE LATEST BOSWELL.

Boswell's Life of Johnson. Including Boswell's Journal of a Tour to the Hebrides and Johnson's Diary of a Journey into North Wales. Edited by George Birkbeck Hill, D.C.L., Pembroke College, Oxford. Six volumes. Oxford: The Clarendon Press; New York: Macmillan & Co. 1887.

THE eighteenth century is beginning to have its

revenge. It entertained the profoundest respect for itself; but its own extravagant estimate was followed by a depreciation to which no other century of a similar grade of achievement has ever been subjected. Its prose was neglected when it was not ridiculed, its poetry was pooh-poohed, its canons of taste were stigmatized as artificial and false. A reaction, however, has for some time past been plainly setting in. After the reign of sentiment and sensation and tumult under which we have been so long dwelling, we begin to find a welcome relief in the calmness and self-repression which characterized the literary work of the last century, and a charm even in its coldness, which often bordered closely upon tameness. No more marked evidence of this reviving interest can be seen than in the appearance of the work now lying before us, following closely as it does upon the elaborate edition of Napier.

It is not meant by this assertion to imply that any feeling about the eighteenth century has of itself led to the reproduction of this particular biography. Boswell's Johnson is a work that stands upon its own merits, and will always hold the place it has taken, undisturbed by any changes of literary tastes and fashions. But for that, a simple reprint is all that would be required. The immense labor, however, that has been spent upon this edition shows that supreme interest exists not only in the man, but in the period. The biography has been and always will be read for entertainment. It is now more and more read and studied for quite different reasons. Otherwise there would be little demand for the wealth of outside matter contained in this edition, and in particular for the ample supply of notes, which give information in regard to everything and everybody even so much as alluded to in the text.

The name of the present editor is well known to those who have devoted themselves even slightly to the study of the career of the man who for many years was styled alike by friends and enemies the great Cham or the great Colossus of literature. The title of *Johnsonianissimus*, which Boswell applied to Malone, and which is here transferred to the Master of Balliol, to whom the work is dedicated, can probably be more justly applied to Mr. Hill than to either of the other two. His investigations have long been carried on in this particular field. He has exhibited, moreover, a fairness of judgment in one matter which unfortunately is as rare as it is desirable. In order to show his appreciation of Johnson, he has not felt it incumbent upon him to depreciate his biographer. So much interest, indeed, has he displayed in the latter that it would be hardly unjust to apply to him also the title of *Boswellianissimus*. Not that he is unduly prejudiced in his favor, though at times he goes somewhat further than we should be willing to follow. He expresses in the interesting preface to this work a feeling of disappointment that his reprint of the correspondence between Boswell and Erskine met with so little attention. He seems to think that these letters were worthy of a favor which they had not received. Yet he evinced his own lack of faith by not printing them entire. He threw out no small part of the poetry in them as being valueless. Doubtless this was true; but it would be hard to persuade most readers of the complete work that the poetry was not fully as valuable as the prose.

There need be no fear, however, that any such fate as neglect will attend the present edition. The editor's feeling towards his author, moreover, will be justified by every one who has studied the man as carefully as he. Boswell's follies and vices not only lay upon the surface—he took pains to call attention to them if they were in any danger of being overlooked, to record them if there were any prospect of their being forgotten. No man has so systematically furnished materials for a depreciatory estimate of himself. Yet of all the paradoxes to which ingenuity has given birth and reputation given currency, there is probably none more absurd than Macaulay's dictum that Boswell was a great biographer because he was a great fool. Qualifications of that kind are not so rare that we should have failed, were this view correct, to find many results of a similar nature; and one of the most striking characteristics of 'The Life of Johnson' is its absolute literary uniqueness, as well as its unapproached excellence.

The accomplishment of such results is not the work of dunces. In fact, while Boswell's merits as a biographer are conceded by all, his merits as a man of letters are rarely admitted by any. Yet they are of the most pronounced character. He was the founder of a new school of writing, and none of the countless imitators he has had has ever equalled the original master. We are all liable to overlook or forget the difficulties that stood in the way of his attempt. The present is an age of biography. There is no situation in life so obscure, no fame so limited, that its occupant or possessor can hope to escape having his achievements or failures, his foibles or his virtues, put on permanent record. The modern biographer, in his search for subjects, fulfils strictly the Scriptural injunction to go out into the highways and hedges and hale them in. Especially is this true of his attitude towards men of letters. In their case he follows hard upon the heels of death, and is often unwilling to wait till the grave has closed over the victim he has marked for his own.

There was nothing of this feeling when Boswell began collecting materials for his work. Few lives of anybody were then written, and of men of letters almost none. Before the middle of the eighteenth century, biography had dealt occasionally with great divines and philosophers. As a general rule, however, outside of political and military leaders, it chronicled no lives save those of men who perished on the gallows. Johnson's account of Savage was really an innovation in literary methods; but the interest of that is due to the writer, and not to the subject, who was little above the grade of a Newgate hero. Pope was the first author in our tongue whose death was followed by hasty compilations of the kind now common, which set out to give an account of his career; and he did not die until 1744. Even this exceptional treatment he owed to the exceptional eminence of the position which he had long held in literature.

On the other hand, of numerous writers of the last century we have scarcely a genuine contemporary record. Fielding died in 1754, but no account of his life was published until one was prefixed to the edition of his works that appeared in 1762, and this is chiefly remarkable for what it does not contain. Of his famous contemporary, Richardson, nothing but the most inadequate sketches have even as yet appeared. We are almost as badly off in the case of Sterne and Smollett. The men who knew them, who could have given plenty of information about them, died without making any sign. How little even do we really know of Johnson's own life before Boswell came into contact with him. Those years of privation and misery, in particular, are lost to us, when he walked at times the streets of London all night because he had no place to lay his head. We get glimpses of them, but we cannot be said to know them.

The debt, therefore, that is due to Boswell is not of a kind to be met with a sneer. It is especially ungrateful to make use of his labors and then revile him, as if any one with the requisite feebleness and impudence could have accomplished the work he did. Nothing could be further from the truth. Boswell was a pioneer in his profession, and he knew it. He had a perfectly clear conception of what he was about to undertake, and a justifiable contempt for the literary methods that had been and still were in use. For, as if it were not enough for the human mind to be oppressed by the dignity of history, there was then flourishing in vigorous vitality a dignity of biography which had to be respected. This sternly repressed the least disposition on the part of the writer to pander to the frivolous desire on the part of the reader to acquire a knowledge of those personal details which eminently reveal the man. Perhaps, so long as this feeling was prevalent, it may have been just as well that so few biographies were written. Certainly only those who have waded through them can appreciate how jejune they generally are, how barren of all that interests and frequently of all that informs.

It was this baleful dignity of biography that Boswell effectually destroyed; and the work of destruction was done consciously. He was not to be turned aside from the course he had marked out by sneers or entreaties. He was unaffected by the contemptuous tone used towards the 'Journal of a Tour to the Hebrides'—which occupies nearly all of vol. v. of the present edition—and which, published the year after Johnson's death, outlined the nature of the more elaborate work that was to follow. The fact that while many abused it, everybody read it, doubtless dispelled any doubt, if such existed, as to his not having hit upon the right method. That method he unhesitatingly followed. He had plenty of people to give him advice how not to do it, to urge him not to draw the man as he was, but as he ought to be made to seem. Hannah More tells us almost tearfully how she "besought his tenderness for our virtuous and most revered departed friend, and begged he would mitigate some of his asperities"; and how Boswell roughly answered "he would not cut off his claws, nor make a tiger a cat, to please anybody." Fanny Burney tried hard to escape giving any information to "that biographical anecdotical memorandumner," as she styled Boswell. When at last the indefatigable seeker after knowledge did meet her, he gave her a new idea of the way a life of so great a man as Johnson should be written. "We have seen him long enough upon stilts," he said to her. "I want to show him in a new light. Grave Sam, and great Sam, and solemn Sam, and learned Sam—all these he has appeared over and over. Now I want to entwine a wreath of the graces across his brow. I want to show him as gay Sam, agreeable Sam, pleasant Sam."

No one can deny that Boswell realized his ideal. He had great opportunities, to be sure, though it is also to be added they were largely of his own making; but he improved them to the uttermost. As a result of a course clearly defined and consistently followed, not only is Johnson himself known to us, but likewise the society that gathered about him, as no other man and no other society are known in our literature. Boswell's method has deepened as well as broadened the fame which in his own day it was foolishly supposed to have lessened. The wisdom of Johnson's polysyllabic writings may come in process of time to be forgotten of most, but the vigor of his monosyllabic conversation will be for ever known of all men.

The editor does also full justice to Boswell's accuracy, which was by no means the mere accident of a retentive memory, as has been often asserted. It was the result of the most thorough and untiring pains. He neglected no sources of information, he left no statement unverified. His care did not save him from making mistakes, but it reduced them to a very low number. In the two or three controversies in which Boswell was concerned in consequence of an attempt to impeach the correctness of his statements, he

came out notably triumphant. This is especially true of the one with that "tuneful old virgin," Miss Seward, as she is somewhere disrespectfully designated by Walpole. To this feeling about accuracy—which is something that an editor naturally respects as saving him a world of trouble—we are inclined to attribute Mr. Hill's rather depreciatory tone when speaking of Mrs. Piozzi. It is almost the only point to which we are disposed to take exception in his annotations. The faults of Mrs. Piozzi have always been unduly magnified. In a general way it may be said that accuracy of statement is something that men attain very rarely, and women never. Of the latter it is indeed hardly expected by the wise, and its absence is deplored rather than censured. Of course, the lively widow of Thrale did not always get her details straight, yet, for all that, it would be unjust to assert that the general impression she gives is much out of the way. The criticism to which she has been subjected proves nothing so much as the worthless nature of most criticism. It has always been distinctly influenced, consciously or unconsciously, by the prejudice that has prevailed against her for having contracted a second marriage with an Italian music-teacher. From the very outset all England felt that for some reason it was incumbent upon it to cherish the memory of the defunct brewer by expressing resentment at this conduct of his widow, though it was not a matter with which it had any concern. This feeling shows itself even as late as the present day. The practical English mind, which at heart looks upon the making of beer as altogether more respectable than the making of music, has never forgiven Mrs. Thrale for entering into what it chooses to call a *mésalliance*. She apparently never had any reason to regret her course, and the public clamor about it was as silly as it was impertinent. Marriages which meet the approval of everybody do not turn out so invariably delightful that we can afford to assume a censorship of the parties who marry with no loftier idea than that of suiting themselves alone.

This feeling, however, whether just or unjust, has nothing to do with the merits of the present work. It would be presumptuous to assert that any edition of a great classic can be or will be a final one, yet it is rather a safer prophecy than those usually made to predict that this particular one is likely to retain that position so long as there is no great advance in the state of our knowledge. The amount of labor that has been expended in perfecting it has been enormous. Much of it is shown in details that would escape the attention of all save those who have to some extent gone over the same ground. The index attains almost to the dignity of a marvel of care and industry, though the editor, in spite of it, feels called upon to apologize for the intentional omission of one class of references. It covers 288 pages of double columns. Of the value of the notes we have no space to speak at large. They cover almost every point that can possibly present itself to any inquirer. We have tested both the exactness and the fulness of the information contained in many of them, and as critics we might be justified in feeling a certain sense of injury in finding so little of which to complain. On one point only, so far as we have observed, are we disposed to question their accuracy; and the error, if it be an error, is one for which there is ample excuse. The editor tells us (vol. i., p. 330) that a paper under the name, the *Idler*, had been started seven years before Johnson began the publication of essays under that title. For his authority he refers us to the Carter and Talbot correspondence, though the passage containing it occurs in vol. i., p. 337, and not, as is here given, in vol. ii., p. 33. In that occurs a distinct statement, in a letter of June, 1751, that "there is a paper called 'The Idler.'" Perilous as it is to maintain a negative in such a case, we venture to declare that there was then no paper of that name; that no number of it can now be shown anywhere, or in fact has ever been seen by anybody. We venture, further, to say that the periodical called in the above-mentioned correspondence the *Idler*, was really the *Inspector* of the notorious Dr. John Hill, which he had begun to publish in the previous March in the *London Daily Advertiser and Literary Gazette*. In fact, the very letter in which the *Idler* is mentioned, speaks of the papers going under that name as being published in the *Literary Gazette*.

It is gratifying to learn from the editor's preface that he has before him the preparation of three other works that deal directly with the man whose life has been here so carefully edited. One of these is of great importance. This is the collection of Johnson's letters that have not been printed in the Life. They are scattered over books and periodicals, and it is full time they were brought together in compact and accessible form. It is pleasant to know that the editing of them will be in the hands of a scholar so learned, so painstaking, and so fair-minded as Dr. Hill has shown himself to be in the preparation of the great work of which we have furnished so inadequate a notice.

SCHOTTMUELLER'S TEMPLARS.

Der Untergang des Templer-Ordens. Mit urkundlichen und kritischen Beiträgen von Dr. Konrad Schottmüller. 2 vols., 8vo, pp. 760, 450. Berlin. 1887.

THE destruction of the Order of the "Poor Soldiers of the Temple" is an event which will never lose its interest. The dramatic suddenness of its fall, the heroism of its members who perished in the flames rather than admit the guilt imputed to it, the contrast between its glorious career for nearly two centuries and its extinction in disgrace, will always render the event, to the ordinary reader, one of the most impressive episodes in mediæval history. To the learned, moreover, the mysterious questions to which it gives rise afford a perpetual subject for acute investigation and fanciful speculation, heightened by the claim of Freemasonry to be the legitimate descendant of the Temple, through the so-called charter of transmission of Larmenius. In recent times, Van Os has asserted the guilt of the order from a high-church standpoint, to vindicate the memory of Clement V.; while Hammer-Purgstall, Wilcke, Mignard, Loiseleur, Prutz, and others have constructed theories, each more ingenious than its rivals, to prove that the Templars were Gnostics, Manicheans, Luciferans, or heretics of some original description.

With true German assiduity, Prof. Schottmüller has undertaken to solve the problem by an exhaustive investigation of the evidence, reinforced by some hitherto unknown documents which he has transcribed from MSS. in the Vatican Library, and which constitute his second volume. More than twelve hundred octavo pages devoted to a single event may well exhaust the appetite of the most resolute *helluo librorum;* but the author is not yet satisfied, and proposes to issue another work, in which he will compile the statistics of the Order from all attainable sources. For such an enterprise he is well qualified by his minute acquaintance with nearly all the documents which have reached us and the painstaking character of his researches.

We wish we could say as much for the results of his labor on the present work. The new material which he has printed is interesting, and adds some details to our knowledge of the prolonged and intricate trial of the Templars, especially in Italy and Cyprus, and serves to confirm the conviction that the most unscrupulous means were used by the agents both of Philip the Fair and Clement V. to secure condemnation. The original portion of the volumes, however, is of little worth. Unfortunately the author has not been content to present a clear and comprehensive history of the event. It has seemed to him necessary to have a novel theory and to use his materials for its demonstration. Unconsciously to himself, his convictions are so strong that his assumptions become facts and are stated without qualification, so that the reader who is not familiar with all the multitudinous details of the successive events cannot distinguish between that which is based upon documentary evidence and that which is evolved from the internal consciousness of the writer. Throughout, the attitude is that of an advocate and not of a judge. Everything which supports the author's side of the case is made the most of—beaten out, in fact, to the tenuity of gold-leaf, with a diffuseness and repetition which is apt to become wearisome—while that which militates against his views is, though not suppressed, yet passed over so lightly that the ordinary reader is not allowed to recognize its importance or its bearing.

Prof. Schottmüller's theory is, that the Templars were not guilty of the heresies ascribed to them, but that their destruction became necessary to Philip because they had entered into an alliance with Clement to enable him to throw off the oppressive domination of the French King; that Clement was by no means the weak and irresolute character ordinarily described, but a firm and sagacious statesman, who did everything he could to save his allies until matters had gone so far that the interests of the Church required their sacrifice, when he joined in procuring the condemnation of the Order and successfully saved its property for transfer to the Hospitallers.

It would require more space than we have at command to follow the author through the political maze of the transactions between Philip and Clement, and show how he has been unconsciously betrayed into misleading his readers in the effort to defend his thesis. Little interest attaches nowadays to the motives of the actors of the drama except as a matter of pure historical speculation. It is otherwise, however, with the question of the guilt or innocence of the Templars, and as to this we may be allowed to criticise the author's method. He subjects the confessions and depositions of the accused and of witnesses to a searching analysis, in which he often displays close investigation and shrewd reasoning; but the fallacy of his process lies in his accepting whatever evidence goes to prove the innocence of the Order, and in his rejecting that which makes for their guilt. He thus follows the example of his antagonists, such as Wilcke and Prutz, who adopt the same process in selecting such evidence as suits their purpose; and though he perpetually sneers at them, his conclusions, while happening to be more correct, are scientifically as baseless as theirs. No one who is familiar with the criminal procedure of the period will attach any weight to confessions extracted by bribery, starvation, prolonged harsh treatment, or the use or threat of torture, while at the same time the professions of innocence made by those who were not subjected to these influences are so much a matter of course that they are similarly worthless, and the evidence of outside witnesses amounts to little beyond a vague expression of general public opinion. The only reasonable method of dealing with the question is to consider it as a whole, with reference to its possibilities and probabilities; to throw wholly out of consideration the exculpatory evidence; and to sift the incriminating testimony with a view to see whether a consistent story of

guilt can be evolved from it that will overbalance the inherent improbability of the accusations. It is not likely that any one who will thus approach the subject with an unbiassed mind will reach any other conclusion than that the Templars were sacrificed to the cupidity of Pope and King.

Abendröte. Psychologische Betrachtungen. Von Paul Lanzky. Berlin: Duncker. 1887.

UNDER the title of 'Evening-Red' and the subtitle of "Psychological Observations," Herr Lanzky publishes a mass of aphoristic deliverances which indicate at least that both authors and publishers in Germany still reckon upon more or less of a popular appetite for this species of literature. The "observations" number in all an even 500. They vary in length from a line to a page, and are arranged under rubrics such as "From the Soul of the Sage," "Passion and Passionlessness," "Against Pessimism," "Religion and Art," "Woman and Love," "Solitude," etc. The quality of the thought strikes us as very uneven; many of the reflections, in fact the great majority, seem to spring from the mind of an honest, sagacious, and highly intelligent thinker, but others are the very essence of pompous vacuity. Here, for example, is number one: "Who art thou that the whole world cannot touch thee with its love or its hate, its sorrow or its joy? I am who I wish to be, and I shall always wish to be who I shall be." And again, number twenty-five: "A voice comes to me at evening and says: 'Thou hast been a man.' In the evening there approaches a second voice, which inquires: 'Art thou a man? Art thou *that* man?'" To all of which, as to many other of Herr Lanzky's meditations, one can only say in the ever-memorable words of Captain Bunsby: "The bearings of this observation lays in the application on it."

What is the worth, at best, of the collections of aphorisms in which many Germans have been and are so fond of expressing themselves? A popular maxim may be valuable as a rule of life; it is, or is supposed to be, a condensed expression of the general experience, and as such it saves thought, and, even when not implicitly accepted, it may serve as a useful starting-point for reflection. The same may be said of the sayings of great men; in such a case the aphorism concentrates the wisdom of an individual whose character is such as to give peculiar interest and authority to his deliberate utterance. It matters but little that he offers no argument for his opinion: the argument is supplied by his life or by his other writings. Again, a brief aphoristic observation may be valuable for its wit, its humor, or for something in its literary quality. Such "sayings," which make no pretence of appeal to the reader's sober judgment, but rather to his sense of literary brightness, are, when occurring incidentally, one of the potent charms of literature; and the writer who gives nothing in this line and never calls his reader's lead-pencil into requisition, may be an instructive, but is likely to be a somewhat dull, companion.

But what is to be said of the aphoristic style as an ordinary vehicle of literary expression? What is to be said of a book consisting entirely of aphorisms? To our own taste such a book is tiresome from the very nature of the case. Even the brightest scintillations of wit or of literary genius lose half their power when removed from their proper connection and occasion and served up *en masse* to be taken one after the other, unrelieved and undiluted. Much worse is the case when we have to do with mere miscellaneous opinions, which are not scintillant at all, or are so only in a low degree. One tires of the inconsecutiveness of such a book; one tires of its oracular and apodictic manner of expression, and thus even real "gems of thought" fail to produce their proper effect upon the mind.

There was a time when the mania for aphoristic fragments became a sort of epidemic disease in Germany. The mania began with the Romanticists, Novalis and Friedrich Schlegel, with both of whom the fragment form was only the outward manifestation of inward unripeness and literary impotence. But the vogue being once set, it was widely copied, and copied especially by persons who laid claim to peculiar transcendental enlightenment, and affected to despise the slow and laborious mental processes of the unilluminated. And so it came about that numerous writers who had no title whatever to be considered as oracles, began showering upon the public collections of short oracular sayings in which the hardest questions of thought were dogmatically passed upon in a magisterial tone, and in language characterized usually by great singularity of expression, and by a more or less skilfully counterfeited appearance of intellectual subtlety. The fashion produced evil results in Germany, and when it passed over into England and New England, it produced evil results there. The idea that the perfection of literary utterance is to be found in strange and whimsical turns of expression, and in would-be startling paradoxes which, when pressed, yield simply nothing to the mind, is essentially an Oriental and semi-barbarous idea. Rhetoric, at its best, is, as Plato long ago defined it, the art of persuasion.

Buddhism in Christendom; or, Jesus the Essene. By Arthur Lillie. London: Kegan Paul, Trench & Co. 1887.

MR. LILLIE, who is well known as a writer on Buddhism, is not an expert or specialist in this field of Eastern literature, but a theorist; no doubt an honest theorist, but nothing more. We take up his book, therefore, expecting to be entertained, or perhaps astonished, if not shocked, at his conclusions. And, indeed, we are so; for Mr. Lillie is an outspoken and unflinching writer, and never fails to tell us what he means. He puts together some statements about Buddha, and compares them with corresponding statements about Christ, and then, as the religion of Buddha preceded the Christian religion, he concludes the latter is borrowed from, or at least indebted to, the former.

We need not say that this mode of argument is worse than futile: it is provoking and harmful. Many serious writers think they can trace a subtle connection between the outlines of the two religious systems; but to say that Christianity is a copy or perversion of Buddhism, is incorrect and misleading. It is impossible to go further than Seydel in this study, and he proposes to compare Buddhism with Christianity as one biographical *plan* may suggest another, the substance of the memoir being filled in from original sources, but framed on the plan of its predecessor. This, in fact, is just what Dr. Völter has proposed in reference to the composition of the Book of "the Revelation," in his little work, 'Die Entstehung der Apokalypse.' His theory has been taken up by Herr Eberhard Vischer, and endorsed by Dr. Harnack. The theory is, that the Book of "the Revelation" was originally a Jewish Apocalypse, which has been adapted and set in a Christian frame, with Christian interpolations.

Now, Seydel proposes just this explanation for the composition of the Synoptic Gospels. He supposes that a Christian convert met with a copy of the legend of Buddha's life (we may observe that there can be no shadow of doubt that this legend was put together and widely diffused *before* the Christian era). Having read this (it was probably in poetry), he formed the plan of superseding it by a more excellent work, the Life of Christ. This Life was framed on the same plan, from the beginning to the end, as the Eastern story; but the materials worked into the plan were of a higher order, and founded on highest truth.

We can see no objection to this explanation of the undoubted sameness of outline that marks the two records. It is well understood that the highest conceptions, whether in poetry or art, are often founded (sometimes unconsciously) on the plan of a vastly inferior model; and, judging from the analogy of the Old Testament ritual, we can see nothing derogatory to the Gospel histories if we suppose this to have really happened in their case. Beyond this we are not disposed to go in the comparison of Buddhism with Christianity. The two are allied in many ways; but no vital truth in the history of Christ can be proved to be borrowed (in the naked sense of the word) from the Life of the Eastern sage.

Parish Problems. Hints and Helps for the People of the Churches. Edited by Washington Gladden. The Century Co.

MORE than a score of writers have coöperated with Dr. Gladden in producing this book. Its wide range corresponds to its widely drawn materials, all the incidentals and accessories of the modern church being treated of—from the pastor's wife and children to the choir-leader. Several of the topics are handled by experts; the pages on church architecture, for example, being the work of Mr. E. C. Gardner. The reader encounters no more repetition than was to have been expected from such a diversity of authorship, dealing with subjects so related. The theological tone, so far as it has occasion to make itself distinct, is highly liberal; æsthetic and liturgical worship is decidedly advocated, and a vast amount of good advice is given to the laity—to whom the book is especially addressed—on all the delicate matters involved in the relation of pastor and congregation. Curiously, the writer who has the most to say on the vexed questions of ministerial propriety and parishional duty has, in experience, signally failed to apply practically the theoretical wisdom here afforded. Altogether, with much that is commonplace, the book contains enough that is fresh and pointed to make a distinct place for itself, and we do not doubt that it will find a great sale among those church people who are not members of the Society for the Suppression of ad-Vice.

Henry Wadsworth Longfellow. His Life, his Works, his Friendship. By George Lowell Austin. Illustrated. New edition. Boston: Lee & Shepard. 1888.

THIS is a reissue of a work which at the time of its appearance may have been useful. It was begun under Longfellow's own eye, as a part of a volume which should include biographical sketches of eminent literary Americans, and was at a later time, after a necessary interruption, continued and elaborated under the encouragement and advice of Longfellow's friend John Owen. It has, however, been superseded by the Life and Memorials of the poet. It contains, it is true, a fuller account of Longfellow's ancestry, and of the characteristics of Portland and of Bowdoin College in the days when they were a home for him. The early poems, suppressed by him and first brought to light in book form by Richard H. Shepherd, are reprinted in full, and his minor and undistinguished work in prose has been carefully traced in the current literature of the day. There are long extracts from prose and verse, to illustrate his years abroad, or to analyze his literary labors at home; Sam Ward's story of how the

"Skeleton in Armor" was published, and Howells's lengthy description of how the translation of Dante was criticised, and other familiar anecdotage about special poems, go to swell the volume; and thus the book is made up heterogeneously, and comes to a considerable bulk, room being found even for a narrative of the funeral services as detailed as a newspaper report. Neither biographically, critically, nor pictorially is it a great success; as a stop-gap until a complete life from authentic sources should appear, it had a certain though not high usefulness; but now, in the light of the abundant and varied materials supplied in Mr. Samuel Longfellow's three volumes of Memorials, a book of this disproportioned and superficial character is more than insufficient—it is hardly to be excused. Moreover, even without reference to our present fulness of knowledge regarding Longfellow's life, it is a trial to the much-enduring reader of these prolix times; it carries the sin of tediousness to a most unconscionable extent. If any one wishes to know the facts and dates of Longfellow's life, he can consult some dictionary of biography; if he wishes an impression of the quality and environment of the man, he will do better to read fifty pages of the Memorials at random than industriously to wade through a dozen popular biographies like this.

Rural Hours. By Susan Fenimore Cooper. New and revised edition. Boston: Houghton, Mifflin & Co. 1887.

THE reissue of this volume brings again before the public one of the pioneer books in that department of country scenes, bird and plant life, the change of the seasons, and all the minor incident of the daily life of nature, of which the literary register has become superabundant. The fact that the landscape is that of the Cooper homestead adds something of personal and extrinsic interest to the story, which by itself is nothing more than the diary of a year in the country. It was written, the author tells us, "in good faith," every event, every impression being real; but there was little need of this assurance, for it is only by habitual attention to external things and the closest accuracy in describing them, that any success is possible in this sort of composition. The year is the well-known American one, with its tardy and delaying spring, hot summer, long and brooding autumn, and keen winter; the country is that of the interior lakes of New York; and there is a background of the expiring Indian tribes, the bold, tree-felling pioneer, and everywhere the aroma of a district still half wild and in process of being reduced to civilization. The observer has the best of qualities needful to her work in the strong and vital interest she takes in the animate life of nature, and in her sensibility to the moods of the sky and forest. The pages of reflection or of science that make the episodes of the record of what actually took place before her eyes, are of that non-insistent and merely incidental kind with which walks in the woods are really varied. In every way the tone of the volume is consistent and harmonized with the matter, and, for what it purports to be, the book ranks well with its successors of later years and younger hands; and it is pleasant to be able to associate this picture of a life in retirement with nature with our memories of the novelist of the woods.

BOOKS OF THE WEEK.

Bancroft, H. H. Popular History of the Mexican People. San Francisco: The History Co. $4.
Braddon, Miss M. E. Like and Unlike. George Munro. 20 cents.
Brinton, D. G. Ancient Nahuatl Poetry, containing the Nahuatl Text of 32 Ancient Mexican Poems, with a Translation, Introduction, Notes, and a Vocabulary. Philadelphia: D. G. Brinton.
Carpenter, Esther B. South-County Neighbors. Boston: Roberts Brothers. $1.
Church, Rev. A. J. With the King at Oxford: A Tale of the Great Rebellion. Illustrated. Dodd, Mead & Co.
Finch, J. B. Speeches. The People Against the Liquor Traffic. Temperance Publication House. 30 cents.
Fresh Woods and Pastures New. By the Author of 'Frank's Ranche.' London. Sampson Low, Marston, Searle & Rivington.
Furnas R. W. Transactions and Reports of the Nebraska State Historical Society. Vols. I. and II.
Henkel, F. The Mistress of Ibichstein. George Munro. 20 cents.
Hugo, V. Les Misérables. Translated by Isabel F. Hapgood. Illustrated edition. Vols. IV. and V. Thomas Y. Crowell & Co.
Lee, Vernon. Juvenilia: Being a Second Series of Essays on Sundry Æsthetical Questions. Boston: Roberts Brothers.
Letters from Heaven. Second American, from the Fourth German edition. Funk & Wagnalls. $1.
Lombard, T. R. The New Honduras: its Situation, Resources, Opportunities, and Prospects. Brentano's.
Mandat-Grancey, Baron E. de. Paddy at Home. Harper's Franklin Square Library. 20 cents.
Marston, P. B. Garden Secrets. Boston: Roberts Brothers.
Miller, J. Songs of the Mexican Seas. Boston: Roberts Brothers. $1.
Montgomery, D. H. The Leading Facts of English History. Revised edition. Boston: Ginn & Co.
Napoléon, Le Prince. Napoléon et ses Détracteurs. Paris: Calmann Lévy; New York: Westermann.
Parker, B. S. The Cabin in the Clearing, and Other Poems. Chicago: Charles H. Kerr & Co. $1.50.
Perelaer, M. T. H. Ran Away from the Dutch. Dodd, Mead & Co. $2.25.
Ransome, C. A Short History of England, from the Earliest Times to the Present Day. E. P. Dutton. $1.50.
Schurman, J. G. The Ethical Import of Darwinism. Charles Scribner's Sons. $1.50.
Seret, W. A. Grammar, with Vocabularies, of Volapük. B. Westermann & Co. $2.25.
Seymour, T. D. Homer's Iliad. Books I.—III. Boston: Ginn & Co. $1.35
Sharp, W. Sonnets of this Century. Edited and Arranged, with a Critical Introduction on the Sonnet. Thomas Whittaker. 75 cents.
Smedes, Susan Dabney. Memorials of a Southern Planter. Baltimore: Cushings & Bailey. $1.50.
Sophia Adelaide. A Chapter from Contemporaneous History. Belford, Clarke & Co.
Stevenson, E. I. White Cockades: An Incident of the "Forty-five." Charles Scribner's Sons. $1.
Stokes, W. The Old-Irish Glosses at Würzburg and Carlsruhe. Part I. The Glosses and Translation. London: Trübner & Co.
Taylor, Dr. W. M. The Scottish Pulpit from the Reformation to the Present Day. Harper & Brothers.
Thanet, Octave. Knitters in the Sun. Boston: Houghton, Mifflin & Co. $1.25.
The Duchess. By "The Duchess." George Munro. 20 cents.
The Giant Dwarf: A Story for Young and Old. Thomas Y. Crowell & Co. $1.25.
The New Catholic Church, with Thoughts on Theism and Suggestions towards a Public Religious Service in Harmony with Modern Science and Philosophy. 10th ed. London: Trübner & Co.
Tolstoi, Count L. N. The Invaders, and Other Stories. T. Y. Crowell & Co. $1.25.

The Nation.

NEW YORK, THURSDAY, OCTOBER 20, 1887.

The Week.

A REPUBLICAN organ, commenting upon the appeal to the Supreme Court in the Virginia debt controversy, says that "the only chance of a decision in favor of repudiation lies in Mr. Cleveland's hands," and that "if he will appoint a judge like Mr. Lamar, there may be a majority of one for a revocation of the original decision." A better way of putting it would be that the original decision may be revoked if Mr. Cleveland will appoint a judge like Chief-Justice Waite, Justice Miller, Justice Bradley, or Justice Gray, all Northern Republicans, who voted "in favor of repudiation," and were only prevented from making it the verdict of the tribunal by the fact that the single Democratic justice, Mr. Field, voted with the other four Republican justices in opposition. If the court finally decides "in favor of repudiation," it will not be because Mr. Cleveland appoints a Southern Democratic justice who votes that way, but because Lincoln, Grant, and Arthur appointed four Northern Republican justices who set him the example.

Senator Sherman has made another "great speech" in Ohio, but we scan it in vain for any reference to the vital issue of nullification—nullification by Ohio people, Republicans as well as Democrats, of the law passed by the last Legislature giving colored children the right to attend the white schools. If such outrages upon negroes had been committed anywhere in the backwoods by Southern whites as have occurred during the past month in college towns of Ohio, the Republican press and the Republican stump speakers would have flamed with indignation against a section so lost to all sense of justice; but neither Foraker, nor Sherman, nor any other Republican orator, nor any Republican organ, so far as we have seen, has uttered a word in condemnation of this barbarism. The hypocrisy of the pretence of Republican politicians that they feel an unselfish interest in the negro, was never before made so plain.

The dissensions among the Knights of Labor, which are causing a terrible internal conflict in the "General Assembly" of that order at Minneapolis, show that it would have been most unwise to hand over the Government of the United States to Mr. Powderly last year, or even let him revise the Constitution. They show, too, that the transfer of all the land, mines, and machinery of the country to "Labor," to be managed by a committee composed of the Powderlys, Barrys, Quinns, and the like, would probably not succeed in banishing poverty and making happiness equal and universal. We hope that clergymen and philanthropists whose imaginations have been touched by the George and Powderly rant are carefully reading the reports of the doings and sayings of these labor organizations; and while doing so, we trust they will bear in mind that the Socialistic world they dream of is one which the managers of these bodies would govern or try to govern. They surely must ask themselves how long civilization would last under such a régime, and be thus helped in getting hold of the central idea of sociology—that the social organization is and must always be what human character makes it, and not one whit better.

The municipal election in Newark furnished an excellent test of the strength of the Labor party. The Rev. Hugh O. Pentecost, one of its noisiest leaders, was nominated for Mayor; Henry George lent his assistance; the Democratic candidate was supposed to be objectionable to the party on personal grounds—in short, the circumstances appeared so favorable that the more sanguine talked of carrying the city. A full vote was polled, but Pentecost received only 1,861 ballots out of a total of 25,594; in other words, the Labor candidate was supported by only 14 out of every 100 voters in a city where the proportion of laboring men is very large. There was a curious parallel between the Newark election and the Indianapolis election the same day. In Indianapolis also there was a Labor candidate for Mayor, but he received only 1,455 votes out of a total of 20,700, which was almost exactly the same proportion as the 1,861 out of 25,594 in Newark. These simultaneous exposures of the party's weakness in the East and in the West can hardly fail to exert a discouraging influence in this State.

Mayor Hewitt said some very useful things last week at the opening of the club-house of the Bricklayers' Union No. 7. This Union is one of the most prosperous in the city, largely owing to conservative ways of talking and acting, and is the first of the unions to own its club-house. Mayor Hewitt pointed out that continual striking is the mark of the rawest stage of trades-unionism. The unions, he said, like children, "go through a dental period, and the first thing they do is to show their teeth." In England, where the labor organizations are older and better managed than anywhere else, during the first fifty years nearly all their money was expended on strikes. But now all that is changed, and 97 per cent. of their funds go into charity and mutual help. The same tendency, Mr. Hewitt said, appears in this country. In 1880 the greater part of the money contributed to trades-unions treasuries was expended in strikes. In 1885 only 12 per cent. of it was expended in this way, and the remainder went in benefits and mutual help. Mr. Hewitt predicted that in five years from now only 2 per cent. of the union revenues would be expended in strikes. But in order to reach this consummation many of the unions will have to slough off the striking or turbulent element, as the Bricklayers' Union No. 7 had to do nine or ten years ago. The men who are constantly thinking of strikes, and getting up strikes, and looking out for reasons for striking, are seldom good workmen or a valuable part of any organization. The constitutional striker almost always finds industry and economy odious.

In his speech at Dunkirk on Monday Col. F. D. Grant handled certain themes in political economy with his accustomed brevity and terseness. Referring to Senator Hiscock's remarks on the vast growth of the sugar-beet industry, and the consequent lowering of the price of sugar and the diminished cost of transportation, he said that he was able to confirm the Senator's position by observations of his own in the republic of Mexico. For, happening once to be at the town of Oataca in that country, he found that sugar was selling at seventeen cents a pound, while in the City of Mexico it could be bought for ten cents a pound. The reason was that Oataca had no railroads or other cheap means of transportation, while the City of Mexico, having railroads, was able to procure sugar a great deal cheaper. It was also a fact within his knowledge that it once cost twelve cents a hundred to ship army goods in the West, "but as soon as the railroad came the price fell enormously." From these data he was convinced of the soundness of Senator Hiscock's views. He concluded that "the railways have so cheapened the cost of transporting everything that all in this nation can live with more comfort." If the intelligent and fair-minded public find Col. Grant's position well taken, they will doubtless be convinced that the Republican party was right in rejecting him for Quarantine Commissioner and reserving him for the higher position of Secretary of State.

The *Times* prints a letter from Mr. D. H. Chamberlain in answer to an invitation to take the stump for the Republican party in this State. He declines to do so because he thinks the Democratic candidates on the whole better men and better officers than the Republican candidates, and the Democratic platform better than the Republican platform. The Republican platform he objects to because it shows that "the only political question to which the Republican party is sincerely devoted is that of protection, so called"—that is, the maintenance of the present tariff and the enormous resulting surplus; while the Democratic platform calls for a reduction of Federal taxation by a sum not less than $100,000,000 per annum. Mr. Chamberlain's other points are also very strong. He touches on the Republican juggling with the temperance question, on the Platt bossism, on the nomination of Belden ("the man who does not stir round for nothing"), for Congress, and so on. In fact, the picture he draws of the Republican party recalls strongly a remark Emerson made about it as long ago as 1879, when its degeneracy was becoming painfully manifest—"the better the party, the worse it stinks when it turns bad."

The St. Louis *Republican* publishes an interview with Mr. Chauncey M. Depew, in which

"the shadow of coming financial disaster" is somewhat vividly portrayed. We presume that Mr. Depew did not intend that his remarks, whatever they were, should be printed; but now that they have got in print, they will supply the text for more or less comment, since Mr. Depew's position as the head of one of the largest railway corporations and amalgamations in the country gives him excellent opportunities for observation of the undercurrents of trade and industry. The first thing that strikes Mr. Depew's attention in the West is the excessive amount of railway building that has been undertaken this year, and the probability that a large part of the new mileage will remain unprofitable for many years to come, and that the portion which is not under the ownership of old and solid companies will either be put to great straits or go into bankruptcy. Now, this is a "true bill," whether Mr. Depew said it or not. The situation in this respect is very much the same that it was in the autumn of 1872. There had been an extraordinary overbuilding of railways in that year, and when the fall trade and the crop movement began, a severe stringency in the money market set in. It was more severe than at the corresponding period this year, for the reason that, while the expenditure for new railways in 1871-1872 was about the same as in 1885-1886, the foundation of capital upon which the superstructure rested was very much less in the former than in the latter period. The carrying power of the country is now vastly greater than it was then, but this fact does not supply carrying power to individuals or companies that do not possess it. Each tub must stand on its own bottom now as at other times.

There was no general disaster in 1872. It was deferred till the following year. The pinch in money was relieved, and most people believed that the worst was over. Indeed, few, if any, looked for the crash which followed twelve months later. Here is another difference between the two periods, and this is more important, perhaps, than the one already mentioned. In 1872 and 1873, and, indeed, during several preceding years, there had been a wild speculative rage in nearly all departments of business. Nobody looked for a panic. When the shadow of coming disaster spread over the country in 1872, it found the trading public unwilling to believe in the possibility of disaster. Nearly everybody was "spread out." Hope and confidence abounded everywhere. Now the contrary condition prevails. If the stock and produce markets may be taken as an index of the public temper, nearly everybody is "hedging." The great majority are, and have been for a long time, "taking in sail." They have been taking the right steps to prevent a general disaster by putting themselves out of the reach of one. It is one of the aphorisms of trade and finance that a panic never comes when it is expected. History does not show a single one that came when any great number of people were looking out for it, because looking out implies preparations on the part of the business community, each for himself, to avoid the consequences of it—such preparations, for example, as the passing of the dividend by the Baltimore and Ohio Railroad the other day. That step ought to be considered a salutary and reassuring event, since it tends to establish solvency. But for the soreness of the Stock Exchange, resulting from a long series of disappointments, it would have been taken as an encouraging rather than a depressing event. All preparations, individual and corporate, to meet a panic tend to avert it. It is a safe conclusion that there is no general disaster coming now, or while the public mind remains in its present temper. But we may look for individual disasters in the quarter where Mr. Depew has been travelling, and we must not be surprised when they come.

The opinions ascribed to Mr. Depew have drawn renewed attention to the real-estate speculation in towns and cities of the second class in the West. It does not seem to have affected in any marked degree the cities of the first class, Chicago and St. Louis. It has had free course in Duluth, Omaha, Kansas City, Wichita, Little Rock, and a multitude of smaller towns, extending to "acre property" that will not be wanted for building purposes in the next half century, if ever. It has not much affected farming lands except such as are within the supposed area of early business demands. It is, therefore, a craze appertaining to certain localities—a large number, indeed, but not so large as to be called a general speculation, even in the sections of country where it prevails. The only kind of permanent investment (by which we mean the conversion of circulating into fixed capital as distinguished from mere betting on future values of real estate) that has taken undue proportions has been railway building in the West and Southwest. An instance of this which is now producing a great deal of mischief is the multiplication of railways between Chicago and St. Paul. There are now six lines between those cities, there being a paying business for not more than three. The latest comer, the Minnesota and Northwestern, has but recently entered the field, being the product of English capital, which was never perhaps more disastrously misplaced. Before the promoters of this new line came forward, the St. Paul, Northwestern, Rock Island, Burlington, and Wisconsin Central were making a precarious living on the traffic between the new Northwest and the head of Lake Michigan. Four of these lines were great spider-webs drawing sustenance from so wide an area that the division of the St. Paul-Chicago traffic into four or five parts, although painful, was no killing matter. When the sixth candidate appeared, there was so little left to divide that it could get nothing without a fearful "cut" in rates. This cut affected not merely the St. Paul-Chicago traffic, but extended itself to the Pacific Coast business, and thus brought down the rates via Omaha and Kansas City. All the roads were still further hampered by the Inter-State Commerce Act. They could not recoup themselves by their local tariffs for their losses on through business. The result has been that the Minnesota and Northwestern Railway has demoralized the entire "Granger" system of roads and a large share of the Pacific Coast business. It is this demoralization, and not the real-estate craze, which has been contemporaneous with it, that has cast the existing pall upon the Stock Exchange.

The Boston *Herald* raises an objection to Mr. John Jay Knox's plan for refunding the 4 per cent. Government bonds, alleging that although there would be a saving of $51,000,000 to the Government by the operation, yet a much larger saving might be effected by buying all the outstanding 4 per cents "at the current quotations." The saving which would thus be effected, it shows, would be upwards of $76,000,000. We presume that all parties, including Mr. Knox, will agree that the *Herald's* plan is the best, if the *Herald* will agree to gather up the outstanding 4 per cents and tender them to the Government "at the current quotations." Mr. Knox's plan goes upon the assumption that the bulk of the bonds are held by persons, corporations, and trustees who are required to keep investments in United States bonds as long as any are to be had, but that their requirement would be satisfied by a 2½ per cent. bond as well as by a 4 per cent., and accordingly that the iron grip with which the 4s are held would be relaxed by the offer of a new bond running the same length of time at a lower rate of interest.

The rumbling in the Republican newspapers on the subject of the Samoan Islands and the supposed designs of Germany on them is intended to discredit Secretary Bayard by the implication that he has not put on a bold front, and told Germany to keep her hands off. It is worth while to ask what we want of a group of islands south of the equator, in the mid-Pacific Ocean, only one of which is good for anything, and this one only 550 miles square, when we rejected both San Domingo and St. Thomas a few years ago, both lying within easy distance of our shores and directly in the track of a great and growing commerce. San Domingo can still be had for the asking. In natural resources, in beautiful scenery, in commodious harbors, and in proximity to our shores, it is worth one hundred times as much as the whole Samoan group. Yet we declined it when it was offered to us, and we would not take it now, nor would we accept all the islands in the British, French, Dutch, and Danish West Indies if they were offered to us as a free gift. We could not afford to take them, for the reason that they cost more for running expenses than they come to. Why, then, should we be concerned about Samoa? Is it that the Monroe doctrine is violated by Germany's proceedings? That doctrine has always been thought to apply to America, not to Polynesia. There is no evidence as yet that Germany has done more than to depose a barbarous chief. Still less is there any evidence that she has violated any rights of the United States.

Prohibition caused a lively controversy among the Nebraska Republicans at their

recent State Convention. In past years the party had pledged itself to submit to the people a prohibitory amendment to the Constitution, but although it controlled the last Legislature, the proposition was defeated. The question was therefore presented whether the party should renew the pledge, and the Committee on Resolutions reported a plank which again committed the organization to submission. But the opposition carried the fight into the Convention, and speeches were delivered against "sumptuary legislation" which read amazingly like the utterances of the average Democratic stump speaker. Mr. Rosewater of the Omaha *Bee*, for example, "claimed that it was an attack upon the individual rights of a citizen, and that there was no more right to legislate on that question than to make an individual attend a certain church." A motion to lay the resolution on the table was only beaten by the narrow margin of 282 to 261, and the opposition succeeded in carrying an amendment which relegated the question to next year (by a provision that the question should be voted on at the primaries in 1888), and which the *Bee* considers "a victory practically for the anti-submission side of the question." Nebraska has had an efficient high-license law for several years, and the success of this system was the strongest argument which the opponents of constitutional prohibition could present.

The State election of 1886 in Tennessee was hotly contested by the Taylor brothers, and the whole commonwealth was deeply interested in the fraternal as well as partisan encounter. The Presidential election of 1884 was the most bitterly fought controversy for many years, the Republicans working with strong hopes of securing both the electoral vote and possession of the State Government. The election of August 29, 1887, involved not a single office, and turned solely upon a question of administration—whether or not the State should prohibit the traffic in liquor. The election of 1886 called out 230,815 voters, that of 1884 259,468, and that of 1887 262,701, of whom 117,504 supported prohibition and 145,197 opposed it. The theory of the spoilsmen has always been that unless you put up all the offices as a stake in every election, few people will take enough interest in the election to turn out and vote; but facts like these from Tennessee and Texas—for the same thing was true of the amendment election in Texas the month before—have disposed of this fallacy in an unanswerable manner.

Arkansas furnishes a fresh illustration of the progress which civil-service reform is making in the South. The Legislature last winter established a State geological survey, and intrusted the appointment of its head to Gov. Hughes. The Governor treated the matter precisely as he would have done if he had been in charge of some great business establishment; that is to say, he tried to find the best man in the country for the place, regardless of the question whether he happened to live in Arkansas or not, and without any reference to his political views. The choice fell upon Dr. John C. Branner of Tennessee, and in making up his staff Dr. Branner followed the same principles which had led to his own selection, even when they required him to take as his assistant a professional geologist of wide experience who chanced to live in Ohio, in preference to an Arkansas man who had the highest possible recommendations from the leading men of Arkansas, but was not fitted by training and experience to do the work. The whole staff was constituted in the same way. As Dr. Branner puts it: "If it was part of the duty of Gov. Hughes and of myself to take politics into consideration in these matters, I must confess that we have both grossly neglected that part of our duties. I have very frequent occasion to consult Gov. Hughes in regard to Survey business, but politics has never been mentioned, or even hinted at, between us. He knew nothing of my political opinions when my appointment was made, and he knows nothing of them to-day. Neither do I know the politics of a single one of my assistants. I consider it as little my business what they think on politics as it is how they part their hair."

The question of a successor to Henry Ward Beecher has received what we presume may be considered indefinite postponement, by the selection of the Rev. Lyman Abbott, one of the editors of the *Christian Union*, as a "temporary supply." He will probably occupy the place until the church has relinquished the hope of finding what the members will consider a suitable successor to their late pastor. Their minds are still filled with the standard of pulpit oratory which he created, but it will gradually grow fainter, and they will frankly come to recognize how completely Plymouth Church was the creation of Mr. Beecher's personality, and how futile it is to expect to keep it on the peculiar and wholly original lines of progress which he traced out for it. There has probably never been a church, in this or any other country, in which the pastor was so large and the congregation so small a part of the organization.

The *World* manages to give an original turn to its comment on the case of the Rev. E. Walpole Warren, the imported contract-labor minister, by translating him to Trinity Parish, and saying that "among other things he should labor to reform the harsh method of treating poor tenants sometimes adopted by the agents of the Trinity corporation." But, however cruel may be the tender mercies of the wicked Trinity corporation, Mr. Warren could influence them only by force of brotherly remonstrance, as he has no office in Trinity Parish, while the Church of the Holy Trinity, of which he is the head, we believe has no tenants.

Mr. Chamberlain's speeches to the Orangemen in Belfast have naturally excited astonishment and derision in England, and particularly the one in which he ridiculed the idea of a parliament in Dublin, as likely to prove simply a reproduction of the New York Tammany Hall. The reason of this astonishment is that he said in a speech in London on the 17th of June, 1885, before he quarrelled with Mr. Gladstone:

> "This question is a national question as well as a parochial question, and the pacification of Ireland at this moment depends, I believe, on the concession to Ireland of the right to govern itself in the matter of its purely domestic business. What is the alternative? Are you content, after nearly eighty years of failure, to renew once more the dreary experience of repressive legislation? Is it not discreditable to us that even now it is only by unconstitutional means that we are able to secure peace and order in one portion of her Majesty's dominions? I do not believe that the great majority of Englishmen have the slightest conception of the system under which this free nation attempts to rule the sister country. It is a system which is founded on the bayonets of 30,000 soldiers encamped permanently, as in a hostile country. It is a system as completely centralized and bureaucratic as that with which Russia governs Poland, or as that which prevailed in Venice under Austrian rule. An Irishman at this moment cannot move a step, he cannot lift a finger in any parochial, municipal, or educational work, without being confronted with, interfered with, controlled by an English official appointed by a foreign Government, and without a shade or shadow of representative authority. I say the time has come to reform altogether the absurd and irritating anachronism which is known as Dublin Castle. That is the work to which the new Parliament will be called."

Of course Mr. Chamberlain may have been all wrong in talking in this way two years ago, but it is to be observed that the state of facts on which he reasoned then was substantially the same as now. He did not, it is true, know as much of the National League as he knows now, but he knew all about the Land League, which preceded it, which was managed by the same men and had the same objects. If he admits he was wrong two years ago on such an old and well-known question as the Irish question, he can hardly expect people to attach any more value to his opinions of 1887 than to his opinions of 1885. People forgive mistakes and changes of opinion, even by men of Mr. Chamberlain's age, readily enough, but they do not continue to pay much attention to men who change their minds frequently on very important matters unless they can show that new facts have come to light.

The fall in the Boerse in Berlin, in consequence of the renewed unfavorable accounts of the condition of the Crown Prince's throat, is a natural consequence of the fact that his eldest son, and the next heir to the imperial throne in case of his death, is a young man of the military type, who has little sympathy with or comprehension of constitutional liberty or the parliamentary system, being in all these respects a great contrast to his father. The patience of the German Liberals under the slights put upon them by Bismarck has been due, in some degree, to the knowledge that a régime more favorable to them would come in with the death of the old Emperor and the accession of his son, who is a man of peace and imbued with constitutional ideas, and has but little sympathy with Bismarck's high-handed ways. If, however, the crown were now to pass again to a mere soldier, a long period of trouble at home and abroad might be opened up. But it has to be borne in mind that even young soldiers are apt to be sobered by the cares of state and the difficulty, even on the throne, of having one's own way.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 12, to TUESDAY, October 18, 1887, inclusive.]

DOMESTIC.

THE President and his party left Minneapolis October 11, and stopped the next morning to see the corn palace at Sioux City, Ia. They visited St. Joseph and Kansas City October 13, and thence went southward, arriving at Memphis, where they were cordially welcomed October 14. The city was profusely decorated, and one arch across a street was made of cotton bales. Judge H. T. Ellett of the Chancery Court, who made a patriotic speech of welcome, fell dead on the platform. From Memphis the party went to Nashville, where the President and Mrs. Cleveland, October 15, visited Mrs. James K. Polk. They spent Sunday at Belle Meade, the famous Jackson stock farm near the city, and on October 17 held public receptions in Nashville—the President in the Capitol and Mrs. Cleveland in a hotel. On the evening of October 17 the party left Nashville for Chattanooga. The President's welcome in the South has been cordial, and special attention has been paid to Mrs. Cleveland. Perhaps the most enthusiastic demonstration that has been seen since they left Washington was made at Atlanta, where they arrived October 17. The next day the President delivered an address on the Exposition grounds. The city was so crowded that many visitors could not find rooms for the night. The pilot train that runs before the President's special train discovered that a bridge in Arkansas was on fire, which, it is supposed, was kindled with malicious intent.

Secretary Whitney has had a model lifeboat built at Alexandria, with a view to its use in the navy. It is twenty-six feet long, seven feet wide, and three feet six inches deep. The frame is of oak and the planking is of white cedar, and white mahogany has been used for the inside casing. There are twenty-six air-tight compartments, and the protected buoyancy of the boat is equal to 115 cubic feet, more than double that of any boat of the same displacement hitherto built.

The annual report of the United States Land Commissioner, Mr. Sparks, shows that since March 4, 1885, 31,824,481 acres of land have been restored to the public domain. Considerable space is given in the report to the subject of public surveys in the Territories and in California, many of which are reported to be fraudulent. "The field examinations," it is set down in the report, "have developed fraudulent and defective surveys, heretofore returned, to an extent which renders apparent the necessity for an inspection of all preceding surveys, and fully justifies the conclusion reached by this office to defer payments of accounts for past surveys until the true character of the work shall have been ascertained." As a result 2,312 entries, covering about 370,000 acres, were held for cancellation, and 1,153 entries, covering about 180,000 acres, were cancelled for fraud.

The annual report of Gen. A. W. Greely, Chief Signal Officer, shows that the percentages of successful indications during the year have been: For weather, 74.5; wind, 69.1; temperature, 74.4—a general average of 73.9. This result is not satisfactory to the Chief Signal Officer, but the reasons for it are that officers have necessarily been assigned to indications work who have never before performed duty of that character, the relief of old officers detailed from the line of the army having been forced upon the Chief Signal Officer by legislative action.

The United States Supreme Court, October 12, granted writs of habeas corpus in the cases of Attorney-General Ayres of Virginia and the two county attorneys who were in prison for disregarding Judge Bond's order forbidding them to bring suits against persons tendering coupons in payment of taxes.

Judge Thayer of the United States Circuit Court at St. Louis, October 11, in the case of the American Bell Telephone Company against Philip L. Rose, et al., issued an order restraining the defendants from making, using, or selling telephones or telephone apparatus infringing on Bell's patents. The defendants had been making instruments for the Pan-Electric Company.

The United States District Attorney for the district including this city will bring suit, at the expense of the United States, against the Church of the Holy Trinity for violating the United States statute "to prohibit the importation and immigration of foreigners and aliens under contract or agreement to perform labor in the United States," because the church called the Rev. E. W. Warren, an English clergyman, to its pulpit, and he has begun to perform the duties of the place.

The New Hampshire Senate, October 13, passed the Hazen bill, which permits the lease to the Boston and Maine Railroad of the Boston and Lowell Road and its New Hampshire system. The House of Representatives had previously passed it. The Legislative Committee appointed to make an investigation into the accusations of the bribery of members by railroad companies has been hearing more testimony. Gov. Sawyer, October 18, vetoed the bill because corrupt methods had been used to promote its passage.

The State Railway Commission of Minnesota has called the attention of all the railroads in the State to their failure to observe the law requiring that "each passenger and sleeping-car operated or run within the State shall be equipped with at least one fire-extinguisher in each end of each car," saying: "We force the subject upon your attention for the third time, and with notice that the Attorney General of the State will be notified to commence summary proceedings against all companies who fail to have their cars fully equipped by the 1st of November next as required by law."

The Coroner of Porter County, Ind., wherein the recent fatal accident on the Chicago and Atlantic Railroad occurred, gave a verdict October 14 holding the employees of the road responsible for the death of the victims. The Judge of the Circuit Court at Valparaiso has charged the Grand Jury to investigate the disaster.

The official returns of the recent election in Tennessee show that the majority against the proposed prohibition amendment was 27,693.

A decision was given by the city judges of Baltimore, October 17, which strikes off nearly 4,000 names from the registry list. This is regarded as a great victory for an honest election there.

The Executive Committee of the Civil-Service Reform Association of New York unanimously adopted, on October 5, a resolution "heartily approving the letter of Commissioner Oberly to the Illinois Democratic Association in Washington for its vigorous rebuke of such partisan associations among employees of the Government, as tending to lead to violation of the Civil-Service Law, and to promote the abuses which that law was intended to correct, and which the President has strongly condemned."

The course of Prof. Egbert C. Smyth of Andover Theological Seminary, in ignoring the decision of the Board of Visitors removing him from his position, has caused an appeal to the Supreme Court of Massachusetts.

There have been a number of new cases of smallpox at Tampa, Fla., and several refugees from that place have died of the disease at inland towns, but no fear is reported that it will spread beyond control.

The General Assembly of the Knights of Labor, at Minneapolis, October 12, adopted the report of the committee appointed to recommend the legislation that the order should strive to have enacted. The report approves the Blair Educational Bill, the eight-hour day for mail-carriers, and the Foran bill in relation to homesteads, providing that such settlers may borrow $500 from the Government, secured by the land, at 3 per cent.; and it approves the recommendations of the General Master-Workman in favor of Government control of the telegraph and telephone systems of the country.

Mr. Robert Garrett formally resigned the Presidency of the Baltimore and Ohio Railroad October 12. October 14 the Baltimore and Ohio telegraph system passed under the management of the Western Union Company. Telegraph rates between some points have been greatly increased over the rates charged by the Baltimore and Ohio Company.

A Galveston, Harrisburg and San Antonio express train was stopped near El Paso, Tex., October 14, by three masked men. One of them threw a bomb, the explosion of which shattered the door and side of the mail car into splinters. The agent, J. Ernest Smith, was dazed, but recovered himself and fired a charge from a double-barrelled shotgun into the breast of the robber, killing him instantly. He shot also at one of the others who ran, and he killed him too.

The Scotch cutter *Thistle* sailed for Glasgow October 14, and as she went down the bay she was saluted by all the yachts within sight.

Eight insane women were suffocated during a fire in the Cleveland, O., insane asylum on the night of October 12.

The Baltic cotton mill, at Baltic, Conn., was burned October 14. The property was valued at a million and a half dollars, and nearly 1,000 persons were thrown out of employment.

The International Military Encampment at Chicago, having failed to meet expenses, was placed in the hands of a receiver October 17.

A bronze equestrian statue of Maj.-Gen. George Gordon Meade was unveiled in Fairmount Park, Philadelphia, October 18. It is the work of the sculptor A. M. Calder, is of heroic size, and is mounted on a pedestal of rough granite.

The body of Gen. Judson Kilpatrick was buried with military honors at West Point October 18.

FOREIGN.

The French Army scandal caused by the discovery that Gen. Caffarel of the War Office and others had sold decorations, has provoked much comment, and great fear in French military and political circles lest revelations be made of a kind to disturb the Government and the organization of the army. The plan for the mobilization of the Seventeenth Army Corps, which was published in the *Figaro*, was found in Gen. Caffarel's house; he was tried by a council of generals on the charge of selling civil decorations, and was pronounced guilty of "habitual dishonorable conduct" and placed on the retired list. Gen. Boulanger having declared that the prosecution of Gen. Caffarel was aimed at him (Boulanger), Gen. Ferron, Minister of War, placed him under arrest October 13 for thirty days for giving improper information to the reporters. M. Wilson, the son-in law of President Grévy, has been declared innocent of compromising relations with the guilty persons, but this verdict is regarded rather as an effort to end the scandal than to find out the whole truth about it. Excitement has been caused also in French Canadian society. Many French Canadians wear French decorations. The late Senator Sénécal wore the ribbon of the Legion of Honor, which it was openly declared had been bought from friends of Gen. Boulanger. A Parisian some months ago petitioned the French Government to inquire into the matter, and it is said that this had something to do with the exposure in Paris.

Gen. Boulanger has received many messages and letters from all parts of France expressing sympathy for him. A demonstration was

made in Nîmes October 17, when M. Spuller, Minister of Public Instruction, opened the college there. The crowd shouted "Vive Boulanger," and the bands played Boulangist airs.

A French decree has been issued for the creation of a civil Governor-General for the Indian and Chinese colonies of France.

Fifteen hundred French pilgrims arrived at Rome October 14, and were received by the Pope on Sunday, when they offered their congratulations on his approaching jubilee.

The European suspense about affairs in Morocco continues. The Sultan's condition is reported to be more hopeful. But France and Italy, October 12, accepted Spain's invitation to hold a conference in Madrid about affairs in Morocco, and it is yet expected every day that the Sultan's death will be announced on the next day. Germany decided not to send a warship to African waters, but to intrust to England the protection of Germans residing in Morocco. This resolution is regarded as a proof of the cordial *entente* between the German and English Governments.

The Queen Regent of Spain, October 13, signed a decree authorizing the construction of six ironclads of 7,000 tons each, which shall be capable of attaining a speed of from sixteen to twenty miles an hour, and four large and sixty small torpedo boats.

Mr. Joseph Chamberlain, who has been continuing his political speeches in Ireland, spoke at Belfast, October 12, and said there were two Irelands. One was under the leadership of agitators who profited by her distress; the other loyal and contented. There were also two races, and he did not intend to submit Ulster to a Dublin Parliament—not because he believed the religious faith of the people would be endangered thereby, but because he objected to submitting Ulster's orderly, regular life to the inventors of the plan of campaign. The Irish were now absolutely masterful in America, especially in New York, the government of which was called Irish. A Parliament in Dublin would be simply a Dublin Tammany Hall ring. He would not consent to handing over the Ulster Protestants to such a ring. Even admitting, for the sake of argument, that Ireland should have a separate government, there was no reason why Ulster, rejoicing in a government which it honored, should be forcibly severed from Great Britain and relegated to the dominion of the National League. He made several speeches at other places on the two or three following days.

Mr. John Bright, October 13, wrote a letter of criticism about a leaflet by Mr. Gladstone headed "Remember Mitchelstown" wherein he said that the leaflet shows the depth of the degradation to which the Liberal party has been rapidly forced by alliance with the promoters and leaders of rebellion in Ireland, and that Mr. Gladstone's followers are ready to adopt any cry or charge he makes to excite the passions of ignorant men against the Government he wants to supplant, and which he is passionately laboring to succeed.

Mr. Gladstone was enthusiastically received at Manchester October 18. On the same day he made a speech at Sheffield, wherein he said that he did not doubt that the mind of the people was rapidly marshalling itself in favor of contenting Ireland, and restoring the freedom and efficiency of Parliament and the honor of England, which has been so grievously tarnished by past misconduct in Ireland. At Stockport he declared that coercion was directed, not against crime, but against the people of Ireland combining to preserve their interests. If such a combination showed a tendency towards crime, the Liberals would not give it the smallest countenance.

At the Congress of the Liberal Federation at Nottingham on the same day, Mr. Gladstone reviewed the situation in Ireland. He wanted a statutory Parliament in Dublin, subject to imperial control. There was nothing to prevent any reasonable man from agreeing with the Liberals' Irish proposals without reference to this or that particular or detail. Only one word could describe the present system of Irish Government. It was "impertinence." The events of the last few weeks in Ireland would not have been tolerated in England. He condemned the action of the authorities at Mitchelstown. He admitted having used the words "Remember Mitchelstown!" The whole system of government in Ireland required to be thoroughly reformed, and such a change an enfranchised nation alone could accomplish. He expressed himself as perfectly confident that if a general election were held immediately, it would result in the return of a Parliament resolved to do justice to Ireland.

The inspector, Brownrigg, and other constables were found guilty of murder by the coroner's jury at Mitchelstown, Ireland. They were not arrested, but only suspended from duty pending the appeal from the verdict. A League meeting at Woodford, Ireland, which had been proclaimed by the Government, was held on Sunday. The telegraph wires were cut on Saturday night, thus preventing communication with Dublin. O'Brien was received by a great crowd, which waved hundreds of torches in the air. In the course of his speech he burned a copy of the proclamation forbidding the holding of the meeting. This act aroused the wildest enthusiasm. Two other members of Parliament made addresses.

United Ireland, Mr. William O'Brien's paper, at Dublin, on October 13 published six columns of reports of National League meetings, and said: "This is how coercion terrorizes the Irish

The yearly manifesto of the English Liberal party is embodied in the report of the National Liberal Federation, which was published October 15. It prophesies the early triumph of the Gladstonian cause and policy, and refers to the large number of dissentient Liberals who have returned to the fold. It endorses the alliance between the English and the Irish members of Parliament, and declares that most excellent moral results have been produced upon the Irish people by the conviction that they no longer stand alone, but that their political relations are being settled on a basis of justice, equality, and peace, and that a way will be cleared for dealing with such questions as local government, local option, religious equality, and further franchise changes.

Mr. Thomas Ryburn Buchanan, member of Parliament for West Edinburgh, a Liberal who has hitherto been opposed to Mr. Gladstone's Irish policy, has intimated his conversion to home rule.

The poor that frequent Trafalgar Square, London, formed another procession October 14, and marched to the Mansion House, where they sought an interview with the Lord Mayor After a harmless encounter with the police the mob was dispersed. After a similar procession October 17, there were several more serious encounters with the police. But for several days since then the unemployed have been making other riotous demonstrations, and there have been several serious collisions with the police.

A Shakspere memorial fountain, presented by Mr. G. W. Childs of Philadelphia to the town of Stratford-upon-Avon, was dedicated with proper ceremonies October 18. The principal address was made by Mr. Henry Irving, the actor, and a letter from Mr. James Russell Lowell and a poem by Dr. Oliver Wendell Holmes were read.

The Niger districts in West Africa, including the coast line between Lagos and the western bank of the Rio del Rey and the Niger Company's land, have been declared to be under British protection.

News was received in London October 12 that Lady Ann Brassey, author of 'Around the World in the Yacht *Sunbeam*,' and wife of Sir Thomas Brassey, whose constant companion she was on his yachting voyages, died on board the *Sunbeam* while bound for Australia, and was buried at sea. October 14 Dinah Maria Craik (Miss Mulock), the English writer, died, aged sixty-one years. The death was announced October 17 of Léon-Cléry Vacher, physician, and member of the French Chamber of Deputies for Corrèze.

Dr. Mackenzie, the English physician who has attended the Crown Prince of Germany since the development of the disease in his throat, said at Berlin on October 12 that the Prince's general health was good, but that there are certain symptoms which cause anxiety. He suffers now from obstinate chronic laryngeal catarrh; and he must pass the winter in a warm climate and avoid conversation. This information caused sufficient alarm somewhat to disturb prices on the European bourses.

The Disconto-Gesellschaft of Leipsic, the capital of which is 9,000,000 marks, has failed in consequence of unlawful speculations. Two of the directors have absconded with a large amount of money and all of the bank stock.

The official returns of the vote for the election of the Bulgarian Sobranye, October 9, show that the Government secured 258 and the Opposition 27 members. Several other fatal riots on election day have been reported. The Bulgarian Minister of Foreign Affairs is in Frankfort trying to negotiate a Government loan.

The Chief Press Censor at St. Petersburg has been dismissed because he exacted money for favorable judgments on publications offered for censorship. A Ministerial council has been convoked at Moscow to appoint a successor to Mme. Katkoff, who recently announced her intention of resigning the editorship of the Moscow *Gazette* in January.

The Congo Government has decided to despatch forces to reconquer Stanley Falls, where there has been a state of confusion bordering on anarchy since the insurrection against Tippu Tib's rule.

The London *Standard's* Shanghai correspondent writes that Mitkiewicz, the adventurer who pretends to have secured valuable concessions for an American syndicate from the Chinese Government, during the negotiations used without authority the names of Mr. Vanderbilt, Mr. Gould, and Mr. Mackay; and that whatever railways and other works should be undertaken with money raised in advance were to be mortgaged to the syndicate.

The steamship *Rio de Janeiro*, which arrived at San Francisco October 17, brought advices that a crisis is approaching in Corea, over which kingdom the Emperor of China claims sovereignty. Simultaneously with the appointment by the King of Corea of ministers to represent the Corean Government in Europe and the United States, Mr. Yuen, China's Resident Minister in Seul, left the city secretly.

A rich alluvial deposit of gold has been discovered in South Australia, about 380 miles north of Adelaide and within 20 miles of the railway line. In a fortnight after the announcement of the discovery 2,000 men were on the field.

Sir Charles Tupper has been chosen as Canada's representative on the American-English Fisheries Commission.

At a dinner in his honor at Montreal October 14, on his return from France, J. A. Chapleau, Secretary of State of the Dominion Government, said concerning the agitation for commercial union with the United States: "Commercial union is an idea which can never prevail in Canada, because it would destroy Canadian industries and Canadian nationality. It holds out delusive hopes to the agriculturist, and while I believe Canadians do not desire it, I feel satisfied that the Americans will not have it. There is nobody in the United States who would embrace the idea of commercial union unless he thought it meant political union as well. Such political union would wipe out for ever all the hopes and aspirations of the people for a Canadian nationality, and would deprive them of all the blessings they now enjoy"

THIS YEAR'S "ASSESSMENTS."

THE first preliminary step to the annual sale of offices to the highest bidder was taken by Tammany Hall on Thursday night, when that organization's so-called nominating convention met and, after appointing a conference committee on nominations, adjourned till the 21st inst. The next preliminary step was taken by the County Democracy yesterday, when that organization met, appointed a similar committee, and adjourned till the same date. In the meantime the claims of various candidates will be canvassed, and all aspirants will be called upon to inspect the following schedule of prices, which the leaders have arranged as the assessment rates for this year:

Supreme Court Judge, 2@$20,000	$40,000
Criminal Judge	10,000
City Court Judge, 2@$5,000	10,000
District Court Judge, 7@$3,000	21,000
Surrogate	10,000
District Attorney	10,000
Comptroller	25,000
State Senator, 7@$5,000	35,000
Assemblyman, 24@$1,500	36,000
Alderman, 24@$1,000	24,000
President Board Aldermen	2,500
Total	$223,500

These figures are based upon "inside information" and are accurate. In all cases they are the lowest prices which the "halls" are willing to accept. Thus, for the nomination for District Attorney the leaders are demanding $15,000, but are willing to compromise on $10,000. For the nomination for Comptroller they are demanding $40,000, but will compromise on $25,000. We have put down the price for a Senatorial nomination at $5,000, which is the average rate, the fact being that in some cases it goes below that sum and in others much higher. We give in the following table the salaries paid in each of above offices:

Supreme Court Judge	$17,500
Criminal Court Judge	12,000
City Court Judge	10,000
District Court Judge	6,000
Surrogate	12,000
District Attorney	12,000
Comptroller	10,000
State Senator	1,500
Assemblyman	1,500
Alderman	2,000
President Board Aldermen	3,000
Total	$87,500

The first question which suggests itself, after a comparison of these two lists, is, How can the candidates afford to pay such prices? A Supreme Court judge is called upon to pay more than the amount of his entire salary for one year. His assessment is high because it is argued that, his term being fourteen years long, he can save that amount out of his salary during that period. The assessment for Criminal Judge is calculated upon the same basis. The Surrogate's term being only six years, his assessment is only half of what a Supreme Court judge's is. The Comptroller has the heaviest assessment of all, though his term is only three years, because there are greater opportunities for making a "good thing" out of his office than in almost any other in the list. The District Attorney's assessment of $10,000, on a salary of $12,000 for a three years' term, is seemingly disproportionately high, but in the hands of a politician the office can be made to "pay" very handsomely, and the assessment is levied on that basis. The City Court and District Court judges pay heavily, but their salaries are high out of all proportion to the value of their services, and for that reason candidates are plenty who are willing to pay the price. The most curious revelations of the two lists are those of State Senators paying an average of $5,000 each for an office of two years' duration, whose salary is only $1,500 a year; of Assemblymen paying $1,500 for a year's service at Albany, for which the salary is precisely the same sum, and of Aldermen paying $1,000 for a year's term at a salary of $2,000.

How do all these officials get their money for this outlay? If the higher judges be men of high character, which, by astonishing good fortune, they almost always are, they either save it out of their salaries, or get their friends to contribute to make it up. If they be men of different character, they have no difficulty in finding methods of gaining it. The Comptroller, as we have said, has unusual opportunities for making his, which he will improve or not according to his views of public duty or private interest. The Senators, Assemblymen, and Aldermen make it by going into what is known here as the "Aldermanic business," and at Albany as "jobs," or legislation which has "good things" in it. In the end, of course, the money comes out of the pockets of the taxpayers, who pay it either directly in exorbitant salaries, or indirectly by means of maladministration and legislation in the interest of extravagance and corruption.

In every way the "assessment" practice is an evil that stands directly in the way of honest and economical government. It bars out nearly all except the very rich or the very corrupt from becoming candidates. Were it not for his refusal to pay this assessment, Mr. Nicoll would to-day be absolutely assured of the united Democratic nomination for District Attorney, and everybody would recognize the nomination as the best that could be made; but the County Democracy is opposing his nomination because he will not pay, and it will refuse to make it if its leaders think they can do so without danger of defeat. Last year we had the great good fortune to have Mr. Hewitt consent to run as a candidate for Mayor, but he paid $25,000 for the privilege, as Mayor Grace had paid about $20,000 in each of the two years in which he was a candidate. What right have we to levy this tax upon candidates—for it is really the people of the city who do levy it, by their failure to provide legal means for defraying the expenses of elections? The politicians have undertaken the business because the city has failed to do it, and, as was inevitable, they make it as extravagant and corrupt as they are able.

The remedy is so simple that it is a wonder that it has not long ago been applied. All that is necessary is for the city to provide for printing and distributing the ballots at its own expense, in the same way in which it provides for their reception and counting now. Then let the amount which each candidate shall be permitted to spend in an election be fixed by law, and let him be required to publish after election a sworn statement of each expenditure. Then let there be a law providing that any reasonable number of citizens can, by certifying that they wish to vote for a particular candidate for office, have his name put on the ballots and the ballots distributed at the public expense. With these simple, rational laws enacted, the whole machinery of "halls" and "workers" would disappear almost immediately. There would be no more assessments, no more sale of offices, no more selection of candidates by primaries composed of political strikers assembled in bar-rooms. Could there be any reform more rational, simple, and salutary than this? Then why don't we have it? Simply because the men who make a living out of the present disgraceful system are blocking the way, and the people, as a whole, are too indifferent or too busy to brush them aside.

MR. KNOX'S PLAN OF FINANCE.

AT the National Bankers' Convention on October 12 Mr. John Jay Knox gave an elaborate statement of the plan of dealing with the 4 per cent. bonds and the Treasury surplus, which he suggested in his report as Comptroller of the Currency in 1882. There is some difficulty in making it popularly understood, and this is one reason why it has not received the attention in Congress which it deserves. Another cause for the public indifference to it heretofore has been the fact that it was not of pressing importance. So long as there was an abundant outlet for the surplus funds of the Treasury by redemption of the 3 per cents, few persons would take the trouble to read or understand any plans for dealing with embarrassments which, although inevitable, were still distant. The situation is now changed. The embarrassment has come, and it is worse than anybody expected that it would be, because the public revenues are greater than anybody anticipated, and also because money has become more "active" than at any time since 1882. Mr. Knox now emphasizes the fact that however diligent Congress may be in meeting the crisis, a year or two must elapse before the reduction of taxation can take effect. Most probably the better part of a year will have passed before any anti-tax law can be matured and agreed to by a majority of both houses, and then there will be another considerable interval before the law will begin to operate. What shall be done meanwhile? Shall money be allowed to accumulate in the Treasury at the rate of more than $100,000,000 per annum?

Mr. Knox proposes that the holders of the 4 per cent. bonds, which have still twenty years to run, shall be offered a new 2½ per cent. bond running the same length of time, and also a cash payment equal to the present value of the remaining 1½ per cent. annual interest, say 23 per cent. The present premium is somewhat higher than this, but as the bondholder gets the use of the premium as active capital for twenty years, he can afford to take something less. This is a matter for the determination of actuaries. It belongs to the domain of mathematics, and there we may leave it. Whatever is the present worth of a twenty-year 4 per cent. bond cut up in the manner proposed, *i. e.*, divided into a 2½ per cent. bond and a cash premium, the bondholders will receive. It is an easy calculation that on a 4 per cent. bond for $1,000 running twenty years, the Government will eventually pay $1,000 principal and $800 interest,

total $1,800; and that under the proposed plan it will pay $1,000 principal, $500 interest, and $230 premium, total $1,730, a saving of $70. On $733,000,000 the saving would be $51,310,000. Mr. Knox's plan has been brought before Congress at different times by Mr. Abram S. Hewitt and Mr. Orlando Potter of New York, and by Senator Aldrich of Rhode Island, but did not gain much attention, for the reason given above.

The immediate collateral advantage is the providing of a way to dispose of the surplus revenues before any anti-tax bill can come into play. This is so important a matter that Congress can hardly overlook a plan so easy of adoption and so economical in the end. If it be asked whether the holders of the 4 per cents would consent to the change, Mr. Knox shows that the national banks, holding about one-fifth of the outstanding fours, would be almost certain to fall in with it, because it offers them a premium which they can immediately use in their business, and which will be extinguished in the course of twenty years, that is, at the rate of 5 per cent. per annum. He thinks that trust companies, life and fire insurance companies, and savings banks will agree to it, for the same reasons, and that trustees who are required by law to invest their trust funds in United States bonds, but not in any particular class of bonds, will be moved by the same considerations in order to save the premium thus put within their reach. The plan seems to offer large advantages to both the Government and the bondholders without harm to any living creature. Mr. Knox quotes the following paragraph from a strong protectionist newspaper, the Utica *Herald*, in support of the plan, to which we give our assent from the opposite pole of the tariff question :

"The scheme can easily be put into execution if Congress would pass a statute to authorize it. It proceeds on the assumption that what the country needs is something to reduce the surplus temporarily, say for about three years, while Congress is deliberating and perfecting the details of a plan for permanent reduction. This of itself would be a great relief to the country. All through the past year, and in fact for several years past, Congress has felt that there was a necessity for some legislation to reduce the revenue of the Government; but although the pressure was strong, it seemed impossible for the members to agree. The plan is exceedingly simple, and apparently need not create any strong animosity against it. It treads on the toes of no man who cherishes a particular theory of the tariff. It interferes with neither free-trader nor protectionist. It appeals rather to the common sense of both of these parties, and can be adopted without partisanship by Republicans and Democrats alike."

THE AUSTRIAN-GERMAN-ITALIAN ARRANGEMENTS.

THE various solutions of the open secret of the triple alliance, offered by the European correspondents of the American journals, do not show due attention on their part to the past record on this question. During the session of the Italian Parliament of 1886-7, there occurred a Ministerial crisis, nominally growing out of the disaster which overtook the Italian arms in Abyssinia, but really turning on the approval of the European policy favored by the Ministry. With this policy Di Robilant, the Italian Minister of Foreign Affairs, had so completely identified himself that the vote of the Chamber of Deputies hinged on the question of the renewal of the tripartite alliance that was to expire this autumn. The discussion brought out the fact that the alliance met the very decided approval of the country, but that the way in which Di Robilant had managed African affairs, and perhaps his personal bearing in the discussion, had provoked such animosity that, while the Ministry retained a majority sufficient for all practical purposes, it was advisable to strengthen its position for future European contingencies by a modification which should increase the majority.

Di Robilant and his war colleague ultimately resigned, but not until the alliance question had been settled; Crispi, even then designated as the chief accession from the Opposition, taking occasion to proclaim his adherence to the "German policy" for which Di Robilant had been attacked by the small party that still favors a French alliance. The treaty, which would actually only have expired this autumn, was renewed by the Depretis-Robilant Ministry, and ratifications were exchanged early this year. This fact was made public by the discussion which grew out of the resignation of the German Ambassador to the Quirinal —an act attributed to Bismarck's having sent the copy of the ratified treaty directly to the King by a special messenger, instead of sending it to the Ambassador for delivery. This reason the Ambassador promptly disavowed, declaring that at his own express desire the negotiations for the treaty had been carried on without the participation of the embassy, and that the transmission of the ratified treaty over his head was in accordance with the precedents of the former stages of the treaty. It was also publicly stated that while the renewal was not obligatory before this autumn, it was considered that, in the then state of European affairs, it was desirable that a definite solution should be arrived at. The grave Bulgarian complications might at any moment involve all the Powers, and consequently the renewal anticipated the expiration of the first term.

There was, therefore, no question of renewal of the tripartite treaty raised by the visit of Signor Crispi to Bismarck ; that question had been settled some months. There were certain details to be arranged, among which the most important was the compensation of Italy in case of Austrian extension to the southeast. This was understood not to be a matter for definition in the treaty, but of agreement between the sovereigns. The cession of South Tyrol from Botzen, with a frontier following the ridge south of the Puster-Thal, has long been accorded—that of Trieste was refused more on account of the opposition of Bismarck than of Austria. If Austria obtains any accession to the southeast, it will necessarily include Salonica, in which case Trieste becomes a dead port of not much greater value than Venice, utterly indefensible against a sea attack, difficult to keep tranquil in case of hostilities with Italy, as the population is mainly Italian, and on all accounts, therefore, not a thing to hold out on if Italy made it a grave consideration. The question of Tripoli and Tunis was also one which enlisted strongly Italian public feeling, and this must have been discussed between Crispi and Bismarck with a view to Franco-German hostilities. In the original treaty the participation of Italy in any war between France and Germany alone was not to be calculated on, as Germany did not require any aid in such a contingency. In case, however, of Russia attacking Germany at the same time, Italy was bound to give a contingent. It is therefore probable that a movement to Tripoli was arranged in case of a Franco-German war in which Russia was not involved. The Bulgarian affair was another question in which the Italian Government had a policy in common with Germany, and the exact nature of coöperation with the allied forces of Austria and Germany, or with Austria alone, was not clearly defined, and was not perhaps capable of being so defined before the development of Bulgarian affairs. It was, however, made certain by the unequivocal declaration of Signor Depretis, that if Russia and Austria came to blows in Bulgaria, Italy would enter as the ally of Austria.

The determination of the conditions of participation and compensation in case of war was, therefore, probably the extent of the new arrangements made during the late visit of Crispi; but a certain personal understanding was made advisable between the new head of the Italian Government and Bismarck and the Austrian Prime Minister, present or prospective, in regard to actual operations. The understanding means peace only if the coöperation of Germany, Austria, and Italy in the rapidly approaching definite solution of the Bulgarian difficulty should be sufficient to warn Russia off the ground; but if, on the contrary, as is most probable, the Czar refuses to permit the arrangement which Austria will support, the real meaning of the understanding is war at no remote period. This unwonted personal intercourse between the rulers looks more like preparation for war than for peace. On one point, however, it is conclusive—that Russia must let Bulgaria alone if peace is to be maintained. Neither Austria, Germany, nor Italy can afford to have Russia at Constantinople, and the Russians have long ago declared that they will not allow themselves to be cut off from Constantinople.

THE FRENCH SCANDAL.

THE French Republic seems to be having a run of very bad luck in the matter of military honor. It was not long after the overthrow of the Conservative régime, or the "ordre morale," as the Republicans derisively called it, that a Minister of War was installed who was accused by the Germans of having deliberately broken his parole during the war after having been liberated on a promise not to fight again. The affair made a great deal of scandal at the time, owing to the cool way in which the French public accepted the charge and the Minister's inability to answer it. It was treated in Germany as another illustration of the corruption of French morals, and of the fitness of the French nation for the terrible chastisement which the war had inflicted on it.

This affair had hardly passed out of the public recollection when Gen. Boulanger, on becoming Minister of War, began to take

a leading part in urging the expulsion of the Duc d'Aumale and the other Orleans princes from the army. He was, for doing this, reproached in the Senate with ingratitude, on the ground that he owed his promotion in the army to the Duc d'Aumale, whose aid he had solicited and afterwards warmly acknowledged. He denied all this with much indignation—denied that the Duke had helped him in any way, or that he had ever thanked him for his promotion or acknowledged that he owed it to him, or that there was anything unseemly in the attacks he was making on him. To all of which the Duke replied by publishing the letter, which was everything it had been represented—warm and grateful almost to the point of abjectness. It was supposed that Boulanger would now surely resign and hide his head. But he seems never to have thought of such a thing He simply said he had forgotten about the letter, and went on with his work of reorganizing the army. His services in that line, too, were considered so valuable that the French Republican press, to its great disgrace, dropped the matter at once, almost without comment. Apparently it did not consider lying about a prince, even when committed by a soldier of high rank, a very serious offence. But a great many sober observers, both in France and out of it, were satisfied that it showed Boulanger to be an unsound and dangerous person, whose political career was likely to end in shame or calamity for the country. It was not very long before he began to develop all the qualities and tricks of the regular politico-military adventurer, and had to be removed from his office, and even from Paris, as a danger to the Government and the public peace.

The Caffarel scandal is, one might almost say, a legitimate sequel to Boulanger's career. Caffarel is one of his protégés, and the chief of his staff, and appears to have been "on the make" from the time he got into the War Office. He made it known to women whom he employed in a confidential capacity outside, that he saw "many channels in which he could be useful" to people who approached him in the proper way. Accordingly, to make a long story short, he soon started a lively trade in the sale of decorations, or rather of the Legion of Honor, which, as it is bestowed on all classes and conditions, all Frenchmen greatly prize, and especially Frenchmen in any kind of business, both for the social distinction it confers and for the advertisement it furnishes, and they are often very willing to pay for it. Another general—Andlau, one of the Boulanger set—also is a fugitive from justice on the same charge.

The result of Caffarel's trial is perhaps the most singular part of the whole affair. He has confessed his guilt, and his sentence is not expulsion from the army, but relegation to the retired list, the reduction of his pension, and the loss of his decoration. The social disgrace no doubt is tremendous, but the professional penalty seems ludicrous. On the retired list he still remains in the army, and is the fellow and peer of thousands of veterans whose career has been stainless. Boulanger, too, has been arrested for insubordination. He took the exposure of his friend in a very characteristic way. Instead of being horrified or indignant, he denounced the discovery as what our criminal classes call "a put-up job." That is, he said it was a plot contrived by Gen. Ferron, his successor in the War Department, to bring him (Boulanger) into discredit. Gen. Ferron has, therefore, very properly ordered his arrest.

No one as yet knows the full extent of the scandal. That more or less damage to the Republic will result from it, there is little question—how much damage, of course, will depend on the condition of the political conscience of the French people. But foreigners are saying, not unnaturally, that if the French people can bear such things with equanimity, something more than a good military organization is needed to enable them to beat the Germans, for it is hard to persuade the world that the Caffarels and Andlaus would not sell plans to the enemy as readily as decorations to their countrymen.

FROM TACOMA TO LOS ANGELES.

Los Angeles, September 30, 1887.

Pasco Junction is the name of a station on the Northern Pacific Railroad which the tourist who intends to see the Pacific Coast from Alaska down to southern California will always approach with considerable hesitation and doubt. For he has here to choose between two of the most picturesque routes in America, the one taking him straight to Tacoma, over the Cascade Mountains, and the other down the Columbia River and via Portland to Tacoma. In truth, however, there is no occasion for the slightest hesitation. No tourist can afford to miss either of these routes, and it is his æsthetic duty to take them both. The best way is to go straight from Pasco to Tacoma, and there take the Alaskan steamer. On returning from Alaska, go back to Pasco by the same road, then down the Columbia to Portland, and from there by rail or boat to San Francisco and Los Angeles. Thus the world-renowned charms of the Columbia River scenery may be enjoyed without sacrificing the less-known but equally grand sights of the Cascade division of the Northern Pacific, at an extra expense of only a few dollars. And there is a special advantage in repeating the trip over the Cascades, because its chief attraction, Mount Tacoma, is very apt to be hidden behind clouds of mist or of smoke for days or weeks at a time; wherefore it is well to revisit him at intervals of a few weeks. Clouds are less to be feared than the smoke from forest fires, which is only too apt to mar the pleasure of tourists in Washington and Oregon during July and August. Sometimes these conflagrations are caused by camp-fires left burning by careless hunters, but this summer there were no extensive fires of this kind, and yet the air was odorous and opaque with smoke, owing to the innumerable "clearings," or places where farmers burn down their dense timber in order to secure land for the plough. A volcano in full activity could hardly be more imposing than the dazzling, nocturnal splendor of these fires—the united brilliancy of hundreds of blazing fir-trees, some lying prostrate in confused groups, others standing in stately array, several hundred feet high, until the flames rush up to their tops and bring them down too. Nevertheless, these transitory fireworks do not compensate one for the loss of a sight of the dozen or more snow-peaks which adorn Washington and Oregon. Perhaps the time is not very distant when timber will become valuable, and "clearings" will have to be made in a less barbarous manner.

Much of the land through which the Cascade branch of the Northern Pacific passes is disfigured by dead black trees and stumps. Other portions are in full cultivation, and the crop most favored appears to be hops, especially in the Puyallup Valley, where these vines attain a most luxuriant and beautiful growth, which is said to have yielded last year one and a half million pounds of hops, many of them being still picked by Indians. Curiously enough, this valley is the most pronounced "temperance" region in the Northwest, and one of the largest hop-growers will not, under any circumstances, allow a saloon to be opened within his extensive domain. This hop valley is between Tacoma and the Cascade Mountains, and—aside from the picturesque hop-vines and a mountain stream, with waters so clear that the passengers can see the trout in it from the car-windows as the train speeds along for half an hour—it is in these mountains that the scenic attractions centre. Unfortunately, one of the most fascinating and exciting features of this route—the "switch-back"—will exist no more after next June. The switchback is the name given to a part of the road where the train ascends the mountains by a series of zigzag movements, somewhat like a sailing vessel tacking at sea. There is one monstrous 110-ton engine in front of the train, and another one behind, and when the train has reached a certain point, it is switched off, and starts ahead in the opposite direction, until a point is reached where six parallel roads can be seen, each a few hundred feet higher than its predecessor. Several times the train goes over trestle-works of a giddy height, and looking so frail as the train approaches them round a curve that the more timid passengers must feel somewhat nervous, and breathe more freely when the perilous spot is safely passed. But, as just intimated, this mountainous "elevated" railroad is merely a temporary arrangement, having been rendered necessary by the company's inability to complete the Stampede Tunnel within the period designated by its contracts. The rock through which the tunnel passes is so soft that timbering is necessary, and the work therefore slow. As the Stampede Tunnel will be almost two miles in length, it will, of all tunnels in the United States, rank next in length to the Hoosac.

Neither the tunnel nor the switchback, however, constitutes the chief attraction of the Cascade route. That honor belongs to Mount Tacoma, around which the train sweeps in a wide curve and at no great distance, so that it can be seen from many different points of view. With the exception of Mount Whitney (15,500), Tacoma (14,444) is the highest peak on the Pacific Coast outside of Alaska; and it is the only peak in the United States south of Alaska which has its sides adorned with genuine valley-seeking glaciers, fifteen in number. The time cannot be distant when thousands of tourists will annually visit these glaciers and attempt the ascent of this mountain, of which the first 11,000 feet are said to be very easy, though the remainder is difficult and perilous. At present it takes a week to go from the town of Tacoma to the mountain, but if the railroad company would build a wagon road from, say, the Devil's Elbow to the foot of the mountain, half that time would suffice for the ascent and return. In one respect the Northern Pacific management has already earned the gratitude of all who have a sense of beauty, viz: by restoring to this noble mountain its euphonious and poetic Indian name, "Tacoma," in place of the ugly (and always mispronounced) French name "Rainier." All the maps of the Northern Pacific Railroad use the Indian name, and if every tourist of taste will follow the example and taboo the word Rainier, it will be easy to suppress it in time. To those Pacific Coast people who stubbornly cling

to the word Rainier, I commend chapter xxiii. of Washington Irving's 'Astoria,' where he laments "the stupid, commonplace, and often ribald names entailed upon the rivers and other features of the great West by traders and settlers. . . . Indeed, it is to be wished that the whole of our country could be rescued, as much as possible, from the wretched nomenclature inflicted upon it by ignorant and vulgar minds; and this might be done, in a great degree, by restoring the Indian names," which are "in general more sonorous and musical."

Portland owes its commercial importance to the fact that the Willamette (as well as the Columbia) is navigable up to its wharves by the largest ocean steamers; so that the rich farm products of the Willamette Valley can be at once shipped to all parts of the world without a long and expensive railway transportation. Scenically no town on the coast—not even Tacoma, with its grand view of the mountain after which it is named—can ever surpass Portland. As viewed from the heights west of the city, Portland is beyond comparison the most picturesquely located town in the United States. Architectural monuments of importance there are none as yet, but the trees and gardens which frame in all the houses are equally attractive in their way, and, from a sanitary point of view, more desirable. Garden City or Forest City would seem an appropriate name for Portland, as seen from Robinson Hill; and the Cascade Range to the east, with the Willamette River separating the city from East Portland and Albina, gives the ensemble a distinct resemblance to Stuttgart, if not to Florence, though neither of those cities can boast of a semi-circle of volcanic snow peaks like Portland—including Mount Tacoma in the distance, and nearer by St. Helens (9,750), which had an eruption as late as 1832; Adams (9,570), Hood (11,200), Jefferson (9,000), and the Three Sisters (8,500). Of Mt. Hood in particular the Portlanders have a magnificent view from their house-tops or from the heights west of the city. Though it is about fifty miles away, there is not a hill between to impede the view; and, as the particular Cascade ridge with which Mt. Hood connects is of insignificant height, the peak stands revealed from head to foot in solitary grandeur, with snow reaching down two-thirds of the way even in August. It is a peculiarity of all the Oregon and Washington peaks that they thus rise abruptly from the ground, without any clustering neighbors to lean upon; and this isolation, combined with the lowness of the snow line, adds much to their grandeur and apparent height. The ascent of Mt. Hood is comparatively easy, and is often made by parties from Portland, including ladies, and without guides. Sixteen years ago I formed one of the first parties that made the ascent. Leaving the emigrant road some distance from the mountain, we had to cut notches in the trees in order to find our way back to the wagon. The mules and dogs were left tied to trees just below the snow-line. We started thence at four A. M., and were back shortly after noon, having encountered no dangers or impediments except some large fissures in the snow-fields, which necessitated a detour.

With such fine scenery constantly in view, and with trees and flowers around every house, it is perhaps not surprising that the wealthy Portlanders have hitherto shown a remarkable indifference to the condition of their parks and streets. The large piles of wood in front of every other house appear more useful than ornamental, and give parts of the city a semi-rural aspect. They make excellent and cheap fuel, however, and the large quantities of pitch they contain give them a delightful fragrance. Another peculiarity of Portland streets is that the blocks are uncommonly small. Fewer streets and wider ones would have been much more acceptable. The waste of space involved in the present arrangement is beginning to be felt now that the California real-estate "boom" is moving northwards. The disaster to the Northern Pacific was a terrible blow to Portland, which is now, however, recovering from it, and some of the property has doubled in value and more within a year. The reappearance in the field of Mr. Villard has created great enthusiasm, and a merchant expressed his opinion to me that if Mr. Villard had remained at the head of affairs, Portland would now have 100,000 inhabitants. It certainly would have, what it now sadly lacks, a first-class hotel. The foundations for one, modelled after the largest foreign hotels, were laid some years ago, and were then abandoned; but a movement is now on foot to complete the building. That such a hotel will pay is shown by the prosperity of the fine and comfortable Tacoma Hotel, which is often overcrowded, and which has some excellent features, including a domestic fire company; every waiter, cook, clerk, and dishwasher having his special duties to perform in case of an alarm.

Many Portlanders are sorely distressed at the fact that one of their two leading business streets has fallen entirely into the hands of the Chinese. An attempt will be made to dislodge them by refusing to renew their leases, the longest of which will expire in about fifteen years. But as the Chinese are willing and able to pay specially high rents, it is doubtful if this measure will be generally carried out. In these public places everything seems neat and clean. To see the dark side of Chinese life one has to visit their private dwellings. Besides the laundry business the Chinese appear to do most of the market gardening for the Portlanders. Wherever there is a patch of ground with water for irrigation, a Chinaman is sure to be the owner or lessee. To judge by the articles found in their provision stores the wealthier among the Chinese appear to be as great epicures as their countrymen at home; while of the poorer ones, if you ask one what he had for dinner, he will invariably reply, "I eatee licee" (rice). Yet they are always glad to get what is left over at table, and this makes it the more remarkable that they are so contented with their insipid boiled rice, without condiment of any sort. One day a lady told her Chinaman to sit down and try *her* way of preparing rice, in the form of pudding. He took some on his plate, added a piece of meat with gravy and a few spoonfuls of lettuce, mixed them well, and, after disposing of this harmonious compound, he remarked to the donor: "You make him heap nice!" Another Chinaman whom I had the pleasure of meeting has given considerable trouble because he for a long time insisted on being paid every "moon," or Chinese month, instead of on the first of the American month. He is, however, very amiable and shows much fondness for his employer's children, sometimes bringing them candy. At other times he teases them by running away towards his cabin with their favorite cat, pretending that he is going to cook her for dinner. One day Lee was left alone in the house, and when the family returned late in the evening they found he had attended to everything, even to winding up the clock. But at one o'clock they were awakened by a most infernal noise; Lee, with the thoroughness of his race, had wound up everything he could find—alarm and all!

One finds the Chinamen not only in Portland, but throughout the country, where they are in great demand, especially during harvest time. The discovery has been made within the last twelve years that Oregon soil is admirably adapted for hops, and to this product many farmers who formerly relied on wheat and apples now devote all their attention. In a country where laborers are scarce there is an advantage in having a harvest in which women and children can participate, yet even thus the farmers could not manage without Chinese assistance. The men are secured through an agent, who sends a cook with every detachment and levies a heavy tax on every man's income. They can afford it, however, as a busy Chinaman can earn as much as $2.50 or $2.80 a day by hop-picking, their ordinary wages (on railroads, etc.) being only $1, without board. Every farmer dries his own hops, and they are of excellent quality. But the market is uncertain, and the matter is perhaps being overdone at present, so that before long some of the farmers may return to their wheat and fruit, in which no other State equals Oregon, both as regards quantity and quality. Concerning Oregon fruit I can speak from personal experience, as I was brought up near an orchard numbering 2,000 apple, pear, and plum trees. For peaches and grapes the Oregon climate is hardly warm enough, and the apples and pears, too, are perhaps a little smaller than they are in California; but in flavor they are vastly superior. Indeed, neither in the East nor in any part of Europe have I ever tasted apples to compare with those of Oregon. They have a richness and delicacy of flavor which must persuade any one that if apples were less abundant they would be considered superior in taste and fragrance to those tropical and semi-tropical fruits which are more highly valued because of their scarcity in our latitude. In most parts of the East an apple is an apple, and few people know or care about the names of the different kinds; but an Oregonian would no more eat certain kinds of apples than he would a raw pumpkin. An epicure is not more particular in regard to his brands of wine than an Oregonian is in the choice of his favorite variety of apples; and there are half-a-dozen kinds which I have never seen at the East, and the systematic introduction of which in the New York market would make any dealer's fortune.

For some reason or other, the Oregonians seem less enterprising than their California neighbors, and instead of sending their fruit East they often allow it to rot on the trees—including superb plums and Bartlett pears that would fetch five to ten cents apiece in New York. Eastern capital is wanted to start transportation enterprises; and a still more important desideratum in Oregon is a larger population. The growth of the State has been remarkably slow, considering its agricultural advantages and its fine climate. In the census of 1880 the population numbered only 174,767. But there were already "16,217 farms, and their products are tabled at a cash value of $13,234,548"—a curious commentary on the exclamation of a member of Congress, forty-five years ago, that he would not "give a pinch of snuff for the whole Territory." Eastern notions regarding the climate of Oregon are almost as widely astray as they are regarding Alaska. Barrows points out that, although the mouth of the Willamette is 200 miles further north than Boston, no ice has been formed on it thicker than window glass since 1862; and that in some of the counties snow has not covered the ground for three consecutive days for a score of years. The rainy season, which takes the place of the Eastern winter, is trying to the patience of some; yet this rain is very different from our muggy, foggy, sultry winter rains in New York. It is known as a "dry" rain because, however it may drizzle, it does not seem to saturate the air and depress the spirits by impeding the natural evaporation and healthy action of the skin. Doubtless this peculiarity of climate is largely responsible for the remarkably beautiful complexions of Oregon and Washington women, though something may be due to the fact that as children they live almost entirely on fruit. The heat of Oregon summer days is seldom oppressive, being generally mitigated by a breeze; and the

nights are invariably cool enough for a blanket. Hence there are no sleepless nights.

Now that the Oregon and California Railroad is almost completed, it is easy to survey the rich resources and admire the fine scenery of Oregon (Mt. Hood or some other snow peaks being visible from almost any elevated place in the State) by traversing the fertile Willamette, Umpqua, and Rogue River valleys. Among the towns of interest on the route are Oregon City, with the falls of the Willamette; Aurora, a German community founded by a religious enthusiast (or "sharper," as the disappointed members now feel inclined to call him); Salem, the capital of the State; Albany, Eugene, and Roseburg, the last not so very far (in a bee line) from Crater Lake, the wonders of which would tempt many a tourist, did they not involve the expenditure of a whole week. At Salem, the town having refused to subscribe a certain sum, the Oregon and California Railroad built their depot a mile outside the town, to the annoyance of everybody but the cabmen. The absence of a rival road shows itself also in the refusal to check baggage through to San Francisco—an arrangement which compels tourists to superintend personally the transference to the stage at Ashland and the rechecking twenty miles beyond. At present, however, only seven miles of the road remain to be completed, and in a few weeks the dusty stage ride between San Francisco and Portland will be a thing of the past. Ashland already seems warmer than Portland, and before the tourist crosses the line on the stage he feels that he is approaching another State. But there is a surprise in store for him; for while the word California is inseparably associated in his mind with grapevines and orange trees, the first thing that meets his view on crossing the State line is the majestic snow-peak of Shasta. The railroad more than half circles this gigantic mountain, which remains in sight for five or six hours, and changes its aspect so frequently that a young lady in our car had much trouble in convincing her father, who looked up from his paper every half hour, that he was still gazing on the same mountain. The guide-book's statement that if the bottom of Shasta were to drop out at any time, it would leave a chasm seventy-five miles in circumference, gives one a better approximate idea of its size than the appearance of the mountain itself at this time of the year, when it is almost denuded of snow. From Sissons, only seventeen miles away, it does not look so grand as Mt. Hood does from Portland, fifty miles away. Spring is the proper time to see Shasta in his snowy grandeur, and as his outlines are interesting, one can easily comprehend the enthusiasm of those who have seen him wrapped in his magnifying white cloak.

Soon after leaving Sissons the train passes a place where several strong springs of mineral water dash down the mountain side almost like waterfalls; then darkness sets in, and in the morning the passengers find themselves at Oakland, ready to cross the bay to San Francisco. After roaming about this hillside city for a few days and comparing my impressions with those recorded in the books, I find that nothing of importance seems to have been overlooked. It is duly noted everywhere that the cable cars are a very pleasant way of climbing the hills on which the residences are healthily located; that the climate calls for a light overcoat part of every day in the year; that Chinatown is like a section taken bodily out of Canton; that the suburban sand is drifted and whirled about by the stiff sea breeze into lovely mounds resembling snow drifts; and that every visitor to San Francisco must drive to the Cliff House and see the law-protected seals gambolling and barking on the rocks near the shore. It struck me, however, that there is less madness and more method in the music of the Chinese theatre than is commonly ascribed to it. It has a quaint charm of its own, though its occasional noisiness is undeniable. The plays seem to be modelled on the opéra-comique principle—*i. e.*, there is unaccompanied dialogue alternating with accompanied dialogue, and with absolute music. As for the poor seals at the Cliff House, the late "H. H." seems to have set the fashion of reviling them as clumsy, hideous, noisy beasts which should be killed and the skins given to the poor; and even the guide-books now echo this strain. No doubt the seals are not "pretty," yet they do give one a weird glimpse of northern animal life—as of a former geological epoch—which even the Alaskan tourist misses to-day, thanks to man's murderous commercial instincts.

From San Francisco to Los Angeles two routes are at present available, by sea or by the Southern Pacific Railroad. In a few months, perhaps, another and more picturesque railroad will take the tourist along the range of mountains near the coast. The Central Road is unpleasant because it goes through the warm middle valley of the State. It seems a pity to pass Merced without getting off to spend a week in the Yosemite, and among the big trees. But, I am told, it is too late in the season to see this valley to advantage, as much of its beauty lies in its snow-fed waterfalls, which are now small. Like Shasta, the Yosemite must be seen in spring, and the same, no doubt, is true of the lofty mountains that form the boundary between California and Nevada. How many of my readers are aware that from Shasta to Los Angeles, almost in a straight line, there are eleven peaks over 10,000 feet in height, and culminating in Mt. Whitney, with 15,000? It makes one long to spend the whole winter exploring these peaks and the floral valleys between, abounding with game. No doubt many of the 100,000 Eastern visitors that Los Angeles County expects this winter will undertake such explorations. My own limited observations of this wonderful region—"Boomland" it is called—must be reserved for another letter. But I cannot refrain from adding that as I write I hear a mother scolding her baby for putting a handful of dirt in her mouth. Real estate is too valuable hereabouts to be thus squandered in luxurious living.

H. T. Finck.

SIMON'S VICTOR COUSIN.

Paris, October 6.

Philosophical studies have been completely transformed in France in the past thirty years; science has taken the place of philosophy, and the present professors of what still goes under the latter name are obliged to study the works of the modern savants—I ought, perhaps, to say scientists, but I am not yet used to this expression, which has only lately been adopted among us. For many years Victor Cousin was the chief representative of the French philosophical school. He had invented a philosophical doctrine which he called eclecticism; it was something like a musical potpourri. Cousin professed to have taken something from every philosophy—the best, of course, of each. He had borrowed something from the Greeks, something from England and Scotland, something from the French philosophers of the seventeenth century; he had not forgotten the Germans. He had taken his honey from every flower. What characterized, on the whole, his selection was a strong tendency to pure spiritualism, a psychology which did not lay its foundation on any physiological facts, and which dealt only with ideas and with consciousness. In this respect it cannot be denied that the philosophy of Cousin had a good influence; it was superior to the coarse materialism of the schools of the eighteenth century; it appealed incessantly to the higher and better parts of human nature; it was optimist and not pessimist; it was inspiring, and not discouraging. The generations which were brought up under its influence were happier than our modern generations, which are led entirely by positivism. Happiness is not, however, a measure of truth. The modern school has completely renounced eclecticism, regarding it as a futile and useless construction, which has no solid basis. The philosophy of Cousin is as much a thing of the past as the philosophy of Nicole or Malebranche.

We will not here attempt to study Cousin in the character of a philosopher; he was interesting as a man. He left valuable historical works, and a place has been given to him in the collection which I have already noticed here, of "Les Grands Écrivains Français." M. Jules Simon has written the volume devoted to Cousin, and no better choice could have been made, as M. Jules Simon may be said to be at the present time the best representative of the philosophy of Cousin. This biography is not, however, like most biographies, an apology; we often feel the claw of the satirist under the velvet glove. "There are," he says, for instance, "men who make much noise during their lifetime, and whom posterity does not know"; and he adds immediately, "Victor Cousin was not of such." But when you read the first phrase, you cannot help applying it to Cousin; and you are confirmed in this instinctive impression by what follows:

"Cousin made his name immortal by great services and by good works; but those who did not live in his lifetime can hardly imagine what a noise he made in this world while he was in it. He liked noise; he was anxious for it. I remember that, at the approach of the Revolution of 1848, the noise of political and social questions having somewhat drowned the noise he made himself over philosophical and religious questions, he trembled for fear of being forgotten. 'Show yourself,' said he to me; 'we must show ourselves.' He said 'We must' as the King says 'We will.' When he was Minister of Public Instruction [he was Minister for only eight months], he filled the *Moniteur* and the official papers with his circulars, his public speeches, his projects. M. Damiron [a professor of philosophy], who was, to use M. Cousin's own expression, the wisest of the wise, mildly reproached him: 'You make too much show; you will tire the public.' But Cousin answered, 'We must show ourselves.'"

Victor Cousin was born in Paris November 28, 1792. He was the son of a jeweller—that is to say, of an artisan who worked for a jeweller; his mother was a washerwoman. He was brought up at first in the street, like a *gamin de Paris*. A kind lady, the wife of a professor, took charge of his education and had him sent to a *lycée;* he showed at once his cleverness and took all the prizes. In 1810 he entered the Normal School for professors which had just been founded. At the age of twenty he was Professor of Greek; in 1813 he was appointed *chargé des conférences* of philosophy, his function consisting in going with the students to the lectures of the Faculty of Letters, and of explaining these afterwards to them. He had among his pupils at the Normal School Jouffroy and Damiron, who afterwards became famous, and Bautain, who became the Abbé Bautain, and acquired some notoriety as a religious philosopher.

Royer-Collard, who was Professor of Philosophy in 1815, chose Victor Cousin as his *suppléant*—a great honor for so young a man; and during the Hundred Days, as Royer-Collard was a stanch Royalist, Cousin enlisted in the Royal Volunteers. His campaign was not long: he went one day from Paris to Vincennes, and returned the next day. Cousin was twenty-two years old. The despotism of Napoleon seemed odious to him, and he looked upon the Bourbons as saviours. He was not then, however, mixed

up with politics: he was deep in the study of philosophy, for he never really learned it till he had to give lectures on it. He went to Germany and tried to understand Hegel; he saw Jacobi and Schelling at Munich. On his return he gave lectures on their philosophy. His great eloquence, his fire, his inspired look (I saw him only in his old age, and he had still kept the look of a prophet), drew round him the ardent and intelligent youth of the Restoration. Cousin, though he was at heart a Conservative, made parade of Liberalism. He spoke on religious subjects in a manner which displeased the "Congregation"; he sometimes had words of admiration for the French Revolution. He was the most brilliant personification of the young University and of the Normal School; his lectures were stopped by the Government. Two years afterwards Guizot, whose professorship was history, was the victim of a similar measure. The Normal School was suppressed. Cousin was obliged to accept the humble post of preceptor of a son of the Duke of Montebello. For eight years he spent his leisure hours in preparing a complete edition of Descartes and a translation of Plato's works. These two works, with his historical studies on Madame de Chevreuse and Madame de Longueville, will be consulted long after the eclectic philosophy is forgotten.

In 1824 Cousin travelled with his pupil in Germany, and, through a strange mistake, he was arrested by the Prussian police, who took him for a *Carbonaro* and a conspirator. He remained six months in prison, and was only released by the influence of Hegel. Jules Simon relates that Cousin often spoke to him of his sufferings in prison, but added stoically: "One thing only preoccupied me—the translation of Plato was not finished." When Cousin returned to France, M. de Martignac allowed him to recommence his lectures. He reappeared before his public as a victim of absolutism and as a representative of free thought, but he triumphed modestly, and publicly expressed his gratitude to the King and to M. de Martignac.

The Revolution of 1830 did not fill him with joy. "He often," says Simon, "said to me that a change of Cabinet would have been enough, that the Revolution had given a fatal blow to the monarchical principle." He could not, however, be hostile to the new régime, and, as he had been a victim under the Bourbons, he was laden with honors—he was made Councillor of State, member of the Royal Council of Public Instruction, a member of the French Academy, a member of the Academy of Moral and Political Sciences (an academy founded in 1832), a peer of France. In 1840 he became Minister of Public Instruction in the Cabinet of M. Thiers, which was of but short duration. "This little professor," says Jules Simon, "born in a garret, became a *grand seigneur* without any interval. He pleased the people in this new incarnation. He was one of the forms of the victory."

Cousin used to say that the professors of philosophy formed his regiment; and Jules Simon gives to one of the chapters of his book the title "The Regiment." He describes in it the great power, we might almost say the tyranny, which Cousin exercised during the Government of July over the French University. He was the leading spirit of the Royal Council of Public Instruction, of the Normal School, where all the professors of the higher schools received their instruction. Jules Simon knew him first at the Normal School, and describes him very vividly:

"We ought to have adored him, but he had something indescribable which repelled friendship; we were, I believe, a little afraid of him. As for our admiration, it was boundless. Sometimes, often, he seized an idea which chance brought to him, and then came an endless series of new and marvellous thoughts, comparisons, pictures, anecdotes. Never shall we see again, in the conversation of a man, such an abundance of fine things. The lecture began at eight; it was to last an hour and a half; we were still there at one o'clock. Suddenly he took his hat and said: 'Let us go to the Luxembourg.' (I will say in parenthesis that I had to go without a dinner.) Once in the Luxembourg, he recommenced speaking, for me alone. I believe that he entirely forgot to whom he spoke—he spoke for himself. He was indefatigable. He left me when the day began to end, and dressed himself to go to some great dinner. I wandered in the streets till the supper hour of the Normal School, at eight in the evening, when I arrived dying with hunger, having eaten nothing but a piece of dry bread since seven in the morning."

The book is full of such anecdotes. Jules Simon clearly makes you understand that Cousin was very ignorant of other people's needs, and that the study of the *moi* and the *non moi* had not destroyed his egotism. He was very arbitrary and tyrannical, very intolerant. "If you emancipated yourself a moment, the claw showed itself at once." He was imperious, but he never forgot one of his pupils; he followed them from year to year, from school to school. He did not, perhaps, much like the soldiers of his regiment, for he was not tender; but he passionately loved talent and philosophy. "Cousin was not good nor tender, but he forced you to believe in yourself; he shook you, he made you work. He was a master, and what a master! I think now that we were not grateful enough; the little sides of his character concealed from us the great ones."

The Revolution of 1848 was a terrible blow to him: he lost all his places, and resigned even his professorship in the Faculty of Letters after the *Coup d'État* of 1851. He was not among the open enemies of Napoleon III.; he took no further part in political struggles, and entirely devoted himself to historical researches in the seventeenth century. His volumes on Mme. de Chevreuse and on Mme. de Longueville are excellent studies of the society of the time of Louis XIII. and Louis XIV. His articles on the Connétable de Luynes are much inferior; he tried vainly to rehabilitate Luynes, who was a very ordinary personage. Cousin had become a bibliophile at the time when good books could be had for a trifle; he left his fine library to the Sorbonne, where it remains now under the care of his old friend, the translator of Aristotle—Barthélemy St.-Hilaire. He died at Cannes on January 13, 1867.

Correspondence.

JUDGE JAMESON'S ACKNOWLEDGMENTS.

To the Editor of The Nation:

Sir: In your issue of the 29th of September last, in a notice of the fourth edition of my work on 'Constitutional Conventions,' referring to my discussion of the weight to be given to the opinion of the judges of Rhode Island on a question submitted to them, in 1883, by the Senate of that State, as to the power of the Legislature to call a convention, you say: "The author sustains the doctrine of ex-Chief-Justice Bradley and other eminent lawyers of Rhode Island, as against the advisory opinion of the judges, . . . who denied the constitutionality of such a call." You then proceed to censure me as follows: "We do not observe, however, any citation of Judge Bradley's pamphlet on 'Methods of Amending Constitutions,' from which the author appears to have drawn valuable material."

My answer to this charge is, that the only indebtedness I am under to the pamphlet of Judge Bradley is for a reference to legal decisions, found, most of them, in an *addendum* to it prepared by Prof. J. B. Thayer of the Harvard Law School, and that in a note to Appendix E, where I discussed the weight to be given to extra-judicial opinions of judges in such cases, I cited this *addendum* by its full title, as one of my authorities. For the few cases derived from the body of the pamphlet, as well as for the aid and comfort its author gave me in quoting and approving conclusions as to the methods of amending constitutions which I had announced in all the editions of my work, I deemed my reference to him by name, in the preface, as one of the numerous gentlemen to whom I was indebted for valued courtesies in supplying me with information and documents, a sufficient acknowledgment.

I may add, that Judge Bradley has not appeared to think me indebted to him for unacknowledged drafts of material from his pamphlet, since, months before the publication of my work, he asked for and received advanced sheets of that part of it relating to the Rhode Island case, for use in the discussion of the question soon to come on in the Legislature of that State. For these sheets I have received, through a gentleman associated with him in the discussion, the thanks of both, but no complaint that I had appropriated, without acknowledgment, valuable material from the Judge's pamphlet. John A. Jameson.

Chicago, October 11, 1887.

[Judge Bradley's pamphlet was issued more than two years before this last edition of Judge Jameson's book, and it was an important contribution to the subject with which it dealt. The addendum to which Judge Jameson refers *was a part of it*. In view of the considerable changes and additions made by Judge Jameson in this new edition, on the very points handled by Judge Bradley (he has added eighteen new pages), we must still think it inexcusable to have omitted any specific reference to the pamphlet. It is true that in the preface Judge "C. I. Bradley" [C. S.] is misnamed as one in a list of forty-seven persons to whom general thanks are rendered. We had not overlooked that; but it does not really affect the question. —Ed. Nation.]

ANOTHER VIEW OF HIGGINS.

To the Editor of The Nation:

Sir: You seem willing to print the actual facts in the case of the People against "Higgins." The writer is an "Independent Democrat" and a "Civil-Service Reformer," and hence no friend of Higgins; but the facts have never been fairly stated yet, so far as I have seen.

Some five or six years since it became necessary to elect new judges for the city of Baltimore. The Independent Democrats and Reformers concluded to put in the field a ticket of entirely new men, against the old judges, who were put in nomination by the regular Democratic party. After the issue was joined, Mr. Higgins approached the manager of the Reform movement and said that he had been a pretty bad fellow in politics, and made full confession of all his iniquities, and expressed a desire to work for the "new judge" ticket. His services were accepted, and he did work for and with the managers of the Reform movement. The Reform ticket was elected, and nothing was heard of Mr. Higgins until the Cleveland campaign, when he appeared in New York as one of the clerks of the National Democratic Committee, and did what he could to promote the election of Mr. Cleveland. Mr. Manning saw his value as a clerk during the campaign, and when he took office in Washington he gave Mr. Higgins a good clerkship. The appointment was probably made by request of Mr. Gorman.

Now it is submitted that the Reformers of Bal-

timore at least have no cause of complaint. They accepted his confession and repentance, and made him one of their number, and it surely is not fair to punish him now for sins which they only knew through his confession, and which they condoned when they made use of his services.

W. JOHNSTON PRESTON.

[We believe it to be true, beyond question, that in 1882 Senator Gorman and Higgins did quietly afford whatever assistance they could, without exposing themselves publicly, to the new-judge movement. But Mr. Gorman's object, as we understand it, was to break down Whyte's influence in Baltimore, since the latter was responsible for the nomination of the old-judge ticket; and the election of the new judges would, therefore, tend to destroy his influence. These tactics were completely successful. Higgins's assistance and advice concerned the prevention of fraud, and could be properly accepted. In no other sense have the Reformers of Baltimore made Mr. Higgins "one of their number." In the course of the campaign Higgins confessed the details of the burning of the ballots in 1875; and our information does not lead us to believe that his sins came to an end in that year or in ten years. But we cannot here go into particulars.—ED NATION.]

ONE MODEL TOWN.

TO THE EDITOR OF THE NATION:

SIR: The conditions which make up a model workingmen's town are manifold and complex as life itself. In view of your able and interesting comments on paternal experiments in town building, as in Mülhausen and Pullman, I would call attention to the town of Millville, where some of the elements of an ideal town have been evolved from the natural desire for self-betterment in the people, under conditions so far favorable that they were not hindered by idealists or capitalists, but were mercifully let alone.

Twenty-five years of building associations and fifteen years of enforced prohibition of saloons have produced a material prosperity which is of a different kind from the prescriptive goodness of the made-to-order towns. It is founded in the moral character of the men and women who have created it, and is correspondingly secure and permanent.

A generation of no saloons and easy home-building facilities has changed the character of the place from a town of factory tenements to one where over one-half of the working people live in their own homes. These homes are not crowded either within or without. They are comfortable cottages, with porticoes and gardens, costing from $1,000 to $5,000 each. Six building associations now issue about $100,000 annually for this purpose, and a large amount is spent from other sources. One hotel provides better accommodation for the travelling public now than four licensed taverns did with half the population in "license" days.

If Henry George wants to know how people value a freehold who have conquered a vice and built such a monument over its ashes, let him come down and try to disturb the "remains."

R. M. A.

MILLVILLE, N. J., November 15, 1887.

CHEER FOR PHILANTHROPISTS.

TO THE EDITOR OF THE NATION:

SIR: Over against Mr. Sedgwick's doleful tale (*Nation*, No. 1161) of the insensibility of poor people to improved tenement-houses in Boston may be set a very different story told by Mrs. Backus in a paper on "The Need and Opportunity for College-Trained Women in Philanthropic Work," read before the New York Association of Collegiate Alumnæ last spring and recently printed. She describes tenement-houses erected in Brooklyn in 1877 and which observe every written and unwritten law for the comfort, safety, and moral purity of their inmates, which are filled the year round, paying returns of more than 6 per cent. upon the original investment, and which contribute—though they house 1,100 souls—not one feather's weight to the city's annual burden of crime and pauperism.

There must be some cause for this different state of things; it can hardly be taken for granted that human nature is all right in Brooklyn and is in need of a radical change in Boston. Mr. Sedgwick says that he has been an attentive observer of the experiment in Boston, but he does not say that he has questioned some of the families who have lived in the houses, and who have afterwards moved out of them, as to the causes of their dissatisfaction. To a scientific observer this would seem to be the natural way of getting at the reason of the failure. But even if such families are fond of darkness and dirt and publicity, it is not a change of human nature into some hitherto undiscovered species that is called for in their case, any more than in the case of so-called decent people who are fond of the common run of comic operas. It is merely the raising of one rank of people into the rank which is just above them, and whose example is constantly before their eyes, that the lover of his kind hopes in either case to accomplish. H.

TO THE EDITOR OF THE NATION:

SIR: A few days ago a cutting from a recent issue of your paper was sent me, with a request that I would answer the article on tenement-houses which it contained. Without in the least wishing to throw discredit on the kindly and conscientious efforts of those gentlemen to whom the writer of the article refers, I should be very glad to present a different view of the subject of tenement-houses, and to show wherein my experience in the management of them has been of a more encouraging nature than that of Mr. Sedgwick's friends.

To do this it is necessary to recall the work which was attempted. Five years ago it seems that a block of wooden houses was built by two gentlemen, one of them a physician, for a class of tenants who are obliged to live in tenements, not being able to afford separate houses. Every effort was made to secure the comfort and privacy of the tenants, and the tenements were offered to them at a very slight increase in price over what they would have had to pay for such accommodations as an ordinary tenement-house affords. As a result, Mr. Sedgwick tells us that the tenements have never been appreciated and are not sought for, and he gives us to understand that after five years, in which the owners of the property have spent both time and money in vain, they have become convinced that people of this class like to live in dirt and publicity rather than in cleanliness and privacy.

Now may I present my side of the question, and tell my story also? Nearly nine years ago a friend agreed with me that we would hire a large and much neglected tenement-house in Boston, and see for ourselves whether its condition could be improved. As a result we have found that tenants care very much to have rules enforced in regard to cleanliness and privacy; that they greatly prefer good management and careful supervision of the property to an easy-going or indifferent rule; that they are ready to help us to keep up the character of the house; and that they will put up with inferior accommodations for the sake of living in a tenement-house where rules are made and enforced.

Here is an entirely different state of things from that represented by Mr. Sedgwick, yet his expression of opinion is an honest one, and is entitled to consideration. Why has the experience of my friend and myself been so entirely different from that of Mr. Sedgwick and his friends? It seems to me that the answer is a very simple one. We did the work ourselves. We made no plans how the poor ought to live; we provided no houses which we thought exactly what the poor needed (though such houses have been the later outcome of our work). We went among them to collect our rents, and to oversee our house, and trusted that in time we should learn in just what direction we could be of use to our tenants. Only by daily and often almost hourly intimacy with their lives, could we hope to find out how to help those lives to be less cramped and degraded by the pressure of outward circumstances; only by being constantly on the spot could we learn how to be good landlords. This required greater leisure than a busy physician could probably afford.

Looking back over the nine years, I can still remember how at first our well-meant efforts were regarded with suspicion, but I can also remember gratefully the way in which that suspicion was gradually overcome. I can recall the pleasant thrill it gave me when the tenants first began to take a pride in the house, not merely in the care of their own rooms, but in the general aspect of the building. It is a small matter to mention, but it was no small evidence of good feeling when one woman, out of her own means, provided curtains for the windows of the common hall. It may seem of small importance, but to me it is worth remembering, that after the first year or two the wreaths which we hung in the corridors at Christmas remained untouched until Easter, and that, too, in a house where there are always eighty people, more or less.

Of far more importance was the improvement in the cleanliness and *quietness* of the house. Instead of the noise of brawling and drunkenness which prevailed before we took the building, a sense of order and quiet began to make itself felt, and I can remember such expressions as these: "I'm sure this house is like a palace to what it was." "You could hear a pin fall here now!" Yet we had attempted no rigorous reforms—the change had come gradually. We had insisted, quietly but firmly, on observance of rules—on cleanliness, on sobriety, on privacy; and, in time, the tenants themselves had come to desire these things.

Perhaps the whole matter can best be summed up in one word—we had taken *an interest* in our tenants and in their lives. No one can know, who has not been among them, how much it means to these people to have a friend, as well as a landlord, with whom to deal.

On one point only do I agree with Mr. Sedgwick, and that is in acknowledging that tenants of this class "prefer the fellowship of the crowd more than the retirement of the home"; and can we wonder at this? Is it strange that people who have many of them never known books, never heard good music, never had any rest or refreshment after the hard routine of their daily lives, prefer the slight excitement or amusement which comes from contact with their fellows, from some slight share in the give-and-take of the great world, of which, during their working hours, they form only a mechanical part? It has always seemed to me most natural that tenants should prefer small front rooms on crowded thoroughfares rather than better quarters in a more secluded situation. Why, the street is their theatre, their stage, almost their world! And it is surely better for a man to see it from his win-

dows than to leave his family to go in search of it.

Such are some of my views in regard to tenants and their needs. If Mr. Sedgwick differs from me, I can only wish that it was in his power to hire a tenement-house for a year, and to see for himself whether there is not much truth in my side of the question as opposed to that of his friends.

In conclusion I should like to add that I have seen the same rules applied to twelve houses—some new, some old—and everywhere with equal success; and that this success I believe to be largely due to the keynote of *interest* which was struck in the beginning.—Very truly yours,

ALICE N. LINCOLN.

BOSTON, October 17, 1887.

CRUELTY TO WILD FLOWERS.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me, through your columns, to speak a word in behalf of the wild flowers that are perishing from the face of the earth?

Many charming varieties once found in this neighborhood have vanished from their accustomed haunts, and the same sad story may be repeated everywhere. Like "les neiges d'antan," they have passed away for ever—fallen victims, perchance, to the greed of gain, which strips the ponds of the water-lilies so thoroughly that none are left for seed, and despoils the fields and brooksides of their flowery treasure to sell in the streets of our great cities; or to the carelessness and folly of amateur botanists, or even of genuine flower-lovers, who dig up *all* the roots and pull *all* the flowers in the unlucky spots they visit.

The State of Connecticut, some time since, passed a law for the protection of the climbing fern; cannot there be some legislative action for the benefit of the yet fairer wild flowers? The wholesale destruction of birds for hat-trimmings has roused general indignation, and "Audubon societies" have been formed to save the feathered beauties from annihilation; why should not "Linnæan societies" do as much for these children of the woods and meadows, and save them and us from the fate that is impending?

N. W.

NEW BEDFORD, October, 1887.

BORROWED CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: In your paper of October 6 you speak of a "singularly thorough criticism" of Jean François Millet which appeared in the *Atlantic* for October, and which you say is called out by the recent exhibition of his works in Paris. You do not seem to have noticed the remarkable similarity between the conclusions of the writer in the *Atlantic* and those of the French artist and critic, Eugène Fromentin. On page 205 of his book on the old masters of Belgium and Holland, called 'Les Maîtres d'Autrefois' (E. Plon et Cie., 1876), Fromentin has the following paragraph:

"An extremely original painter of our time, a man of lofty enough soul, of melancholy temperament, of good heart, a true countryman by nature, has said about the country and about country people, about the hardships, the cheerlessness, and the nobility of their labors, things which a Hollander would never have thought of saying. He has expressed them in language slightly crude, and by methods in which the thought is clearer and more vigorous than the execution. His turn of thought has been immensely applauded. In it has been found in French art something of the sensibility of a Burns, less apt in making himself understood. To sum up, has he or has he not painted and left beautiful pictures? His manner, his utterance—I mean that exterior form without which the creations of the mind have neither being nor existence—has it the qualities necessary to stamp him a great artist and to give him the certainty of living long? He is a profound thinker measured with Paul Potter and Cuyp; he is a captivating dreamer compared with Terburg and Metzu; he has certain qualities undeniably noble when we think of the vulgarities of Steen, of Ostade, or of Brouwer. As a man he can put them all to the blush; as a painter, can he equal them?" G. A.

SUPPRESSIO VERI.

TO THE EDITOR OF THE NATION:

SIR: Mr. George Ticknor Curtis, who had already written the 'Life of James Buchanan,' has furnished to 'Appletons' Cyclopædia of American Biography' the sketch of that President. It occupies seven and a half double-column closely-printed pages, yet in it all Mr. Curtis never mentions or alludes to the most memorable and characteristic act of that statesman's career—the Ostend Manifesto. The Ostend Conference was the culmination of Buchanan's diplomacy, and gives the positive side of his life-long policy, as his conduct in the closing months of the Presidency shows its negative side. Mr. Curtis glozes over the latter and totally omits the former. Is not this a serious literary offence? Are not the editors also to blame for allowing such omission of important fact?

J. P. LAMBERTON.

PHILADELPHIA, October 10, 1887.

"IS BEING BUILT," ETC., ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: After some delay, I am now enabled to write conclusively respecting two points touched on in a communication of mine published in No. 1143 of your paper.

Mr. T. L. Kington Oliphant, in his 'New English,' ii. 58, alleges that he finds, early in the seventeenth century, the phrase, "Italy *is being held* dangerous." Having lately succeeded in referring to the book which he loosely quotes for it, I there read: "For Italy begins to grow out of request: it *is being held* dangerous to our nation both for health of body and soul" ('Court and Times of James the First' [1848], i. 138).

Now that idioms of the type of *is being built*, in substitution for the simple indicative present passive, are occasionally met with, "*is being held* dangerous" would not strike one, if coming from a careless writer of our own age. But the date of the letter quoted is 1611; and it occurred to me, at once, that the passage given above, if not the result of tampering, curiously, and next to incredibly, offered an instance of the misuse of a locution antedating the ascertained existence of its use.

Its punctuation included, the sentence in question has been adulterated, faithless editing not having been content with "grow out of request, *as being held* dangerous" (Sloane MS., Mus. Brit., 4,173, fol. 253). For this information I am indebted to my obliging friend Dr. Charles Gross, who tells me, in his letter received this day, that the writing of the MS. "is very distinct."

As regards another matter which I previously spoke of, the printed "was being seducyd"—professedly occurring in a MS. written about 1534—it turns out that "was" there reproduces a word unmistakably marked for erasure. Of this I have satisfied myself by personal inspection, which, however, was hardly necessary, after I had seen the Latin original: "His Ioannis vocibus . . . qui . . . vel pecuniâ ab honestate, fide, probitate deductus, quid deceret, non consideraverat," etc. The English of this, with my own punctuation, runs: "With these woords of Iohn Chenelet, who . . . ether els, [was] being seducyd, by mony, from honestie, fayth, and good dealing, had not consyderyd," etc. ('Three Books of Polydore Vergil's English History' [1844], p. 166.) In passing, the MS. is imperfectly indicated by its editor, Sir Henry Ellis, as "MS. Reg. C. VIII. IX." This should be corrected to "MS. Reg. 18 C. VIII. IX."—Your obedient servant, F. H.

MARLESFORD, ENGLAND, September 30, 1887.

Notes.

CHARLES SCRIBNER'S SONS will add to their present list of Robert Louis Stevenson's works his 'New Arabian Nights,' 'The Dynamiter,' and 'Familiar Studies of Men and Books.' They announce the following new publications: Mr. Stevenson's 'Essays,' including in the first volume the 'Virginibus Puerisque,' which has been for some time out of print; 'Sermons for Children,' by Dean Stanley; an 'American Girl's Handy Book,' by Misses Lina and Adelia B. Beard, with numerous illustrations of sports, games, and work; and 'Frau Wilhelmine,' a third volume of the 'Buchholz Family.'

Mr. Charles Carleton Coffin, the well-known writer for the young, has begun the preparation of a series of books giving a history of the late civil war. The first of these, entitled 'The Drum-Beat of the Nation,' will be published immediately by Harper & Brothers. They also announce 'Horse, Foot, and Dragoons,' by Mr. Rufus Fairchild Zogbaum, being sketches of army life in France, Germany, England, and the United States, profusely illustrated by the author; Miss Blanche Willis Howard's story, 'Tony the Maid'; Col. G. W. Williams's 'History of the Negro Troops in the War of the Rebellion'; and a book of fairy stories for children, called 'The Wonder Clock,' told and illustrated by Howard Pyle, with characteristic decorations by his sister, Miss Katharine Pyle.

Houghton, Mifflin & Co. issue as a holiday volume Hawthorne's 'Tanglewood Tales,' with illustrations by G. Wharton Edwards; a 'Book of Folk Stories,' the old favorites for children recast by Horace E. Scudder; and 'Hymns of the Faith,' by Profs. Harris and Tucker of the Andover Theological Seminary.

Estes & Lauriat, Boston, have in preparation an expensive gift-book, Keats's 'Endymion,' profusely illustrated with photo-etchings and wood engravings after paintings by W. St. John Harper.

T. Y. Crowell & Co. have in press 'Burnham Breaker,' by Homer Greene; and 'Fairy Legends of the French Provinces,' translated by Mrs. M. Carey.

D. Lothrop Co. announce 'The Ignoramuses,' by Mary Bradford Crowninshield, author of 'All Among the Lighthouses'; a 'Life of Robert Southey,' from new material by John Dennis; and 'The Old Farm Home,' by Abbie M. Gannett.

'A Cyclopædia of Diseases of Children and their Treatment, both Medical and Surgical,' edited by Dr. J. M. Keating, will be published by J. B. Lippincott Co., the first volume being expected to appear in the early autumn of next year. The work will be of a "thoroughly practical character."

'Grant in Peace: from Appomattox to Mt. McGregor,' by Adam Badeau, will be a subscription-book published at Hartford.

A year ago (*Nation*, No. 1093) we had occasion to praise Mr. D. H. Montgomery's little textbook, 'The Leading Facts of English History.' Ginn & Co. have now brought out a revised edition, in which the slight criticisms we bestowed upon its predecessor have all been heeded. The maps and tables have been multiplied, and the book still more deserves the attention of teachers.

It is a gratifying thing to see so careful an historical student and accomplished a writer as Mr. Arthur Gilman employ his powers in the pre-

paration of a series of school readers on American history (Chicago: Interstate Publishing Company). These readers are three in number: 'The Discovery and Exploration of America,' 'The Colonization of America,' and 'The Making of the American Nation'—the last reaching to the inauguration of Mr. Cleveland. It seems to us that nothing could be better for their purpose than these books, which succeed in an unusual degree in compressing the entire course of American history into a very moderate space, and in telling the story in a style at once interesting and serious—no writing done for children, and no effort to attract by pictures. The books are intended to advance in difficulty from one part to another, but there is no essential difference in style. We hope these readers and others like them will partly supersede the popular readers which now have possession of our schools—for the most part a medley of disconnected selections.

Dr. W. S. Mayo's 'Kaloolah: The Adventures of Jonathan Romer' lends itself well to illustrations, and, after many years, this story has been revived by G. P. Putnam's Sons, with the aid of Mr. A. Fredericks, who supplies a large number of brush drawings for full-page engraving, and not a few pen-and-ink sketches scattered among the letterpress. Scenically and picturesquely, the larger illustrations are taking and effective, but the action of the characters, even in the most dramatic situations, is apt to be feeble.

From the same publishers we have the first two volumes in York Powell's series of "English History by Contemporary Writers." These are W. J. Ashley's 'Edward III. and His Wars' and the Rev. W. H. Hutton's 'The Misrule of Henry III.,' both of which have been noticed in the *Nation*, Nos. 1152, 1153. They are attractive little books, within and without—the illustrations being often contemporaneous with the text.

'Parlor Games, for the Wise and Otherwise' (Rochester: The O. M. Hubbard Co.) is a handy pocket collection, duly indexed, and well calculated to serve the purpose of innocent amusement.

Burke on 'The Sublime and Beautiful'; George Herbert's 'Temple'; and more selections from Plutarch's 'Lives'—Timoleon, Paulus Æmilius, Lysander, Sylla—acceptably enlarge Cassell's National Library.

Henry George sends us a paper edition of his 'Protection or Free Trade?'—the most useful of all his writings.

Sheets Nos. 10, 14, 15 of the New Jersey Geological Survey's Atlas of the State complete this admirable work. They all relate to the southern portion, from Salem to Delaware Bay, and from the Delaware River to the Atlantic, and exhibit in the usual detail the vicinity of Salem, Bridgeton, and Millville, respectively. New Jersey has now set a laudable example to all other States, and if it owes its place as a pioneer partly to its geographical position, which enabled it to profit very extensively by the labors of the Coast Survey, not a little must be set down to the intelligent direction of its own Survey under Prof. George H. Cook. A topographical Atlas like this, on a scale of an inch to a mile, and with contour lines and indications of altitude, is a great boon to residents and tourists, and will be seized upon by commercial map-makers for the improvement of their charts of New Jersey. They must make long strides, however, before they can rival the workmanship of this Atlas.

The fund for the education of the freedmen so wisely devised by the late John F. Slater of Norwich, Conn., is known to everybody; and all who admire philanthropy of so high an order will be glad to learn that Mr. Slater's portrait is prefixed to a semi-private volume of 'Addresses at the Dedication of the Slater Memorial Building' in the same town on November 4, 1886 (Cambridge: University Press). The building, which provides a public hall, lecture-rooms, a library, a museum, is a gift to the Free Academy of Norwich by Mr. William A. Slater, who thus honors his father—both visibly, in the fine structure, and in the perpetuation of public spirit from generation to generation. The addresses were one by the Rev. J. P. Gulliver—interesting for its revelations of the difficulties which popular education encounters from "politics," even in New England; and by President Gilman of Johns Hopkins University, who pointed out some of the ways in which the new building could be made to answer the intention of the donor.

The *Journal of* [*Animal*] *Morphology*, edited by C. O. Whitman and E. P. Allis of Milwaukee, and published by Ginn & Co., Boston, the long-expected initial number of which has just appeared, is the most ambitious American enterprise in pure zoölogy since the "Contributions" of the elder Agassiz, and, if duly sustained, will greatly advance science and be an honor to the country. This number contains seven papers by well-known naturalists; with a single exception, they are accompanied by admirable plates, and are either too technical or too long to have found place in other natural-history periodicals. Indeed, so far from injuring these latter, the publication of this journal should enable them to be more popular and more intelligible to those who are interested in science, but have neither the time nor the training for technical discussions. It is to be hoped that later numbers may present more of vertebrate anatomy and embryology, derived, among other sources, from papers which might otherwise be published, not altogether appropriately, in medical journals. Self-interest, pride of country, and regard for the progress of unmixed morphology, alike call upon every American zoölogist to aid in the firm establishment of this most commendable publication, produced as it is by the association of Boston with a city of the "Great Northwest."

Bulletin No. 1 of the Forestry Division of the Department of Agriculture embodies a report on the Relation of Railroads to Forest Supplies and Forestry. A great variety of woods are exhibited as to their structure by means of photo-micrographic transverse and other sections, on a uniform scale of 100 diameters. Appendices treat of wood ties and their decay and modes of preservation; of metal ties and spark arresters.

The sixth instalment of the 'Battles and Leaders of the Civil War' (The Century Co.) is mostly given up to Gen. Buell's incisive "Shiloh Reviewed."

The latest American addition to the Tauchnitz series is Mrs. Burnett's delightful juvenile comedy, 'Little Lord Fauntleroy.'

That the northern half of Africa is essentially a Mohammedan country is known to most persons, but the fact is perhaps seldom borne in mind. One may see in the double No. 129-130 of the Journal of the Berlin Geographical Society a large map of the dark continent, in which shading and color are employed to manifest to the eye the extent and local relation of the various religions in Africa. The corresponding text is a paper accompanied by many statistical tables of missions. The author is Dr. A. Oppel.

The Bulletin of the Société de Géographie, just issued, is chiefly devoted to the annual review of the progress of geographical science during the year 1886, by the Secretary, M. Ch. Maunoir. Particular attention is, of course, paid to the French explorations in western Africa and the Congo Basin. The Vicomte Charles de Foucauld contributes a brief sketch of his adventurous journey in Morocco in the years 1883-84. On account of the disturbed state of the country, he was obliged to travel a great part of the way in the disguise of a Morocco Jew, under the name of Rabbi Joseph. He says that to be obliged to walk in the towns with naked feet, to receive injuries, and to be stoned occasionally, was comparatively nothing; but to be compelled to live constantly with this degraded race was an intolerable torment. Notwithstanding the danger of discovery, he was able to take frequent observations and to plot his route from day to day. This was the easier from the fact that his Oriental dress, and especially the Eastern custom of frequent prayer apart from one's companions, allowed him to take his observations unperceived. His map, which accompanies his paper, is a very beautiful specimen of cartography, and gives very full details, as, for instance, distinguishing by varied lines the living streams, the dry channels, and those which contain pools of water. M. Foucauld's observations are mostly of the interior, and not, where they might possibly have been looked for, along the Algerian frontier, considering the French designs upon Morocco.

It is announced that Dr. Junker, the well-known African traveller, is about to publish immediately a short account of the Mahdi's revolt. His maps will be ready soon after Christmas, and the account of his travels in the spring.

The *Annuaire de la Presse Française* (Boston: Schoenhof) is still published in its eighth year under the name of Émile Mermet, who died in 1884. It makes a volume of over a thousand pages, containing a very full list of the various periodicals and newspapers of France, with succinct but sufficient details in regard to them—the particular shade of their political opinions, something of their history; and not only the names of their responsible editors, but a list of their prominent editorial writers is frequently given, as well as much other information of general interest. During the year 1886 the number of Parisian publications was 1,993, while there were 3,100 in the rest of France, an increase in all of 343 since the previous year. It is interesting to note that there has been a slight decrease in the number of Republican journals of various shades, while there are sixteen more monarchical papers than in 1885, including under this name not only royalist, but also imperialist papers. The useful list of pseudonyms of writers in the French press is very much increased in the present volume.

The centennial of the first performance of Mozart's "Don Giovanni," which is to be specially celebrated at Salzburg on October 29, is also the occasion of a German work just published, entitled 'The Legend of Don Juan on the Stage,' by Karl Engel. In it, after treating of the historical character and the origin of the legend, he gives some account of the various stage adaptations of this story which have been produced during the past two hundred and fifty years. Another work, 'Mozart's Don Juan,' 1787-1887, by R. von Freisauff, contains a rich store of historical and statistical details in relation simply to Mozart's opera.

'Die Schätze des Goethe-National-Museums in Weimar,' consisting of sixty heliotype copies of portraits, busts, etc., of the poet and his family, of his bric-à-brac and his art efforts ("a surprising number of drawings by his own hand"), is announced to be published in ten parts (Weimar: Louis Held; New York: B. Westermann & Co.). The text will be furnished by Director Geh. Hofrath C. Ruland.

The author of the economic monograph on 'Federal Taxes and State Expenses,' which we lately noticed very summarily, shows us to have been in error in reporting him to assert that "three per cent. of the population of the country own more than two-thirds of all the property, and pay but one-fourth of the taxes." He really says this of three per cent. of the *taxpayers*. The correction gives an *à fortiori* emphasis to our dissent.

—We recorded last week the death of Prof. John H. Wheeler at Newbury, Vt., on October 10. Something more than this passing mention is due to one who was not only a valued contributor to the *Nation*, but an ornament to American scholarship, and whose premature end at the age of thirty-six cut short a career of great promise. What was especially striking in his talent was its versatility. "He was," writes one who knew him intimately for a long period, "a walking edition of *Notes and Queries*. I never knew him at fault, upon *any* subject, for an answer to a question." He graduated from Harvard College in 1871, having during the course distinguished himself in mathematics and in the classics, and during the next year he taught in one of the leading Boston private schools. The law then attracted him, and he spent some years at the Harvard Law School, with every indication of having well chosen the profession. To teaching, however, he gravitated again, received the degree of Master of Arts in 1875, was a fellow of the Johns Hopkins University in 1876–7, held a Parker fellowship of Harvard University in 1877–80, which gave him three years in Germany and Italy and earned him the degree of Doctor of Philosophy from the University of Bonn in 1880. Returned to America, he was for one year Professor of Latin at Bowdoin College, and then, in September, 1882, became Professor of Greek in the University of Virginia, where his strength broke down and a premonition of death overtook him. He resigned his post during the past summer. Prof. Wheeler was married in 1880, and leaves a wife and infant daughter. Among his unpublished literary remains are scholia on difficult passages in Horace and Euripides which deserve to see the light.

—We are glad to see that the "Johns Hopkins" studies of local institutions of self-government are not to be bounded by the imaginary line which separates the United States from Canada. The fifth and sixth (joint) numbers of the fifth series are 'Local Government in Canada,' by John George Bourinot, Clerk of the House of Commons of Canada. As might be anticipated, this monograph contains much matter of high historical interest, much also that deserves to be considered practically by citizens of the United States. The experiments made in the British colonies, to revive those institutions of local self-government which have become nearly extinct in the mother country, in a form adapted to the needs of the present age, are very interesting and valuable, as the result of careful and systematic examination into those needs, and not of the happy-go-lucky legislation which there is so much of on our side of the line. For, while we must recognize that our method, not being based upon theories, but growing out of immediate needs, is gradually evolving an American system of high practical excellence, we ought to recognize also that this process of evolution would be assisted, and the results improved, by more regard to historical precedents and theoretical considerations.

—In the ninth issue of the same series Mr. James Bryce, M. P., discusses in a most instructive manner 'The Predictions of Hamilton and De Tocqueville.' His aim is to indicate to students the utility of comparing the actual development of our Government with the hopes or fears of those who laid its foundations, and the vaticinations of later observers in its mid-career. For this purpose he chooses the *Federalist*, or, more exactly, Hamilton in the *Federalist*, and the 'Democracy in America.' He draws in the one case upon the objections to the Federal Constitution which Hamilton combated, the latter's own private apprehensions at the paring down of his ideal, and his public forecast of the working of the political machinery. On the other hand, Prof. Bryce gives what is really a most valuable analysis of Tocqueville's masterpiece, interspersed with acute criticism on his object and method. Thus, he lays stress on the fact that the French statesman was not engaged in a scientific examination of institutions and tendencies in this country, but had a constant reference to France, both in what he looked for and saw and in what, by a natural selection, he reported. Hence, imagining a type of Democracy, he inquired how far America had deviated from it, and "the facts he cites are rather the illustrations than the sources of his conclusions. . . . It is not Democracy in America he describes, but Democracy illustrated from America." "In many chapters he begins by laying down one or two large principles, he develops conclusions from them, and then he points out that the phenomena of America conform to these conclusions." "There is always some basis for every statement he makes. But the basis is occasionally too small for the superstructure of inference, speculation, and prediction which he rears upon it. To borrow an illustration from chemistry, his analysis is always right as far as it is qualitative, often wrong where it attempts to be quantitative." The second part of Tocqueville's work, issued in 1840, Prof. Bryce considers quite theoretical, and divorced from facts either as sources or as illustrations of his conclusions.

—Among Prof. Bryce's independent remarks many are striking from their sagacity, or for the light they throw on too familiar features of our institutions. Thus, he says of the perpetual conflict between the national Executive and the Legislature: "Wherever the President is weak or unpopular, Congress seems to be gaining on the Executive Chief. When the latter is presumably strong, he can keep the Legislature at bay." The amendment of particular provisions of the State constitutions without recasting the whole instrument he happily designates by the Swiss term Referendum—an analogy which would escape most Americans. He says of our national cohesiveness: "Nor does the growth of the Union make the retention of its parts in one body more difficult. On the contrary, the United States is a smaller country now, when it stretches from the Bay of Fundy to the Gulf of California, with its sixty millions of people, than it was then [in 1834] with its thirteen millions, just as the civilized world was larger in the time of Herodotus that it is now," etc. Not to quote more, we will say that this paper of Prof. Bryce's leads one to expect great things from his work on American institutions, now on the eve of publication. We remark a slip in the statement that, when Tocqueville wrote, "Washington Irving was probably the only author whose name had reached Europe"—whereas Cooper was then, as he perhaps still is, the best known American man (or woman) of letters that this country has produced. Nor is it accurate to say that the protective tariff was "imposed in the interest of the Northern and Middle States." The tariff was imposed by the South, under the leadership of Clay, and New England adjusted herself to it, and clung to it after the South had repented of it.

—The concluding volumes of the new translation by Miss Isabel Hapgood of 'Les Misérables' of Victor Hugo have just been published (Thos. Y. Crowell & Co.). As in the handsome American reprint in French now in course of publication by William R. Jenkins, each of the five volumes in which the work appears contains one of the parts into which Victor Hugo divided his story. With their fine paper, clear print, and numerous illustrations, they make a very beautiful presentation of this most popular and most interesting of the author's stories. To expect of a translation of any of Victor Hugo's novels that it should be written in elegant and unstrained English would be unreasonably exacting in regard to a writer whose French is frequently as extravagant and unnatural as his manner of expressing his feelings and opinions is violent and abrupt. In this new translation, however, Miss Hapgood has performed the very difficult task of translating acceptably, and, at the same time, with the extreme of faithfulness, a work conceived as well as written in a manner the furthest removed from English ideals. In so excellent a piece of work it is to be regretted that the translator should have allowed herself to omit at least one long passage, the greater part of the chapter in the battle of Waterloo called "Cambronne." It is not worth while to discuss here the necessity or the literary morality of such omissions, but in this case Miss Hapgood pleads extenuating circumstances on the score of propriety, and the omission is at least honestly made and explained, unlike similar sins of translation by other writers, who, shirking such difficulties by means of paraphrases and omissions, give, in passages far less innocent than this, the impression of a thoroughly unobjectionable original, or, what is still worse, by mutilations and changes, an entirely misleading view of the author they misinterpret. But when a translator not only understands, but is able to render into another language, with such conscientious faithfulness as Miss Hapgood has here done, both the thought and the language of such an author as Victor Hugo, her translation deserves the highest praise.

—One of the consequences of Italian unity has naturally been the desire to concentrate learned and scientific institutions in the capital—not, indeed, by the destruction of those already existing in the provinces, but by remodelling old ones, or by creating new ones, imbued with a national rather than a local feeling. Such, for instance, is the new archæological institute which held its first sessions in Rome last winter, and such is the Istituto Storico Italiano, which has this summer held its third plenary session. It is composed of only fifteen members—four appointed by the Government, viz., Capasso, Correnti, Crispi, and Villari; six representatives of the deputations of Lombardy, Romagna, Venetia, Parma, Tuscany, and Modena—Cantù, Carducci, Lampertico, Linati, Tabarrini, and Vischi; and five sent by the existing Sicilian, Neapolitan, Lombard, Roman, and Ligurian historical societies—Amari, Bonghi, Calvi, Monaci, and Belgrano. The number of members was purposely made small, because the Institute is not an historical society in the ordinary acceptation of the term, but aims at giving greater development, unity, and system to the publication of the sources of national history, and especially at promoting those preparatory labors which exceed the limits and intentions as well as the means of the deputations and local historical societies. After full consideration of the field, the Institute decided on three things: to begin the publication, under the title of "Fonti per la Storia d'Italia," of documents not included in the collection of Muratori, or imperfectly and incompletely printed there; to start a catalogue of manuscript sources of Italian history, and to make a bibliography of everything relating to the national and municipal history of Italy printed up to 1884. Every publication is to be accompanied by a careful historical and critical preface, by notes, by a glossary, an index, and one or more facsimiles of the more important manuscripts, etc. A Bulletin of the Institute is also published, of which the second number has appeared, giving an account of its plan and intentions. The first publication, in an elegant octavo, is the 'Gesta di Federico I. in Italia,' edited by Ernesto Monaci, a heroic poem (Codex Vatican-Ottoboni 1463), composed at the Court of Barba-

rossa between 1162 and 1166. The next publication will be the 'Prochiron Legum' in the Greek text, with the Latin translation and notes of Francesco Brandileone, from the Vatican codex 845. This is to be followed by the 'Cronaca di Giovanni Sercambi' (1164-1424), and others equally important.

RECENT FRENCH FICTION.

A BOOK which has brought upon its author violent protests from many sides, and finally a duel, is 'Le Cavalier Miserey, 21e Chasseurs' (Paris: Charpentier; Boston: Schoenhof). M. Abel Hermant is young, for it was in 1884 that he went through with his year of *volontariat* in the Twelfth Regiment of light cavalry, stationed, like the imaginary Twenty-first, at Rouen. This year he used to advantage, for he produced from his observations at that time a picture of contemporary French garrison life which, for its sincerity at least, could not be surpassed. But decidedly it will not do to say or write everything, as M. Hermant has found. As a literary work, 'Le Cavalier Miserey' shows the highest powers of observation, and a mastery of style which will give its author a very high place among the writers of the naturalistic school. But, as M. Anatole France says, speaking seriously too, "S'il y a dans la société humaine, du consentement de tous, une chose sacrée, c'est l'armée." Now it was this "sacred thing" which M. Hermant was accused of touching with disrespect. In former days, for tearing away the veil from other sacred things he would have incurred the penalties of the time. Now the Colonel of the regiment depicted in this graphic novel has ordered an *auto de fe* of the noxious volume, and in the *ordre du jour* which he caused to be read to the assembled regiment he calls the author *infect drôle*, and says: "Every copy of 'Le Cavalier Miserey' found in the quarters shall be burnt on the dunghill, and every soldier found with it in his possession shall be punished by imprisonment."

In an answer to this, in which he addresses himself to the Minister of War for redress, the author says he cannot but approve this measure of military police "if the Colonel thought he could see in the 'Cavalier Miserey' a single phrase which was of a nature to diminish, in the eyes of the men, the prestige of their superiors." And really, after reading his book, it is hard to understand how any one could see in it an attack upon that "sacred thing," the army. On the contrary, the Twenty-first Chasseurs lives and moves in it as a body to be admired, and the poor, simple-minded Cavalier Miserey finds himself gradually but thoroughly permeated with an intense, blind affection for his regiment, towards which, in spite of his final degradation, he has a feeling akin to the love that is felt for a living being. There are pages worthy of Zola in the book, though the writer is never brutal in his expressions. The noble figure of the Colonel, Count of Vermandois, appears just enough to make the informed reader think of the Duc de Chartres, who, indeed, was the Colonel of the real Twelfth at Rouen, though there are no personal details that are not pure fiction. The death of the horse of Miserey in the court of the barracks is the most graphic episode of the work. The language of the men, with its violent ellipses, is made very natural, never falling into caricature, as is usual in military novels, nor is it as coarse as some naturalistic writers might have made it. In fine, M. Hermant is fully justified in writing in his preface: "J'essaie le premier d'appliquer une vision artiste et les procédés du roman d'analyse à l'étude sur nature du soldat."

Benjamin Constant, in his 'Journal Intime,' mentions a physician who asserted that he could tell, by looking at a man's face, the disease he was destined to die of. In company, when others were giving themselves up to pleasure, he spent his time in thinking—Such a person will die of a brain fever, such a one of apoplexy, such a one of consumption. "A very cheerful amusement, indeed," adds the cynical Constant. M. Octave Mirbeau, the author of 'Le Calvaire' (Paris: Ollendorff; Boston: Schoenhof), belongs to the same race as that contemplative physician. At least the work which has brought him into notice would seem to indicate this. 'Le Calvaire' is the history of the gradual loss of all moral vigor and power of resistance to evil in a human soul. The author shows as much talent as boldness in his treatment of a very disagreeable subject. It is the old story, told so often since the days of the Abbé Prévost, but told this time in quite another spirit and with very different ends in view. The reader is, indeed, reminded of Des Grieux by the hero, and the heroine recalls Manon Lescaut, but it is rather by contrast than resemblance in each case. There is no question about the comparative morality of the two presentations of a similar situation, any more than there is about the greater truth to nature of M. Mirbeau's Juliette over all the Manons and Marguerite Gautiers who have preceded her. The book is painful from beginning to end, and often repulsive, but it is written with vigor and earnestness, and the author commands the attention and to a certain degree the admiration of the reader throughout.

'Le Calvaire' is complete in itself; but as a sequel, 'La Rédemption,' is promised, it is perhaps premature to pass a final judgment upon the work, the first of any importance of a writer still young, who has drawn attention in the past as a brilliant journalist, with the gift (which he has retained) of bringing upon himself a great variety of enmities. His present work, besides shocking many persons by its title, which seemed sacrilegious, roused much anger upon another score, even before it was entirely completed. It was appearing in the *Nouvelle Revue* when the announcement was made that the part which was to have appeared could not be published in the *Revue* because the army was represented there in a way that the editors could not approve. A few fragments essential to the story were given with the following part, and in subsequent numbers the work went on to its conclusion, the omitted portion appearing only when the whole was published in a volume. This omitted portion, which is only an episode in the hero's life during the Franco-Prussian war, is by far the best thing in the volume. It recalls, though remotely, Stendhal in the 'Chartreuse de Parme,' and more nearly Tolstoi in his most desolating war scenes, while the whole volume seems written under the influence of Dostoyevsky.

M. J. H. Rosny, in 'Le Bilatéral' (Paris: Albert Savine; Boston: Schoenhof), introduces his readers into the world of anarchists, communards, collectivists, evolutionists, possibilists, and socialists of various shades. The personages of the story, not always very amiable specimens of their class, are shown in their homes, their wineshops, their noisy out-door demonstrations, and their disorderly public and private meetings, with a vividness and power surprising in so young a writer; for M. Rosny's only other volume, 'Nell Horn, de l'Armée de Salut,' was published only about a year ago. The hero of the present work, who is always ready to see two sides to every question (whence the name by which he is known, "le Bilatéral"), is a rather impossible character in the revolutionary circles in which he moves. He appears to mirror the contradictory feelings of the young and very impressible observer who presents to his readers in this work the best and highest aspirations of the strange revolutionary world which he has studied and reproduced with much sympathy and comprehension. Indeed, the great impersonal world of *la Révolte* fills up the background of many of the scenes, and sometimes, as in the commemorative demonstration of the *Semaine Sanglante* at the tomb of the *Fédérés* in the cemetery of Père Lachaise, or in the in-door meeting of the previous night, absorbs into itself the entire interest of the reader. There are few more thrilling passages in any contemporary writer than that in which the unreasoning outbreak at the cemetery is pictured in all its successive savage phases; or, in a different manner, the pathetically calm address to the assembled revolutionists of Mizel, the old communard, just released from long imprisonment. There is wonderful power and promise in these scenes, in spite of a certain studied obscurity of language, a constant use of uncommon or technical words or expressions made to do strange figurative service. The author is evidently inclined, when speaking in his own person, to fall into the worst faults of style of the impressionists, not to say the *décadents*. But when his characters speak, they do so with all the naturalistic bluntness and disregard of conventionalities of the personages of Zola or Huysmans. Unlike these writers, M. Rosny uses coarse and brutal expressions only incidentally, and, though he does not avoid them when occasion demands, he does not seek situations that would most naturally call them forth. He was therefore fully justified by the character of his writing in signing the protest, of which the *Nation* recently gave an account, against the latest work of Zola.

M. Jules Claretie, in 'Candidat' (Paris: Dentu; Boston: Schoenhof), has given a picture of French electioneering in which a world is represented less brutal but also less worthy of respect than that of 'Le Bilatéral.' M. Claretie is not a novelist of much force; but in his last book he has succeeded in giving a very vivid picture of a very ugly phase of modern democracy. His hero, the Commandant Verdier, is a thoroughly honest man, who allows himself to be thrust forward as a candidate for political position, although he has not the slightest inclination for political intrigues. The author has had every opportunity to see the methods of work in the Republican party, and his general moderation and urbanity of tone are such that we may trust him not to have overdrawn his picture, although he has taken the perfectly justifiable privilege, as a novelist, of depicting an exceptional case of French political manœuvring. There runs through the book a very interesting love story, of which the course is disturbed by the calumnies of the opponents of the candidate, who is throughout one of the most genial figures in modern French fiction. On the whole, 'Candidat' is a far better work than 'Monsieur le Ministre,' which brought M. Claretie's name into prominence as the first among the writers of what is called the *roman d'actualité*.

In 'Braves Gens' (Paris: Dreyfous; Boston: Schoenhof), M. Jean Richepin has evidently made an effort to write something which should not utterly frighten away those who still have certain *bourgeois* ideas of propriety and morality. He has succeeded in so far that those who are accustomed to modern French novels will rather wonder at the subdued tone of the reckless author of 'Les Blasphèmes.' It is true, he would have to make a still greater effort to succeed in portraying his *braves gens* without introducing material which *les honnêtes gens* would like not to find in a story. M. Richepin is gifted with a nature too exuberantly poetic to feel perfectly at his ease in scenes of common life. His

braves gens are far from being commonplace mortals. They are all artists in every fibre, like the author himself. We feel that his simple-hearted musician, Yves de Kergouet, and his extravagant friend Tombre, are equally exponents of the author's own inner thoughts and feelings, in their long and always interesting discussions on music, pantomime, and art in general. With many vivid flashes of gayety, and a poetic treatment of scenes that a naturalist would have made vulgar prose, the book is on the whole sad and depressing.

M. Armand Silvestre is not a very serious writer—scarcely serious enough to be allowed a place in polite literature; but on the score of propriety his last volume is almost unexceptionable—'Au Pays des Souvenirs' (Paris: Frinzine; Boston: Schoenhof). The words "almost unexceptionable" are, however, true only in a relative sense, for the author of 'Le Livre des Joyeusetés' and of 'Le Dessus du Panier' seems to take an urchin-like pleasure in disregarding certain common conventionalities. But his *joyeux propos* generally appear worse at the first glance than they really are, and often his freedom of speech is mere playfulness. Even the sub-title of the present volume, 'Mes maîtres et mes maîtresses,' is merely a trick to catch the eye. But with all due allowance for what he calls "la gaieté française," it will not do to vouch too strongly for the propriety of any of M. Armand Silvestre's books. In the present one he discourses very pleasantly about the persons of note whom he has known: Théophile Gautier, Arsène Houssaye, Thérésa, and others. His first chapter is about George Sand, whom he remembers with that grateful warmth of affection which is common to all the younger generation of writers who knew her at Nohant in her serene and active old age. Indeed, the remembrance of this gifted and genial woman recurs again and again in the pages of M. Armand Silvestre. In "Les Villes lointaines" he talks of Toulouse, Antwerp, the Hague, etc., in the lyrical and picturesque fashion affected by the admirers and followers of Théophile Gautier. The volume closes with a short series of "Intimités," in which the rather too free story-teller reappears, to be wholly himself again as he reaches the last pages of his book.

Thomas Bewick. His Life and Times. By Robert Robinson. Newcastle-on-Tyne, Eng.: R. Robinson. 1887.

THE local cult of Bewick—the honoring of the prophet of modern wood-engraving even in his own birthplace—is of long standing and was never more flourishing than now. We owe to it not only his townsman's impulse to build this latest monument to the artist and to the man, but that access to collections which gives a peculiar value to Mr. Robinson's labor of love. Upwards of a dozen letters of Bewick to his brother, to booksellers, publishers, authors, and friends, are here published for the first time—one in facsimile; and the original blocks procured for this work and beautifully printed are such as will be highly prized by collectors of modest means, who can never hope to own the original impressions. Mr. Robinson, again, has dealt in all the articles relating to Bewick which now command such high prices—buying sometimes for himself and sometimes for others. But, above all, he is the first admirer of their father who has had the intimate acquaintance of the daughters of Bewick for a quarter century, as a qualification for the task which he has now accomplished so creditably.

A previous biographer, Mr. D. C. Thomson, called his meritorious performance a "Life and Works." Mr. Robinson's "Life and *Times*" exactly marks the distinction at which he aimed, and which will probably always belong to his memoir. It implies a purposed freedom of treatment, a neighborhood talk about the man and his environment, moving steadily forward with method and reason, and yet discursive at will; unfettered by chapters or table of contents (atoning for these with a good index); sometimes separating matters that might better have been grouped and coördinated; drawing constantly on personal experience without obtruding the author's personality. This natural, unaffected gossip and narrative is readable throughout, and is in singular sympathy with Bewick's well-known character. One feels in Mr. Robinson the ardent admirer and devotee, who, if a little excessive or undiscriminating in his art judgments, is not blind to the defects in Bewick's temperament, noticing the disputes which he might have avoided had he possessed less spirit, bluntness, and impulsiveness, and giving to the light correspondence which caused temporary misunderstandings with or alienation from his friends.

Mr. Robinson's general method has been to follow Bewick's career in the light and with the aid of his autobiography, which is occasionally quoted from at length. This story he supplements from divers sources, and takes up as he proceeds the men associated with Bewick in one way or another, even going as far back as 1716, to the beheaded Earl of Derwentwater, whose legend formed part of that border-warfare lore on which the boy was brought up. He gives a copper-plate engraving of this nobleman, and so he does of many a local celebrity, like Emerson Charnley, the publisher, or like Thomas Spence, the radical who undertook Bewick's conversion by cudgel, and repented of it; and in other cases he gives us on wood the faces of such formative friends as the Rev. Christopher Gregson (after Bewick), the bookbinder Gilbert Gray, etc. Then, still in passing, he reviews the sons of Newcastle who have won a name in art. Bewick disposed of, his brother John is presented in a very agreeable light, and an account of Robert Elliot Bewick, the less gifted son of Thomas, follows. Then the pupils of Bewick are taken up in order, and more light is thrown on the two Johnsons, on Nesbit, and Clennell, while Harvey and John Jackson are not overlooked. A list of Bewick portraits, and a catalogue of the principal works illustrated by Thomas and John Bewick, close the book, save that we have the tale of the Howdy narrated in that Northumberland dialect of which Bewick was a master, and for which he was cited as a *graphic* authority in Brockett's 'Glossary of North Country Words.'

The frontispiece of the volume is a careful wood-engraving after Good's full-length portrait of Bewick, the last for which he sat. In words we are shown this sturdy, hard-featured, pock-marked man, covering his bald crown (scalded in early youth) with a brown silk cap, for ever whistling at his work—at night replacing the customary engraver's lamp with two double-wicked candles. We see him at his home on Circus Lane or at Gateshead, in his early walks with his girls roused from their beds, at the Blue Bell Inn with his dog, who gives the signal when it is time to leave the little club that gathers there, or in the genial company of the Falstaffian Stephen Kemble, manager of the Theatre Royal. With a good ear for music, but one song is remembered of him, and he joined but once in the social dance. The inedited letters manifest his interest in his brother's welfare, in the fate of artist friends, like the unhappy Summerfield (engraver of Murphy's miniature of Bewick), in the preservation of the salmon ways in the Tyne, in the prevention of bank-note forgery, etc. Most of them naturally relate to his family and works, and the one dated March 21, 1786, proves that the 'British Birds' was in contemplation before the 'Quadrupeds' was off his hands. Freshest and most valuable of all are the extracts from Bewick's office copy of the 'Birds' for use in printing the sixth edition (1826)—the last which he supervised himself—and therefore containing marginal instructions to the pressmen in regard to the proper management of the cuts. In these we have a criterion for any edition or any copy of the 'Birds.' Mr. Robinson also gives Bewick's interpretation of sundry tail-pieces, and endeavors to explain—we confess, not clearly to our comprehension—the double printing of the vignette of a horseman riding in a pelting rain. He uses Miss Jane Bewick's caustic annotations on Charnley's reprobated reëdition of the 'Select Fables' of 1784; tells us about the fortunes of the stuffed bird which was the original model for Bewick's drawing of the land-rail, and that the last bird drawn and engraved by him was the white-throated nightingale, as the funeral procession from Cherryburn was his last and ominous engraving.

Besides the dialect tale of the Howdy, Mr. Robinson reprints part of the preface to the 1826 edition of the 'Birds' (not found in all copies), and the finely simple, pathetic tract to accompany the cut—in itself designed to be a tract for the prevention of cruelty to animals—the old horse "Waiting for Death." This cut, large, pleasing to nobody, because, if not to be called unfinished, it was incomplete without a companion block or blocks complementary to one another as in color printing, is here printed from the original block. So is the Chillingham Wild Bull, of which we may compare the impression with the much inferior one in Thomson's Life (after a proof with the border subsequently discarded). These two are the great illustrative features of the work, but other smaller cuts are to be numbered by the hundred, taken principally from 'Tales for Youth,' the 'Looking-Glass for the Mind,' the 'History of a Fly,' 'The Hive,' Somervile's 'Chase,' and from the Goldsmith. John Bewick and Clennell are thus largely represented along with their master. Jackson's engravings of Tynemouth Priory and other local antiquities mingle with specimens of the work of the other pupils already enumerated.

Mr. Robinson makes a charming story of his frequent visits to the Gateshead home of Bewick's daughters. He minutely describes its interior, filled with ancestral relics, amid which it was always in order and, indeed, inevitable to converse of the revered parent. It is a pity Mr. Robinson did not insert their likenesses—typical, fine-looking Englishwomen still, even in the nineties; Jane having her father's strength of lineament and of character; Isabella recalling her mother (we may assume), and more retiring. These interesting women Mr. Robinson confirmed in their half intention to publish Bewick's autobiography, a service for which all lovers of English literature are indebted and should be thankful to him—Americans among the rest, only two of whom, by the way, are on his subscription list. Fortunately he did not persuade them to omit their father's liberal religious and political speculations, which make so large a part of the man. This autobiography deserves to be reprinted as sumptuously as is the present superb volume, and to be illustrated by Bewick himself—*i. e.*, with all those vignettes which introduce his own person (like the Snow-man, or Tracking the Hare in the Snow), or the localities associated with him, or exhibit his boyish sports and experiences, or the manners of the time, or are distinctly alluded to in the autobiography, and with the various portraits extant of him and of his friends. Such a book, undertaken with knowledge, taste, and enthusiasm, would be the fitting complement of Thomson's, Dobson's, and the present biographies, and would be sure to meet with

a cordial welcome; but the compiler would have to ask Mr. Robinson's permission to use a good deal of the fresh material in his indispensable 'Life and Times.'

The Isles of the Princes, or the Pleasures of Prinkipo. By Samuel S. Cox. G. P. Putnam's Sons. 1887.

THE credit which has been so ingenuously accorded to our Government by a foreign critic, of sending literary representatives to the various European Governments, seems to have a specious justification in the legation to Constantinople, since each minister there appears to be taken with the itch for writing—partly, it may be, in recognition of the utter uselessness of the legation for all and any good purpose, except to give some scholar leisure to study, and partly in a disposition to follow (thus far, however, *haud passibus æquis*) our long-time admirable and revered Minister to the Sultan, George P. Marsh. But if the Department of State means to commit the country to the consequences to its literary reputation of the production of such books as 'The Isles of the Princes,' the legation may be abolished at once. The descent in the scale of literary merit from Marsh to Lew Wallace, and thence to "Sunset" Cox, can be continued no further without coming to yellow covers or Sunday *World* supplements.

The most wearisome feature of American literature at this present day is its tendency to unrestrained and unrelieved joke-making, as if Artemus Ward, Mark Twain, and Petroleum Nasby had started a stampede in the field of letters which was becoming a wild and blind race of badinage, likely to carry with it the entire literary generation. American humor is a commodity of which a little, like Cayenne pepper, goes a long way when it is good, but which, when a book is filled with it, in ninety-nine cases out of a hundred becomes a bore; for even Attic salt is bad diet. Mr. Cox is not "the hundredth man." As literature, his book is bad form and flimsy substance. The Isles of the Princes are the famous islands which lie off the Bosphorus, and are the favorite summer resort of the wealthy and diplomatic world of Constantinople. The book, nominally devoted to them, embraces all the Levant (which Mr. Cox, like most green American travellers, persists in calling the *Orient*), rakes together gossip about the subject proper, the history and topography of the suburbs of Constantinople, Greek and Roman history, Carthage, Bithynia, Hannibal, the San Stefano and Clayton-Bulwer treaties, Broussa and Asia Minor generally, and as much irrelevant matter as was needed to make up the requisite number of pages. Evidently Mr. Cox has no sympathy with the pathetic complaint of Agassiz, that he "had no time to write a *small* book," for he might have left out three-fourths of his writing and made a better book, and possibly even a tolerable book, since he would have had time to pay some attention not only to style, but to accuracy of details. He might, for one thing, have avoided the almost invariable misspelling or miswriting Greek words, as, for instance, "*kale mare*" for *kal' emeros* (good day), and "*kale spero*" for *kal' esperos* (good night), not risking the Greek letters, though among other attempts he writes elsewhere πῶιος τὸ ἐξεῦζε (*sic*), which shows that he knows nothing of modern Greek, even if he had not taken the pains to inform us that the cultivated Greeks of Athens do not understand the language of the country people—which is about as sensible as saying that Bostonians do not understand the talk of the people in Vermont. Of the author's style and humor the following is a favorable sample; it occurs in a digression on petroleum:

> It is generally supposed that Job was a rich man. Perhaps many of his boils and broils came out of the fact that he was an opulent liver. Considering the land of Uz *as we now find it*, one would suppose there was very little wealth in it. We have not a very clear idea of it. Job must have worked several gangs of slaves on fruitful ground in the desert. He had some connection with the petroleum industry of the Euphrates, although it has never been thoroughly acknowledged. Job acquired his large fortune from the uncertain element of the petroleum wells. Sometimes they gave him abundance; at other times, like the wells around Pittsburgh, they gave him nothing. There can be little doubt that when his wells caught fire it spread fire in the prairie, and not only destroyed houses and flocks and children, but reduced Job to a considerable amount of profanity and scalding sores."

Imagine 381 pages of miscellaneous, questionable, and incongruous information jerked at you in that style, or in this: "Open a page of Gibbon. Read the story of these emperors. Select one whom you may call a sample. Take Manuel. He was a Comnenus." In speaking of the change from Greek to Turkish rule, he says: "In the old *Arabic legislation*, municipal rule was not the exception. The Ottoman did not greatly change the general polity and administration of affairs when Turkey was conquered from the Greeks. Both systems were decentralizing . . . One of the changeless things in this country is the fixed fact that, while the Greek emperors ruled, there were the same capitulations or privileges extended by the Greeks to the Turks as the Turks now extend to the Greeks and Franks"! He tells us that the cavass "from the Albanian Mountains" is a native of Croatia, and "is in the old Greek costume," and then gives us a photograph of him, which proves to be a Montenegrin in full national dress, no wise resembling "old Greek" or Albanian. He speaks of the "bamia" as a novelty to us, not knowing that it is the common gombo. He assures us that "still the classic books generally regard Fano as the old Ogygia." He says "St. Mark's at Venice is but a copy of St. Sophia, almost its original"! "The latter was spoiled to decorate the former." Further, that "'Ouida' *lives and writes in Venice*, and receives much of her weird and luxurious fancies out of its very stones." "In spite of all efforts to save the splendid pile of St. Mark's, it is cracked irremediably. *The lagoons, like time, are slowly hiding its beauties.*" "The very crozier of the Patriarch, with its eagle and serpent, is copied from the *baton of Jove*"! "There are taxes, *the old octroi*, levied here upon donkeys and carriages," etc. Mr. Cox follows his immediate predecessor in his admiration of the Sultan, whom he considers "wise beyond most of his subjects," and, like Gen. Wallace, he is anxious that the world should know their friendship, for "when we were visiting Egypt in February, 1886, I received a note from the Princess to call at her palace. She desired to prefer a request of the Sultan (*sic*), whom she knew to be my friend."

The want of ordinary care in making up the book is comically shown in a description of one of the views the author finds:

> "We pass round point after point of Halki, until between Halki and Antigone there opens a vista scarcely credible in its loveliness. Chatok-Dagh, the highest mountain of the mainland of Asia, *is in our rear*. . . . The shore line and mountain make a landscape over which and through which there hangs an interpenetrating lustre and distant unveiling which would make Bierstadt wild with artistic enthusiasm."

We are, as a general thing, accustomed to find the views we go to see before us; but when they are accompanied by interpenetrating lustre and overhung by distant unveiling, we do not know exactly how to take them. We are told, which is the only apology we can conceive of for the composition of this *omnium gatherum*, that "I am forbidden by my wife and other powers to write for publication on political and social themes pertinent to this capital of diplomacy [which does not prevent a chapter of scandal at the expense of Bulwer]. Having, however, the *cacoethes* equal to any Scotchman, I must be writing something at odd moments." We have only to add that the illustrations are so bad that one has no cause to regret their being put in this particular volume.

Palestine in the Time of Christ. By Edmond Stapfer, D.D., Professor in the Protestant Theological Faculty of Paris. Translated by Annie Harwood Holmden. A. C. Armstrong & Son. Pp. xii., 527.

THOMAS ERSKINE used to tell a story about the rise of the modern critical spirit. Miss Dundas, he said, was trying to interest a poor woman, whom she was calling upon, in the narrative of her father's, Sir David, recent visit to Palestine. The result was to give a great shock to the devout Scotchwoman, who at last exclaimed, with a gasp of incredulity: "Ye'll no' tell me that there's such a place on earth as Jerusalem!" The good creature was as much startled as if she had been told of a meeting with the angel Gabriel. To her mind any place or person mentioned in the Bible took on at once an altogether supernatural and unearthly character. It is easy to say that all this has been changed, and that great attention is now given by religious teachers to the setting of the Bible story; yet it remains true that, in the popular mind at least, Hebrew literature is thought of as let down, like the sheet of Peter's vision, bodily out of heaven. That prophet and apostle were of flesh and blood, and walked upon actual ground, is now pretty well settled; even that a study of Oriental customs and the geography of Palestine helps to explain the Scriptures, is commonly admitted; but that a broader search after the antecedents of Jewish and Christian religious ideas—an analysis, though on no larger scale than that of Prof. Stapfer's book, of the social and religious life of the Jews, with an eye to the resulting influence on the teachings of Christ and the apostles—is something foreign as yet to the general mind, may be inferred from the way the general mind will revolt from this conclusion of the author's: "Upon many important questions Jesus shared the views of His contemporaries. . . . He owed much to the Pharisees. He adopted their doctrine of Providence and of the resurrection of the body. . . . Jesus borrowed from the Essenes. . . . The exegesis adopted by Him is sometimes the same as that of His contemporaries. He certainly shared the current ideas of His nation in reference to demons and evil spirits. This must be obvious to any one who reads the Gospels with unbiassed eyes. In a word, He was a Jew all His life" (pp. 489–90). Yet this is only the guarded inference of one who has just gone over, as carefully as possible, all the facts in the case, with no prejudice except in favor of Christianity. In other words, just as the Scotchwoman of Erskine's story had to substitute a Jerusalem of stone and brick for her city in the clouds, so will the attentive reader of such a book as the one before us see that it puts the natural in many places where the supernatural has long held undisputed possession.

From what we have said, the nature of this latest fruit of Prof. Stapfer's Talmudic studies may be gathered. In a pleasant and popular style, making no display of learning, he sets forth the facts in regard to the social and religious life of the Jews of the time of Christ, holding himself faithfully to the promise of his preface to confine himself to a "statement of facts compiled and collated with all the exactness of which I was capable, leaving it to the reader to draw the conclusions which force themselves upon

every candid and unprejudiced mind." His sole aim was to fill the gap which he found in French literature in the absence of a thorough contemporary history of the New Testament. His critical position is certainly conservative as compared with that of many Germans, being much less advanced than that of Keim, for example. He admits errors and irreconcilable discrepancies in the Gospels, and would appear to believe in no miracle except that of the character of Christ. While we have books in English that cover the same ground, there would still seem to be a place for a work like this one, at once scientific and popular. It has not the range of Schürer (accessible in English since two years ago), but seems to us better fitted for general reading. The translation, barring some minor slips, appears to be thoroughly well done.

The Teaching of Geography: Suggestions regarding principles and methods for the use of teachers. By Archibald Geikie, Ph.D. Macmillan & Co. 1887. 12mo, pp. 202.

GEOGRAPHY is for the most part taught in our American schools in such a dull and perfunctory way that a very general impression of its uselessness as a school study has been gaining ground. And yet there is no study more capable of being made at once useful and intensely interesting, if only teachers would cease to teach the book, and undertake to teach their pupils about the *earth*. In this, as in every other department, nothing can take the place of a gift for teaching, whether natural or acquired; and the best method and most fertile suggestions will fail with an incapable instructor. Any one, however, who has an ambition to teach geography well, will find it to his advantage to study Dr. Geikie's admirable little book, which the best equipped and most experienced among us cannot read without profit.

NEW BOOKS.

LOUISE DE KEROUALLE,

Duchess of Portsmouth,

In the Court of Charles II.; or, How the Duke of Richmond Gained His Pension. Compiled from State Papers in the Archives of the French Foreign Office, by H. Forneron. With a Preface by Mrs. G. M. Crawford of Paris. With 6 engraved Portraits of Court Beauties from the Paintings at Hampton Court Palace, 8vo, cloth extra, $3.50.

"An interesting record of a very strange and humiliating period in English history. Even now, when two centuries are past, one burns with anger and shame to read how the French king kept his diplomacy steadily at work to secure his aim."—*Pall Mall Gazette.*

"The Dukes of Richmond have had a big haul. In 1676 Charles II. granted to the Duke of Richmond and his heirs for ever a duty of one shilling per chaldron on all coals exported from the Tyne and consumed in England. In 1799 this was commuted for a pension of £29,000, chargeable on the Consolidated Fund. Later this annuity was funded or redeemed for £633,333 invested in Consols, and afterwards sold out and invested in land settled upon the Duke and his heirs."—*Scotsman, on "Perpetual Pension Scandals."*

New Work by the Author of 'How to be Happy though Married.'

FAINT, YET PURSUING,

By the Rev. E. J. Hardy.

Contents—Faint, yet pursuing—Thorns in the flesh—The perfect work of patience—A refuge for the distressed—Mistakes about happiness—A wise choice—The day of salvation—Sisera no match for the stars—The Babylonian captivity—God's method of punishment—Our Father's chastisement—Christian friendship—Thoughts for Advent—Christmas thoughts—The divine arithmetic of life—Excuses—Secret faults—"Is it not a little one?"—Forewarned, forearmed—No waste—Good Friday and bad Friday—The full, perfect and sufficient sacrifice—Volunteer for God—The Lord and the giver of life—Worldliness—Bid Christ to your wedding—Old Testament heroes—Are Christian principles practical?—Christian Socialism—Seeing not necessarily believing.

Sq. Imp. 16mo, cloth, $1.75.

POSTHUMOUS HUMANITY:

A Study of Phantoms.

By Adolphe D'Assier, Member of the Bordeaux Academy of Sciences. Translated and annotated by Henry S. Olcott, President of the Theosophical Society. To which is added an Appendix showing the popular beliefs current in India respecting the post-mortem vicissitudes of the human entity.

Contents: Facts establishing the existence of the posthumous personality in man—Its various modes of manifestation—Facts establishing the existence of a second personality in the living man—Its various modes of manifestation—Facts establishing the existence of the personality in animals, and concerning a posthumous animality—Fluidic form of vegetables—Fluidic form of gross bodies—Character of the posthumous being—Its physical constitution—Its aversion to light—Its reservoir of living force—Its ballistic—The nervous fluid—Electric animals—Electric persons—Electric plants—The mesmeric ether and the personality which it endangers—The somnambule—The sleep-talker—The seer—The turning-table—The talking table—The medium—Miracles of the ecstatics—Prodigy of magic—The incubus—The obsessing spirit—Causes of the rarity of the living phantom—Causes of the rarity of the trans-sepulchral phantom—Resemblance of the spiritistic phenomena to the phenomena of the posthumous order—Lycanthropy—Glance at the fauna of the shades—Their preoccupations—How they prolong their existence—The posthumous vampire.

In crown 8vo, cloth, $3.00.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

JUST PUBLISHED:

History of the Christian Church.

By GEORGE P. FISHER, D.D., LL.D., Professor of Ecclesiastical History in Yale University. 8vo, with numerous maps, $3.50.

Prof. Fisher here presents in a single volume a complete history of the Christian Church, fully exhibiting also the relations of the history of Christianity and of the Church to contemporaneous secular history, and giving a sufficiently complete survey of the history of theological doctrine. The work is designed not for students only, but for intelligent readers generally, being in the best sense popular as well as scholarly and original.

The Story of the Psalms.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

In writing the story of some of the Psalms the desire of Dr. Van Dyke has been to bring these ancient poems into close connection with the lives and experiences of the men who wrote them. This method of connecting the Psalms with their authors is new, and the subject has been treated in a fresh and suggestive manner.

AN ILLUSTRATED EDITION.

Kidnapped.

Being the Adventures of David Balfour in the year 1751. By ROBERT LOUIS STEVENSON. A New and Illustrated Edition. 12mo, cloth, $1.25.

Mr. Stevenson's powerful and highly successful story acquires additional interest by reason of the artist's spirited and sympathetic illustrations in this new edition.

"Mr. Stevenson has never appeared to greater advantage than in 'Kidnapped.' . . . No better book of its kind than these 'Memoirs of the Adventures of David Balfour' has ever been written."—*The Nation.*

BY THE SAME AUTHOR.

New Arabian Nights. The Dynamiter.

More New Arabian Nights. (*With Mrs. Stevenson.*) Each 1 vol., 12mo, cloth, $1.00; paper, 30 cents.

Messrs. Charles Scribner's Sons, having arranged with the author and the former publishers for the publication of these well-known books, now offer to the public new editions, uniform, in cloth and paper, with their other books by Mr. Stevenson. Purchasers should remember that these are the only editions from the sale of which the author receives a royalty.

The American Girl's Handy Book.

How to Amuse Yourself and Others. By LINA and ADELIA B. BEARD. With nearly 500 Illustrations by the Authors. Square 8vo, $3.

Full of information upon the thousand and one things that interest every girl, this volume forms a notable companion to the popular book for boys by Daniel C. Beard, brother of the present authors. Everything that can be imagined to tell girls simply and clearly about their sports, games, winter afternoon and evening work, etc., can be found here in this helpful and entertaining volume.

*** These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

The Nation.

NEW YORK, THURSDAY, OCTOBER 27, 1887.

The Week.

THE President's speech at Montgomery, Ala., contained one passage of great significance. After declaring that "there is and should be an insistence upon a strict adherence to the settlement which has been made of disputed questions and upon an unreserved acceptance of such settlement," and expressing his firm belief that "there is American fairness enough abroad in the land to insure proper and substantial recognition of the good faith which you have exhibited," Mr. Cleveland proceeded: "We know that you still have problems to solve involving considerations concerning you alone; questions beyond the reach of Federal laws or interference, and with which no one but you should deal. I have no fear that you will fail to do your manful duty in these matters; but may I not, in extension of the thought which I have before suggested, say to you that the educational advantages and care which may be accorded to every class of your citizens have a relation to the general character of the entire country, as intimate and potential as your productions and the development of your mineral resources have to its material prosperity?" This is the same thing as to say that the question what "educational advantages" the State of Alabama shall provide is one of the "questions beyond the reach of Federal laws or interference," and with which no one but Alabamians should deal; in other words, that the Federal Government has no right to mix in State schools, as is proposed by the Blair bill. The President's veto of the Texas Seed Bill last winter can hardly have left any room for doubt that he would interpose his negative to the educational subsidy scheme if it should ever reach him; but if any such doubt remained, it must be removed by this speech.

EX-SENATOR THURMAN of Ohio has just made a speech which causes one more than ever to regret that so good a man should have been driven into retirement by the corrupt gang which seized control of the Democratic organization in his State a few years ago. The most striking passage of the speech was that in which he gave his opinion of Mr. Cleveland. "I have seen a good many Presidents in my long life," he said. "I have known several of them personally, and I have read the history of the Administration of them all. I have seen and I know—and I think I know him full well—Grover Cleveland, our President of the United States; and on my honor as a man who is bound to tell you the truth, if ever a man was bound to tell the truth to his fellow-man, I don't believe that a more honest, braver, truer man ever filled the Presidential chair of the United States. He is more than that; he is a man of far more ability than people who don't know him may suppose. He has that supreme faculty, the best of faculties, which we designate by the term 'common sense.' If he is not a level-headed, common-sense, honest man, then I am no judge of men." Mr. Thurman expressed his satisfaction at the evidence that Mr. Cleveland is growing every day in the estimation of the American people, and declared his firm belief that "when his four years are at an end, they will say to him, 'You have done well when we put such and such trusts in your hands. We have tried you for four years and found you will do well, and now you may take your seat for another four years.'" The Republican organs have been expressing great curiosity, ever since Mr. Cleveland was elected, as to the opinion which was held of this upstart in public life by a venerable statesman like Mr. Thurman, and they will of course be glad to present it to their readers now that he has expressed it.

In Mr. Thurman's speech many other wise sayings are found. The best of all, perhaps, is the burst of indignation in which he denounces the idea that the public should be required to pay more money into the Treasury in the way of taxes than is needed for the purposes of an economical Government. "It is monstrous," he said, "it is simply monstrous. I have said that everybody is bound to contribute to the support of the Government; but it is monstrous to tax him $100,000,000 a year in order to get money and lay it up in the Treasury, which the Government doesn't need at all, which the Government can't make any honest use of; and there never was anything in the world more corrupting than this accumulation of surplus money in that way. It leads to all manner of corrupt schemes of plunder in Congress, and if they go on much longer, there will be no such thing as an honest tax bill or an honest appropriation bill that will pass that body." Contrast this with Senator Frye's plan for subsidizing steamships, multiplying pensions, and digging a canal in Nicaragua expressly for the purpose of spending money that cannot be used otherwise. Is it possible that the American people are willing to be corrupted with their own money — to pay taxes all summer in order to scramble for the proceeds in Congress all winter? This is the kind of Socialism that Senator Frye approves, but if he imagines that there is any stopping place when once the principle that he advocates is accepted as part of American public policy, he is a very near-sighted statesman. Behind Mr. Frye stalks Mr. Shevitch and all the following of Karl Marx.

The misfortune which has overtaken Mr. Haskell, the young editor of the Minneapolis *Tribune* who made the coarse attack on Mrs. Cleveland the other day, for which he has had to atone by a humiliating apology, furnishes a striking illustration of the danger of getting into journalism too young. There is not one young man in a thousand whose head is strong enough, or judgment ripe enough, to be allowed to attack and criticise everybody he pleases in the editorial columns of a newspaper. It is a liberty which makes him drunk, and too often ruins both intellect and character. For instance, Mr. Haskell standing alone could not possibly have said anything about any man, woman, or child which would fill a whole community with indignation. But when he made some foolish remarks about Mrs. Cleveland editorially in a newspaper, it almost caused a riot, and imposed on him the necessity of making a public atonement. Any position in which a man can, by a few words, kick up such a row as this, is, of course, very attractive to youths who dislike obscurity and love "power"; and hundreds every year fall victims to the temptation.

The *State Register* of Des Moines, Iowa, publishes a circular sent out by the Democratic Committee of that State to Federal office-holders, suggesting that they make "voluntary contributions" to the expenses of the political campaign now in progress, and indicating about how much would be a fair contribution, considering the emoluments of the offices held by them respectively. The amounts named are quite moderate. "Presidential postmasters," they say, "are generally contributing from $25 to $50; fourth-class postmasters, from $2 to $25; railway postal clerks, $10 to $15; members of pension examining boards, $10 to $15, and other Federal office-holders in proportion to the amount of salary received as compared with the officers named above." We presume that the *State Register* is secretly opposed to the levying of assessments on office-holders, but, so far as its comments on the circular go, they only show that it considers Mr. Cleveland's Administration inconsistent in allowing the Democratic Committee of Iowa to send out such a circular. It is much to be regretted that the President has no means of reaching this bad committee. It is much to be regretted, also, that the Civil-Service Act does not contain a clause prohibiting the payment of money by Federal officers, clerks, and employees for political purposes. It is especially to be regretted that the Republican Senators voted unanimously against such a clause while the measure was pending (December 24, 1882), the Democrats voting unanimously in favor of it. Very likely, if the vote were to be taken now, the two parties would divide differently upon it.

The reason why the Democrats voted for this amendment was, that they had no office-holders at that time to call upon for political contributions. The reason why the Republicans voted the other way was, that they had all the office-holders, and they expected to get a great deal of money out of them for campaign purposes, as they had been in the habit of doing, and as they continued to do. The Civil-Service Act passed without this desirable clause. It prohibits every person in the service of the Government from soliciting or receiving any money from any other

person in the service for any political purpose whatever. It also prohibits any person, whether in the service of the Government or not, from soliciting or receiving any money from any person in the service, "in any room or building occupied in the discharge of official duties." Here the prohibitions stop. It is not in violation of the law for members of committees, not themselves office-holders, to solicit money from those holding offices, except in public buildings or rooms. Nor is it unlawful for the office-holders to pay, although it ought to be made so, and would have been if the Slater amendment had not been voted down by the Republicans.

The Baltimore *Sun* recently stated that "Steve" Elkins had expressed himself in favor of the Gorman ring; and such action appeared so consonant with all that was known of his political history that we accepted the *Sun's* statement as correct, and reproduced it in these columns. We are assured, however, that there is no foundation for the charge, and that, in point of fact, Mr. Elkins opposes the ring.

Before Alaska and the Aleutian islands came into our possession by purchase from Russia, the Government of the latter country laid claim to exclusive jurisdiction of the waters of Behring Sea lying to the northward of the islands, all the way from the Asiatic to the American coast. The claim was not acknowledged by our Government, and a communication was made by John Quincy Adams, as Secretary of State, to our Minister at St. Petersburg, expressing surprise that such exclusive jurisdiction should be asserted, since Behring Sea was approached from the south by open spaces 800 or 900 miles in width. The Russian Government replied that while the right of exclusive jurisdiction was still affirmed by Russia, the exercise of it would not be insisted on. The whale fishery in these waters was at that time of considerable importance to us, and it is made plain by the correspondence that if any practical interference with the rights of our whalers had been attempted by Russia, there would have been active resistance on our side. No steps being taken to enforce the Russian pretension, but, on the contrary, an assurance being given that none would be taken, the matter was allowed to drop. It would have been idle for us to pursue an abstract right which had no practical end. If our whalers were not molested, Russia might entertain such views respecting the principles of *mare clausum* as suited her.

After we became possessed of the Aleutian Islands, an exclusive right to take fur-bearing seals in those lands and waters was granted to the Alaska Commercial Company, in consideration of the payment of a certain sum of money proportioned to the catch. The object of this grant was to regulate the catch so that the animals should not be exterminated, and to provide for some part of the expense of governing the country. But the effect was to create a monopoly of seal fishing. Whether the object could be gained without producing this effect is not clear, but it is quite certain that the monopoly would not be granted now without some better testimony of its necessity than was given at the time when it was established. The seal fishery has long engaged the attention of the inhabitants of British Columbia, whose territory touches Alaska on the parallel of 54° 40′. They claim the same rights in Behring Sea that we claimed for our whalers when Russia asserted her exclusive jurisdiction. Whatever our rights were then, theirs are now. Whatever Russia's rights were then, ours are now. We do not look for any prolonged or serious dispute over this question. The public law of the world is pretty well settled that the jurisdiction of the mainland does not extend beyond a marine league of the shore. This is subject to modification by the "headland" doctrine, which is still in an inchoate condition. The doctrine of *mare clausum* is a branch of the headland doctrine, or closely allied to it. It is for our interest to oppose the extension of the *mare clausum* theory as much as possible, for the reason that we have no waters to which it could be applied except Behring Sea, and only one-half of that, while other nations with extensive colonial possessions have many such. We are not interested to establish a principle that may fence us out from any part of the waters of the globe. If it be replied that only by the application of this principle can the fur seal be preserved in the neighborhood of Alaska, the answer is that we have not been appointed to preserve the fur seal otherwise than in accordance with the law of nations, whatever that may be.

Senator Frye, having come back from a trip in Europe, is prepared, from what he says he saw there of the effects of free trade, to hold on firmly to the surplus. He has been telling a protectionist gathering at the Hotel Vendome in Boston what he would do with it if he had his way. He would give $10,000,000 a year in subsidies to American ships, or, in other words, towards hiring people to engage in the business of navigation; $10,000,000 more to educating people who are now not getting an education; and he would put 500,000 men at work digging the Nicaragua Canal. To discuss the uses to which people like Mr. Frye would put the surplus, would be a great waste of time and space. They do not really care what use it is put to or how much mischief it causes, and would advocate any use of it which they thought likely to be adopted, because their great aim is to keep up the tariff. Probably a good many of them are rather sorry that there is a surplus, but the fact that there is one does not cow any of them. The Boston *Advertiser*, which is now also fighting for the surplus, denied last week that "the Republican party was committed to large Government expenditures in order thus to be rid of the surplus, and so easily put out of the way the problem of reduction." But this is not Senator Frye's position. He is distinctly in favor of large Government expenditures in order to be rid of the surplus. In other words, he is in favor of taxation in order to make a surplus—an absurdity which is not wholly new in the annals of political folly. In 1837, when it was found that the fourth instalment of the surplus, which was to be distributed among the States, was not forthcoming, and that the Treasury was threatened with a deficit, there were loud demands that the amount necessary to make the "surplus" hold out should be borrowed. There seems in matters of finance to be nothing in the way of oddity of which the human mind is not capable.

Mr. Warner Miller, ex-Senator of New York, proposes to raise the tariff to the point of prohibition on certain articles; in other words, to reduce the revenue by increasing the taxes. This plan was developed in his speech at the Republican ratification meeting at the Cooper Institute on Saturday evening. "Increase the duty on iron goods and woollen goods 25 per cent.," said he, "and you will decrease the imports by more than 50 per cent., and set hundreds of thousands of laboring men at work upon their production at home." The duty on iron goods and woollen goods at the present time ranges from 30 to 116 per cent., and is a tax falling mainly upon the farmers and planters of the United States, whose pay for their exported articles, reaching them in the form of imported articles, is diminished by the amount of the tax. Mr. Miller would have this tax increased 25 per cent. Probably the article of "wood pulp" would be embodied in the proposed increase of duties, although Mr. Miller was too modest to mention it. We are not prepared to deny a certain logical intrepidity in Mr. Miller's plan. A person who holds the view that duties ranging from 30 to 116 per cent. are an advantage to the country, may well conclude that absolute prohibition of foreign trade in anything that can possibly be produced here, with resulting monopolies in the production of those things at home (wood pulp, steel rails, etc.), would also be beneficial to the country. But we cannot imagine that his views are shared by many influential persons. In fact, his speech at Cooper Institute reconciles us completely to his retirement from public life; for although his successor, Mr. Hiscock, is far from representing any opinions of ours in fiscal science, he is not smitten with the midsummer madness that has taken possession of Mr. Miller.

Among plans for temporary use of the Treasury surplus and for avoiding a lock-up of public money, that of Mr. W. P. St. John, President of the Mercantile National Bank of this city, as sketched in his paper at the Pittsburgh Bankers' Convention, is especially noteworthy. The plan is proposed in order to meet "a possible emergency." Mr. St. John argues, in the first place, that the law which authorizes the Secretary of the Treasury to deposit public money in national banks, "except receipts from customs," includes the fund in the Treasury received from national banks for the redemption of their surrendered circulating notes. This fund is upwards of $102,000,000, and is, in fact, regarded by the Treasury as public money, being mixed with all other cash on hand and treated as one of the ordinary liabilities of the Government. Without making hair-splitting distinctions be-

tween public money and trust funds, it is sufficient to say that if the Secretary should choose to consider this fund as "public money other than receipts from customs," and should decide to deposit some portion of it in the banks, it is not likely that anybody would object, and it is still less likely that anybody could make his objections effectual. The feature of Mr. St. John's plan which strikes us as original and important is that which relates to securing the Government for such deposits, and for all deposits under the law. He proposes that the 4 per cent. bonds shall be received at 120, the 4½ per cents at 105, and the Pacific 6s and the District of Columbia 3.65s at 110, these figures leaving a fair margin of security over and above the deposit; but that the "lawful money reserve" required against deposits in national banks (25 per cent. in redemption cities and 15 per cent. elsewhere) shall be lodged with the Treasurer of the United States as additional security. As the law authorizes any bank to count as part of its reserve any money deposited by it in the Treasury "in sums of not less than $10,000," there seems to be no legal difficulty in the way. Certainly such addition to the bond collateral would be abundant and superabundant for all purposes of securing the deposits.

Poor Mr. Hoxie, a farmer, tried to get Henry George to say, at a meeting at Utica on Monday, that he ought, when his land is taken from him, under the George movement, to get back the amount, with interest, paid for it by his grandfather; but George was inexorable. He maintained that nobody ought to profit by a dead man's labors and sacrifices, and that there should be a "new deal" in everything in each generation. We presume that as nobody is to be permitted to inherit anything from the dead, so nobody will be compelled or even allowed to pay a dead man's debts. George further demolished poor Hoxie by comparing his property in land to property in slaves, and in fact made it plain to the meeting that the robbing of Hoxie would be a praiseworthy act. A farmer must, in fact, feel himself a very forlorn object at a George meeting.

The decision of Judge Collins in Chicago, that the Board of Trade of that city has no right to restrict the use of its market quotations to particular persons or classes, is unquestionably sound. The Judge refrained from deciding whether the quotations must be given to the public in any and every case, but held merely that if given to one, they must be given to all. In other words, there must be no discrimination, not even against the "bucket shops." If bucket shops are wrong, let them be proceeded against according to law. They cannot be closed by a process which involves the monopolizing of information necessary to the conduct of the country's trade. In the course of his decision the Judge made some wholesome remarks about the growth of monopolies calling themselves trusts and others calling themselves labor unions, as "new and alarming products of the age, varied and dangerous combinations, one and all claiming to be private enterprises, and hence above law and regulation." The pulse of trade, he said, must be allowed to beat full and free; and that it might beat full and free in the grain and provision trade, he would require that any facilities given by the Board of Trade to one person be given on the same terms to all.

The new-fangled "Trusts," of which the Sugar Trust is the latest example, are discussed from the legal point of view by F. J. Stimson in the *Harvard Law Review*. It cannot be said that any new light is thrown upon these nondescripts by Mr. Stimson, unless it be considered new light to learn that the Trusts are exceedingly slippery customers, and that while wholly outside of the law and unknown to the law, they present no definite point of attack, being very much like a hedgehog when rolled up in the form of a ball. Reference is made in the article to the legal proceedings now pending in Louisiana against the Cotton Seed Oil Trust, where an injunction has been applied for to prevent the Trust from transacting any business in the State, upon the ground that, being neither a partnership nor a corporation, it has no legal status. Mr. Stimson's idea is, that affirmative action by the legislative power will be necessary to kill off these nondescripts, but the kind of legislation required is not stated with sufficient fulness. One kind of legislation not suggested in the article would be the repeal of those protective duties which deliver over the American people as a helpless prey to small rings of producers. The vaunted competition among the domestic manufacturers which was to bring down prices and prevent monopoly, disappears even to the imagination when the production of the article is lodged in a "Trust."

For some years past there has been a virulent faction fight among the Republicans of Worcester County, Mass., which culminated last fall in the defeat by one wing of the Congressional candidate named by the other wing, and the election of a Democrat and "free-trader" from a Republican and protection district. The other day both sides got together and had a thorough washing of all the dirty linen which had accumulated during several years, each faction charging the other with selfishness, treachery, and indeed wickedness of every sort. After the orators on both sides had exhausted themselves, Senator Hoar got up and tried to pour oil on the troubled waters by this impressive plea for unity: "I wish to measure well my words; and the permanent diversion of the Republican majority in this Tenth District means the overthrow of the Republican party in Massachusetts, which will no doubt be followed by its overthrow in other New England States. If, gentlemen, you value good government, well-paid labor, and constitutional liberty, this strife must end, or the power will pass into the hands of those opposed to those three principles." This is the same thing as saying that unless the row among the Worcester County Republicans is stopped, the Democratic party will control the nation, and that the Democratic party is opposed to good government, well-paid labor, and constitutional liberty. Inasmuch as the candidate of the Democratic party at the last Presidential election was supported by 4,874,986 voters, against only 4,851,981 for the Republican, it follows, according to Mr. Hoar's theory, that more than half of the people favor bad government, poorly paid labor, and the overthrow of constitutional liberty. Whether even Senator Hoar and the Republicans of his district can save a nation so far gone as this, appears exceedingly doubtful.

The difficulty of dealing with the "unemployed" in London seems to be growing greater, largely owing to the fact that there is no way of discriminating between the unemployed who want employment and those who do not. The criminal or dangerous class in London who do not follow any honest calling, is probably much larger than the class of honest poor who cannot just now find any work to do; and the former attend the meetings and parades in the West End in the hope of a disturbance and a chance to plunder. But the fact that the two classes are always mixed, makes any vigorous action on the part of the police very difficult. Consequently the demonstrations in the business streets are carried on with impunity. The irruptions made into St. Paul's and Westminster Abbey, with the accompanying ruffianly interruptions of the service and desecration of the monuments, however, will probably irritate the public into demanding sterner measures of repression. The West End shopkeepers, who have to keep constantly ready to put up their shutters, lest a meeting should suddenly be converted into a marauding party, seem to be already near the end of their patience.

Where the end of these disturbances is to be, however, is something no man can tell. Everybody has foreseen during the last thirty years of industrial progress in England that if there came for any reason any prolonged check to her prosperity, the labor question would assume very serious proportions, and that it would take some time for the surplus of labor, both skilled and unskilled, to find new fields. Every country which is to-day developing great manufacturing industries is exposing itself in a greater or less degree to the same risks. Belgium is passing through a worse crisis than England. She is carrying on to-day a good many industries which pay little or no profit, and simply give a wretched support to the laborers. The great coal strike in France, which only came to an end a few months ago after lasting nearly two years, was made against a corporation which had for years made no profits. The worst of it is that the agitators, when things come to a pass like this, persuade the laborers either that if they owned the mines or the mills themselves they would make a good living out of them, or that there is a fund somewhere in the possession of the capitalists which the Government ought to let them get at. The only remedy seems to be the extension of coöperation, so as to spread among the laboring class greater knowledge of the conditions of successful business management. At present a large proportion of them talk and feel about capital as small children talk and feel about their father's money—that is, as if his purse were inexhaustible or easily replenished.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 19, to TUESDAY, October 25, 1887, inclusive.]

DOMESTIC.

THE President and his travelling companions went from Atlanta October 19 to Montgomery, Ala., where they were enthusiastically received. In his address at the Montgomery Fair, the President said: "Your iron ore taken from the same field as the material necessary to its manufacture supplies a powerful element of national cohesion, and in its manufacture you are preparing the strongest bonds of national unity. Every ton of iron you are enabled to furnish a Northern State goes far towards destroying sectional feeling. Your fellow-countrymen appreciate the value of intimate and profitable business relations with you, and there need be no fear that they will permit them to be destroyed or endangered by designing demagogues. The wickedness of those partisans who seek to aid their ambitious schemes by engendering hate among a generous people is fast meeting exposure; and yet there is, and should be, an insistence upon a strict adherence to the settlement which has been made of disputed questions and upon the unreserved acceptance of such settlement." After leaving Montgomery the President stopped only at Asheville, N. C. He arrived at Washington on the morning of October 22.

Great indignation was provoked at Minneapolis by the publication of a scandalous editorial article in the *Tribune* about Mrs. Cleveland. The editor, Mr. Blethen, was burned in effigy, many people withdrew their patronage from the paper, and on October 10 Mr. Haskell, one of the editors, was obliged to publish over his own name an explanation that he, and not Mr. Blethen, was responsible for its publication.

A despatch from Secretary Bayard was received at Ottawa, October 19, wherein he expressed regret that the orders for the release of the three Canadian sealers seized in Behring's Sea were not obeyed by the officials at Sitka, and said that orders for their release had again been given.

An officer of the Signal-Service Bureau has been stationed at St. Paul to give out earlier reports of the approach of cold waves than can be given out at Washington. Longer notice by several hours can thus be served.

The Supreme Court of the United States has granted a hearing before the whole court of the motion for a writ of error in the case of the condemned Chicago Anarchists. Arguments will be heard October 27.

A convention of the Illinois members of the Grand Army of the Republic in Chicago, October 20, organized a "Service Pension Association" to agitate for the passage of a service pension bill by Congress.

The Convention of the Carriage Makers' Association, in session at Washington, October 20, adopted a resolution praying the Boards of Education of the different States to increase the number of technical schools, and to make them more useful by the appointment of mechanics as instructors in the use of tools.

The Western Waterways Convention at Memphis adopted resolutions, October 21, making a plea for the continuance of Congressional appropriations for the improvement of the Western rivers, and approving Government aid to cut the proposed Hennepin Canal.

Chief-Engineer P. M. Arthur of the Brotherhood of Locomotive Engineers, in his annual address to the Convention of the Brotherhood at Chicago October 19, said: "There have been times and incidents when the strike was the only court of appeals for the workingman, and the evil lay in the abuse of them, and not in the use of them. The methods used to bring about a successful termination of strikes, the abuse of property and even of persons, have brought the very name into disrepute, while the troubles of the laboring man are rapidly receiving mere cant, and sympathy for him is dying out. More and more clearly defined is the line becoming which divides the honest man, satisfied with a just remuneration which he has truly earned, until by his own efforts he can rise to a higher position in life, and the loud-voiced 'bomb-thrower,' who, scarcely able to speak the English language, seeks to win his own comfortable living from those who have worked for it, presuming upon the imagination and arousing false hopes in the hearts of those who are still more ignorant than himself."

The anti-Powderly element of the recent Convention of Knights of Labor has appointed a Provisional Committee, and issued an address "to the rank and file of the order," making twenty charges against the Powderly management, saying among other things that "the general office has become a luxurious haunt for men whose chief aim is to benefit self, pecuniarily and otherwise, and that there has been for more than a year a conspiracy for the purpose of holding the salaried positions, elective and appointive, in and under the General Assembly."

The places of nearly all the printers formerly employed in the job and book printing establishments in this city who went on a strike because the employers would not submit to the dictation of the Typographical Union, have been filled by non-union men.

A call has been issued for the National Republican Committee to meet in Washington December 8 to appoint the time and place for the holding of the National Republican Convention next year.

The New Hampshire House, against a number of whose members accusations of bribery to vote for railroad bills have been made, on October 20 decided, by a vote of 159 to 125, in favor of passing the Hazen bill over the Governor's veto. October 20 had been set for adjournment, but both branches of the Legislature indefinitely postponed it.

The Democrats of this county having nominated Mr. John R. Fellows for District Attorney when the sentiment of a large part of the community was distinctly in favor of Mr. De Lancey Nicoll, who was so active as Assistant District Attorney in the prosecution of the bribed Aldermen, the Republicans, encouraged by the independent sentiment, on October 25 nominated Mr. Nicoll (Dem.) for District Attorney, and Mr. R. B. Martine (Dem.), who is now District Attorney, for Judge of the General Sessions.

Three saloon-keepers convicted of selling liquor on Sunday in Utica, N. Y., have been sentenced to break stone in the county jail for thirty days.

The managers of the Alpha Oil Company, which hoped to rival the Standard Oil Company, made an assignment at Detroit October 22.

A vigilance committee appointed at a meeting of the Cherokee Nation in Indian Territory pursued a band of thirty-two desperadoes, and a pitched battle was fought October 20, which continued all day. Eight of the vigilance committee were killed, and eight wounded. Col. Boudinot, editor of the *Cherokee Advocate*, the organ of one of the political factions in the nation, on October 22 shot and killed B. H. Stone, the editor of the *Telephone*, the organ of the other faction.

Severe storms on the lakes, October 22–23, caused the loss of several large vessels and many small craft; but, so far as reported, no person perished.

There were two serious railway disasters October 20—one near Greenville, S. C., where a passenger train ran into a freight train that ought to have been side-tracked, and two persons were killed and ten were hurt. The other was on the Chesapeake and Ohio Road, near Charleston, W. Va., where three cars left the track because of a defective switch. Twenty-six people were hurt.

The Toledo, Peoria and Western Railway Company, on whose line the fatal disaster at Chatsworth, Ill., happened, has paid to the heirs of some of the persons that were killed, and to some who were injured, amounts ranging from $500 to $2,600 each.

The corner-stone of the first building for Clark University at Worcester, Mass., founded by Mr. Jonas G. Clark, was laid October 22. A letter by the founder was read, and Senator Hoar delivered an address.

By the gift of Robert Treat Paine, the Robert Treat Paine Fellowship of Social Science has been established at Harvard. It will be awarded to a graduate of any department of the University wishing to study either at home or abroad "the ethical problems of society, and the efforts of legislation, governmental administration, and private philanthropy to ameliorate the lot of the masses of mankind." The annual income will be $500.

The standard of scholarship at Harvard College has not been raised 20 per cent., as was reported in these columns a fortnight ago, but it has been raised. The marking by percentage, however, has been given up, and students are marked in five grades—A, B, C, D, E; and how much the standard has been raised cannot be stated in a single percentage.

The American colony resident in Mexico, together with a number of Mexicans, have offered to present to the Logan Monument Committee an onyx slab from the Mexican mines.

Rustem Effendi, Secretary of the Turkish Legation at Washington, died October 19. On the same day the Rev. Dr. Heman Lincoln, Professor of Ecclesiastical History in Newton Theological Seminary, died at Newton, Mass., at the age of sixty-six years. Elihu B. Washburne, who had held many offices of trust and honor, among them the post of United States Minister to France for eight years, died in Chicago October 22, in his seventy-second year.

FOREIGN.

The French Legislative Chambers reassembled October 25. In the Chamber of Deputies M. Rouvier introduced a bill providing for an extraordinary army and navy credit of 100,000,000 francs, and another bill for the conversion of the 4½ per cent. rentes into 3 per cent. rentes. Gen. Ferron submitted a bill for a special corps of infantry and artillery for mountain service.

M. d'Ornano, Bonapartist, moved in the Chamber of Deputies that a committee be appointed to inquire into the Caffarel-Wilson scandals concerning the sale of decorations, and demanded urgency for his motion. Although urgency was opposed by Premier Rouvier, it was carried by a vote of 379 to 155. The Republican Electoral Committee of Tours has asked M. Wilson whether he took advantage of his residing at the Élysée to avoid the payment of taxes, whether he made use of the Presidential autograph stamp for private purposes, and whether he promised favors in return for personal services.

Gen. Caffarel has been dropped from the French Army list because of habitual dishonorable conduct. But he will, until further notice, receive a yearly pension of 8,000 francs.

The convention regarding the Suez Canal between France and England, which was signed October 24, provides that the canal shall be kept open in time of war; that no act of hostility shall be permitted at either of its approaches or on its banks within a zone to be determined by an international commission; that belligerent Powers shall neither embark nor disembark troops or war material on the canal or in the ports of access, and that if Egypt proves unable to compel respect for the treaty, she shall appeal to Turkey, who, in concert with the signatory Powers, shall take the necessary measures to enforce obedience.

At the same time a convention was signed about the New Hebrides.

It was announced October 22 that an agreement had been arrived at between France and England for the withdrawal of the French troops from the New Hebrides.

M. Paul Deroulède has resumed the Presidency of the Patriotic League, which is now reported to have 30,000 members.

A dinner was given in connection with the approaching French Exhibition, in the Louvre, October 18, at which M. Dautresme, Minister of Commerce, congratulated the directors upon the progress of the works, which insured their completion by 1889. The applications from persons at home and abroad for space for exhibits, he said, promised that the enterprise would be a great success.

The evidence taken in the investigation of the burning of the Opéra Comique in Paris some time ago shows "incredible carelessness and want of system in the management."

The French steamer *Hindoostan*, which arrived at Marseilles October 24, from New York, was burned that night, with 3,000 tons of merchandise.

The Congress of the English Liberal Federation at Nottingham, which closed October 19, was one of the largest meetings ever held by the Federation. Two thousand five hundred delegates attended it. The Congress resolved that when the Irish question is settled, the disestablishment of the Church in Wales shall be made the leading point of the policy of the Liberal party. A registration bill was foreshadowed at the conference which is really a reform bill, granting manhood suffrage and abolishing revising barristers and political agents. It is reported that Mr. Gladstone is the author of the measure.

In his speech at the Congress Mr. Gladstone said that he would bodily sweep away the law of entail. He strongly condemned the revival of the fantasy of protection. He urged the extension of local government in the direction of decentralization, but said that these, together with the questions of liquor traffic and disestablishment of the Church in Scotland and Wales, could not be touched until a sound adjustment had been effected in regard to Ireland. He advocated the enfranchisement of the nation as a primary tool essential to the work, and he condemned fagot voting, declaring that one man should have only one vote. He said that it was sometimes thought that he should go further, and bind himself in determining the precise manner in which all the principal enactments in his future bill for the government of Ireland should be framed. He was not prepared and did not intend to so bind himself. At Derby, October 20, he made another hopeful speech. The *Times's* comment on the series of speeches is this: "We stand amazed at the fecundity of language and the physical endurance displayed by a man completing seventy-eight years. In substance, however, his speeches are deplorable."

Ten thousand persons attended the open-air demonstration under the auspices of Radical clubs at Rotherhithe, England, October 24, and adopted resolutions protesting against the Government's interference with the liberty of the press and the right of public meeting in Ireland and England, and condemning the Government's action against the unemployed of London. Speeches were made from five platforms

Lord Hartington, in a speech at Nottingham October 24, described the Liberal Federation as nothing but a one-man association without a permanent national character. He said that after the elections of 1885, nine-tenths of the Liberals would have repudiated as a calumny the assertion that the party was pledged to home rule or the repeal of the Union. He declined to examine the Liberal Federation's new political programme, as it had no more practical bearing upon the immediate future than the resolves passed by the three Tooley Street tailors.

Lord Randolph Churchill, in an address at Seaham October 21, said that he believed Mr. Gladstone and his supporters, judging from their language, supposed Ireland to be governed by Turkish pashas or by a system similar to that of the Spanish Inquisition; but the Government was composed of men as respectable and as responsible as Mr. Gladstone. On October 24 he spoke at Stockton, and said that the Nationalist leaders had made a tool of his friend Blunt, who was an impulsive man and knew nothing whatever about Irish affairs.

A meeting was held at Islington October 24 in honor of Mr. Joseph Chamberlain, and resolutions were adopted expressing satisfaction at his appointment on the Fisheries Commission. Mr. Chamberlain said in reply that unfortunately the difficulties in his way were not those inherent in the case or directly involved in the issue to be decided; that Irish-Americans were ready to use every effort to prevent a settlement. There had never been a time during the last thirty years when the Irish in America had not been willing to use the privileges conceded to them by their adopted country in order to sow dissension and promote ill feeling between Great Britain and America. He was not sanguine enough to expect that on the present occasion they would change their policy, but he was encouraged by the belief that the vast majority of native Americans, and every Englishman and Scotchman in the United Kingdom, would regard a fratricidal conflict between the two countries as a crime of the deepest dye. He spoke also of the criticism of his appointment that had been made in Canada by the advocates of commercial union with the United States. Mr. Chamberlain will leave London for Washington early in December.

An indignation meeting was called at Woodford, Ireland, Sunday, October 23, by the British Home-Rule Union, and it was proclaimed. But a crowd assembled, and Mr. Wilfrid Blunt, the well known philanthropist, who was formerly a Conservative, was to preside. When he with the other speakers mounted the platform, a magistrate forbade him to hold the meeting. A conflict with the police followed, and Mr. Blunt was violently arrested, and more than thirty persons were hurt. Blunt, when asked whether he would give bail, replied that as an Englishman he believed that the whole action of the police was illegal, and he would rather be imprisoned than give a pledge to representatives of the Tory Government. The Irish leaders have not concealed their gratification at the arrest of so prominent an Englishman for such a reason. He was taken from Loughrea Jail to Woodford October 24, under a strong escort. He gave bail, and was the recipient of great demonstrations.

An application has been granted by the Court of Queen's Bench at Dublin for a writ to quash the verdict of wilful murder rendered by the Coroner's jury against the policemen who did the shooting at Mitchelstown.

Several thousand of the unemployed in London, following a leader with a red flag, marched on Sunday from Trafalgar Square to Westminster Abbey, and 1,200 of them were admitted. They interrupted the service with cheers and groans and laughter and comments. When the service was ended, the crowd proceeded, shouting and hooting, to Trafalgar Square, where the leaders denounced the Church and police. Several arrests were made of brawling persons and thieves, and on the next day one of the leaders was fined.

England has accepted Spain's proposal for an international conference on the Morocco question.

The first sleeping-car express of the special mail service between London, Paris, and Lisbon, in connection with the ocean steamship service to South America and South Africa, arrived at Lisbon October 24.

The Right Hon. Alexander James Beresford Beresford-Hope, member of Parliament for Cambridge University, and proprietor of the *Saturday Review*, died October 20. On the same day Edmund Texire, the French journalist and author, died, at the age of seventy-one. He translated 'Uncle Tom's Cabin' into French. Waldemar Adolph Thisted, the Danish poet and novelist, is dead. Remenyi, the violinist, it is reported, was recently drowned in a shipwreck off the coast of Madagascar.

All the public and many private buildings at Berlin were decked with flags October 18, in honor of Crown Prince Frederick William's birthday. The King and Queen of Italy sent an affectionate telegram to him.

Germany has granted the request of China for German officers to instruct and organize the Chinese Army. Many officers have volunteered, though the salary is small.

The returns of the election for Deputies in Saxony show that the next Chamber of Deputies will contain 46 Conservatives, 12 Nationals, 17 Progressists, and 5 Socialists. According to the Dresden *Journal* (official), the Socialists polled 12,176 votes, against 2,474 in 1881.

Bishop Kopp, the new Prince-Bishop of Breslau, took the oath of civil allegiance to the Emperor of Germany October 20. This is the first time such an oath has been taken since the opening of the Kulturkampf. It has recently been so modified as to render it unobjectionable to the prelates. The Government of Austria Hungary has reduced the Governor of Upper Austria on half-pay because he attended a Catholic meeting at which a resolution was adopted in favor of restoring the territory and secular authority of the Papacy.

Dr. Schliemann, the archæologist, has made a will leaving his valuable collection at Athens to the Ethnological Museum at Berlin.

A new Austrian sugar-bounty bill provides for a tax of 11 florins, and an export bounty of 1½ to more than 2 florins per hundred kilos. The bill directs that the registration of the stock of sugar in the country shall be made within three days from the 1st of August, 1888, when the bill will become a law.

The *Politische Correspondenz* of Vienna, October 19, published a semi-official warning against emigration to America, saying that all branches of labor here were overcrowded.

The *Journal of St. Petersburg*, October 22, declared that the proceedings of the Bulgarian Sobranye amount to nothing and can never bring about the solution of the Bulgarian question. It calls the Sobranye "a phantom of national representation and a product of villany and violence."

It is reported from St. Petersburg that remains of the ancient town wall of Jerusalem and the position of the gates through which the Saviour passed to Golgotha have been discovered, by excavations on ground owned by the Russian Government.

Advices were received at London from Merv, October 21, that Ayub Khan, who was recently reported to have perished in a desert, had assumed the direction of the insurgents in Afghanistan, and was preparing a revolt in Herat.

The Viceregal Council at Simla has passed a law to check the slaughter of wild birds, whose plumage is in such constant demand in Europe that great numbers of them are killed every year to supply the market.

Advices have been received at London from Stanley Pool that Henry M. Stanley had gone 150 miles further up the Aruwimi, and had sent the steamer *Florida* back to Stanley Pool for more supplies and men. The natives showed no disposition to molest the expedition, and all were in good health.

The Mexican constitutional amendment permitting election of the same person to the Presidency for two consecutive terms, having received the approval of both houses of Congress, was officially promulgated October 23.

THE PRESIDENT'S JOURNEY.

The reception at Montgomery, Ala., on Thursday was the last formal event of the President's trip, and Mr. and Mrs. Cleveland are now back in the White House, after a three weeks' absence. The journey originated in the pressing invitation which the President received to visit St. Louis after the Grand Army encampment, in view of the unpleasantness caused by ruffians of the Tuttle type over his proposed attendance on that occasion, and in the equally pressing invitation to the Piedmont exposition in Atlanta. Mr. Cleveland's acceptance of these invitations was no sooner announced than he was earnestly urged to extend his trip so as to visit other cities, and he was thus led to plan a schedule which took him through several of the chief States in both the West and the South.

A trip of this sort is a most valuable experience for any President. Despite the demands upon his time which are always made by the reception committees for what may be called spectacular purposes, in order that he may ride through the streets, review processions, and shake hands with the crowds, he still finds many opportunities for learning the character of the people, which cannot fail to prove of service to him. Then, too, the fresh idea which a President gets by such a journey of the immensity of the country, the vastness of its resources, and the solemnity of the trust committed to its chief magistrate, necessarily has an educating and inspiring effect. On the other hand, it is well that as many of the people as possible should get at least a glimpse of their President through their own eyes, instead of always viewing him through the distorted glasses of partisan organs and orators.

The most striking feature of the trip has been the heartiness with which Mr. Cleveland has been received, as well in the Republican States of the West as in the Democratic States of the South. Georgia turned out no larger crowds of spectators than Minnesota; Montgomery, Ala., than Omaha, Neb. The *Tribune's* correspondence has repeatedly borne emphatic testimony to the non-partisan character of the welcome accorded the President, and the zeal with which Republicans have joined Democrats in doing him honor. There seems to be no doubt that never, since "the era of good feeling" in which Madison made his journeys seventy years ago, have people of all parties shared more generally and heartily in the receptions to a President of the United States. This fact is significant of the dying out of those bitter partisan animosities which developed not long after Madison's day, became intensified with each decade that preceded the war, and for twenty years survived the end of that contest.

Mr. Cleveland's trip has proved that this attitude of the public mind is justified by the final settlement of the great controversy which caused such partisan and sectional bitterness. Events have conspired to draw public attention to the strength of those bonds which now for the first time unite the States in a perfect union. At Nashville Mr. Cleveland was welcomed by Judge Ellet, the most conspicuous citizen, whose sudden death a few moments later caused every reader to scan his speech, and to find in it this frank acceptance of the situation: "The Southern people have bowed to the stern logic of events until they have in a frank and manly way accepted the result of the struggle as a final settlement of all questions in dispute; and they have since labored with rare courage, fortitude, and cheerfulness to accommodate themselves to their new conditions, to reconstruct their broken fortunes, and to contribute as far as possible to the general prosperity and happiness of the whole country. As one practical result accomplished by the conflict, the theory of the right of States to withdraw from the Federal compact was overthrown, and the indestructibility of the American Union was established on the firmest foundation. The chief element of discord has been removed for ever; and though questions will continue to arise about which men may differ, and differ earnestly, it is settled beyond appeal that for all abuses and grievances that may arise from the action of the Government, the remedy must hereafter be sought within the pale of the Union, and under the forms of established law."

At Montgomery the President stood in the city where the Confederate Government was organized under Jefferson Davis upon the corner-stone of slavery. He was welcomed by a Governor who had fought to overthrow the Government presided over by Abraham Lincoln. Yet this ex-Confederate soldier took special pains to rank the Emancipator with the Father of his Country, using these notable words: "Successor in the mighty line of Washington, of Jackson, and Lincoln, he represents in law and in fact the unity of the American people." Mr. Cleveland was equally frank and emphatic on his part. After declaring his belief that there need be no fear that the Northern people will permit their intimate and profitable business relations with the South to be destroyed or endangered by designing demagogues, and that "the wickedness of those partisans who seek to aid their ambitious schemes by engendering hate among a generous people is fast meeting exposure," he added: "And yet there is and should be an insistence upon a strict adherence to the settlement which has been made of disputed questions, and upon the unreserved acceptance of such settlement." When a "rebel" accepts Abraham Lincoln as a national hero in whom he has as much pride as the Union soldier feels, and when a President largely elected by the "Solid South" utters such language as this in the birthplace of the Confederacy, the veriest Bourbon of them all, North or South, must see that the old sectional issue is for ever eliminated.

The personal bearings of the trip will inevitably be discussed. We do not see how any candid person can doubt that the journey has both shown the President's great strength with the people and increased that strength. There was more than the perfunctory respect due to the Chief Magistrate by every good citizen in the welcome given to Mr. Cleveland by Republicans. The truth is, that among them were tens of thousands of men like Mr. Andrew Carnegie, "stanch Republicans" who thought he was going to ruin the country, but who now frankly confess that his Administration "has been highly creditable," and who "will shed no tears if Mr. Cleveland is re-elected." Despite his failures and blunders, Mr. Cleveland has evidently impressed the candid among his former opponents as a man who is honestly trying to do his duty to the country, and he reaps the reward in a growing popular support. The creditable manner in which he has maintained the dignity of his office during the trip, has been demonstrated by the utter failure of snarling Republican organs to find any plausible ground for criticism, while the patriotic tone of his speeches in the South has disarmed much opposition in the North.

The most noteworthy and encouraging thing about the growth of Mr. Cleveland in the respect and confidence of the people is the fact that it is a tribute to the American idea. Of all the absurdities which culminated in the canvass of 1884, none was more ridiculous than the claim of "intense Americanism" for a candidate whose special boast at the same time it was, that he was the idol of those most un-American of all our citizens, the dynamite Irishmen. There are plenty of signs that the people have seen through that pretence. The Memphis *Avalanche*, speaking of the President's popularity, and paying at the same time a deserved tribute to his wife, remarked: "After all, what attracts the people so strongly to both Mr. and Mrs. Cleveland is the fact that they are so essentially, so thoroughly American. There is no sham, no tinsel, nothing false, nothing inflated. Each is a fit example of the real American type." The Brooklyn *Eagle* copied this, and added: "The same thought also found expression in the answer given by a prominent Republican of Kingston, in this State, who, upon being asked the ground of his declared intention to vote for Mr. Cleveland in 1888 if he got a chance, said: 'He is the most typical American we have had in the White House since 'Old Abe.'" The best sign for the future of the nation is the assurance that pinchbeck Americanism has had its day.

THE SUPREME COURT AND THE ANARCHISTS.

If the report be true that the counsel for the Anarchists ask the Supreme Court to review the proceedings of the State Court, under the Fourteenth Amendment to the Constitution, which forbids any State to deprive any person of life, liberty, or property "without due process of law," they are probably trusting to luck more than to the law. What they maintain is, apparently, that the regularity of criminal proceedings in a State court cannot be left exclusively to the State judges, and that the United States Supreme Court may be called on to see if the pleadings were correct and the jury properly empanelled. In this instance they require the Supreme Court to say whether the jury was or was not "packed." If they should succeed in their application, no murderer with a little money would ever go to the gallows without getting the Supreme Court to examine the record even for technical errors. But it is not likely they will succeed. The court has not of late shown much indulgence for attempts to saddle the general Government with

the administration of State affairs, and, even if it were disposed to constitute itself a general court of appeal, would hesitate before the amount of fresh work which any such rôle would impose on it. It will probably decide that State courts, whatever their defects may be, are good enough for the general run of murderers, and that State judges of appeal may fairly be left to say what is "due process of law" in their State criminal courts.

What is oddest about the application is, however, that it should be made on behalf of Anarchists, or, in other words, that men who live in a constant state of revolt against all law should be so anxious to get the benefit even of technical defects in criminal procedure; and that men who cultivate so diligently readiness to inflict death on other people, should writhe so terribly when the game goes against them and their own turn to die comes. In other words, we do not seem as yet to have produced or imported a genuine Anarchist—that is, a man ready to dispense with the protection of the law in his own case, and to surrender his own life when caught taking other people's lives. All these Chicago Anarchists have availed themselves to the utmost extent of the legal machinery in order to escape punishment of crime. There is no statute or section of the Constitution under which they are not willing to take shelter. They hire counsel, and set up technical exceptions, and dodge, and parley, and plead, just like petty thieves.

Moreover, they are apparently as much afraid of death as if they never talked about it, and had a deep sense of the sacredness of human life. They have left no stone unturned to postpone being hanged, showing that, in spite of the horrible pictures they draw of the state of society in this country, they would fain continue to live in it and denounce it. There has, in fact, so far as we can hear, been no difference between the Anarchist in the presence of death and any other man. He clings to this world with as much tenacity as any capitalist or nobleman. If one may judge from the behavior of the Chicago band since their conviction, they do not find life in an organized capitalistic society such a very bad thing after all. The charge they bring against the prosecution and the courts is really that they have treated them anarchically. What the prosecution and courts have done, they complain, is to disregard the law of the land in their manner of trying them. But the fundamental anarchical doctrine is that when you get hold of a man you do not like, if you are stronger than he, you may do what you please to him—that is, try him legally, or try him illegally, or kill him without a trial. So that even if everything the Anarchists say of the manner in which they were tried be true, it is irrelevant. The men composing the court and jury and the prosecuting counsel had an unimpeachable *à fortiori* right to try the Anarchists any way they pleased, because they might have destroyed them as soon as they caught them without any trial at all.

The truth is, there is no "grit" about our American variety of the Anarchist. The more austere and determined members of the sect do not seem to come to this country, or else the climate and surroundings make them chicken-hearted after they get here. We have apparently no such determined cutthroats as the Russian Nihilists, who, when they are caught, instead of whimpering, and whining, and appealing and raising points of law, wait silently and cheerfully for the hangman. When they throw bombs, they know that they stake their own lives on the result, and when they lose, pay the forfeit like men. Spies and Lingg and the rest ought to try to imitate them. Nothing would do more to spread the Anarchical creed and make it respectable in this country than a readiness to die on the part of the chiefs of the school. Nothing does more to discredit Anarchy than any display of a desire on their part to live among the capitalists and their slaves, and witness the daily robbery of the laborer by the employer. A good Anarchist ought to have, in fact, a certain longing for the gallows, as a conspicuous place in which to testify his faith in his own hideous creed.

THEOLOGY AND THE NEWSPAPER.

THE most remarkable thing about the Springfield missionary debate has been little noticed. This was the almost purely theological nature of the discussion and the decision. What we mean is the comparative absence of secondary and involved issues. There was some question, it is true, of ecclesiastical position, and of the control of ecclesiastical funds, but this was wholly subordinate; in the minds of both parties to the dispute the great thing was the decision of the purely theological question as to probation beyond the grave. The practical outcome will be insignificant: one man rather than another will be Home Secretary, the new corporate members of the Board will be conservatives, the half-dozen rejected candidates will not have their cases reconsidered. It was the matter of doctrine that was seen to be the great thing, and the whole debate turned on that.

Doubtless many have been impressed with a vague sense of there being something obsolete and far away in the action of this nineteenth-century council gravely deciding a point in theology, but few, perhaps, have perceived the agency of the newspaper in making the whole proceeding seem such an anachronism. In fact, the theological spirit has no more deadly enemy than the modern reporter, and its weakening is more due to his activity than it suspects. Nothing has done more to discredit the Council of Nicæa, for example, than the revelations made, all the years after, of its factious and unseemly temper, of the personal and political elements at work in it, of a real division of opinion despite an appearance of harmony. The result arrived at was published with a round *Nobis placuit et Spiritui Sancto*, and was accepted by the Christian world with a submissiveness which would not have been so general, we may be sure, if the people of the time had known what we now know of the real doings of the Council. But the Springfield Council, if we may so call it, had its corresponding unveiling immediately. The Eusebiuses of the contemporary newspaper were there taking notes, not for posterity to disinter, but for all the world to read in the next morning's telegraphic despatches.

Now, a debate on theology, especially on some abstruse point of theology, cannot but suffer from this sort of intrusion and publicity. The short-hand reporter and the theological debater are not congenial. The special correspondent and the interviewer work havoc with speculative theology. The newspaper makes such a full disclosure of all the balancing of opinion and mixed motives entering into the decision of an ecclesiastical court, that the decision is at once robbed of half its force and nearly all of its impressiveness. The more recondite matters of theology seem to demand an atmosphere of mystery. They undoubtedly gain much if they can be surrounded with the secrecy and awe attaching to the early councils of the Church. But the newspaper will have none of that. Its realistic treatment dispels all the glamour; it makes a pitiless exposure of divided sentiment, gives the antecedents of debaters, records the strength of opposing factions. Then, too, the fully published reports of the debate bring about a disparagement of theological authority; for they show theologian pitted against theologian, professor against professor. In other words, the decision is practically taken away from the theologians and referred to the public. The reason of the case is alone looked for, and the theologian is called down from the pedestal which he is accustomed to mount when he addresses laymen. Worst of all, in the hands of some of the most widely read newspapers of the day, the whole awful doctrine at issue is degraded into a topic of the time, to be discussed as flippantly as any other. Theology cannot stand sensational journalism. Few, we imagine, realize how the treatment of the finer things of religion in the style which, we regret to say, is adopted by the great mass of modern newspapers, tends to take the fibre out of all that is sacred in the minds of their readers.

A remoter effect of the newspaper upon the action of the Board at Springfield will be to impair, if not wholly to nullify, the value of its decision in those very parts of the earth for which it was chiefly intended. That is to say, there are newspapers and newspaper readers in China and Japan and India. It is certain that pretty full accounts of the doings of the American Board will reach the people of those countries. They will understand, accordingly, that, whatever the missionaries may think or say, in loyalty to the instructions given them by the Board in this country, the question of the fate of dead heathen is an open one. Within the year the *Christian Union* published a letter from Japanese Christians, setting forth their great interest in the matters discussed by the Congregationalist denomination in this land, and intimating a hope that the decision would turn in favor of the liberal view. It will be known to such foreign observers that the liberal view has a great body of adherents here, has a considerable following in the Board itself; and they will be apt to think that what is not a heresy in the United States cannot be a deadly error in their own country.

INTERNATIONAL RAILROAD CONFERENCES.

Problems of international traffic in Europe are becoming almost as important as those of inter-State traffic in America. They present much greater difficulties, owing to the absence of any controlling power to which the different parties can appeal. But in spite of this fundamental trouble, and in spite of the many hindrances due to difference of language and character, much progress has already been made towards uniformity. There is every reason to expect that this progress will continue, and that railroad traffic will be the first department of private business activity to be subjected to a really effective and well-settled code of international law.

The more important questions of railroad liability have nearly reached this stage. An agreement was made a year ago by representatives of France, Germany, Austria, Italy, Russia, and nearly all the minor European States, by which the conditions of such liability, and the mode of procedure for enforcing it, were accurately defined This code was not the work of a moment. As early as 1874 the Swiss Government took steps to call a conference of representatives of different nations for this purpose. The plan was carried out in 1878. The delegates resolved to attempt the formation of a general agreement with supplementary provisions for its execution; but they had not sufficient powers to enable them to enter upon details, which were reserved for a second conference that met in 1881. This body succeeded in agreeing upon a plan, which was submitted to the different Governments for approval. Unfortunately, the delegates had not been given sufficient authority to make their action binding on the States which they represented. The result was that while each Government approved the general plan, and was willing to accept most of the details, almost every one insisted on some slight modification which was peculiarly objectionable to some other State. Germany was the chief sinner in this respect. Nothing positive could be accomplished until the meeting of a third conference in 1886, at which the delegates had fuller powers as well as added experience. The agreement adopted in 1886 has not yet been ratified by all the States interested, but there seems to be no doubt of its ultimate adoption. It determines the manner of shipment, the details of the bill of lading, the rights and responsibilities of the different parties interested, both under the normal operation of the contract and where exceptional circumstances intervene. It also defines the right of action of the various parties in the case of failure to comply with the conditions of the contract, determining which courts have jurisdiction and how their decrees are to be enforced.

It need hardly be said that this agreement does not provide for international regulation of rates. The representatives of the different States had all declared that purely personal discrimination was unlawful within their borders, and therefore many articles of the agreement were framed with that fact in view, and imply the existence of such a prohibition. Further than this it was impossible to fetter the action of the separate States. Nor does the agreement deal with the details of railroad operation except such as are directly concerned with the safety of the goods shipped and the determination of liability for damage.

The impulse towards international uniformity in railroad operation comes from another quarter—from those persons who are practically concerned in railroad management, and who see the difficulties and dangers which arise without it. The first step in this direction was taken as long ago as 1847, when Germany was split up into a number of independent States by the establishment of the German Railroad Union (*Verein Deutscher Eisenbahn-Verwaltungen*). This soon came to include not merely the roads of Prussia, Bavaria, Hanover, Saxony, etc., but those of Austria and other States outside of the limits of Germany proper. As far as its influence reached, the Association had anticipated most of the provisions of the proposed international agreement.

The growth of national feeling, not to say national hatreds, at the time of the wars of 1866, 1870, and 1878, tended to check the impulse towards unity of management. But this check could not last long. As international traffic grew in volume, the necessity for handling it safely and economically grew too strong to be retarded by any mere sentiment. Two years ago an international railroad conference was called at Brussels, in the hope that it might pave the way for uniform action in many matters of railroad administration.

Although the Brussels Conference was largely attended, its results were not very satisfactory. It had tried to do too much. Many questions were discussed from many points of view, but few definite results were reached. One all-important thing, however, was accomplished. The Brussels Conference did not teach people much about managing railroads, but it taught them a great deal about managing conferences. A second meeting of the same kind, which was held at Milan last month, was better arranged in its plan and more fruitful in its results. Instead of roaming at random all over the field of railroad management, its promoters laid out certain specific questions for discussion, on which there was some prospect of reaching an agreement. Instead of issuing their invitations indiscriminately, they took special care to secure the attendance of exactly the kind of men whose views would be worth something. The attendance was by no means confined to Europe. All quarters of the globe sent delegates. Of American roads, we understand that the Pennsylvania Railroad system was particularly well represented.

Comparatively few of the matters discussed are of much popular interest in America. The question of rates was not dealt with, because it was impossible to take any international action upon it for the present. Many of the topics will be of little importance outside of continental Europe. Others, like the use of metal instead of wood for ties, have a future rather than a present interest for Americans. Still others are of immediate importance on both sides of the Atlantic, but are too purely technical to interest the general reader. Such are the questions concerning the use of steel in bridges, or concerning the advisability of allowing different engineers to run the same locomotive. But no one, however slight his knowledge of the technical points, will fail to appreciate the significance of having them discussed in international conferences—discussed not as matters of purely scientific interest, but as subjects of practical arrangement and compromise. The design is to secure a common understanding, on matters of international importance, between the representatives of different nations. The Conference of Milan has accomplished much in this direction, and it is confidently believed that the next meeting, which is to be held at Paris two years hence, will do a great deal more.

THE PARLIAMENTARY INTERIM.

London, October 11, 1887.

This year there has been no repose for politicians. The Parliamentary session had hardly closed when the autumn campaign in the provinces began. Mr. Morley, Lord Randolph Churchill, Mr. Chamberlain, Lord Rosebery, and Sir William Harcourt have all made important speeches at different places. The leaders of the Tory party are still enjoying a short and hard-earned holiday, but there has been no lack of Conservative oratory from the lesser lights of the Government. Lord Salisbury is to speak at Oxford, Mr. Gladstone at Nottingham, and Lord Hartington at some other town The deliberate verdict of Great Britain in the great Irish controversy is yet to be delivered, and each party is straining every nerve to win it. The present object of public attention and the theme of political speeches is the development in Ireland of the policy of the Government. They have obtained from Parliament extraordinary powers, which they declared to be necessary for and calculated to insure the maintenance of order, and which the Opposition denounced as unnecessary, dangerous to liberty, provocative of disturbance. Under these powers they have decreed the suppression of the National League. How far will the hopes of the Government be realized? Newspaper columns are now filled with the fatal affray at Mitchelstown, the prosecution of the Lord-Mayor of Dublin and Mr. O'Brien, and the murder of Head-Constable Whelehan. Any one of these events would be enough to produce a profound sensation if it happened in this country; and though the British elector has long been accustomed to regard unhappy Ireland as the natural home of disorder, the causes of which were practically beyond his ken, he now feels constrained to examine such occurrences with nicer observation.

It would be going too far to assume that the Government have been anxious to provoke collision. That, indeed, is most unlikely. But if it were said that the incident at Mitchelstown is a symptom of the spirit of the new régime—a sign that the army of constabulary and other limbs of the law who keep order in Ireland, will be inclined to regard the Nationalists as enemies over whom they have at last got the upper hand—the inference would be more difficult to gainsay. On the other hand, the Loyalist party in Ireland, as it is called, are for the moment no better pleased. They see that the intervention of the police, resulting in a panic and the death of three innocent persons, is not an act of firmness which can bring any credit. They complain of the blundering in the Sullivan prosecution, and of the impunity of Mr. O'Brien and others who continue to defy the law. They accuse the Government of irresolution.

There is probably some truth and some error in the charge. There are not wanting signs in

the speeches of young Tory officials that, as a panacea for the troubles of Ireland, they are captivated with the idea of an iron and despotic ruler. But the older heads of the party have never been sanguine as to the support which such a policy would gain in the country. From the introduction of the Crimes Bill to the proclamation of the League, there has at each step been marked hesitation. In the lobbies it was from prominent Liberal Unionists that the loudest cries of "Cromwell or surrender" were heard; and if the Government had not been goaded on by the encouragement and perhaps the taunts of their allies, it is doubtful whether the present policy would ever have been persevered in. But it would be a mistake to draw from what is now passing any hasty inference as to the ultimate success of repressive legislation. During the coming months there will be a protracted struggle between the law and the League. The Nationalists will pursue their historic policy of agitation, combined with passive resistance, not breaking into insurrection or threatening it. What will the effect be on the public mind in England and Scotland? Hitherto repressive legislation, especially under Lord Spencer, has achieved at least a temporary and superficial success, but then it was backed without misgiving by almost the undivided force of English opinion. Now the case is altered. The Liberal party are the allies of the Irish Nationalists, and sympathize with their objects. Many members of the party give a cordial and active support to all their proceedings.

While this great change makes the task of the Government more difficult, it is precisely upon this change that the Tory and Unionist leaders found one of their strongest hopes of success in resisting the principle of home rule. The great mass of the electors (and the number who have not finally made up their minds on home rule are abundantly sufficient to turn any election) are probably not much terrified by the bugbear of separation. The longer it is looked at, the more unreal that danger appears. But if a home-rule policy could be associated in their minds with lawlessness and crime, the prospects of the anti-Home-Rulers would be bright. The Government consider that they have now got the law on one side, and the Nationalist League opposed to the law on the other, and they appeal to the country to withdraw its sympathy from those who are defying the law. The same motive dictated the attacks of the *Times* on the character of Mr. Parnell and his lieutenants. The unmeasured character of the attack overshot the mark, and bore little fruit except in minds already well prepared for the seed. Indeed, the refusal of the House of Commons to grant Mr. Dillon an inquiry, besides leaving a stain on the history of the Parliament, produced a revulsion of feeling in his favor. In the same spirit the most is made of those offences against the dignity of Parliament of which Irish members have been occasionally guilty. Such offences are in reality of very rare occurrence. Commonly the Irish member's greatest offence is his sovereign disregard (no doubt with some excuse) for anything like economy of public time, and the offences have usually been confined to persons of little account. This, however, has not invariably been the case, and the Irish party can hardly know how deeply the quiet British elector resents the affront. In Ireland, as the conflict goes on between the authorities and the League, the Government will say to the people at home, Will you not uphold the law? Will you encourage men who abandon constitutional methods and openly defy the law? How far may the spirit of anarchy not extend?

We shall soon know how the Liberal leaders will deal with the new situation, and which party the country will hold responsible for the disorders which it is too probable may occur in Ireland during the winter. An appeal on behalf of the law made to the law-abiding citizens of Great Britain will not fall on deaf ears. But when the law is once directed against the right of free speech and public meeting, it may awaken memories of English and Scottish history not favorable to the cause of the Government. The League, too, is the lineal descendant of the associations of Keogh, of O'Connell, and their successors. Those associations were always in conflict with the law on the questions of emancipation, of tithes, of rents, of arbitrary eviction. In every case events have proved that the League has been right, the law has been wrong; and redress has come, not from the wisdom and the initiative of the British Parliament, but from the agitation of the League. The lesson will not be forgotten. C. D.

LOS ANGELES.

Los Angeles, Cal., October 7, 1887.

It is amusing to notice the vast contempt with which the 50,000 inhabitants of the city of Los Angeles look down on the 350,000 benighted denizens of a certain northern village known as San Francisco, and on other places that have the effrontery to grow rapidly and to claim special advantages of climate, situation, and commerce. The Los Angeles *Herald* informs its admiring readers that—

"Pasadena and Los Angeles will be one city in a brief period, and form a continuous municipality from the Sierra Madre to the sea—an extent of thirty miles in length by at least six in width, with 500,000 people contained therein, and will be the capital of the richest State in the Union. The claim of New York as the Empire State is already in dispute, but the dispute will soon be settled by the preëminence of South California."

It must be admitted that much has happened in recent years to justify this Los Angelic grandiloquence. Fifteen years ago the City of Angels had only 10,000 inhabitants, no street-cars, and only one railway. To-day it has at least 50,000 inhabitants, electric street-cars, and more than half-a-dozen railways, with about seventy-five daily trains. Orange trees have increased in the county from 25,000 to 700,000; grapevines from 3,000,000 to 20,000,000; and other agricultural products in proportion. Its very disadvantages have proved advantages to Los Angeles. For instance, the fact that coal, like wood, is expensive made the city the first in the country to adopt a general system of electric street lighting. It has seventeen masts 150 feet high, fourteen masts 60 feet high, and hundreds of private lights. The electric railroad is also being rapidly extended. The cars run at the rate of ten or twelve miles an hour, which can be increased to twenty outside the city limits. The road's capacity is said to be four times that of a horse road, and its cost only one-half, while there is no torturing of poor horses in the hot noonday sun. A ride or a walk along the streets of Los Angeles conveys the impression that the city is quite as large and as "metropolitan" as it claims to be; the natural bustle and activity being increased by the winter visitors from the East, who, it is asserted, are now coming in at the rate of a thousand a day, to be scattered a few days later among the various resorts near the coast and along the foothills, where an extraordinary number of new hotels are now in course of construction.

In every country the smaller cities are apt to take after the metropolis. Thus, Rouen constantly suggests Paris, Linz Vienna, the English cities London, etc. Similarly, Los Angeles suggests San Francisco in many details—the appearance of the stores, hotels, Chinese shops, and the gardens, although the gardens have a more decided semi-tropical aspect, and there is a general appearance of more open-airness, if the word be permissible. The city is surrounded on all sides by high mountains, and buried among groves and gardens. Orange, lemon, "pepper," and fig trees adorn the gardens everywhere, side by side with many luxuriant shrubs and flowers, dwarfed apologies for which are often seen in Eastern gardens. In size and brilliancy of color these California flowers are incomparable, but the same causes which tend to give quinces, for instance, a less pronounced flavor than they have in the East, appear to impair the fragrance of some flowers. This fact has often been commented on, but I believe that too much emphasis has been placed on it. Repeated experiment has convinced me that the verbena and heliotrope, and perhaps the geranium, have a less delicious fragrance in California than in New York, at least in October; but the same is not true of roses, and pinks, and lilies; and I am informed that the countless varieties of wild flowers that adorn the (now arid) hillsides in spring have a most intoxicating fragrance, wherewith they allure so many bees that honey can be sold at three cents a pound. According to a writer in the San Francisco *Chronicle*, sweet peas have no fragrance at all in California, which seems very odd, for only a few hundred miles further north, in Oregon, these flowers have a most exquisite fragrance, as I know from personal experience.

The present ambition of the Los Angeles people is to surpass all the rest of the world in as many things as possible. And in one thing certainly they are unapproachable—in the number of real-estate offices that decorate their town. Neither San Francisco nor any mining town ever had so many saloons to the number of inhabitants as Los Angeles has of these land offices; and the various jokes apropos which have been current of late in the Eastern papers hardly exaggerate the real state of affairs. Almost every landowner, whether he has a sign over his door or not, is willing to part with some or all of his property for a consideration—not a slight one, by any means; and the whole county is affected with this epidemic, there being places of only a few thousand inhabitants where corner lots are sold almost at New York city prices. One day, driving along a country road about twenty miles from Los Angeles, I noticed half-a-dozen well-dressed men resting under a tree. My companion informed me they were doubtless a syndicate looking about for a place to locate a new town. At Fullerton, a few miles from Anaheim, I saw one of these new towns. It consists of the framework of a large hotel and of a few hundred yards of elegant cement sidewalk, not in front of the hotel, but in another part of the "town." Elsewhere towns get pretty large before any one begins to think of a sidewalk, even of the most primitive kind; but the residents in Los Angeles County, of course, would not be satisfied with a sidewalk in any way inferior to that in front of Mr. Vanderbilt's house on Fifth Avenue.

Having built his sidewalk and his large hotel (with real-estate office) in place of the saloon which usually is the pioneer building in Western towns, the southern Californian begins to cast about for a supply of water—not so much for domestic use, since wine is almost as cheap as water, as for the irrigation of his gardens and fields. If a river or brook is near by, a water company is formed, ditches are dug, and each shareholder, after paying his dues, may have his water "on tap" whenever he wants it. In the absence of a river, wells are made to supply the water. Sometimes these wells are bored horizontally into the mountain side, thus creating an artificial spring; but, as a rule, the wells are vertical, from eighty to five hundred feet deep, or even more, although

at one hundred to two hundred feet the water is generally obtained. A windmill is then erected over the well, which pumps the water into a large high tank, whence it is easily conveyed to the garden or field by hose. There is no lack of wind to drive these mills, for the charm of Southern California's climate lies in this, that although the sky is commonly cloudless and the sun warm, winter and summer, there is almost always a brisk breeze to temper the solar rays and deprive them of their sting.

This is true especially of Los Angeles County, which is situated between the deep sea and an imposing circular range of mountains, that send their breezes down over the valley as soon as the ocean breezes cease; and, although at some seasons both these air currents, near their source, would be unpleasantly cold for invalids, they are almost always mellowed and warmed by the sun's rays before they reach the centre of the valley. The morning—till about two o'clock—is the warmest part of the day; but in the autumn the morning heat is tempered by a daily fog, which remains till about ten o'clock. It is not a depressing fog, and is rather enjoyed by the natives, as a temporary change from the everlasting sunshine. In fact, monotony is the gravest charge that can be brought against the climate of Southern California. In the autumn and spring a few rainy days afford refreshing variety, but summer and winter are alike in their cloudless skies, warm sunshine, and alternating mountain and ocean breezes. As a physician at Anaheim remarked to me, the seasons do not differ in character, but only in flavor—like the differences between several kinds of apples. He also informed me that, although the temperature sometimes rises above a hundred in the shade, he has never seen a case of hydrophobia or sunstroke—thanks to the dryness of the air and the almost incessant breezes. Yet, like all southern climates, it fosters indolence, mental and physical; and he would not recommend it, therefore, to young persons—except for money-making purposes. But for invalids and for elderly persons, it is the best place in the world. The somnolence brooding in the air (except in Switzerland I have never slept so soundly in my life as here) would cure the worst case of Wall Street insomnia; and the incessant sunshine and constant life in the open air can hardly fail to add ten years or more to the life of old men or women who desert their over-heated and ill-ventilated Eastern homes for the open air and winter sunshine of Los Angeles County.

The general irrigation now resorted to, and the numerous green oases which have in consequence sprung up amid the deserts of prickly cactus, have already exerted some influence on the climate, and there is reason to believe that rain will be more abundant in the future than it has been in the past. A potent factor in producing this change will be the groves of trees that are being planted everywhere. There are some poplars and locusts and other trees that appear to flourish tolerably well, but the two species that most triumphantly defy sunshine, dust, and drought are the red-pepper tree and the Australian eucalyptus, both of them beautiful to behold. The red-pepper tree, with its gracefully drooping branches, resembles a weeping willow, but its growth is more luxuriant, its dimensions larger, and it is adorned with bunches of beautiful small red berries. The leaves, when bruised, have a strongly pungent cayenne odor, whence the name of the tree, which, by the way, does not flourish in Northern California. The leaves and fruit of the eucalyptus have a still more objectionable odor when crushed (very much like assafœtida), but the tree has a most stately appearance, and its marvellously rapid growth—a seed becoming a large tree in a few years—causes it to be raised on a large scale for fuel and for shady avenues.

But although Los Angeles County can raise the Australian eucalyptus and the pepper tree, there is a point at which the climate draws the line further south. Thus, the banana and the pineapple, although they can be raised here, do not do well, and the same is true of almonds. Yet the Los Angelites do not despair on that account, as they have a superabundance of other fruits to fall back on. Of the vast and fruitful orange and lemon orchards of this region every one has read. Figs grow abundantly and are in good demand, especially those of the Smyrna variety, which are now displacing the others. The demand for California olive oil is greater than the supply. English walnut trees yield a profitable crop. Peaches are so abundant that they are fed to the cows, and some varieties (but not all) are equal in flavor to the New Jersey and Delaware crop. Ears of corn a foot long, with twenty rows to the ear, can be seen in the market, side by side with gigantic twenty-horse-power onions, and potatoes weighing from two to five pounds. Sugar beets are on exhibition weighing 50 pounds, and pumpkins of 150 to 175 pounds. Pumpkins, melons, tomatoes, and other creepers grow wild, without any care, and may even become a weedy nuisance. If a Chinaman eats a watermelon under a tree along the road, the chances are that a crop of wild melons will be found in that neighborhood the following season; and on one farm I saw a *volunteer* tomato plant which the owner said he had ploughed down twice, but when I saw it it measured at least twelve feet square, and had thousands of small red berries on it of the kind which is only used for preserves, although, like the little yellow ones, it is of a much more delicate flavor than the large tomatoes, which alone, for some inscrutable reason, are ever seen on our tables.

This list is by no means complete, and is being constantly extended; for California is still largely in an experimental stage of development. The experiment with ostrich farming near Anaheim has resulted so successfully that other farms have been started near Los Angeles. I visited the original farm near Anaheim. The keeper, an Englishman imported from Africa, showed me a fine lot of healthy birds and some beautiful specimens of feathers, naming prices which, if they were advertised by a New York house, would create a riot among "bargain"-seeking women; for it is to be hoped that women, having abandoned the vulgar fashion of wearing stuffed bird corpses on their hats, will return to their old love, the delicate plumes of the ostrich, the wearing of which involves no cruel massacre of innocents. And California has another kind of plume to which the attention of women should be directed, the product of what might be called the vegetable ostrich—pampas grass. Nothing more exquisite for a vase or for a (fan-shaped) wall ornament could be imagined than these bushy white (or colored) plumes, which in Los Angeles County attain the height of thirty-six inches, not including the stem. Formerly, when these plumes were imported from South America, florists charged $1 or even $1.50 apiece for them; now the retail price is 25 cents, and the wholesale price 3 or 4 cents. Vast quantities are being exported to Europe, but Southern California is able to supply the demand of several continents, as the pampas grass, like most plants, grows there like a weed.

A dark cloud has, however, lately risen, and is for the moment casting an ominous shadow over the cheerful prospects of California. All the products so far mentioned are, of course, subordinate in importance to the grape crop; and the California grapevine is at present threatened by an enemy more dangerous, because more obscure, than the phylloxera. A few years ago some of the grapevines in Los Angeles County suddenly began to die out. Among these were some of the oldest vineyards, eighty years old or more. Indeed, the old Mission grape was the first to be attacked. Then followed other varieties, always in the same order in each vineyard. The disease begins at the tip of the vines and slowly spreads downwards, the roots being affected last. The second season the crop is a comparative failure, and the third the vineyard is a graveyard. One lady told me she had had dug up and used for fuel as many as 80,000 of her vines within a few years. The disease is said not to be phylloxera nor mildew; nor have the chemical experts who have examined the vines been able to throw any light on the matter, except by attributing the decay to a kind of cellular degeneration. Various theories are being discussed, and the owners of the vineyards meanwhile console themselves with the statement that a similar mysterious disease affected the grapes of Sicily and Madeira at one time, and disappeared after a few years, allowing the young vines to grow as before. What causes them to look with comparative indifference on this temporary (as they hope) interruption of business is the fact that there has been an overproduction of grapes, in consequence of which the price of wine has fallen to unprofitable figures. An interruption of a few years in this excessive production would raise the prices and thus pay for the losses now sustained. In the meantime the wine-growers would do well to ponder the fact that quality is of much more value, financially and gastronomically, than quantity. Labor is scarce in harvest-time, and, to save trouble, too many of the small growers neglect to pick out the green and sour grapes, which therefore vitiate the juice of the whole bunch; or else they intrust the cleaning of their old barrels to ignorant Chinamen (the Indians have all disappeared), with equally disastrous results. Too many Eastern people have contracted absurd prejudices against California wines, because chance threw some of this sour wine into their cellars. But it may be safely stated that the average California claret, and white wine, and port are superior to the wine that may be bought for the same money in France and Germany, and elsewhere. The *labels* of famous French wines and Cognacs are for sale openly in the show-cases of country stores in Los Angeles County! These honest folks are practically compelled to use this stratagem. They would much prefer to sell their best wines under California labels, in order to build up their reputation.

Whatever may be the outcome of the present vineyard epidemic, Southern California will have plenty of other things to fall back upon; and at present it almost looks as if all the crops were to be neglected, comparatively, and a specialty made of building hotels for invalids and tourists. Among the special attractions for tourists is quail-hunting in the foothills. The physician already referred to kindly took me out on an afternoon hunt. We drove in a tough two-horse buggy, up and down hill and along the dry bed of a brook, carefully dodging the bristling cactus bushes, which are apt to make a deep impression on "tenderfoot" visitors, less by the grotesque manner in which their fleshy leaves are stuck on one another at odd angles than by their fish-hook-like spines. These prickly leaves are so arranged that nothing larger than a quail or a rabbit can get under their protecting shadows. The dogs give them a wide berth, and the quail can only be shot on the wing if they are alarmed and fly from one group of cactus bushes to another. The result of an hour's buggy-hunting was nine quails, three pigeons, and two rabbits.

But, packing a bottle of Zinfandel and one of port into our valise, we must be off for the East, bidding farewell to the soporific and yet bracing and fattening air, and the valuable dust of Los Angeles, and to the shady orange groves and eucalyptus avenues, and the Mexican adobe huts, and the nocturnal music of the mocking birds, and the cacophony of the roosters and the coyotes, whose shrill yelps are, in my opinion (this is an original theory), provocative of the very unorthodox conduct of the imitative roosters in crowing as early as nine or ten o'clock at night, and at other absurd hours. But before leaving California I must record what, after all, was my most astounding experience in that land of wonders. Grapes in Los Angeles are a cent a pound. Yet the train boy on the Southern Pacific train modestly asked "two bits," or twenty-five cents, for a package containing at most about half a pound—a profit of about five thousand per cent.! What added to his offence was the fact that he called them "California muskrat grapes"!

HENRY T. FINCK.

Correspondence.

PROHIBITION IN EAST TENNESSEE.

TO THE EDITOR OF THE NATION:

SIR: It is asserted by Sue Harry Clagett, in a communication in the *Nation* for October 13, 1887, that in all the Southern States prohibition is weakest where the Republicans are strongest. There is one notable exception to this rule in the case of East Tennessee. The thirty counties composing this noted subdivision of Tennessee have a Republican majority of about twenty thousand. In the war of the rebellion it was intensely loyal, many counties sending more men into the Union Army than they had voters. In the recent prohibition election, East Tennessee gave a majority of about thirteen thousand for temperance.

JOHN M. BISHOP.

WASHINGTON, D. C., October 18, 1887.

THE WORD "ACT."

TO THE EDITOR OF THE NATION:

SIR: In comparing the *Nation's* remarks (No. 1158) on the use of the word *Act* in Shakspere, to designate the section of a drama, with the great dictionary in question, I am surprised to learn that neither Dr. Murray's staff nor your correspondent has discovered a *much earlier* use of the word. Miss Smith, in her reprint of "Gorboduc" (Heilbronn: Henninger, 1883), gives the title-page of the edition of 1565. It runs thus:

The
Tragedie of Gorbodvc
Where of three *Actes* were wrytten by
Thomas Nortone, and the two laste by
Thomas Sackuyle,
&c., &c.

The alleged "piracy" of this edition of 1565 has, of course, no bearing upon the circumstance that the word *act* was used in 1565 in its modern sense.

Miss Smith's text follows that of the "genuine" second edition of 1570. The title-page here does not contain the word "act." But on turning to p. 7 we read: "The order of the Domme Shew before the First *Act*, and the signification thereof." And a like heading is given at pp. 29, 46, 56, and 76 for the remaining "acts."

The play is marked off *Actus Primus, Scena Prima*, etc., to the end. The same division is to be noted in Marlowe's "Tamburlaine," Wagner's edition (also Henninger, Heilbronn, 1885). Tancock, in his edition of Marlowe's "Edward II." (Clarendon Press), says that the original editions have no division into acts and scenes. My impression is, that all Lyly's plays were carefully divided off; also Gascoigne's "Jocasta" and "Supposes." But whether the word "act" occurs in them as an English word, or even in its Latin form, I am unable to say, not having access to any editions that can be called critical.

Yours, J. M. HART.

CINCINNATI, October 17, 1887.

SO-CALLED SOUTHERNISMS.

TO THE EDITOR OF THE NATION:

SIR: I have just read Prof. C. F. Smith's paper on Southernisms, in the seventeenth volume of the Transactions of the American Philological Association, and find that he has included in his list a considerable number of words that have no claim to be regarded as Southernisms, unless the mere fact of their being in use in certain parts of the South as well as in other sections of the country gives them a claim to that designation. I spent the greater part of my boyhood in Pennsylvania, not far from the mouth of the Juniata, and readily recall that more than a score of words from Prof. Smith's list were current in our neighborhood. The people of that region are chiefly the so-called Pennsylvania Dutch, or their descendants, who speak English only, with a liberal admixture of what are popularly known as Scotch-Irish. I cannot recall that there was among my acquaintances one person who was in any way connected with the South, though Maryland is less than a hundred miles away. I propose here to discuss briefly a few of the words and phrases most familiar to me.

Biddable is often used with the meaning assigned to it by Halliwell, though, so far as I can now recollect, it was usually applied to brutes—to horses and dogs.

Comb, of a house, is in common use. It is of pure Teutonic stock, and is used to designate many objects that have but little resemblance to a comb for the hair, as, the comb of a cock, the comb of a gun, etc. The Germans call a cog-wheel a *comb*-wheel. The crest of a roof of thatch or shingles bears some resemblance to a comb, and the term soon came to be applied to the highest part of the roof even before the shingles are put on. I never heard any other word used for this purpose.

The word which Prof. Smith spells *fice* is common in Pennsylvania as spelt by Bartlett, who gives it *fiste* (*i* as in mice). It is often used with the epithet "little" prefixed, in evident ignorance of the fact that it is a diminutive.

In-fare. The 'Encyclopædic Dictionary' derives this word from the Anglo-Saxon *in-faere*, and defines it "an entertainment given by a newly married couple on entering their new home." This is about the sense in which I first heard the word, which is in common use.

Queer is, I have reason to believe, current in many parts of the North, in the sense of strange, peculiar. To say "I feel queer" does not so much mean I feel sick as I feel unusual, I do not feel as I am wont. Pope uses this word but once, and it is in the above sense (Donne's Fourth Satire):

"The mosque of Mahound, or some queer pagod."

To red up, in the sense of "put in order, clear up rubbish," is common in the North. The word is of pure Teutonic stock, and has many cognates in its various branches. I am inclined to believe that *reddin'-comb*, which I often heard in my boyhood, is related to it. Such a comb is used to put the tangled hair in order and to clear it of foreign substances. The fine comb is not primarily for the benefit of the hair, but is intended as a prophylactic against any possible inhabitants of the head.

The word *court-house* for *county-seat* is probably of Southern origin, though there are at least two county-seats in Ohio that still retain this designation in addition to their municipal name, or perhaps as a part of it. Both towns have several thousand inhabitants.

Branch, to designate a brook, is common in Ohio; so is *cavort* (though I have usually heard it applied to a person), as well as *trot-line* and *watchout*. I do not recall having heard any of these four in Pennsylvania.

The following words I heard scores of times when a boy in the sense given by Prof. Smith: *Paddies, to put it past, strapped, I'll be switched, suke or suky, which, like all wrath, sick* (to set dogs on). The latter is probably a corruption of "seek." It is the call of encouragement to a dog that is looking for game—Seek him! or, Seek it!

I have reason to believe that most of the words above given were brought into Pennsylvania by the Scotch-Irish, and I remember others that were used by this class only. The Scottish borders and the north of Ireland have contributed a pretty large contingent of words, one and another of which is every now and then exhibited as an Americanism. Emigrants from the same British district brought with them to this country the same words, and these were often transported to widely different sections, where in course of time they are liable to be recorded as localisms. CHAS. W. SUPER.

ATHENS, O., October, 1887.

Notes.

C. W. BARDEEN, Syracuse, is about to reproduce Comenius's 'Orbis Pictus,' using the English edition of 1727 for the translation, and that of 1658 (the first edition) for the Latin text and the copper-plates, of this once famous and universal school-book. The edition is intended for teachers, and will be limited to 500 copies on large paper. The 'Vestibulum' and 'Janua' of the same author may follow.

'Alumni Oxonienses' is the title chosen for a transcript of the matriculation register of the University of Oxford from 1715 to 1886, showing the members, with their parentage, birthplace, and year of birth, and their degrees, arranged in alphabetical order, by Joseph Foster, 21 Boundary Road, Finchley Road, London, N. W. Mr. Foster will, if properly encouraged, subsequently transcribe the register from 1575.

"The first book in America on the new universal language" will be entitled 'Volapük: An Easy Method of Acquiring the Universal Language Constructed by Johann Martin Schleyer' (Milwaukee: C. N. Caspar). It has been prepared on the basis of A. Kirchhoff's 'Hilfsbuch,' with a key to the exercises and a bilingual dictionary.

'Washington and His Country' stands for a forthcoming abridgment of Irving's Life by John Fiske, who has furnished an introduction and a continuation which, say the publishers, Ginn & Co., "make it a complete history of the United States."

Lowell's 'Vision of Sir Launfal' will be the principal holiday book of Houghton, Mifflin & Co. A new portrait of the poet, and many illustrations by the best American artists, will adorn the volume.

Lee & Shepard will publish immediately 'The Fortunes of the Faradays,' by Miss Douglas; 'Only a Year, and What it Brought,' by the late Miss Jane Andrews; a volume of poems by the late D. A. Wasson; 'Britons and Muscovites,' by Curtis Guild; 'Pre-Glacial Man and the Aryan Race,' by Lorenzo Burge; 'Educational Topics of

the Day; or, Chips from a Teacher's Workshop,' by L. R. Klemm; and 'Lectures to Young Men (with "Asides" to Young Women),' by Robert Collyer.

Symposiums on 'Evolution' and 'Non-Christian Religions' are promised by Thomas Whittaker.

Cassell & Co. have nearly ready a novel, called 'Dead Man's Rock.'

Mr. William J. Rolfe has added to his series of school classics the 'Minor Poems of John Milton' (Harper & Bros.). Nearly all the renderings from the Psalms are omitted, as is also the translation of Horace Od. i, 5; some of the less important forms are relegated to an appendix, in which place are also to be found the "various readings" extracted from his manuscripts. A biographical introduction and a critical estimate from Channing, together with a mass of notes, complete the book. The editor acknowledges his obligations to the usual sources.

'A Vacation in a Buggy,' by Maria Louise Pool (G. P. Putnam's Sons), describes, with a light touch, a drive across Berkshire and the middle counties of Massachusetts. It originally appeared as a series of papers in the *Evening Post*.

Mr. Clarence Stuart Ward has extracted the 'Wit, Wisdom, and Beauties of Shakespeare' (Boston: Houghton, Mifflin & Co.), and so relieved the public of the tedium of reading the works intact. Here is his view of the matter: "A mere bowing acquaintance with most of the plays which in early years were hastily read through, with little thought and scant appreciation, and a certain familiarity with portions of those commonly acted on the stage, are all with which most persons claiming to possess a liberal education can be credited." To remedy this condition of affairs he gives us about two hundred pages of extracts which he describes as being "*all* the passages in Shakespeare, long or short, which are of especial significance or distinguished by any inherent excellence." It makes a remarkably small book. As to the scale and relative proportions of the selections, we observe that there are only nine lines from "A Winter's Tale" to about one hundred from "King John," while in the latter block we look in vain for anything of Prince Arthur. Examination need not go further. As a handy volume of Shaksperian quotation the book has its use; but its pretension to contain the substance of Shakspere is as ridiculous as is the author's idea of what acquaintance with his works a liberal education implies. The book is an amusing practical illustration of the foolishness of Prof. Alexander Bain's plan of learning Shakspere by extracts, to which we lately referred.

Alfred H. Welsh has supplemented his bulky work on English literature by a new volume, 'English Masterpiece Course' (Chicago: John C. Buckbee & Co.). Its introduction—beginning, "Through all the kingdoms of organic and inorganic being is the unity of the persistent, illimitable essence"—reads like the ghost of the Concord School wailing in the wild West; but the work itself is a list of authorities, or at least of writings, upon the principal English classics *seriatim*, and covers the magazine files as well as books. These lists are by no means exhaustive, nor do they indicate what is best or most indispensable of the works cited; but as a trial index for the subject of literature in small college libraries, the book will prove useful for class-reference.

Prof. Genung's 'Practical Elements of Rhetoric' (Boston: Ginn & Co.) is composed on the old lines, but with more system and exhaustiveness; it is the modern representative of Whately's method—too cumbrous and too fine-drawn for the school-room, with a place only in a college curriculum. It is descriptive, analytic, and expository, and shows little trace of that real practicality of exercising the student constantly in various ways upon the art of expression which has been a growing and promising characteristic of several late books on rhetoric already reviewed in our columns.

'An Operetta in Profile,' by Czeika (Boston: Ticknor & Co.), is a social village satire of a mildly humorous kind, principally characterized by contemptuousness for the pettinesses developed in small natures under the influences of small towns. It is not without a certain cleverness, but youthful satire can hardly fail to be a very narrow thing, and neither the characters nor the incidents in this pretty little volume are in themselves attractive or matter of interest, light or serious, to any mortal; nor is its tone or treatment pleasant.

A contribution to popular literary biography comes to us in 'Famous American Authors,' by Mrs. Sarah K. Bolton (Thomas Y. Crowell & Co.), with portraits. The persons written of are all men, seventeen in number, and in such a list, which includes Stoddard, Gilder, Carleton, Cable, and other contemporaries, the omission of Motley, Cooper, Poe, and Whittier shows an eccentric favoritism in the choice. It appears that the author has written elsewhere of Whittier, and of the women who might claim to be, or to have been, famous. The restriction of the papers to male authors need not be cavilled at, but had the omissions noted above been made good, the volume would have gained a very desirable completeness. In the subject-matter there is nothing new. Each article is a compilation; the treatment is adulatory and sentimental; but considerable personal information is here gathered about the literary men of middle life which it is difficult to obtain, and in this what value the book possesses consists.

The letters which several literary or clerical gentlemen have recently contributed to the *British Weekly*, and which have been collected in a small paper volume, 'Books Which Have Influenced Me' (James Pott & Co.), are valuable illustrations of the importance to the effect of a book of the spirit and personality of the reader, and also of the usefulness of surrounding boys with the classics of their own tongue and of the world. Only three or four of these letters are really of interest. Gladstone's four lines are merely a literary curiosity to inform us of a very slight matter. Ruskin's remark, that "the books which have *most* influenced me are inaccessible to the general reader—Horace, Pindar, and Dante, for instance," is an amusing case of aristocratic temper; and his linking "all fine French divinity" and "Gaboriau's 'Monsieur le Coq'" has a comic side. But Hamerton, Stevenson, and Besant alone contribute what is worth reading, except Stead's paper, for the strong and good impression it gives of the man himself. Scott receives most gratitude; the Bible is prominent; Montaigne, Shakspere, and Coleridge, and the contemporary leaders, Carlyle, Tennyson, Emerson, Kingsley, are all well mentioned. On the whole, individual idiosyncrasies are rare, Stevenson affording Walt Whitman, for example, and the Rev. Marcus Dods John Foster. Generally the current classics and the acknowledged contemporaries hold the field. One omission—Plutarch—is singular. Can it be that that old reservoir of heroic impulse and brave example is past being a formative book? In Hamerton's paper is the suggestion that perhaps he cannot mark the influence of books upon himself very well; and we have a shrewd suspicion that that is somewhat the case with all the contributors.

Mr. Thomas R. Lombard edits 'The New Honduras' (Brentano), a book which attempts to give in a hundred pages an account of the physical geography, history, "resources, opportunities, and prospects" of that Central American republic. Though some of the chapters are ludicrously inadequate, others are of real value. The frequent innocent references to certain American companies having concessions from the Government of Honduras, with allusions to the rare investments offered by them, are of a nature to warn rather than entrap the reader, so that the undisguised advertisements to be found in the book need not deter us from commending its descriptive and statistical parts.

The thirteenth annual report of the United States Commission of Fish and Fisheries, for 1885, has been issued from the Government Printing Office. Among the miscellaneous matter in the appendix the chapter on the sponge fishery at Key West possesses a special interest. Besides the general illustrations in the text, which are numerous, as usual, there are 150 plates of patents germane to the subject. A catalogue of the fishes inhabiting North American waters north of the Tropic of Cancer, by David Starr Jordan, is also a valuable feature of this volume, whose proportions exceed 1,400 pages.

We spoke last week of the completion in seventeen sheets of the topographical map of New Jersey. An eighteenth sheet is to contain the whole State on a smaller scale, and it is to be hoped that this may be shaded hypsometrically, so as to give immediate expression of high and low ground. The gradual coloring of the large sheets according to the geological formations of areas will afford Prof. Cook a task of as high a class as that just terminated under his direction. New Jersey is now the only State in the Union that possesses a complete map that meets the educational and technical needs of the times. New York has an incomplete State triangulation, but the further work was stopped by the Governor's veto a few years ago, perhaps because its practical results were not apparent enough. Nothing but skeleton triangles were published as the result of much work and cost, and these did not inspire the Legislature to override the veto as well as the results of a judicious division between geodetic and topographic work might have done. Besides this there is the Adirondack survey under the direction of Mr. Colvin, but also incomplete, although it is now full time for some final results to appear in the form of finished maps. Massachusetts is working under an agreement with the Geological Survey at Washington; its field work is well finished, and several sheets of the final map are issued in an office edition, giving good promise for the remainder. Pennsylvania was invited to join in a similar co-operative work two years ago, but the legislators could see no propriety in spending State money for a State map!

Verbeek's great work, already reviewed in these columns, on the eruption of Krakatau in August, 1883, forms the basis of a brief narrative of this stupendous event in the Bulletin of the American Geographical Society for September 30. The most original paper is by R. E. Peary, Civil Engineer, U. S. N., "A Reconnoissance of the Greenland Inland Ice." Mr. Peary describes in a very graphic manner his attempt in 1886 to cross from Disco to the east coast. Without accomplishing this, he obtained an experience which will prove of material advantage to future explorers.

The October Proceedings of the Royal Geographical Society opens with an account of the discovery of two rivers in British New Guinea which are navigable for nearly one hundred miles from the sea. On one, gold was found in considerable quantities. This is followed by Mr. Cope Whitehouse's paper, read before the British Association, which gives the final results of his sur-

veys, conducted at the request of the Egyptian Government, of the Raïan Mœris. From this and the accompanying brief reports of several engineer officers associated with him in the task, there can be little doubt that a large storage reservoir could be constructed in this part of the Nile Valley at an expense of about £1,000,000, by which 2,390,000 acres of untilled land in the Delta could be irrigated and cultivated, thereby increasing the annual revenue £3,000,000. Sir Charles Warren's address as President of the Geographical Section is also printed. His subject was "The Teaching of Geography," the most interesting part being that in which he showed the close dependence of right political action on accurate geographical knowledge. The closing paper is Dr. Wolff's account of his explorations on the Upper Kassai and Sankura, tributaries of the Congo.

The vexed question of the expulsion of the Acadians is discussed anew by Sir Adams G. Archibald in the Collections of the Nova Scotia Historical Society, vol. v. (Halifax). He first gives, with special reference to Longfellow's "Evangeline," a succinct statement of the mode in which the Acadians were surprised and removed, and then reverts to the causes which made this step seem necessary. The review is both dispassionate and humane, and deserves to be widely read.

Another vexed question, that of the Northeastern Boundary, is called to mind by a privately printed 'Biographical Sketch of John G. Deane,' one of the most learned, indefatigable, and unyielding supporters of the claims of Maine up to the date of the Ashburton Treaty. The personal facts in regard to him collected by his son are rather fragmentary, and the pamphlet is eked out with genealogical notices. A map shows the contested frontier of Maine.

Prof. George H. Palmer's Commencement address on "Expenses at Harvard" has been reprinted in pamphlet form, with an appendix consisting of selections from the original correspondence with students on which Prof. Palmer based his conclusions. It is to be had free of cost on application to Mr. Archibald M. Howe, 25 Congress Street, Boston, Room 3.

The *Overland Monthly* for October has a good frontispiece illustration of Japanese temple scenery, thirteen pages of editorial notes and criticism, and several good body articles. The specialty of this number, however, seems to be ghost-lore. A truly international company of unsubstantial visitors from the unseen are set before us, with their varied characteristics. Perhaps some writer may yet make a department of comparative ghost-lore, and give the spectre a distinct place in literature, if not in science. The first paper, with an illustration, is by Mr. F. Warrington Eastlake, who has made scholarly contributions to the Asiatic Society of Japan. He translates from the vast mass of Japanese legends some of the hair-raising stories so beloved of grandames, by which children are fascinated and frightened. There is also an Indian and a civilized ghost, which show the same eerie character. Another paper on Japan—a sympathetic picture of household and child life in the Mikado's dominions—is furnished by Mr. H. H. Berger.

Halliwell-Phillipps writes to an American friend: "You, accustomed to the various American temperatures, can hardly realize the effect of our lengthened unusually hot summer. I have only examined the records of one town [for Shaksperiana] during the summer now past. I had arranged for doing several others, but was not up to the task. I managed to work up to the end of June; since then I have been in a state of invincible repugnance to put pen to paper—literally mentally prostrated—up to the first of October."

Our civil war has at last been seized by Jules Verne as the theme for a story, which he calls 'Nord contre Sud' (Paris: Hetzel; New York: Christern). The scene opens in February, 1862, on the St. John's River, Florida, on board the steamboat *Shannon*, where outspoken "nordistes, anti-esclavagistes, abolitionnistes ou fédéraux"—according to a classification not devoid of novelty—are still able to find a *modus vivendi* with "sudistes, esclavagistes, sécessionistes ou confédérés," their fellow-passengers. One of the former, Edward Carrol, "would not be surprised if President Lincoln meant to carry the war as far as Florida"; and Dupont was already credited with the intention of entering the "passes" of the St. John's. The illustrations are as amusing as these touches—and as might be expected.

In *Nord und Sud* the Russian writer Danilevski gives an account of a recent visit to Count Tolstoi at his country home, Yasnaya-Polyana. He found the illustrious author with unimpaired mental faculties, still absorbed in his theological studies. Among the books in his library were Emerson's 'Essays' and Henry George's 'Progress and Poverty.' Referring to his manner of life, Tolstoi said: "Every day, according to the season, I labor on my farm. I cut down trees, I chop wood, I mow. Ah! and I plough. You do not know what a pleasure that is. You go along turning up the fresh earth, tracing the long furrows, and you do not notice that one hour, two, three hours pass. The blood courses joyously through your veins. Your head is clear, your feet scarcely touch the ground; and how hungry you get, and how you sleep afterwards!" To these occupations should be added shoemaking in winter. Danilevski believes that Tolstoi is simply passing through a period of rest preparatory to writing another great work.

—A feature of the 'Elocutionists' Directory' (New York: Edgar S. Werner) which will make it of great value to librarians, is the index to the hundred or more commonest "speakers," or books containing selections supposed to be suited for recitation. The index covers eighty two-column pages of small print, and must prove highly serviceable in spite of its defective method, such as entering many titles under the prefatory article, because that is the first word, and others under the least important word even when this is not the first—as thus, 'Curfew will not Ring To-night' is entered under "To-night." Oratory, other than of the bunkum or maudlin style, has long been rare, both in politics and at the bar, and this fact has been ascribed to the disappearance alike from cross-road schools and from classical academies of the manly art of declamation. From an examination of the material offered in these "speakers," we are inclined to think that, in so far as they influence the matter, the coming generation will be greatly inferior to the present, bad as that undoubtedly is. The most popular of them is the series called 'One Hundred Choice Selections,' of the earlier volumes of which 100,000 copies are said to have been sold. A book of one hundred selections might contain all the "pieces" which would at once develop a boy's power of vocal expression, awaken his interest in history and politics, and teach him, by the power of euphony and musical cadence, to appreciate the force of powerful prose and of stirring rhyme. But the compilers of 'One Hundred Choice Selections' have in mind a very different public from that which "spouted," with more or less understanding, Webster's reply to Hayne, or Burke's apostrophe to Marie-Antoinette, or Wolsey's Soliloquy, or the "Charge of the Light Brigade," or even Spartacus to the Gladiators. Their aim, they say, is to provide extracts which are new and fresh, and had they aimed to give only masterpieces, not only would the supply have run short, but their collections would not have sold by the hundred thousand. Considering that since the appearance of their first "choice," they have resifted their material (each time, of course, with a coarser sieve), no fewer than five-and-twenty times, we ought not, perhaps, to be surprised that the serious pieces are but few, and devoid of literary merit, and the humorous ones chosen, for the most part, from the funny column of Western newspapers. When we remember, too, how lasting are impressions of this sort, and how impossible it is for even careful study, in later years, to produce anything like the same permanence of impression on the mind, one cannot but regret the decadence in popular taste, as indicated by the kind of stuff which seems to suit it.

—Volume xl of the second division of Ersch and Gruber's 'Encyklopädie' is the ninth volume devoted to the letter K. The first thirty-two pages embrace subjects connected with war, such as military academies, prisoners of war, courts-martial, martial law, the war game, war and battle-songs—the last-named article extending to eight pages, and describing the martial hymns of the ancient Greeks and Romans, of the Teutons, of the Middle Ages, and coming down to the most modern times. The longest article in the volume is the one on copper, of thirty-four pages, and is followed by one of twelve pages on copper-plate engraving. Others of considerable length are: Crimean war, ten pages; Croatia, eleven pages; Kryptocalvinists, twelve pages; Kung-fu-tse (Confucius), ten pages. There is a short account of the Kuklux Klan, taken from articles published in the *Century* magazine and in the *Nation* (July 3, 1884). Among miscellaneous topics not generally treated in books of this kind may be mentioned fire-works, goitre, near-sightedness, crêches, Kriemheld, coronation, cakes. Of interest to philologists are such articles as those on the Cree language, the Kunama, the Kru, and the Kuki. The biographical notices are very numerous and very full, and among them may be mentioned Mme. Krüdener, Kryloff, the Russian fabulist; Krummacher, Kücken, composer of some of the most popular German songs; Critias, Crœsus. Among the geographical articles there is an abundance of Chinese and Russian names of towns, provinces, and rivers which one would look for in vain in other encyclopædias. There is, also, the usual profusion of titles in the sciences, as well as in history and law. It may be mentioned that volume lxxviii. of the first division, published in 1863, contains a detailed biographical notice of Count Giovanni Gozzadini, concerning whom our Italian correspondent has lately written in commemoration of his death, and a very long and copious account (thirty-five pages) of the Gozzadini family.

—Prof. Gustav Körting's 'Neuphilologische Essays,' lately published in Heilbronn, do not turn out to be philological essays as that phrase would naturally be understood in English, since they really deal for the most part with certain practical questions of higher German pedagogy. The author discusses such themes as the present status of modern philology at the German universities, the State examination, and the examination for the doctor's degree in modern philology, and the work done by the gymnasia and the high schools for girls in the teaching of French and English. The book is an excellent one, full of fresh and able discussion, which will be read with interest, both in Germany and in this country, by the limited public to which it appeals. We have been especially entertained by the last of the eight essays, which is upon modern-language instruction at the higher schools for girls. Kör-

ting describes this instruction, and deplores the fact that its dominant aim is to enable the learners to "parlieren" French and (to a less extent) English. He argues with force and humor that this ability to do school-room conversation in French and English is an accomplishment of no intellectual value, and one, moreover, that is soon forgotten, for lack of opportunity to practise, by the great majority of those who have once acquired it. Hence, he contends that the girls' schools should radically modify their theory of procedure, and aim to impart real intellectual culture, a culture analogous to that afforded to boys in the gymnasia. To this end "conversation" must go, and the study of literature take its place. The girls should study foreign languages, if at all, simply that they may be able to read and enjoy good books in those languages.

—Having established these theses to his satisfaction, and, we will add, to our own, Körting proceeds to inquire which modern literature is best suited to the needs of German girls, and elaborates his reasons for preferring English to French. We certainly feel no inclination to dissent from his conclusion, but some of his incidental argumentation is curious, and shows how very mediæval and monastic the ideas of even a progressive German thinker can be with regard to the minds of women. The essayist's objection to French literature is its lubricity—an objection with which, stated thus generally, we do not quarrel, although we think that a specialist like Körting could do the world no better service than to urge frequently and persistently the fact that the *espèce ordurière* and the *espèce pornologique* are not all there is of modern French literature. It is rather the particular illustrations of the main proposition which we find singular. "How many French works there are," exclaims Körting, "works that are classical, or at any rate highly important, which cannot be put into the hands of girls or women"; and then we have a short *index expurgatorius* which contains Pascal's "Lettres Provinciales," Voltaire's "Candide," Rousseau's "Nouvelle Éloise," "numerous" songs of Béranger, "the most" of the plays of Victor Hugo, and Mérimée's "Lettres à une Inconnue." Really, if German women are to be kept away from such books as these, it would hardly seem worth while to attempt to cultivate in them a taste for secular reading at all; least of all should they be trusted to travel without a duenna along the devious and slippery byways of our own English literature. It would certainly be cheaper and less risky not to bother their heads in the least with the costly furniture of a man's education, but to confine them to fancy work, expurgated Bibles, and a little daily practice in "parlieren" with a safe elderly person of their own sex.

—In a recent dissertation entitled "Der *Spectator* als Quelle der *Discurse der Maler*," Dr. Theodor Vetter gives the world an excellent illustration of German capacity for bestowing time and trouble upon matters that are of no, or very limited, importance. *Discourses of the Painters* was the name given to a Swiss periodical published by Bodmer and Breitinger in 1721–1722, in imitation of Addison and Steele's *Spectator*, to which the editors in a preface acknowledged their general indebtedness. "To you, illustrious *Spectator*," they say, "this work owes its origin, a part of its method, and perhaps everything it contains that is clever." The journal continued to appear for a year and a half; intrinsically its numbers are of no interest, and their historical importance is at any rate very small. It is simply one of an enormous number of journals for the promotion of polite culture which were called into existence on the Continent of Europe by the success of the London *Tatler*, *Guardian*, and *Spectator*. It is also one of the avenues, though doubtless one of the least important, through which the Swiss littérateurs Bodmer and Breitinger endeavored to recommend to the Germans the literary models of England, and so to discredit the dominant French influence. What Dr. Vetter has done is, now, to go laboriously through the *Discourses* and note every paragraph, sentence, or phrase that has been translated, imitated, or probably suggested by anything discoverable in the *Spectator*. In conclusion, he presents a statistical table of his "results." They perhaps throw some light upon the literary methods of polite journalists a hundred and fifty years ago, but this subject was already pretty well understood.

—We have received through B Westermann & Co. a new volume of essays by Fritz Mauthner, whose *Credo* was briefly noticed in the *Nation*, No. 1153. This new volume is entitled 'Von Keller zu Zola,' and consists of critical essays upon contemporary German and French writers. The only heterogeneous element in the book (and this is in its way a critical essay) is "The Bloodsucker of Sandy Bar," a rather sickly parody upon the once familiar manner of Bret Harte. To an American it seems strange to come across this production in such company. Mauthner evidently writes for appreciative and intelligent readers of the best literature, and so one cannot help wondering for what public he thinks it necessary or worth while, at this date, to parody the style of Bret Harte's Western sketches. Is the taste of the German public now in danger from these writings? The title 'From Keller to Zola' is apparently intended to represent an anticlimax, since Mauthner belongs to the Keller "sect," who see in the Zürich novelist one of the great lights of modern fiction. Keller is for him the representative of the true and only realism, the one modern who has found just the right standing-ground between the effete romanticism of the past and the ultra-naturalism of many living writers. For Zola and for Zola's German admirers (whom he admits to be sadly numerous) the essayist has strong language of reprobation, but more for the latter than for the former, as is evidenced by this deliverance, which is further interesting for the accuracy with which it describes the sensations of many another Zola reader: "I confess that my dislike of Zola always keeps front against his German defenders and his French imitators, but not always against the power of the master himself. Each new creation of his produces at first an overpowering effect, and it is not until the mud, trickling down from every side, has become so deep as to necessitate one's wading ankle-deep in filth, that Zola compels one to abandon his path, and that a feeling of distress slowly mounts into head and heart, and stides all admiration, just as sea-sickness inevitably blinds us to all the beauties of the billowy ocean." Another remark of Mauthner's concerning the famous Frenchman has arrested our attention: "The question arises how it is that dirt has been erected into Zola's canon of art. Is his grand emporium of bestiality a secret madness or a business speculation? A great Paris bookseller assured me that it was the latter; a great Paris poet, that it was the former."

—There have been not a few books about bookbinding published in Paris recently, but no one of them has had the solid merit or the sumptuous adornment of the latest, a 'Manuel historique et bibliographique de l'Amateur de Reliures,' by M. Léon Gruel, himself a distinguished binder (Paris: Gruel & Engelmann; New York: F. W. Christern). Where others have been fantastic and careless, M. Gruel is exact and trustworthy; he denies himself all privilege of conjecture, and produces an authority for his every assertion. His book is in two parts, first a brief chronological account of the art of bookbinding in France, and secondly a mass of notes about bookbinding in general, famous binders, celebrated collectors, technical terms, and so forth, arranged in dictionary form. Nowhere else can the lover of books find so good a brief history of bookbinding in the country where the art has most flourished, or more useful and entertaining notes, or, above all, so many and so elaborate reproductions of notable bindings. M. Gruel's noble folio has a page 29 centimetres by 23, ample room for a full-sized facsimile of even a very portly volume; and of this full page he takes full advantage. There are dozens of plates, chromolithographs, and colored photogravures, sometimes in two or more tints, the more exactly to reproduce the original. Never before has the bibliophile been invited to such a feast. We rise from a careful study of this invaluable series of beautiful plates with a renewed conviction that no designs for the covers of a book have ever been made more graceful and more lovely than those executed for Grolier. Space fails us now to discuss the text of M. Gruel. We may note only that M. Gruel can find no warrant for the accepted attribution to Le Gascon of the many books bound in a style of florid grace; he thinks it more likely that the chief artist in this style was Florimond Badier. Like most of his countrymen, M. Gruel rarely strays beyond the borders of France, and when he does venture abroad, as like as not he errs; thus, we find him noting Robert (*sic*) Payne, and confessing he knows no more about him than that he found the name cited in an obscure pamphlet.

—"Only a man who for many years has been present in the ranks, who has taken a direct part in the various phases through which the Russian revolutionary movement has passed, who has intimately known the persons who have appeared during those phases, . . . could give European readers a sufficiently truthful idea of the form and substance of the Russian revolutionary movement." These words, applied by Peter Lavroff, in a preface to 'Underground Russia,' to its author, "Stepniak," are with equal force applicable to himself. Successively a writer, conspirator, prisoner, and exile, he has, within the last decade, probably been the most active revolutionary organizer of all Russians living abroad. His public utterances are weighty, but rare, and very seldom addressed to "European readers." His views of the changing phases of the revolutionary labor in his native country must be gleaned from Russian writings mainly printed in Geneva, and intended to be smuggled into Russia and there clandestinely circulated. The latest of his publications is 'Two Addresses' ('Dvie Rietchi'), one treating of "The Roll and Forms of the Socialist Propaganda," and the other presenting a parallel between two periods of revolutionary activity of eight years each (1871-1879 and 1879-1887). The latter address—both were delivered in Paris—contrasts in its retrospective remarks, with almost surprising frankness, the buoyant, hopeful, self-sacrificing spirit which animated the Russian Liberals, and especially the youth, at the close of the first period mentioned (when the deadly grapple with Czarish autocracy had just been seriously begun), with the prudently cool, half-despondent, half-selfish disposition of the present generation, brought about by sacrifices without number and victories without profit. "There are still live men in Russia who have not dropped their hands, and are resolved to fight to the end. But these men, who stand the higher amid the general lowering of spirits, are isolated and disunited. They are no longer supported in their resolution by the general soaring of minds." The same mental conditions Lavroff sees reflected in the colony of exiles which surrounds him,

He accuses nobody, only states the facts. He does it the more candidly as he finds comfort for the propaganda in the general advance which Socialism has made within the last period in all countries of western Europe and in America. But his statement of facts as to the present aspect of "the Russian revolutionary movement," coming as it does from such an authority, has special significance.

THE SCIENCE OF THOUGHT.

The Science of Thought. By F. Max Müller. London: Longmans; New York: Charles Scribner's Sons. 1887.

In addition to the brief title set forth above, the title-page of this latest and most elaborate work of the distinguished Oxford professor bears a sentence which is frequently repeated in the book, as, in a manner, the text of the whole disquisition, and as presenting the basis of the theory propounded in it: "No reason without language, no language without reason." The author, whose life has been mainly devoted to two special branches of study, philology and mental science, has here brought together the conclusions to which he has been led by many years of research, and which have taught him that these two subjects of study form in fact but one, and cannot properly be disjoined. Language, he holds —and all will readily admit—is the embodiment of thought. On the other hand—and this is the important side of the question, to which his work is specially designed to draw attention—thought, he maintains, cannot exist without language. The only true method, therefore, of studying mental science is by the analysis of speech.

The importance of this view is enforced by striking and, indeed, somewhat startling assertions. In his preface he admits that the outcome of his system might not unfairly be represented by the statement that "there is no such thing as intellect, understanding, mind, and reason, but that all these are only different aspects of language." In his chapter on the "constituent elements of thought," he repeats this declaration in still more vigorous terms: "I certainly deny that there are any such things as soul, mind, memory, intellect, understanding, and reason, or that the conscious Monon can be said to be endowed with them, whether in the shape of separate faculties or useful implements." This seems, at first sight, to be destructive radicalism, carried to the last degree. Yet, as the author adds, there is really nothing terrible in it. What he is denying is not any substantive fact, but simply the propriety of certain forms of expression. Physicists have dismissed the term "caloric" from their vocabulary, and have shown that heat is merely a mode of motion. In like manner, Prof. Max Müller would dismiss these ancient terms of metaphysical science, in favor of others which, in his opinion, more exactly express the operations of the mind.

The special characteristic of his system is that it introduces into mental science a law equivalent to that which constitutes the most important discovery of our age in the science of physics—the law of the correlation and conservation of forces. As physicists have shown that heat, light, electricity, and motion are merely different manifestations of one natural force, so Prof. Max Müller maintains, in effect, that the various operations of the mind, or rather their products, are simply different manifestations of one intellectual force. These mental operations he sums up in four "acts"—"sensation, perception, conception, naming"—which work through four corresponding instruments or faculties—"sense, imagination, intellect, language"—and have for their respective products, "sensations, percepts, concepts, and names." The whole scheme is succinctly set forth in the following table:

Act.	Instrument or Faculty.	Product.
Sensation	Sense	Sensations
Perception	Imagination	Percepts
Conception	Intellect	Concepts
Naming	Language	Names.

All these products are convertible and inseparable. "Sensations are impossible without percepts, and percepts without concepts"; and all these are impossible without names—that is, without spoken words—which, in their turn, are impossible without all the preceding operations. And as, among these products, we cannot really study any but the last, it follows that in language, and language alone, lies the source of all certain knowledge concerning the workings of the human mind.

This is the thesis which Prof. Max Müller proposes and maintains with his usual clearness of expression and wealth of illustration. The importance of it to the science of thought is evident; but the author's argument is seriously impaired by the fact that, in the greater portion of his work, he has unduly restricted the meaning of the term "language." In one part of his treatise he distinctly declares that "thought may exist without words, because other signs may take the place of words." But in general he uses the term "language" with the meaning of "articulate language," either spoken or written; and because brutes do not possess articulate speech, he denies to them the power of reasoning. He even denies this faculty (in the sense in which he employs the term "reason") to uneducated deaf-mutes, and to our primitive ancestors before they acquired articulate speech. There is here an evident inconsistency, which perplexes the argument throughout the work. In one place, as has been seen, we are assured that sensations necessarily imply percepts, that percepts imply concepts, and that concepts imply language. In another place we are told that brutes have sensations and percepts. It follows, as a necessary consequence, by the author's own reasoning, that they must also have concepts and language. That they really have both — if a just meaning is given to the term language—must be apparent to any observer. A hen that, at sight of a hawk, utters a cry of alarm to her brood, has assuredly as clear a concept of "danger," and expresses it as distinctly, as if she had pronounced the word. To deny to the sensation, percept, concept, and intelligible utterance in this case the names of thought and language, which we would give to them in the case of a human being, is to make a purely arbitrary distinction, that cannot be reconciled with the general principles of the theory here proposed.

It is clear that the fourth member in the author's series of intellectual products requires a larger definition to bring it into harmony with his own system. The proper term for it is not "names," but "expressions." The first member would also perhaps be more aptly expressed by "impressions," which the author himself holds to be synonymous with "sensations." The series will then be "*impressions*, percepts, concepts, *expressions*." By "expressions" will be understood not merely vocal utterances, but everything which is a sign of thought. A movement of the body, a glance of the eye, a change of countenance, is an expression. In all this series of mental operations the lower animals partake as distinctly, though not as fully, as man. The difference is only in degree, not in kind.

We now get a clearer comprehension of what is meant by the apothegm—"no reason without language, no language without reason." When a natural philosopher says, "No heat without motion, no motion without heat," we understand him to mean simply that in all heat motion is implied (which may or may not become apparent), and that in all motion heat, in like manner, is implied. So the metaphysician, adopting Prof. Max Müller's law, merely affirms that every concept implies an expression (which may or may not be actually manifest), and that every expression implies a concept.

When the author's inconsistent limitation is removed, his objection to the Darwinian view of the descent of man falls with it. The peculiar theory of the origin of language which he adopts from his friend Prof. Noiré, ingenious as, in some respects, it must be deemed, also becomes unnecessary, as it certainly is improbable. Darwin's view, which Prof. Noiré himself formerly held, will appear to be the only satisfactory and probable one. In the progress of evolution, a time arrived when the inarticulate cries which expressed conceptions became articulate words. We may further take it for granted that the first to use such words were young children. To suppose, as Prof. Noiré apparently does, that man could live to mature age with the mental capacity required for speech, and then for the first time invent and use words, is a strange fancy, opposed to all that we know either of human or of brute nature. He might, with equal reason, suppose that the primitive men who first walked upright had crept on all fours until they were full-grown, and then by gradual efforts took to their feet.

It is fair to add that our criticism does not affect the chief object and main value of Prof. Max Müller's work. These are to be found in its convincing exposition of the truth that the only proper mode of studying the operations of the mind is by investigating its products, and that of these by far the most important are articulate words. The author, as he is careful to show, is not the first to set forth this proposition in general terms; but he is the first to build upon it a complete system of mental sciences. The importance of this procedure, in spite of any incidental defects of execution, is found in the fact that it converts the science of thought from a deductive to an inductive science, and brings it into harmony with all the other branches of inductive study, which, under the Baconian method, are now making such prodigious advances.

Of the portion of the work in which the author exemplifies and illustrates his theory—his analysis of the Sanskrit roots, his chapters on Kant's philosophy, on the formation of words, on propositions and syllogisms—it is only necessary to say that while they contain, along with much that will reward a careful study, not a little that will arouse controversy, they have, like all the author's former productions, the prime merit of being free from the two greatest of literary faults—obscurity and dulness. A work in which two of the dryest and hardest of studies, analytic philology and mental philosophy, are made at once lucid and attractive, is an acquisition for which all students of those mysteries have reason to be grateful.

RECENT NOVELS.

The Gates Between. By Elizabeth Stuart Phelps. Boston: Houghton, Mifflin & Co.

In the Golden Days. By Edna Lyall. D. Appleton & Co.

Under the Storm. By Charlotte M. Yonge. Thomas Whittaker.

A Border Shepherdess. By Amelia E. Barr. Dodd, Mead & Co.

The Invaders, and Other Stories. By Count Lyof N. Tolstoï. Translated by Nathan Haskell Dole. T. Y. Crowell & Co.

Miss Phelps, in 'The Gates Between,' discusses a familiar theme, and one which excites her highest intellectual qualities and her deepest emotional sensibilities. Again she penetrates beyond the physical and natural world, boldly invading the spiritual and supernatural. For several reasons the imagination of the reader here responds easily to the imagination of the author. Spiritual desires, affairs, actions are not minutely identified with mundane interests and cravings purely of the flesh. Probability and common sense are not outraged by a representation of disembodied spirits enjoying and suffering pleasures and pains known to be sensory. Happiness and agony alike spring from those nameless forces which every human being feels to be existent within himself, and which science in its explanations wisely lets alone. By restraining a proclivity literally to reproduce the known in scenes absolutely unknown, Miss Phelps evinces a reverence for her subject, and an artistic perception of fitness, which are not evident either in 'Gates Ajar' or in 'Beyond the Gates.'

The method chosen to disclose the experiences of the spirit of Dr. Thorne is the best conceivable. It is a direct, concise narrative, naturally arranged and appropriate, even in the smallest details of composition and expression. Excepting in the introductory chapters, where the living Dr. Thorne gushes unduly over the charms of his wife, the style is generally restrained and calm. When it rises to intensity and exaltation, the reader's sentiment goes along with it harmoniously. The transition from the picture of Dr. Thorne alive to that of Dr. Thorne dead is managed with extraordinary skill. A reader unused to Miss Phelps, when he grasps the situation, must be almost as much surprised as Thorne was. Very impressive, too, is the description of Thorne's slow realization of the truth. Up and down familiar streets he goes, gazing upon familiar faces, shouting, appealing to friends who neither see nor hear. Vain alike are threats and prayers; whatever land he may have passed to, he is dead to the world. In all this description, so entirely without authority that it may be called a vision, there is nothing to shock the reader's demand for possibility, or to throw him out of harmony with the strain. He accepts the events as real, and his belief increases when he perceives the meaning in the punishment meted out to Thorne. Arguing from the premise that as far as individuality is spiritual, Thorne's individuality suffered no death, that punishment was torture exquisite and awful. The man of arrogant will is powerless to compel, powerless even to accomplish, his own imperative desire. The busy, important physician is doomed to idle wandering in the places where every moment had been precious; the man of prompt resolve and action can only helplessly look on at mistakes of incompetency that he struggles to avert; the man of science and facts, of special hereditary endowment and special training, finds himself at last thrust into a society where he is less at home than is a boor in a palace, where his ignorance, his uselessness, his insignificance humiliate him inexpressibly. But humiliation is the beginning of redemption; when, in deep anguish, he cries for help to God the Spirit, then he stands at the gates of eternal life. Purely fantastic all this really is, and no greater praise for its literary quality can be spoken than to say it never seems fantastic. It is easy to reject the theory advanced, but it is not easy to flout at it as ridiculous and unworthy of rational respect.

The scene of 'In the Golden Days' is in England during the reign of Charles the Second. Miss Lyall has been able to see and to describe the miserable truth of those days. She shows us men deliberately forsaking good for evil, wantonly undoing much that their fathers had done for liberty and for righteousness. Though she perceives that it is human for men just flinging off tyrannical restraint to plunge into license, she does not hold up that aspect of humanity for our respectful admiration. The hero of the novel is young Hugo Wharncliffe, a man of reserved nature and intellectual force, but easily influenced by bolder, less scrupulous spirits. He is a Royalist by tradition and association rather than from conviction. He is put in a position which compels him either to incur the enmity of the King and of his courtier brother, whom he dearly loves, or to retain their favor by giving public testimony to the treasonable intents of a man whom he knows to be guilty of no treason, except that of worshipping God in his own fashion. All the incidents hang on this situation, which is well conceived both to describe political and social conditions of the period, and to test a complex character torn by conflicting duties, motives, and emotions. The shameless audacity of Hugo's conviction for complicity in the Rye House plot, a plot of which until his arrest he had never heard, illustrates, without exaggeration, the degraded practice of justice prevalent in the Golden Days. The persecution of the two non-conformists, Hugo's companions in Newgate, extends the illustration. These figures are lifelike and well contrasted, while the glimpses of Algernon Sydney give vitality to that somewhat dim historical personage. Where King Charles appears, he is hardly natural. Such remorseful hesitation as Miss Lyall attributes to him after Hugo's appeal for Sydney's life, we may be pretty confident Charles Stuart never felt. Miss Lyall does not approve of the King, but she has a suspicion of sentiment for him. Except where he is concerned, she stands firm for honor and virtue; and all the feeling of the book is for those who dared death to preserve a scrap of either.

Miss Yonge, in 'Under the Storm,' goes back for material to the wars of the King and the Parliament, the Cavaliers and Roundheads. The sound of battle scarcely echoes through the story, which only professes to tell how a family of children kept themselves alive during the nation's troubles. The heroic temperament of the eldest boy is displayed quite as finely in his care of his sisters as in his defence of the communion vessels of silver intrusted to him by the banished vicar; yet Miss Yonge's devotion to her church leads her to lay most stress on his faithful wardenship of the holy chalice and paten. No matter where the greater glory lies, Steadfast Kenton is well worth the consideration of the children to whom his story is addressed. His nature was faithful and trustworthy—the nature to which the trust means everything, the thing trusted, very little. In the narration the author adheres to an elementary principle in story-telling which she has frequently neglected. Her young readers will not be bored by sermons independent of the story, but may detect the sermon when the story is finished.

A natural reflection after reading the three books just noticed is, that the authors are women who have found their proper vocation, and are doing very well the work through which they can be most widely useful. Unfortunately there are other women novelists who could well be spared from their chosen sphere of activity. Conspicuous among these are the writers of the 'Modern Circe' and 'Scheherazade.' Nothing more vicious, in a weak, dull way, nothing more conclusive of moral obliquity and mental depravity, has ever been put in print. The numerous preceding productions of the same writers may perhaps be excepted from this judgment. As literature, these books are of course not entitled to notice, and their claim to be called works of fiction is small. They are the product of delighted familiarity, actual or mental, with a vulgar and base society, whose actual vulgarity and baseness, however, is, in all probability, refinement itself in comparison with these representations. It is only because these books are popular (and their popularity is greatest among women) that they are worthy even of contemptuous condemnation. If the women who read novels can once get into their heads that to be found reading the effusions of the "Duchess" and Miss Florence Warden is presumptive evidence of a corrupt mind, or of no mind at all, then the nimble pens of these ladies shall speedily be condemned to the harmless task of entertaining only those who wield them.

In 'Allan Quatermain' Mr. Haggard brings to a close the terrestrial adventures of the hero of 'King Solomon's Mines.' Wonderful are these adventures beyond the telling of any mortal man except Mr. Haggard. Most of them are old friends with new faces, yet the new faces are marvellous enough almost to effect complete metamorphosis. They are painted with that fond elaboration and tender care which one does not readily think of a man's bestowing on any creation except his own. It is in this detail, and in the selection of subjects for minute description, that the author shows literary ability of a higher kind than that displayed in stringing together a number of impossible adventures. For instance, Inkosi-kaas, the battle-axe of Umslopogaas, is so vital to the narrative that the page of description given to "her" is not wasted; it at once fills the reader with a proper sense of her importance. The account of the Goya lily, of the crabs infesting the outlet of the underground river, and of the zu-vendi palace and temple are all excellent examples of the art of description.

If Mr. Haggard could have let his book go simply as an irresponsible invention, there could have been no doubt that he knew what he was about, and that he estimated the value of his work justly. He has, however, been possessed to hope that its perusal may help boys to attain "the state and dignity of English gentlemen." Mr. Haggard has such a high opinion of this estate that a boy with any spirit would naturally want to get there, once having heard of it. The average boy's mind is cruelly direct and practical. He scorns subtleties, and winks and nods are loathsome to him. Any lesson he may learn from a book will be that which shines as the sun at noon. Therefore the average boy, fired with ambition to become as that irreproachable being, an English gentleman, and taking 'Allan Quatermain' for a text-book, will have no hesitation about how the thing is to be done. The point, he will say, is to kill anything, everything—bird and beast and man. I must keep right on till there is nothing but other aspirants to the state of an English gentleman left on the face of the earth. He will probably be restrained from emulation of the woodpecking exploits of the Zulu only by the difficulty of acquiring in civilized lands an Inkosi-kaas with a pole-axe end.

In novels, as in the British Parliament, the discussion of the Irish question is never done. The author of 'The O'Donnells of Inchfawn' argues the question at length, and gives his adherence to the solution by emigration. If it be possible

to present Irish woes in a way that shall not bore to death people who are not Irish, the author has succeeded. His plot is conventional, but his characters are interesting, and fit naturally into the scenes in which they play a part. The author, though very kind to their virtues, is not blind to those peculiarities which do not exactly endear the Irish to other nations. The O'Donnell tenantry are impulsive, turbulent, absolutely ignorant, and hopelessly lazy. If they could, by honest work, extract subsistence from the land, they would wither in despair. There would be no excuse for begging and picturesque starving, for mysterious conspiracies, and for incredible noise about wrongs. But noise and notoriety have become essential to them, and with plenty of those, their idea of bliss is completely expressed in such a vision as that inspired by the thought that the evicted O'Donnells were coming to their own again:

"Once more they pictured the great kitchen crowded with retainers; once more they saw the waste and prodigality in which their souls delighted. Once again their rents were paid when and how they could; once again the pig had the warm corner by the fireside, and the praty-garden flourished."

In 'Frederick Hazzelden' the Irishman returns from America determined to demonstrate that the "question" can be solved only by depositing dynamite in those places where mostly congregate people who couldn't be tempted to put a finger in the Irish pie. Why he arrived at this conclusion nobody knows, but his motives are no more obscure than are those of most of the people in this disjointed novel. There is nothing mysterious about the author's motive, since it is quite clear that he is guiltless of one. His fancy is first attracted by mesmerism and clairvoyance; then it rests for a moment on the figure of an orthodox parson who is a pagan at heart; then it flits over a wide range of political situations, finally concentrating expiring energy on the dynamiter. While gathering strength for each new flight, the author indulges in homilies which, being abstract and mainly didactic, do not tax his imagination. Several of these, on women, on life, and other subjects equally extended, are extremely amusing. They have all that decision of judgment, that impregnable self-confidence, which rarely dwell in any human breast after its eighteenth year. Though he refrains from any direct literary criticism, he informs us that the sentiments of a man who admired Tennyson were necessarily "of a strictly proper English-fireside, 'no-blush-to-maiden's-cheek' order, and that his literary taste was unsophisticated." The extreme sophistication of the author's literary taste may be responsible for what appears to be the baffling inconsequence of his literary performance.

'Thraldom' has the unmistakable flavor of a book written at a time when the author had almost nothing to say. The opening sketch of young Tom Fane has something of the charm which Mr. Sturgis always lends to youth; the style is careful and finished, but in all other respects the author falls below himself. Mysticism in its vulgar forms is not a congenial field to Mr. Sturgis. Therefore, when he meddles with it, there is no wonder that he doesn't know what to do with it. All the mystical agencies employed to thwart Tom Fane's love are perfectly unimpressive. Such mountebanks as the negress, with the pointed, poisonous fingernail, and her mistress can be adequately handled only by the literary mountebanks whose rights of property in them should be held sacred.

Mrs. Barr's 'Border Shepherdess' is another instance of a conscientious author's falling short of her best capability. The work is carefully done, but there is no spirit, no go. Mrs. Barr's construction is always faulty; she never knows when her story has properly come to an end, but keeps on with tag after tag. Her lingering farewells are like the awkward retreat of a bashful young man from a drawing-room. In this case, she tarries until she has killed off the majority of two generations. The character of Faith Harribee is strong and fine, but contemplation of it is as tiresome as would be looking all day at a mountain standing out in high, steady light, without a particle of shadow. Lord Graeme and his sister are failures. Their development is inconsistent with the heredity with which the author in the beginning especially endows them, and in many particulars it contradicts itself. There is, however, no contradiction in the delineation of the influence on character of the stern faith of the Covenanters. One realizes the awful dignity of the creed that teaches men and women to accept, without resentment, crushing sorrow and disaster as the will of God, yet perceives equally its awful inhumanity.

Though Tolstoi has long since repudiated his strictly artistic writings, they still continue to be translated. The latest volume before us in English contains six of his shorter stories—"The Invasion," "The Cutting of the Wood," "An Old Acquaintance," "The Snow-Storm," "Polikushka and Cholstomyer"—of which the first, which is the briefest, occupying only some forty pages, gives the name to the volume. The translator in this volume, as in his previous performances, has again succeeded in making the volume well-nigh unrecognizable to Russian eyes. "The Invasion" becomes "The Invaders"; and, lest we mistake this for a slip, Mr. Dole is careful to add in a foot-note, "Nabég" (which is pronounced Nabyég), "pronounced Na-be-ukh"! The transformation of Cholst*omyer* into Cholst*omir* is more serious, since the word is a compound, the second part of which means 'measurer,' while *mir* means 'the world.' The translation itself has some astounding blunders. In the "Story of a Horse" Tolstoi makes the drover *put his arm around its neck and put on the halter*, which Mr. Dole, on page 283, translates "took him by the neck and gave him his breakfast"! Translating on p. 281 *dazhe* (even) by *also* entirely alters the sense of Tolstoi's humor, and the statement on p. 284, that the horse "received nothing but *execrations* for this 'rot,'" when Tolstoi says that he received a scolding as a good-for-nothing, entirely alters the relation between master and beast. For not only is the language thus misrepresented, since the Russian knows no such thing as slang, but Tolstoi is such a master of detail that even the most delicate change spoils his art, and such blunders are numerous in the volume before us. Again, in "The Invasion," the Captain's mother speaks of the Caucasus as *Kapkas*, instead of the Russian *Kavkas*. She, being old-fashioned and behind the times, mispronounces the new word, and Tolstoi, accordingly, italicizes that word. Such a slight touch, characterizing the woman, is part of Tolstoi's art. Now, an italic *p* looks somewhat in Russian like an *i*, though it requires serious defect of vision to mistake the one for the other. Mr. Dole entirely missed the point, and did not even know that the author he translated was speaking of the Caucasus; for, without even italicizing the word, he translates it as Kaikaz! (p. 4). And this, too, while in the previous paragraph the narrator is made to say in English, "I had only become intimate with the Captain in the *Caucasus*"!

The artistic merits of these sketches are so great that it is all the greater pity that Tolstoi should have fallen into such ignoble hands. The psychological analysis of the feelings of a horse is in its way not less powerful than that of Ivan Ilyitsh; the scenes in "The Invasion" (*Incursion* is the more accurate word) are in power not behind those of the 'Cossaks' and 'Sebastopol,' and for the like of descriptions of nature in "The Snow-Storm" we can go only to Turgeneff. None of these sketches are earlier than 1852 or later than 1861.

BULGARIA UNDER ALEXANDER OF BATTENBERG.

Aus bulgarischer Sturmzeit. Eine authentische Darstellung des Handstreichs von Sofia und seiner Folgen, von A. von Huhn. Leipzig. 1886.

Der erste Fürst von Bulgarien. Aufzeichnungen des russischen Generals und vormaligen bulgarischen Ministerpräsidenten L. N. Sobolew. Aus dem Russischen. Mit einer Einleitung. Leipzig. 1886.

Prince Alexander of Battenberg. Reminiscences of his Reign in Bulgaria, from authentic sources. By A. Koch, Court Chaplain to his Royal Highness. London: Whittaker & Co.; New York: Scribner & Welford. 1887.

THE authors of the above publications were all eye-witnesses of many of the events to which they devote their pages. Two of them, Herr Koch and Gen. Soboleff, were even actors in them, though in varying degrees. The former went to Sofia in December, 1879, a few months after Prince Alexander's accession to the throne of Bulgaria, and remained at the side of the Prince, as his court chaplain, to his very downfall; and, though he does not boast of much guiding influence, it is clear that his opinion and advice were both valued and freely given. Soboleff was one of the two Russian generals whom the Emperor Alexander III. selected in the summer of 1882, at his German cousin and namesake's request, to hold the leading positions of Minister of the Interior (with the Presidency) and Minister of War in the Bulgarian Cabinet. Both he and his colleague, Gen. Alexander Kaulbars—brother of the officer who figured so conspicuously and unenviably in the early part of the interregnum between Alexander of Battenberg and Ferdinand of Coburg—held their posts in Sofia down to September, 1883, when the bitter antagonism which had long existed between them and the Prince and his other Ministers compelled them to resign and return to St. Petersburg. Maj. von Huhn, having acted as war correspondent of the *Kölnische Zeitung* in November, 1885, during the conflict between Servia and Bulgaria—which he described in 'Der Kampf der Bulgaren um ihre Nationaleinheit' (see *Nation* No. 1128)—went to Sofia as correspondent of the same journal immediately on receipt of the news of the kidnapping of Prince Alexander in August, 1886, witnessed his return and abdication in September, and was ready with a collection of reports in book shape in October.

Von Huhn's book—of three hundred short pages—is consequently the narrative of thrilling events which crowded each other in a few weeks. To the writer's ability and competency in this respect ample justice has been done in these columns, in the notice of his Bulgarian war account. That the shocking events of 1886 did not make him a more charitable judge of Russian doings and motives than he showed himself in the previous publication, need not be told. Neither did the misfortune that befell his hero dampen the fervor with which he glorified him when successful and victorious. He writes from a German standpoint, one might say, considering mainly his antipathies, and, both as a German and an ardent friend of the Bulgarian cause, he expresses the wish, in closing, that no German may become the successor of Alexander on the throne of the Balkan principality. "This book might possibly live to go through a second supplemented edition, and I should not like to be

bound to report the sad end of a countryman." "The sad end," in the writer's thought, evidently implies a worse termination of a new crown-adventure than that of Alexander's was. Prince Ferdinand, however, may console himself with the reflection that correspondents of the *Kölnische Zeitung* are no better prophets than other wise mortals in our troublous times, and, besides, it was that very gazette which so recently predicted the speedy downfall of the Romanoff dynasty. It is unlikely that both predictions will be fulfilled.

Gen. Soboleff writes for Russians, and in every way as a Russian, and not only as such, but as a delegate of the Czar, and representative of the Panslavic idea, vanquished in a political contest by a German adventurer and vile Slavic renegades. His pages—contributed in the original to the St. Petersburg historical magazine, *Russkaya Starina* (September, 1886), and republished in pamphlet form in German with an insulting introduction—cover only the period of his ministerial activity in 1882-'83. As to style, he has the advantage of brevity and pith over the two authors whose writings we have grouped with his reminiscences. He wields a pointed pen, dipped in hatred and contempt. The hatred is partly national, partly personal; the contempt apparently the result of sincere conviction. He sees in Alexander of Battenberg and his "conservative" Bulgarian statesmen, Natchovitch, Grekoff, Stoiloff, and others, only a band of shrewd and unscrupulous "exploiteurs," banded together for the purpose of plunder (through corrupt railway contracts and similar transactions), sold to Austria-Hungary, as "cowardly" Milan and his Servian ministers are, and animated by the blackest ingratitude towards Russia, the magnanimous deliverer of Bulgaria. They are also tainted with other blemishes: Natchovitch is married to a Catholic, and rears his daughter in a Catholic school; Grekoff's features show him to be of Jewish descent; Stoiloff was educated in Roberts College, a Protestant school; Vulkovitch had pro-Turkish proclivities; Prince Alexander was fond of luxury, and was, above all, false. When, in 1881, the Prince suspended the Constitution of Tirnova, under which he was called to reign, and got himself granted almost dictatorial powers for seven years, he did it in the Austro-German interest, but at the same time pretended to act in obedience to the will of the Czar. It was an act of double treachery. Soboleff prefers his severest accusations with great distinctness and emphasis, and adds specifications of a most damning character, but fails to adduce evidence other than his own knowledge of facts and recollections of Alexander's compromising utterances made in intimate conversation with himself and others. The following statements, penned as early as April, 1883, may serve as specimens of his boldest assertions:

"The Prince must not be permitted to meddle in financial affairs; he must be contented with his salary. The Prince himself told me that kings are bound to secure their future by material means, that Charles of Rumania and Milan of Servia thus secured theirs. The Prince's father, Prince Alexander of Hesse, unguardedly complained before Bulgarians that his son was poor, while other princes owned estates, palaces, and large funds."

"I opposed the immediate purchase of the railway [from Rustchuk to Varna], advising the assembling of a conference at Constantinople. Three weeks later the Prince told me at Rustchuk that the Prince of Wales had recommended [the negotiator] Mosel to him, and had requested the speedy purchase of the line. Mosel came to me, and with surprising impudence gave vent to his astonishment at my not assenting to the purchase of the line, whereas Grekoff had told him that the affair was settled. 'By so doing you do me an injury,' he said. I asked him to be more explicit, and he answered that he saw in the arrangement of the affair the beginning of his career. 'You close my path,' he exclaimed. I laughed, and replied, 'Thus Bulgaria has to pay nine million francs more than she ought, in order to procure you the possibility of beginning your career. That is a high price!' Mosel reconsidered the matter, and begged me not to break off the negotiation. 'For the mere hope that the negotiation may be continued,' he said, 'I am ready to sign a check for £10,000 for your benefit.' I requested him to go, and advised him to leave Bulgaria altogether."

What, in the eyes of readers unable to pass judgment on the authenticity of such revelations, considerably weakens their force as points of impeachment is the cool and patient forbearance, not to say astounding duplicity, with which Gen. Soboleff, in the surroundings thus described by him, continued to stay at his post in the service of the Prince—at least nominally and apparently so—till driven from it.

Herr Koch's stately volume, originally written in German, covers Prince Alexander's entire reign. He writes partly in refutation of Soboleff, whose denunciations he declares to be downright calumnies. He ascribes almost all the evils that beset Bulgaria under Alexander to the intermeddling, secret intrigues and plottings, in Sofia and St. Petersburg, of Soboleff and Kaulbars, and their Russian co-workers, Yonin, Kojander, and others. Their Bulgarian confederates, whom Soboleff calls the "true conservatives" of the national party, he describes as men without character or true ability. Tzankoff (commonly "Zankoff") is "a man of moderate intelligence, short-sighted, . . . vain, and ambitious, . . . accessible to secret influences, and given to changing his opinions every minute." "Like all Bulgarian statesmen, his nature is eminently one of negation." Karaveloff is "the type of a half-educated person," always ready to tell that he has studied "Hegel, Kant, Spinoza, Schopenhauer, and Hartmann, Hume, Locke, Spencer, and John Stuart Mill," but, "thanks to his chronic mental dyspepsia, . . . incapable of expressing his thoughts in writing." In the conspiracy which overthrew Alexander he "did not, indeed, participate actively, but passively. . . . The baseness of disposition necessary to an open participation in it was not wanting, but rather the courage." Stoiloff, on the other hand, is "one of the ablest and most competent statesmen of Bulgaria." The Conservatives and opponents of Russian encroachments generally appear less selfish and unscrupulous than the men of the opposite camp. Most of this reads like partisan talk, but there are exceptions which clearly show that the author is naturally disposed to be fair and judge leniently; and it must also be owned that, whatever may have been the springs of the actions which make him most indignant, the way the pro-Russian workers and helpers in Bulgaria acted before, during, and after the dethronement of the Battenberger is strong *prima-facie* evidence in favor of the German writer's view of men and things.

As to the gravest points of the controversy, we must say that Herr Koch is, to a great degree, on the defensive. Alexander's management of the financial affairs of the country was certainly very unsuccessful, whether the most grievous sins of commission or omission be attributable to his friends or opponents, to incompetency or corruption. The Prince did abrogate, by a kind of *coup d'état*, the Constitution framed under Russian auspices before his coming to Bulgaria, and, by restoring it, afterwards proved that the abrogation was as little wise as it was legal. He abrogated the Constitution with the help of Russians — which Soboleff himself acknowledges, without explaining the fact—and restored it as a shield against the Russians; and, at the same time, veered around from the standpoint of a grateful and obedient young protégé of the Czar to that of a relative disgusted with tutelage and bent on self-emancipation. He carried his self-emancipation from Russian control to the point of almost open defiance, especially after the revolution of Philippopolis in 1885, which made him master of Eastern Rumelia, and involved him in manifold hostilities; and when this defiance had been revenged by the kidnapping outrage, and he had been dragged to Bessarabia and barely dismissed with his life, he crouched before the Czar with an abjectness in shocking contrast with his really noble attitude in the Serbo-Bulgarian war. Herr Koch makes out a plausible defence of his hero by showing what fatalities, flowing from the character of the unripe Bulgarian nation, their ill-fitted Constitution, and the insatiable ambition of Russia, had necessitated all these shortcomings; but he has not succeeded in proving that Alexander of Battenberg evinced on the throne of Bulgaria more than mediocre abilities as a ruler, and a fair patriotism mingled with contempt for his new surroundings.

Peruvian Antiquities. The Necropolis of Ancon in Peru. A series of illustrations of the civilization and industry of the Empire of the Incas, being the results of excavations made on the spot by W. Reiss and A. Stübel. Dodd, Mead & Co.

THE concluding parts of the series of illustrations of this magnificent iconography have been issued. The work forms three volumes, containing no less than one hundred and nineteen folio plates, devoted to views of Ancon and of its graves; describing and figuring the mummies and their contents, as well as the ornaments, utensils, and earthenware found in the burial-places. We have learned to admire the ruins of the buildings found scattered throughout Peru, nowhere more numerous than on the elevated plateau between Peru and Bolivia on the shores of Lake Titicaca and in the valley of the Uyubamba. Our knowledge of the contemporary culture has been gained from the study of the industrial products and numerous objects belonging to the domestic economy of the ancient Peruvians. We owe the preservation almost intact of the old burial-places and of their contents, which have given us so complete a picture of a civilization swept away by the Spanish conquerors, to the extremely dry climate and to the worship of the dead practised by the former occupants of Peru. The explorations of Reiss and Stübel carried on at Ancon, one of the principal burial-places in Peru, have brought before us the rich contents of this necropolis in a series of illustrations which leave nothing to be desired. We may call special attention to the plates illustrating the fabrics. Those who are familiar with Peruvian antiquities cannot fail to admire the wonderful accuracy of these illustrations.

In an iconographic work, which depends for its value entirely on the accuracy of its illustrations, there is little of a theoretical character to criticise. The authors have limited their work mainly to an explanatory text of the plates and to a short introduction, and have wisely made no attempt to determine the age or to assign any great antiquity to the coast burial-places, such as Ancon and Arica. Whether these sites were selected on account of their proximity to the coast, rich in fishes, or from being the seaports of the natural highways to the table-lands of the Andes, is a question the authors do not attempt to answer. The collections they made have passed into the possession of the Ethnological Museum of Berlin, and to the assistance of the Berlin Museum the present work owes its existence.

There are interesting appendices on the mammals found in the burial-places by Dr. Nehring, on the plants and fruits by Dr. Wittmack, and on

ancient Peruvian skulls by Prof. Virchow. Considerable light is thrown on the history and origin of domesticated plants by the finds in the Peruvian graves. The garden bean, the maize, the manioc, the quinoa, the guava, the gourd, may be regarded as having been indigenous to America. The drawings of human skulls are wonderful for thoroughness and accuracy; they illustrate the typical form of the Ancon skull, as well as some abnormal skulls selected to show the effects of intentional deformation produced by pressure or by the application of bandages.

It seems strange that in our day, when so much attention is given to explorations in Greece, Italy, Egypt, India, and Asia Minor, so little should have been accomplished in deciphering the history of the early inhabitants of South and Central America. The Central American States are hardly better known than they were forty years ago, when Stephens first explored Yucatan and Guatemala. As far as Peruvian archæology is concerned, only Tschudi, Rivero, D'Orbigny, and Squier have published anything trustworthy. Such works as those of Marcoy, and the more recent volume of Wiener, can scarcely be called contributions to our knowledge of South American archæology. The field is practically untouched, and a rich reward awaits the next explorer of the land of the Incas.

Pen Portraits of Literary Women, by Themselves and Others. Edited by Helen Gray Cone and Jeannette L. Gilder. Cassell & Co. 2 vols.

THE autographic inscription of the title of these volumes on their covers, in a handwriting which a number of their readers will recognize as that of Col. Higginson, the ready befriender of literary women, is a certificate of their quality. Yet the title itself is not an appropriate one. Such a mode of depicting character as is here made use of can scarcely, by the utmost stretch of courtesy, be called portraiture. It is mere literary "snipping," work done with the scissors, not the pen, and resulting in a mass of extracts of more or less interest, most of them too short to afford other than a broken entertainment, and drawn from such various, different, and differing writers that the blended passages convey to the reader's mind no definite or lasting impression. The book is another unavailing attempt, of which there are so many nowadays, to enable the ignorant to reach the same level as the well-informed, and will induce in many an intelligent young girl, and some few young men, desirous of "culture," a mistaken belief that they know a good deal about the seventeen women of whom these volumes treat.

But with this general criticism of the whole class of books to which this one belongs, our fault-finding comes to an end. Whether such work is worth doing at all or not, it cannot be done much better than in these pages. The choice of personages is excellent. It ranges from Miss Burney to Miss Brontë, and from Mme. Sand to Mme. Ossoli (Margaret Fuller), and includes a remarkable variety of characters both unfamiliar and familiar to the present generation. For any one of the past generation—that is, any one above fifty years of age—who has lived in a literary atmosphere, who has been the contemporary of some of these "dear, dead women," and, by inheritance, the contemporary of even "Mrs." Hannah More, these volumes are full of agreeable and amusing reminiscence. A divine cheerfulness breathes from such memories. The sincerity of mind, the serenity of soul, the purity of heart, the simplicity of life of most of these women; their warmth of domestic affections; the strength of their courage, which, often in sorrowful loneliness with only disappointments for their familiars, converted their own imperfect abilities into well-springs of pleasure and enlightenment for their fellows—these are qualities of far-reaching virtue, and such lives may well be studied by other than "literary women."

Thackeray's words about Charlotte Brontë, here quoted, apply in some degree, alike and diversely, to all these associated names. His words read, with a little change, thus: "Who that has known their books has not admired the noble English, the burning love of truth, the bravery, the simplicity, the indignation at wrong, the eager sympathy, the pious love and reverence, the passionate honor, so to speak, of these women?"

Modern Cities and their Religious Problems. By Samuel Lane Loomis. With an introduction by Rev. Josiah Strong, D.D. The Baker & Taylor Co.

THIS book will not be pleasant reading for those who are at ease in Zion. It is perhaps the fullest and frankest statement of the alienation of the poor from the Protestant churches of the country yet made by any single writer from the standpoint of pronounced sympathy with evangelical Christianity. The Rev. Mr. Loomis speaks with a backing of ample personal experience, having been actively engaged in work among the neglected classes of cities for five years, and having spent a year, in addition, in London and the cities of the Continent, in the study of facts and methods; he has also made a good use of the literature of his subject. His first three chapters are devoted to the growth, social composition, and dangerous tendencies of our American cities, and are followed by descriptions of charitable and educational work undertaken by churches and other organizations in behalf of the poor of London and Paris. He adds a chapter of "Suggestions." This last we think weak. It consists largely of suggestions that things ought not to be as they are. The author has little of the clear-seeing rationality and respect for natural law which mark the writings, on the same subject, of Arnold White. He seems to miss the significance of what is really the freshest and most promising effort alluded to in his book, the work done by the Church of St. Jude's, Whitechapel, London, and its free-thinking vicar. It is certainly along that line—the utilization of existing forces brought to bear at the point of least resistance—and not in wishing that we had powers which we have not, and that Nature were not so inexorable, that the best work of the future will be done.

Animal Life in the Sea and on the Land. By Sarah Cooper. New York: Harpers. 1887. 8vo, pp. xv., 413. Illustrated.

THIS little book is intended by the author for the use of young people, as an aid to their studies in natural history, and to be used as far as possible by the teacher in combination with specimens of the animals themselves. Starting with the sponge, and proceeding systematically through the animal kingdom, from the simpler to the more specialized forms, such subjects have been selected in each general group as seem to be of most general interest. Especial attention has been given to the structure of animals and the relations and adaptations of their structure to their surroundings and mode of life. Classification, throughout, is implied rather than insisted on; the arrangement of Nicholson's textbook has been, in general, followed. Technical terms have been avoided as much as possible, without sacrificing accuracy of statement. There are 278 illustrations of varying merit, a good many of which are new and well adapted to the requirements of the text.

An examination of the text has shown fewer slips than in most books of this kind. The style, too, is particularly free from the mawkishness which is characteristic of many attempts to "write down" to the level of youthful comprehension. In the hands of a good teacher the book, taken together with specimens, should prove useful and well adapted to its purpose. We note the absence of any general review of the mutual relations of different groups of animals. This, in another edition, would, we think, prove practicable, and would give the work a completeness which, in its present shape, is lacking. On the whole, however, the author has succeeded in her main endeavor, and the boy or girl who has followed the course indicated, will have a very fair idea of the chief characteristics of the more important forms which are comprised in the animal kingdom.

BOOKS OF THE WEEK.

Aids to Common Worship: Services of Scripture from the Revised Version, in the Readings Preferred by the American Revisers. The Century Co.
Andresen, K. G. Sprachgebrauch und Sprachrichtigkeit. Heilbronn: Gebr. Henninger.
Austin, G. L. The Life and Times of Wendell Phillips. New ed. Boston: Lee & Shepard. $1.50.
Baedeker, K. Great Britain. England, Wales, and Scotland. London: Dulau & Co.
Baker, L. C. The Fire of God's Anger; or, Light from the Old Testament upon the New Testament Teaching concerning Punishment. Philadelphia: Office of "Words of Reconciliation."
Browne, Phyllis. Mrs. Somerville and Mary Carpenter. Cassell & Co. 50 cents.
Coffin, C. C. Drum-Beat of the Nation. The First Period of the War of the Rebellion. Illustrated. Harper & Brothers.
Denslow, V. B., and Parker, Jane Marsh. Thomas A. Edison and Samuel F. B. Morse. Cassell & Co. 50 cents.
Downing, A. J. Cottage Residences; a Series of Designs for Rural Cottages and Cottage Villas and their Gardens and Grounds. With Additions by H. W. Sargent and Charles Downing. Illustrated. John Wiley & Sons. $2.50.
Duffy, Bella. Madame de Staël. [Famous Women.] Boston: Roberts Brothers.
Frazar, D. Perseverance Island; or, the Robinson Crusoe of the Nineteenth Century. Illustrated. New ed. Boston: Lee & Shepard. $1.50.
Giles, H. Human Life in Shakespeare. Boston: Lee & Shepard. $1.50.
Gilder, R. W. Lyrics. 2d ed. The Century Co.
Gilder, R. W. The Celestial Passion. The Century Co.
Gilder, R. W. The New Day. A Poem in Songs and Sonnets. The Century Co.
Gronlund, L. Ca Ira! or, Danton in the French Revolution. A Study. Boston: Lee & Shepard. $1.25.
Howard, Blanche Willis. Tony, the Maid: A Novelette. Illustrated. Harper & Brothers.
Keats, J. Endymion, and Other Poems. Cassell & Co. 10 cents.
Kenyon, J. B. In Realms of Gold. Cassell & Co. $1.
Knight, W. Memorials of Coleorton: Being Letters from Coleridge, Wordsworth and his Sister, Southey, and Sir Walter Scott to Sir George and Lady Beaumont, 1803 to 1834. 2 vols. Boston: Houghton, Mifflin & Co. $4.50.
Knox, T. W. Dog Stories and Dog Lore. Cassell & Co. $1.75.
Macaulay, Lord, Warren Hastings. Cassell & Co. 10 cents.
Marenholz-Bulow, Baroness von. Reminiscences of Friedrich Froebel. Translated by Mrs. Horace Mann. New ed. Boston: Lee & Shepard. $1.50.
Martin, G. A. Fences, Gates, and Bridges: A Practical Manual. Illustrated. O. Judd Co. $1.
McGrath, R. H., Jr. The Doctrine of Cy Pres as Applied to Charities. Prize Essay of the University of Pennsylvania for 1887. Philadelphia: T. & J. W. Johnson.
Meynell, W. The Modern School of Art. Illustrated. Cassell & Co. $6.
Phelps, Elizabeth Stuart. Old Maids, and Burglars in Paradise. Boston: Houghton, Mifflin & Co. $1.25.
Pratt, W. S. Songs of Worship for the Sunday School. The Century Co.
Pyle, H. The Wonder Clock; or, Four and Twenty Marvellous Tales, being One for each Hour in the Day. Illustrated. Harper & Brothers.
Science and Immortality: The *Christian Register* Symposium. Boston: Geo. H. Ellis.
Serbati, A. R. The Ruling Principle of Methods Applied to Education. Boston: D. C. Heath & Co.
Sparhawk, Frances C. Little Polly Blatchley. Illustrated. Boston: D. Lothrop Co. $1.
Stedman, E. C. Victorian Poets. Revised and Extended, by a Supplementary Chapter, to the Fiftieth Year of the Period under Review. Boston: Houghton, Mifflin & Co. $2.25.
Thorpe, Rose Hartwick. Ringing Ballads: Including "Curfew Must not Ring To-night." Boston: D. Lothrop Co. $2.
Westall, W. A Fair Crusader: A Story of To-day. Harper's Franklin Square Library. 20 cents.
Williams, G. W. A History of the Negro Troops in the War of the Rebellion, 1861-1865. Harper & Brothers.
Wilson, Augusta Evans. At the Mercy of Tiberius. A Novel. G. W. Dillingham.
Winter, J. S. Driver Dallas: A Novel. Harper's Handy Series. 25 cents.
Wooldridge, C. W. The Missing Sense, and the Hidden Things which it might Reveal. Funk & Wagnalls. 60 cents.
Works of Edward Fitzgerald, Translator of Omar Khayyám. 2 vols. London: B. Quaritch; Boston: Houghton, Mifflin & Co.
Zogbaum, R. F. Horse, Foot, and Dragoons. Sketches of Army Life at Home and Abroad. Illustrated. Harper & Brothers.

HAVE JUST READY.

DOYLE'S ENGLISH COLONIES IN AMERICA:

The Puritan Colonies.

By J. A. Doyle. 2 vols. 8vo. $7.00.

Southern Silhouettes.

By Mrs. J. H. Walworth. 16mo. $1.25.

By author of 'OBLIVION,'

Jean Monteith.

By M. G. McClelland. *Leisure Hour Series.* $1.00.

Major and Minor.

By W. E. Norris. *Leisure Hour Series.* 2 vols., $2.00. *Leisure Moment Series*, 50 cents.

The Best Book for Literary Clubs.

English Masterpiece Course

By Prof. Alfred H. Welsh, Ohio State University, author of 'Complete Rhetoric,' 'Development of English Literature and Language,' etc. 12mo, cloth, 90 cents.

A book for private study, for literary clubs, for the class-room, and for libraries of reference.

"As a guide for the student or reader to what has been said in a critical way of the more important productions in English literature, *it is simply invaluable.* . . . The work will be found particularly useful by members of reading clubs and special students of English literature."—*Boston Transcript.*

Sold by the Baker & Taylor Co., 9 Bond St., New York, and all booksellers, or it will be mailed post-paid on receipt of 90 cents by

JOHN C. BUCKBEE & CO.,
Publishers, 122 Wabash Ave., Chicago.

Artistic Presents of Permanent Value.

High-class Etchings, mostly unprocurable elsewhere, costing when framed from $5.00 upward.

An Illustrated and Descriptive Catalogue mailed on receipt of 10 cents. FREDERICK KEPPEL & CO., London, and 20 East 16th Street, Union Square, New York.

"*The practical features of the work, and its constant effort to make every step clear to the student, entitle it to the consideration of all desiring to acquire rapidly a working knowledge of the language.*"—Cincinnati Commercial Gazette.

GERMAN SIMPLIFIED.

An eminently practical new method for learning the German language. Edition for self-instruction, in 12 numbers (with keys), at 10 cents each; school edition (without keys), bound in cloth, $1.25. For sale by all booksellers. Sent, postpaid, on receipt of price, by Prof. A. Knoflach, 140 Nassau St., New York. Prospectus free.

AUCTION SALE OF BOOKS

BY

F. J. SHELDON & CO.,

TUESDAY, NOVEMBER 8.

Americana and Books published in and relating to the State of Rhode Island. For Catalogue send stamp to Tibbetts & Preston, Providence, R. I., who will also receive bids.

VILLAGE Improvement Associations.—How to organize. B. G. NORTHROP, Clinton, Conn.

MACMILLAN & CO.'S

NEW PUBLICATIONS.

THE BROOK.

By Alfred, Lord Tennyson, P. L., D. C. L. With twenty illustrations in colors by A. Woodruff. Oblong, 32mo, 75 cents.

GNOSTICISM AND AGNOSTICISM, AND OTHER SERMONS.

By Rev. George Salmon, D. D., Regius Professor of Divinity in the University of Dublin. 12mo, $2.00.

NON-MIRACULOUS CHRISTIANITY, AND OTHER SERMONS.

By the same author. Second edition. 12mo, $1.75.

WELLINGTON COLLEGE SERMONS.

By Rev. E. C. Wickham, M. A., Master of Wellington College. 12mo, $2.00.

THE PRIVY COUNCIL.

The Arnold Prize Essay, 1860. By Albert Venn Dicey, B. C. L 12mo, $1.00.

THE PRINCIPLES OF POLITICAL ECONOMY.

By Henry Sidgwick, author of 'The Methods of Ethics.' Second edition. 8vo, $4.00.

ISMAY'S CHILDREN.

By the author of 'Hogan, M. P.,' 'Flitters, Tatters, and the Counsellor,' etc., etc. 12mo, paper, 50 cents; cloth, $1.00.

"An uncommonly fine story, with a well-constructed and powerful plot and an interest that steadily increases to the end. . . . The story is one that appeals at the very outset to readers of cultivated tastes, and is one of exceptional strength and brilliancy."—*Boston Saturday Evening Gazette.*

THE NEW ANTIGONE.

A Romance. 12mo, $1.50. *Ready.*

MARZIO'S CRUCIFIX.

By F. Marion Crawford, author of 'Mr. Isaacs,' 'Doctor Claudius,' etc. 12mo, $1.50. *Immediately.*

CLARENDON PRESS SERIES.—New Volumes.

PRINCIPLES OF ENGLISH ETYMOLOGY.

By the Rev. Walter W. Skeat, Litt. D., LL.D., M.A. First series. The Native Element. 12mo, $2.25.

THE PHILOLOGY OF THE ENGLISH TONGUE.

By John Earle, M.A., Professor of Anglo-Saxon in the University of Oxford. Fourth Edition. Revised throughout and rewritten in parts. 16mo, $1.75.

LOTZE'S SYSTEM OF PHILOSOPHY.

Part 2—Metaphysic. In three books, Ontology, Cosmology, and Psychology. By Hermann Lotze. English Translation. Edited by Bernard Bosanquet, M.A. Second edition in two volumes. 12mo, $3.00.

THE POEMS OF LAURENCE MINOT.

Edited, with Introduction and Notes, by Joseph Hall, M. A., Head Master of the Hulme Grammar School, Manchester. 16mo, $1.10.

XAVIER DE MAISTRE. VOYAGE AUTOUR DE MA CHAMBRE.

Edited, with English Notes, by Gustave Masson, B. A. New edition, 16mo, 40 cents.

ARISTOPHANES. THE KNIGHTS.

With Introduction and Notes, by W. W. Merry, D.D. 16mo, 75 cents.

CICERO. SPEECHES AGAINST CATILINA.

With Introduction and Notes, by E. A. Upcott, M. D. 16mo, 50 cents.

CICERO. IN Q. CÆCILIUM DIVINATIO AND IN C. VERREM ACTIO PRIMA.

Edited, with Introduction and Notes, by John R. King, M. A. 16mo, 60 cents.

C. TACITI. ANNALIUM.

Liber 1. Edited, with Introduction and Notes, by H. Furneaux, M. A. 16mo, 50 cents.

P. TERENTE. PHORMIO.

With Notes and Introductions, by Rev. A. Sloman, M. A. 16mo, 75 cents.

VIRGIL—BUCOLICS.

Edited, with Introduction and Notes, by C. S. Jerram, M. A. 16mo, 60 cents.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 3, 1887.

The Week.

A DESPATCH from Washington gives a list of thirty-six Presidential post-offices in various States and Territories at which the commissions of the postmasters will expire during December, and adds that the commissions of fifty-one Presidential postmasters will expire during January. When one considers that these are among the most desirable Federal offices, and that under the spoils system they would have been turned over to the Democrats as soon as that party came into power, the fact that there are scores of Republican incumbents serving out their terms as the third year of a Democratic President approaches its close, is a sufficient answer to the question whether civil-service reform is making any progress in this country.

The American farmer has a new grievance against the steel ring of the United States. It appears from experiments made in Germany during the last three years by Prof. Wagner, that one of the best fertilizers available is made by pulverizing the refuse slag formed by the basic process of making steel, better known as the Thomas-Gilchrist process. Ores high in phosphorus can be directly treated by this process, and as its object is to eliminate the phosphorus, that ingredient must be taken up and retained by the slag. Hence a very good phosphoric lime results, containing about 16 per cent. of phosphoric acid, 50 per cent. of lime, 12 per cent. of iron, and 7 per cent. of silicic acid. This phosphoric acid is, moreover, in a good form for use in the fields, for experiment has shown that finely ground Thomas slag operates twice as well as Peruvian guano, six times as well as bone-dust, and somewhat more than one-half as well as the superphosphate. As two tons of the powdered slag can be purchased at a lower price than one ton of superphosphate, and is quite as efficacious, this slag is the cheaper material in the end, and, being a worthless material as slag, and a burden to the iron works, both the iron-masters and the farmers gain through its utilization. Upwards of 400,000 tons of slag is made up into fertilizers each year in Germany, and experiments conducted on English soil have demonstrated its usefulness.

In the United States it has been charged, and the charge has never been denied, that the syndicate which purchased the right to use the Bessemer process also controls the right to use the Thomas-Gilchrist invention, for which many of our domestic ores are peculiarly fitted. But, having secured the right against all comers, it refuses to sell privileges, on the ground that such action would cause what Marx happily describes as a "moral depreciation" of the values of their Bessemer plants. It is like a telegraph company which should acquire and hold unused all improvements of the telephone, because more convenient and agreeable telephonic communication would unfavorably affect the business of telegraphing. There is only one steel works in the United States which employs the basic process, and so the American farmer is hardly in a position at present to avail himself of this newly discovered cheap and efficient fertilizer, which much of the soil of the Eastern States, exhausted by long-continued culture on narrow lines, needs in order to be restored to heart. The tariff on steel, which has built up the steel monopoly, is, of course, indirectly responsible for this abuse of power and injury to the farmer.

The growth of material prosperity in the South continues steady and healthful, as is shown by the fact that it is as marked in purely agricultural districts as in those localities where mining or manufacturing has started "booms." The Raleigh *News and Observer* calls attention to the considerable increase in the assessed valuation of property in North Carolina, recently reported, as "a further gratifying evidence of the advance of the State on all lines of prosperity," and adds: "There has been marked growth in material welfare in every section. There has been improvement in every department of industry. There has been advance in agricultural methods. There has been development everywhere of the wonderful resources of the State. Throughout the State the watchword has for some time been 'Forward,' and the result is a status with respect to material progress second to that of no State in the South." The progress of Florida is best shown by the fact that the assessment of the State has risen within the past seven years from $29,471,618 to $76,611,409. Texas is accumulating a surplus in her State Treasury. The revenue for the last fiscal year was $325,000 above the estimates, and before the next biennial meeting of the Legislature there promises to be a balance on hand of $800,000.

Such facts as these show how absurd it is to talk about the South being still so "impoverished by the war" that she needs national aid to educate her children, and how demoralizing it would be to swell the surplus of a State like Texas by the gift of $4,000,000 from the Federal Treasury, as proposed by the Blair bill. The truth is, that the honest people in the South no longer pretend that they need any assistance. For example, the subsidy scheme proposed to give North Carolina about as much money for schools as she now raises, but it is confessed that the people of the State can easily raise this extra amount themselves, the Raleigh *Chronicle* declaring its belief that "the taxes for the public schools ought to be doubled," and that the people can afford to double them. That Florida, a State with almost as many negroes as whites, needs no help, could not be better shown than by this recent statement of the Jacksonville *Southern Leader*, the organ of the colored people, in whose special behalf the subsidy scheme has always been advocated: "The educational outlook for this State was never better. New schools are being opened in all directions, and new and more competent teachers are coming here and placed in charge of schools. Our common-school system has reached a stage of perfection which is highly gratifying to all classes of citizens."

Proofs of a growing rainfall in the far West are thickening. A valuable testimony in this direction just now comes from Gen. Morrow, United States Army, in command at Fort Sidney. In an address delivered last month at the first annual fair in Cheyenne County, on the western frontier of Nebraska, he gave a leaf from his own experience. Twenty years before, he had led soldiers through that identical region when there was no settlement for 500 miles east of Julesburg. Then he had observed that men slept in the open air from May to November without having their blankets dampened; but in August, 1887, he saw on the same ground dews as heavy as ever at the same season in Michigan or Arkansas. During the first three-fourths of the present year he reports the rainfall at his post to have been fourteen inches, while the annual fall in fertile Malta does not exceed fourteen, and that about Spanish Madrid is only nine. The annual amount of rain registered at Camp Douglas in its first year, 1861, was eleven inches; but in 1874, the last of five years during which Gen. Morrow held command at that post, the rainfall had more than doubled, the rain-gauge showing twenty-seven inches. The speaker emphasized these facts, because in portions of the Cheyenne region the last two seasons have been exceptionally dry. He also showed that within the last three months 83,000 acres of Government land had been taken up in that county, largely by homesteaders. The fair exhibits, also, already showed every variety of farm produce. These facts are the more noteworthy because Cheyenne County stretches four degrees west of the famous meridian of 100°, which in Government publications figures as a line that agriculture cannot cross. They are still more striking if we note how they refute the doctrine laid down by the *North American Review* in 1858. At that date, when there was scarcely one Nebraska hamlet forty miles west of the Missouri, the *North American* described our people as having "already reached their western inland frontier," and the westward stream of emigration as there "dammed up so that it must fork northward or southward." The Missouri bluffs, accordingly, were described as "a shore at the termination of a vast ocean desert nearly one thousand miles in breadth, which it was proposed to traverse, if at all, with caravans of camels, and which interposed a final barrier to the establishment of large communities—agricultural, mercantile, or even pastoral." Yet before the close of 1880 Nebraska numbered half-a-million inhabitants.

Mr. J. W. Longley, a writer of considerable ability, defends in the Toronto *Week* the policy of commercial union between Canada and the United States. In answer to the objection that such commercial union will lead to annexation, he says that it will not have that result until a majority of the people of Canada desire it and vote for it, and that when they do desire it and vote for it, they ought to have it. It will be hard for anybody to gainsay that proposition, but there is one other element that might have had a place in Mr. Longley's argument, and that would have strengthened it not a little. Since annexation is nothing else than a political marriage, in which the parties have equal and perfectly defined rights, it is not to be expected that we shall make an offer of marriage or accept one without examining the reasons and grounds for union just as critically and prudishly as Canada herself. There was a time when annexation meant to the United States aggrandizement, the lust of conquest, and the pride of dominion. That was the era of slavery. The Mexican war and the Ostend manifesto were the signs and outgrowths of it. If there be any lingering remains of that spirit of aggressiveness, they are now seldom seen or heard. Mr. Goldwin Smith said very truly, in one of his magazine articles, that the United States was the only considerable Power on the globe that looked at a mouthful before swallowing it. The reason why they look before swallowing is that the mouthful is something that has to be digested and assimilated. Anything that belongs to the American Union must be good enough to help govern it. In a closely contested national election, the vote of Canada might and probably would turn the scale. It might do so regularly for the next twenty years. This fact alone would compel us to take heed to our steps. It does not follow that we should reject Canada, but equally it does not follow that we should accept her as a matter of course. It has always been the idea of Canada that we were greedy to swallow her, and that we were only prevented from doing so by a wholesome respect for the British Navy. Under the incitements of the war of 1812 there was such a feeling. Under the stimulus of any war with the mother country that feeling would revive. But under the régime of peace and common sense the people of the United States will be just as particular in choosing their partners for life as their neighbors on the north or on the south can possibly desire.

Nobody can fail to admire the consistency of the Union Square Anarchist meeting on Saturday evening, in its treatment of the grave questions of law applicable to the condemned men at Chicago. The preamble recites that the condemned men were performing a patriotic duty at the Haymarket meeting, and that the public officials of Chicago were engaged in an unlawful conspiracy against them. They (the meeting) accordingly demand "from the courts of the nation their immediate release," the question pending before the courts of the nation being simply whether the condemned men are entitled to a new trial or not. They demand also "the prosecution of the real criminals, the Police Department of Chicago." This they demand also from the courts of the nation. Seeing that the police of Chicago left forty or more dead and wounded on the field of the encounter, in strict conformity to Anarchist ideas, their further prosecution by the Supreme Court of the United States might be justly intermitted. If these demands are not acceded to, a committee is to be appointed "to proceed to the Governor of Illinois and request that the demands of this meeting be complied with"; that is, that the Governor decide that the laws of Illinois on the subject of murder and conspiracy to commit murder are wrong, and that the real criminals are the surviving policemen. If the Governor should not take this view of his duty, the consequences are left wholly to the imagination, since the resolutions leave a painful gap at this point, and even the speakers could suggest nothing except that such high-handed proceedings would produce a revolution in any country in Europe. The orator who hazarded this valuable conjecture added with bitter sarcasm that this was a republican government. What a pity that Lingg, Schwab, Spies, Fischer, Engel, and Fielden had not reflected upon the republican hindrances to revolution before they abandoned the easy paths of the Old World to tread the thorny ways of the New.

But we must again remind the Anarchists and their friends, who are complaining that they have not had a fair trial, that if their complaints are well founded, the day of the execution will be a great day for their cause, because it will witness the triumph of Anarchy. Nothing can be more Anarchical than hanging people without a fair trial; nothing more absurd from the Anarchical point of view than "due process of law." A good Anarchist ought to be ashamed of claiming "due process of law." It is a virtual abandonment of his principles. When Anarchy comes, there will be lots of people hanged, but none of them will have a fair trial. The majority will hang the minority, and the big men the little men, simply because they have the power. What has happened in Chicago is, according to the Anarchist story, simply a foretaste of this good time coming. The majority have seized on seven harmless men, and have put them through a mock trial, and are going to kill them because they do not like them. But, why not? Where is the wrong of this from the Anarchical point of view? Why should not the man with the halter strangle the man with the bomb, if he can get hold of him and master him? Is it not simply a question of comparative strength? Is it not, in short, very ridiculous for Anarchists to hire lawyers to rant about justice and legality?

Mr. Patrick Ford writes a long letter to his own newspaper, the *Irish World*, to upset the land doctrines of Henry George and the theology of Dr. McGlynn. While wishing Mr. Ford every success in his endeavor, we must caution him to submit his dissertations on political economy to some instructed person before printing them. When he says, for example, that "in the coins issued from the United States mint there is at once a national property and a private property," we naturally desire to know which part of the coin is national and which part private. What Mr. Ford means is, that the inside of a gold eagle, containing all the metal, is private property, and the outside, the image and superscription, national property. But this leads to confusion worse confounded, for he says immediately, "The individual has a property right in the exchangeable and purchasing power of the dollar, but the property right in the dollar itself, as absolute money, is vested in the nation." After a man has spent the dollar and got its exchangeable and purchasing power in the form of mutton, for instance, the property right vested in the nation will necessarily be held in trust by the seller of the mutton, even though he depart immediately to England and deposit it in the bank of that country. The question how the nation is to recover its share of the property is one which we hope that Mr. Ford will not present to Mr. Blaine when he becomes President of the United States, because the consequences might be serious. If the banks of the Old World were asked to surrender the nation's share in the gold eagles held by them, and the demand were backed by force, they might melt those coins and utterly destroy what Mr. Ford calls the "special value over and above its intrinsic worth and commercial value as a commodity," which "added special value," he says for the humiliation of Mr. George, "is an unearned increment." But the unearned increment becomes, in the next sentence, the equivalent of "interest," which Mr. George contends that the individual has the right to draw. Herein, says Mr. Ford, "Baron Rothschild agrees with Mr. George." This *reductio ad absurdum* ought to prevent any Blaine Irishman from voting the Henry George ticket.

The assessment imposed on Judge Lawrence as the price of his renomination, which he refuses to pay, is, we understand, $25,000, an enormous sum — considerably more, in fact, than a year's salary. It is imposed on him, too, not for the expenses of his election, but for the privilege of being a candidate for continuance in an office to which his claim ought not to be questioned. We have always maintained that the highest interests of the community demand that a judge who has rendered faithful service on the bench during one term ought to be retained. He has the immense advantage of having been found fit by actual trial. One may say this, as we say it, in Judge Lawrence's favor, without reflecting in the smallest degree on any of his rivals at the coming election. They are all worthy, but the actual incumbent is, if worthy, the worthiest. Our allowing a judge who has discharged the duties of his office as Judge Lawrence has discharged them, to be taxed in this frightful way as a condition of his continuance in the public service, is surely one of the worst political scandals to which a civilized free community has ever sub-

mitted. It would be a disgraceful thing even if the money went into the public treasury, or if a judge's legitimate election expenses reached such an amount. But the money does not go into the public treasury, nor does it cost $500 to elect a judge. Nearly the whole of the money goes into the pockets of a class whom it is no exaggeration to call scoundrels, and the chiefs of whom actually grow rich out of their thefts from these election funds. If we took the distribution of the ballots out of their hands—that is, deprived them of the power of cheating at the polls as we have deprived them of their power of cheating in the count—there is no department of our administrative system which would not feel the purifying effects.

Omaha, Neb., is having very much the same sort of a fight for non-partisanship in the courts as New York city. Four judges are to be elected from the district. The Bar Association unanimously recommended the re-election of two Republicans and one Democrat who have served with distinction. The Democratic Convention followed the recommendation, and associated with them an excellent lawyer for the fourth place; but the Republican politicians not only refused to accept either of the Democrats, but rejected one of the Republican judges who was not satisfactory to the bosses, and made a thoroughly partisan ticket. The result was a prompt revolt of the better sort of Republicans, and the organization of a citizens' movement for the reëlection of the three judges now on the bench, which has every promise of success.

Month by month the Grand Army of the Republic is steadily losing its ostensible character as a non-partisan organization, and sinking into a mere attachment of the Republican Machine. In Ohio the Republican managers have gone so far as to request members to turn out and parade in honor of the Republican candidate for Governor on his stumping tour through the State. In Peoria, Ill., the Republican members of a most flourishing post have made themselves so offensive to their Democratic associates that the latter have been forced, in self-respect, to withdraw from the body. Unfortunate as this degeneration of the organization is, there is happily this compensation, that the order loses its threatening influence in politics as soon as it becomes clear that it is only part of the Republican Machine.

M. Wilson, President Grévy's son-in-law, evidently hoped he had disposed of the Caffarel scandal, as far as he was concerned, by printing the correspondence he had with Mme. Limousin, the go-between. The correspondence, as printed, was a plain attempt at blackmail on her part, but he declared, in a letter to the *Temps*, that he took no notice of an invitation, with which it concluded, to visit her at her house. He went down to Tours shortly afterwards to meet and explain to his constituents, but the meeting was stormy and hostile, which he accounts for by saying that it was packed by Monarchists and Radicals. When the Chambers met on Tuesday week, an investigation into the scandal was moved by Cuneo d'Ornano, a Bonapartist, and carried, with "urgency" tacked on to it, by a vote of 379 to 155, in spite of the opposition of M. Rouvier, the Minister. The committee appointed to conduct the investigation is to consist of one Moderate Republican, six Radicals, and three Conservatives—the majority probably hostile to Wilson, and the Radicals certainly eager to strike at President Grévy through him.

President Grévy has, it is now said, reconsidered his threat of resigning, and is going to await the result of the investigation. But the furious pursuit of Wilson by the Radical and Monarchist papers is not in the least relaxed, and he has in some degree played into their hands by paying $8,000 into the Treasury to cover his use of the President's postal frank. This was one of their original charges against him, and he has apparently confessed it. So they say he will have to confess the others by and by. The whole scandal is a curious mixture of politics and personality. When the sale of the decorations by Caffarel was originally discovered, and the accusation pushed home, Gen. Boulanger told the newspaper reporters that the affair was got up by the Minister of War, Gen. Ferron, to damage him. On his acknowledging this, Gen. Ferron put him under close arrest for thirty days, and converted him, in the eyes of the Radicals, into a martyr. These latter then determined to carry the war into Africa by attacking Wilson, the President's son-in-law, and the Monarchists joined them in the hope of forcing M. Grévy's resignation and then discrediting the Republic, and possibly overturning it in the resulting confusion. His resignation is still looked for confidently, and his successor, it is said, will be either M. Ferry, M. de Freycinet, or the Duc d'Aumale; but if it comes to this, Boulanger will probably appear as "the man on horseback." The scene, it is hardly necessary to say, is witnessed with great gusto in Germany.

The *Univers*, the French Clerical organ, extracts from a religious paper less known to fame, the *Propriétaire Chrétien*, an article describing a new and absolutely efficacious remedy for the phylloxera, which has been desolating French vineyards so terribly. The *Univers* intimates that it is equally efficacious for the diseases of other plants—potatoes, corn, and wheat. It has been tried by a friend of the writer, whose name and residence, however, he does not give, and has proved, he says, a complete success. The friend some years ago bought a vineyard in which the vines were diseased, and he began by pulling them up by the roots. He then had the whole property carefully blessed by a Dominican monk, and erected in the centre of the vineyard on a suitable pedestal a large statue of the Sacred Heart. All work on Sunday was strictly forbidden. The laborers were forbidden even to touch their tools on that day, and were warned that they would be dismissed for cursing or swearing. When these arrangements were completed, the replanting of the vineyard began; but, in doing so, purely human precautions were not wholly disregarded. One-third of the new cuttings were American, one-third ordinary French, and one-third French from American grafts. Cultivation was then resumed in the ordinary way, with scrupulous abstinence from any of the dressings recommended by science, falsely so called. The result has been that, "fortified by the priests' prayers, the vines are growing magnificently."

A most extraordinary and most gratifying illustration of the harmonious relations which it is possible to establish between employers and employed has just been furnished in England. The Manchester, Sheffield and Lincolnshire Railroad recently met with a serious disaster at Doncaster, which must result in heavy losses to the corporation. As soon as the situation came to be known, the employees in the various departments of their own accord held meetings to consider what they could do to relieve the company, and in every case a unanimous disposition was shown to contribute their wages for several days, varying according to their pay, but averaging about a week for all. A delegation, representing all classes of the men, was appointed to present this offer to the directors, and the report of the meeting is most interesting reading. The employees told the story of the various meetings which had been held, and the directors expressed their hearty appreciation of the generous disposition which had been displayed, although they declined the offer, on the ground that the shareholders were, on the whole, better able to bear the loss.

The Earl of Wharncliffe characterized the action of the railroad's employees as an unprecedented thing, and said that it marked an epoch in the history of capital and labor. This was hardly an exaggeration of the fact, and yet it is probable that such relations might be the rule rather than the exception if only both sides always treated each other as has been the rule in the case of the Manchester, Sheffield and Lincolnshire Railroad. For it was made evident in the speeches that this action of the employees was only the natural outgrowth of the policy pursued by the employers. Sir Edward Watkin said that the directors had always thought it was their duty to assist the men in providing against accident and for a rainy day, and when any proposal in that direction had been brought before them, they had not only welcomed it, but done all they could to assist it. Their Mutual Provident Society has 5,203 members and a reserve fund of £10,626; and the savings bank, which has been in existence nearly twenty-eight years, has 2,701 depositors, has received deposits of £583,413, and has £313,714 in accumulated funds. The directors have also established a fund which, partly by their contributions and partly by those of the men, provides a superannuation allowance for salaried officers, and they propose ultimately to establish a similar pension system for all classes of their employees.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 26, to TUESDAY, November 1, 1887, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND, on October 31, received a deputation from Great Britain who desired his coöperation in securing a treaty between that country and the United States which shall provide for the amicable settlement of disputes by arbitration. Short addresses were made by Sir Lyon Playfair and others, and in reply the President said: "I promise you a faithful and careful consideration of the matter, and I believe I may speak for the American people in giving the assurance that they desire to see the killing of men for the accomplishment of national ambition abolished, and that they will gladly hail the advent of peaceful methods in the settlement of national disputes, so far as this is consistent with the defence and protection of our country's territory, and with the maintenance of our national honor when it affords a shelter and repose for national integrity, and personifies the safety and protection of our citizens."

President Cleveland has issued the usual proclamation appointing Thursday, November 24, Thanksgiving Day.

Secretary of the Navy Whitney is so ill that he has been obliged to go away from Washington for several weeks.

Admiral Porter, in his annual report to the Secretary of the Navy, says that the following harbors are entirely defenceless against a single ironclad: New York, Boston, San Francisco, lake ports, Hampton Roads and Norfolk, New Orleans, Philadelphia, Washington, Baltimore, Portland, Me., Rhode Island ports, Key West, Charleston, Mobile, Savannah, Galveston, Pensacola, Wilmington, N. C., San Diego, Cal., Portsmouth, N. H., to say nothing of many other places of greater or less importance. Two heavy ironclads could begin at the easternmost point and proceed along the coast to Texas, laying them all under contribution. He recommends the construction of a squadron of heavy ironclads.

Gov. A. P. Swineford of Alaska, in his annual report, says that wonderful mineral deposits are being worked. The mine and mill on Douglas Island have been in steady operation during the year, turning out gold bullion at the rate of $100,000 per month. The total value of the Alaskan fisheries for the year is estimated at $3,000,000. "The fur trade of Alaska," the report goes on, "is practically monopolized by the Alaskan Commercial Company, which does not confine its operations to the seal islands leased to it by the Government, but holds and possesses most of the Aleutian chain and the greater part of the mainland as a principality of its own, over which it exercises undisputed sway." The Governor says that if the contract with this company cannot be legally rescinded, it ought not to be renewed, and he repeats his recommendation that a local government be provided for Alaska, with representation in the lower house of Congress.

The Chinese Minister has returned by direction of his Government a portion of the Rock Springs indemnity, appropriated by Congress, which represents the amount of six claims that were ascertained to be duplicates of other claims.

Up to October 26 there had been more than 225 cases of yellow fever and 34 deaths at Tampa, Fla., and there were then 80 patients, but fear of its spreading has subsided. Some excitement has been caused in New York and in several Western cities by the arrival of a number of immigrants from the country near Palermo, Italy, who may have brought the germs of cholera with them. The clothing of most of them has been burned or fumigated.

The chief engineer of a railway company has asked the New York State Civil-Service Commission for the names of the applicants for work as engineers in the department of the State Engineer. The railway company desires to fill a vacancy in its engineering force. This is the first formal application of the kind ever made to the Civil-Service Commissioners of this State.

Mr. Carl Schurz delivered an address to the Commonwealth Club (Independent in politics) at its first meeting this fall, October 26, in favor of the election of De Lancey Nicoll, the Democrat who has been nominated by the Republicans for District Attorney of this county; and on October 29 there was a largely attended meeting of Republicans, Independents, and Independent Democrats to further the same purpose.

Arguments were heard by the Court of Appeals of this State on the appeal of Jacob Sharp for a new trial, October 27-28. The leading argument for the people was made by Assistant District-Attorney De Lancey Nicoll. The court's decision has not yet been rendered. On the same days the Supreme Court of the United States heard arguments on the motion to grant a writ of error in the case of the condemned Anarchists of Chicago. No petition for their pardon made in the form required by law has been received by the Governor of Illinois.

The Republicans of Missouri are making an effort to have St. Louis chosen as the place for holding the National Convention of the party next year, and a committee has been appointed to make an argument before the National Committee when it meets in Washington.

Mayor Latrobe (Democrat) of Baltimore was reëlected October 26 by 4,495 majority—a gain of 2,265 over the Democratic vote for Mayor two years ago. The new City Council will consist of twelve Democrats and eight Republicans in the first branch, and seven Democrats and three Republicans in the second branch.

The Boston Chamber of Commerce and others made complaint to the Inter-State Commerce Commission, October 27, that the freight rates upon grain and produce from Chicago to Boston constitute an unjust discrimination in favor of New York, and an unjust discrimination in favor of Boston exporters as against local dealers.

Natural gas has been discovered in quantities large enough to be profitable near Detroit.

The corner-stone of a monument to Gen. R. E. Lee was laid with appropriate ceremony at Richmond, Va., October 27, in the presence of many ex-Confederates and a great crowd of people. In the evening Mr. Charles Marshall delivered an oration on Gen. Lee's career, and a poem was read which was written for the occasion by the late Mr. James Barron Hope. A bronze statue 8½ feet in height of Leif Erikson, the Icelandic explorer who is supposed to have discovered America about the year 1000, was unveiled in Boston October 29. It is the gift of the Scandinavian societies of the city.

An appeal by Prof. Egbert C. Smyth of Andover Theological Seminary from the decision of the Board of Visitors removing him from his professorship was filed in the Supreme Court for Essex County, Mass., November 1. He asks for a writ of *certiorari* that the Visitors be commanded to produce in court all matters relating to the case.

George Engel, Louis Lingg, and Adolph Fischer, three of the condemned Anarchists at Chicago, have written an open letter to Gov. Oglesby of Illinois refusing any commutation of sentence short of liberty, and declaring unabated faith in the principles of Anarchism.

The wife and child of Mr. Wechsler, a merchant of Brooklyn, were severely hurt by the explosion of a package brought to their residence by a messenger, October 29. The sender of the package is unknown.

Henry M. Jackson, who was the paying teller of the United States Sub-Treasury in this city, stole $10,000 and ran away, it is supposed, to Canada, where he was reported to have been seen.

The propeller *Vernon* foundered during a severe gale on Lake Michigan October 29, and her crew and passengers, about thirty persons in all, perished. Some of them were seen clinging to rafts, but only one man could be rescued.

Rear-Admiral J. W. A. Nicholson died in this city October 28 in his sixty-seventh year. He entered the navy as a midshipman February 10, 1838, and was retired from active service in 1883.

FOREIGN.

The scandal about the sale of decorations of the Legion of Honor has threatened a serious crisis in the French Government. A very turbulent meeting was held at Tours, which is represented in the Chamber of Deputies by M. Wilson, the son-in-law of President Grévy, on October 25, whereat by a small majority a resolution was adopted declaring that M. Wilson had betrayed his trust and must resign. He announced that he was not willing to do this, as the vote was the result of a coalition of the Monarchists and the Intransigeants. On the next day at Paris, two men, Coeller and Martin, were sentenced, the first to eighteen months' and the other to six months' imprisonment, for being concerned in the sale of decorations. An accomplice has been arrested at Vienna, and it is reported that Gen. d'Andlau, who fled from Paris to escape arrest, has been seen in London, and that he intends to come to America. M. Wilson has made restitution of 40,000 francs to cover the postage on matter he franked with President Grévy's stamp during the time he resided at the Palace of the Elysée. October 28, President Grévy declared that while he did not object to M. Wilson being tried in the regular way for any offence provable, he did object to a system of blackening his son-in-law's character through the press, and through a committee of the Chamber embracing numerous personal enemies and representing party hatreds. He (the President) was unable to remain in the Elysée with a broken-up family and diminished dignity, and he declared his intention to resign, but was persuaded to reconsider the subject.

Gen. Ferron, the French Minister of War, has prohibited military music at Clermont-Ferrand because it promoted demonstrations in favor of Gen. Boulanger.

A dinner was given in Paris October 28 in celebration of the anniversary of the dedication of the statue of "Liberty Enlightening the World." M. Bartholdi delivered to United States Minister McLane a medal which had been struck in honor of President Cleveland, and requested him to forward it to the President. Mr. J. G. Blaine was one of the American guests.

Count de Lesseps announced to the French Academy of Sciences November 1 that the Panama Canal will be opened on February 3, 1890. The work, he predicted, will not then be entirely completed, but the passage will be free for twenty ships a day. It is estimated that this traffic will produce an annual revenue of from 90,000,000 to 100,000,000 francs.

Mr. Wilfrid Blunt, the Englishman who was arrested at Woodford on Sunday, October 23, for speaking at a proclaimed meeting, was found guilty October 27 of violating the Irish Crimes Act and sentenced to two months' imprisonment. On his way to

Loughrea the next day he addressed three meetings and was cheered by the crowds. His appeal will not be heard till January, and his sentence is regarded as severe by both parties in Ireland. Mr. Blake, Crown Solicitor at Cork, has resigned because the Crimes Act leaves him no discretion in judging whether an accused person is guilty or not, and because he believes the act is directed against political opponents of the Government.

Mr. Chamberlain left Birmingham October 29 to sail for America. At Liverpool, when he arrived, the station was strongly guarded, and he was cheered and hooted by the crowd. The news comes by way of Canada that he will be accompanied while here by detectives as a guard. The anti-Tory press of Canada has severely criticised him for his taking notice in a public speech of the Irish-American opposition to his appointment. The Ottawa *Free Press* declared October 26 that the only chance of success in the present negotiations lies in the dropping of Mr. Chamberlain by the British Government, and the appointment of some man "possessed of a little more prudence and common sense."

The Irish League Convention at Cardiff, October 31, adopted a resolution condemning the sentence passed on O'Brien and the treatment to which he had been subjected. "May many such crimes be committed by Irishmen," exclaimed T. P. O'Connor, "and may it be the only form of crime which Irishmen commit! O'Brien is a happier man in his cell to-night than any man skulking in the Chief Secretary's lodge." Herbert Gladstone, speaking at Glasgow, wished O'Brien godspeed, and said that the Liberals would soon thwart the Coercion Act forced upon the Irish people.

The appeal of Mr. William O'Brien, editor of *United Ireland*, against the sentence of three months' imprisonment for using seditious language at Mitchelstown, was refused and the sentence of the lower court confirmed on October 31. There was a physical struggle in the court-room when the decision was announced, which threatened to result in bloodshed. A crowd wished forcibly to rescue the prisoner, and the police were compelled to hurry him off to jail. O'Brien made an address, wherein he said that he gladly went to prison for a cause which provoked such earnestness.

Mr. O'Brien has promised to resist to the death his subjection to the treatment of an ordinary criminal. The Governor of the prison in which he is confined, at the Mayor's request, has telegraphed to the Prisons Board asking advice as to the course he shall pursue.

Sir William Vernon Harcourt, in a speech at Portsmouth October 27, denied that it was possible to shelve the Irish question, which, he said, came back always with renewed force. The Coercion Act was always a dead failure. Other governments had failed after trying coercion; the present Government failed before it had begun to apply coercion. Nobody believed that Unionist gatherings represented any section of the Liberal party. They were really Tory meetings, got together to cheer up deserters.

Sir George O. Trevelyan made a speech at Bangor, Wales, October 28, wherein he said that the experience of the Welsh with the English Government had caused them to sympathize with the Irish.

It was reported from Rome, October 27, that Father Gualdi was to return to Ireland with fresh instructions from the Pope, and that Mgr. Persico would probably follow soon. The Pope is reported to be disappointed with the result of their mission because they obtained only vague declarations, which will be useless in furthering his desire to pave the way for a renewal of diplomatic relations with England.

Earl Kimberley, in a speech at Louth October 27, said he hoped that Earl Rosebery would devise a scheme to reform and purify the House of Lords. He would gladly support him in the undertaking.

Mr. Gladstone has written a letter in reply to a question regarding free education, in which he says: "I wish to avoid entering into a new controversy. I am devoted to the settlement of one subject, on the progress of which all other subjects must depend."

Sir Charles Dilke has written a review of Great Britain's military condition, to show that the empire has no system of military defence whatever, and is daily getting weaker as compared with other European Powers; and that it is exposed to the loss of coaling stations, the destruction of her navy and commerce, and the bombardment of her commercial ports and arsenals.

The Royal Clyde Yacht Club at Glasgow, October 26, resolved to send a challenge next year to race for the *America's* cup with a cutter, in the name of Mr. Charles Sweet, a Scotchman resident in New York.

An American named Cohen died in London, October 25, who was supposed to be a dynamiter; but the English police, after causing a deal of excited talk, have failed to find good evidence to support their supposition.

War is reported to be imminent in Zululand against annexation to Natal. Sir Arthur Havelock, Governor of Natal, with 1,500 troops, has started for the territory formerly possessed by Cetewayo, where the latter's son heads an uprising.

Malietoa, the King of the Samoan Islands, who was deposed and exiled by the Germans, wrote a letter of protest to the American and British consuls; and the anti-German comment in New Zealand is that Germany's action was unjustifiable, and would have provoked opposition by other Governments if it had been done by a weak Power.

Advices have been received at Zanzibar from Emin Bey that the King of Uganda recently threatened to attack Emin's stations on the southern shores of Albert Nyanza because he suspected that the Stanley expedition was designed to attack him. He sent envoys to Emin to ascertain the object of the Stanley expedition, and when he learned its pacific purpose, the preparations for war ceased immediately.

The report of the United States Consul-General at Vienna shows an increase of $150,000 in Austrian exports to America from January to October, as compared with the same period last year.

The Emperor of Austria-Hungary, in his speech to the delegations of Cisleithania, October 29, said that he had strong hopes of peace and of the continued friendly relations of all the Powers. He regretted that the Bulgarian question was still unsettled, but he thought that it would remain a local matter, and be finally decided in accordance with the desires of the Bulgarian nation and in conformity with European treaties.

The Bulgarian Sobranye was opened October 27. Prince Ferdinand, attended by civil and military officers, drove to the Chamber and was received by the people with acclamation, and he made an address, saying that the Government was working for the prosperity and greatness of Bulgaria, and that order, tranquillity, and security had been restored. M. Tutcheff was elected President of the Sobranye. Prince Ferdinand has advanced $200,000 from his private fortune to the Bulgarian Treasury to hasten the completion of railways.

The Sobranye unanimously voted an address in reply to Prince Ferdinand's speech, assuring him of the support of the army and the people. It is reported from Paris that Prince Ferdinand has sent a political envoy to Vienna and Paris.

A recent article in the Moscow *Gazette* about the results of manœuvres of Russian reserves, has excited general European attention, because of the declaration that "Russia as well as France can now say, 'We are ready.'" The article is regarded as official, and is interpreted as a menace to Germany. The same journal demands a neutrality agreement touching Gibraltar similar to the Suez Canal agreement, and expresses the belief that if all the Powers interested would insist on such an arrangement, England would yield. The anti-Semitic journals in Russia have been instructed to stop discussing the anti-Semitic question, for both financial and political reasons. The Russian press, in its adverse comments on the proposed increase of customs duties, says that the high tariff is ruining trade, while continual changes cause distrust on the part of other countries.

The town of Kluzin in the Province of Minsk, Russia, has been burned. Three hundred and fifty houses and a number of stores were destroyed, and many lives were lost.

Mr. Van Riper, formerly American Consul at Moscow, having, at the request of the Russian Government, been dismissed for selling medals to Russian exhibitors at New Orleans, has been expelled from the Czar's dominions.

The revenue of the German Empire for the first half of the current financial year shows an increase from customs duties of 10,300,000 marks, from the Post-office of 4,000,000, from State railways of 1,250,000, and a decrease from the sugar tax of 500,000, and from the spirit tax of 2,000,000.

The Disconto-Gesellschaft of Berlin and the Norddeutsche Bank of Hamburg have decided to establish a Brazilian bank for Germany in Rio Janeiro, with a capital of 10,000,000 marks. It is reported from Berlin that the German Bank has entered into a contract to construct railways in the Argentine Republic.

Festal performances were given throughout Germany and Austria on October 30 in honor of the centenary of the production of Mozart's "Don Giovanni."

Johannes Ronge, the chief founder of the German Catholic party, died at Vienna October 27. M. Platosnoff, a prominent journalist, who it was thought would succeed to the editorship of the Moscow *Gazette*, died October 30.

The Mormons have applied to the Porte for permission to establish a community in Turkey.

A company has been organized in Greece for the administration of the monopolies in petroleum, matches, salt, cigarette-paper, playing-cards, and emery, which guarantees the last loan of £5,500,000.

Dr. Dawson, the chief of a party of geologists sent by the Dominion Government to explore the country adjacent to the Alaska boundary, has reported that there is a gold-bearing region fully 500 miles in length, and of indefinite width, along the Yukon River, that has been very little prospected.

The republics of Nicaragua and Costa Rica have been in dispute over a boundary question since 1825, and it has now been submitted to President Cleveland to settle as arbitrator. Should the boundary line be fixed in accordance with the claims of Nicaragua, it would leave the whole route of the proposed Nicaragua Canal within the republic of Nicaragua. Should the claims of Costa Rica be held valid, she would have sovereignty over one bank of the San Juan River, which is to be a part of the proposed canal.

Mexican banditti near the Texas boundary line have demanded large sums of money from rich ranchmen, and threaten to kill them if they refuse to pay it; and disguised as Indians they have committed many depredations.

THE BREAK-UP OF A MACHINE.

THE appearance of John J. O'Brien as a bolter from a Republican Machine nomination is an event of much significance. It marks in the most emphatic way the change which has been wrought in the character of the Machine since the last national election. As everybody knows who is familiar with city politics, this peculiar organization was the invention of the late President Arthur when he was a political power in this city. He conceived the idea of fighting the local Democratic organizations with their own weapons. As their district leaders were mainly Irishmen, he went to work to create a new class of politicians, namely, Irish Republicans. Up to that time an Irishman who was not a Democrat was an extremely difficult person to find. But Mr. Arthur knew how to make them, and so it came about that the Republican Machine which was constructed by him had among its leaders so many of the Johnnies, Jakes, and Mikes. There were Johnny O'Brien, Barney Biglin, Mike Cregan, Bob McCord, and Johnny McClave, and a host of other lights, who were not only Irishmen themselves, but whose names acted as a magnet for other Irishmen to join the Republican ranks.

Of course, all these men were attracted to the new organization, not through any love for Republican principles, but because it was made clear to them that there was a good living in the business. Under the skilful leadership of Mr. Arthur they became an important factor in municipal politics, and in one way or another did secure a good living. By making a compact organization in every election district of the city, they were able to offer for direct sale, or as a basis for a "deal," a definite number of votes. In close contests, brought about by factional quarrels among the Democrats, this body of voters brought their leaders a handsome income in more ways than one. If they did not get their price in hard cash, they received it in promises of "recognition" of one kind or another after election. This income on election day, together with the patronage of the Custom-house and of the various Federal offices in the city, gave the "Boys," as they dubbed themselves, a very comfortable support. They were able also to "deal" a few of their own number into the Legislature and the Board of Aldermen each year, and to get places for others upon city commissions and in other offices which were filled by appointment. Then, most important and valuable of all, they had charge of the distribution of campaign funds on election day.

Thus, in the heyday of Machine power, Johnny O'Brien was not only Boss of the Machine, but was made Chief of the Bureau of Elections at a salary of $5,000 a year; Jake Patterson and Sol Smith became police justices, on salaries of $8,000 a year; Barney Biglin got the contract for conveying emigrants' baggage at Castle Garden, and made, and is still making, a great deal of money, as well as a public scandal, of the privilege; "Jake" Hess became a Charity Commissioner, and later Subway Commissioner; Johnny McClave and Steve French got themselves upon the Police Board, where they use their power mainly to produce deadlocks in the interest of the Machine: Mike Cregan, whose death occurred recently, succeeded for many years in retaining a clerkship under a Democratic judge. The pay-rolls of the city contained the names of hundreds of less conspicuous Machine workers, while the Custom-house was a harbor of refuge for hundreds more.

They formed a compact body, organized and managed for simple business purposes, and with no nonsense about them. Their great harvest was gathered on election day, when the Union League Club, and other assemblages of brown-stone voters and silk-stocking Republicans, put money in their hands to be used in keeping the dreadful Democratic party out of power. So long as appeals for funds to save the country from a second rebellion and the poor negro from second slavery were efficacious, the Boys prospered tremendously. They took the handsome contributions, put the larger part in their pockets, and used the moral influence of the voters who had raised the money as a basis for a still further profit by means of a secret sale of votes to the dreadful Democrats. The climax was reached in the national election of 1884, when Johnny O'Brien took $50,000 of the hard-earned money of Jay Gould, which that devoted friend of the poor negro had placed, with other good Republican money, in O'Brien's hands, to be used on election day in behalf of Blaine, and put it in his own pocket. Johnny had sufficient foresight to discern that such another opportunity would never come to him.

The loss of the election of 1884 was the beginning of the end. With it went the Custom-house and all the Federal offices; and the failure of the country to go to ruin under Democratic control removed the last excuse for large campaign funds to keep the "Confederacy out of the saddle" and the "poor negro" from slavery. Since that moment the Machine has been rapidly going to pieces, for the simple reason that there was no longer "anything in the business." The attempt to reform it by disciplining "Mike" Cregan for doing a good stroke of business in the regular way, by selling out a Republican candidate, hastened the end. A new organization could be built up from the ruins of the old, but the Boys themselves could not be reformed, for the sufficient reason that there was nothing to be made in a Machine run on reform methods. The ousting of Mike Cregan from his district leadership took the heart not only out of him, but out of every other genuine Boy. Then civil-service reform got Johnny O'Brien's office of Chief of the Bureau of Elections into its clutches, and his final source of profit was thus threatened. He made a desperate effort to retrieve his fortunes by getting the Machine to nominate Judge Donohue, but it not only refused to do that, but, for the first time in its history, took an open stand in favor of non-partisan action in city nominations. With this O'Brien seems to have abandoned all hope, and is now in the field as a bolter against the Machine of which he was once the boss.

This collapse of the Machine as the Boys controlled it, is a great gain for decent politics. Not only has it during its existence failed absolutely to put good men in office, but it has almost invariably used all its power to keep the best men out and put the worst in. It has been the chief obstacle to non-partisan, citizens', and all other movements for the purposes of giving us better city government. The part which the Republicans, as a minority party here, ought to occupy, is that of a balance of power ready to be thrown in a solid mass for a good nomination and against a bad one every time. For the first time in many years the Republican organization, under the patriotic leadership of Mr. Root, is used in that way in the present campaign, and the fact is one of the most cheering signs of the times.

STATE INTERFERENCE WITH RAILWAYS.

THE last number of the Publications of the American Economic Association contains Dr. E. J. James's paper on "The Agitation for Federal Regulation of Railways." The general tone of this paper is temperate. The author reviews calmly and fairly certain tendencies in recent American legislation which are likely to operate quite as strongly in the immediate future as they have done in the past. Whether we sympathize with these tendencies or not, there can be no doubt of their existence; and Dr. James has done good service in presenting the facts clearly before the reader. Unfortunately he makes these undoubted facts the basis for some political reasoning which is more than doubtful.

"It is impossible," he says, "to tell exactly what is going to be the outcome of any proposed legislation or proposed policy, owing to the vast and complex relations involved; and it is also impossible ever to find out what can or cannot be done, except by an attempt to do something or other. In many cases the most important thing is to go ahead, whether you know you are right or not, simply because by not going ahead you are sure to be lost. . . . Those who believe that something must be done, but who do not see their way clear as to what should be done, should be willing to join with those who have settled views, and give them a fair chance to prove that they are right or wrong." As applied to the Inter-State Commerce Act this line of argument may have had some justification; as a general principle of political action it is dangerous in the extreme. It is a favorite weapon of radicals and fanatics on almost every subject. "You admit the existence of serious evils," says the labor agitator to the business man, "and you do not offer any plan to relieve them all at once. We do. Stand back and let the Socialistic theory have a fair chance." Fortunately the moderate men in the community see the fallacy of such reasoning. Fools rush in where angels fear to tread, but they cannot generally get a majority to support them in so doing.

When a demagogue uses this argument, we laugh at him; when a man like Dr. James uses it in a scientific paper, he makes it a more serious matter. He must see that the principle in his argument is the same as in that of the labor agitator. He would also probably

admit that the most active supporters of positive measures of railroad regulation were those who knew least about the difficulties of the subject. In advising men who see those difficulties to put aside their scruples, he takes a grave responsibility, and one which can only be justified by the most thorough knowledge and the most careful use of the facts in the case. If he knows his ground, he has a right to give such advice; if he does not know his ground, it is unwarrantable to assume the right to direct others in this way.

Now, most statements of fact on this subject are too complicated to be either proved or disproved in the limits of a newspaper article; but there are one or two which can easily be tested, and which we select for examination on that account. "In some points," he says, "we are certainly inferior to foreign railway systems. We have no passenger train between New York and Boston, for example, which can, by any stretch of language, be called a fast train. The famous Chicago Limited sinks to the level of a slow train after it gets beyond Pittsburgh, and most of the express trains between New York and Philadelphia—by all odds for the distance the fastest service in the United States—are by no means 'lightning flyers.'"

If we bring these statements to the test of comparison with railroad time-tables, we find:

(1.) That the passenger train service between New York and Boston is faster than the Berlin-London fast mail train, than the quick Prague-Vienna express, or even than the famous Orient express; that it is faster than any train in Germany, Austria, or Belgium over anything like the same distance; that there are only two train services in France which make better time on routes of the same length, and that one of these charges *six cents a mile*, while the other exacts a minimum aggregate fare of about *twelve dollars*, no matter how short the distance traversed. This is true to-day, when the New York, New Haven and Hartford Railroad is making extensive track improvements, which, while they are in progress, hinder its capacity for making fast time with safety. If Dr. James will turn back to the summer of 1883, before these temporary hindrances came up, he will find that the line from Boston to New York ran a longer distance in a shorter time than the best train then existing between New York and Washington. When competing on equal terms, it ran its 234 miles as fast as any other road in the country except the New York Central—and this exception was more apparent than real.

(2.) We find that the line between Pittsburgh and Chicago makes faster time than any other single-track road in the world; and that the "Orient" express, with all the advantages of double track and double fares, takes fully as long to accomplish the same distance. The Fort Wayne train is slow by comparison with its rival on the Lake Shore, but not otherwise.

(3.) The schedule time on the New Jersey Central between New York and Philadelphia has in some instances run as high as that on any regular trains anywhere in the world, and far higher than anything outside of England or America. None of the Continental trains known as "Éclair" or "Blitz-zug" show a speed which even approaches some of the best trains on either route between New York and Philadelphia.

It may be admitted without reserve that the best English trains do a little better than anything which we have accomplished in America. With a cost of over $200,000 per mile, and a system of construction adapted specially to the wants of fast passenger traffic, it would be a pity if they did not. But Dr. James speaks of foreign railroad systems in general, not those of England only; and if his words were intended to apply simply to England, he gives a totally wrong impression. The following are detailed statements of some of the fastest trains in different countries for runs of between 200 and 300 miles. (It will be noted that the maximum speed attained by each nation varies inversely as the amount of State interference.)

	Distance	Stops.	Time. H. M.	Speed — Miles per hour, inc stop 'age
London-Newcastle (G. N.)...	272	2	5.47	47.0
London-Liverpool (L. & N.W.)	202	4	4.25	45.7
Jersey City-Wash'ton (P.R.R)	226	3	5.05	44.5
New York-Syracuse (N. Y. C.)	290	2	7.02	41.2
New York-Boston (B. & A.)...	234	6	6.00	39.0
*Paris-Angoulême (Orléans).	276	3	6.30	42.5
†Paris-Mâcon (P. L. M.).....	274	2	6.38	41.1
‡Paris-Nancy (Est.).....	219	3	5.46	38.0
Prag-Vienna (Nord. B.).....	251	8	6.51	36.6
Berlin-Löhne (Paris Mail)....	212	7	6.04	35.0

There is only one other set of statements which we have space to examine — those which deal with the relation of railroads and water routes as means of freight transportation.

The question, in its details, is a highly technical one; but the general facts are clearly enough apparent from commercial history, without going into technicalities. A natural water route of the higher grade furnishes a cheaper means of transportation for slow freight than a railroad of the same length. An artificial water route in an advantageous location, like the Erie Canal, can continue to exist in competition with railroads; but it cannot be made to pay interest on its cost—in fact, it cannot be made to pay tolls at all. A water route with fewer advantages, whether it be natural or artificial, cannot compete with railroads on any terms. In other words, the operating expenses of the best water routes are as high as the operating expenses of the railroads. If such a water route has no fixed charges, like the ocean, or if it abandons the attempt to pay them, like the Erie Canal, it can compete; not otherwise. This is a point which is overlooked by the more superficial writers on these subjects. They compare the economy of water routes, not counting interest on cost, with the economy of railroads, counting such interest as a necessary charge. This may be right enough in dealing with past works which cannot be made to pay such interest in any case. But in estimating the policy in the future, interest must be taken into account, unless, indeed, Dr. James, in advocating river improvements, thinks it a good thing to get rid of the surplus in the Treasury, whether we expect any return or not.

Dr. James says that there is "a certain combination of the two in which the canal can transport one portion of the traffic, and the railroad the other, at a much lower rate than the railroad can do the whole of it, and this is the combination which they [the German and French engineers] are seeking. This is a system of combination, not competition, and will probably be the ultimate form of organization." He supports this statement in two ways: (1.) By a general allusion to "German and French engineers and economists," who, it is true, have been speculating on the subject for some time, with every advantage on their side, and with conspicuously small results. (2.) By calling attention to the fact that "the all-water transit between Chicago and New York, instead of being 17 and 20, and even 25 cents, as a few years ago, now rules at about 6 cents; sometimes a fraction above, and occasionally a small fraction below that figure. In summer the all-rail freights per bushel are generally a fraction above those of water, depending upon competition and the demand for export; but in winter the rates average from 12 to 21 cents per bushel. *No comment is needed.*"

We should think not. Railroad competition has reduced canal rates to one-quarter of their former figures, so that no tolls can possibly be charged; therefore Dr. James infers that the canal is the cheaper method of transportation. Competition produces these low rates; therefore he infers that a system of combination will produce economy in handling. He seems to ask that we should "believe his theory because the facts contradict it."

We have criticised these points somewhat sharply because we believe that they illustrate a danger to which the American Economic Association is seriously exposed. The Association says in its platform: "We regard the State as an agency whose positive assistance is one of the indispensable conditions of human progress." If this is only an historical generalization, it is a harmless platitude which hardly any one would deny. But if it is to be taken as a practical maxim, it is highly dangerous. If it means anything at all, it means, "In doubtful cases the presumption is in favor of State action." When Dr. James says that "in many cases the most important thing is to go ahead whether you know you are right or not," he accepts that meaning, and his high position in the councils of the Association makes it all the more important to call attention to the error, in order that other members, who do not agree with him, may see the false position into which they are drifting.

* Fare six cents a mile.
† Fare four cents a mile, but no tickets sold for less than 300 miles.
‡ Orient express. Fare five cents a mile. Number of tickets limited.

REFORM IN OUR NATIONAL COURTS.

It is now more than thirty years since the first movement was made in Congress to provide for a reform in the Federal courts. As early as 1854 Mr. Douglas introduced a bill in the Senate creating appellate courts in the different judicial circuits throughout the country. In 1868 another bill for relief and

reform of the national courts passed the Senate, but was then dropped. Some years later a bill for the same purpose was favorably reported by the House Committee on Revision of the Laws, and was passed by the House. The bill for the reform of the United States courts prepared and introduced by the late Judge Davis, which passed the Senate in 1882, is well known, and has been discussed and commended repeatedly. The bill introduced by the present Judge Jackson, in the early part of last year, while he was in the Senate, contains the main features of the Davis bill, with some judicious modifications.

Since the introduction of the bill by Mr. Douglas in 1854, the work of the courts has been greatly increased by acts of Congress. The Inter-State Commerce Law passed last year will without doubt provide considerable new business for these tribunals before very long. Besides this, the amount of litigation has been enormously increased by the natural growth of population and business of the country. Under these circumstances it must be considered a wonder by any intelligent person, either layman or lawyer, who gives the subject sufficient consideration, that the Federal courts are still able to perform their work with any show of promptness, or with any degree of justice to the litigants before them.

The fact is, that, owing to the failure of reform by Congressional action, in the mere matter of delay in obtaining final judicial determination on important questions, great injustice is done constantly. Decisions by the Supreme Court often come like post-mortem examinations, after the litigant is past relief. As was said by one of the justices of our Supreme Court, in speaking on this subject, "Tardy justice is often the grossest injustice." This is so in civil cases, but in prosecutions for crime before the United States courts, as the law now stands, the matter is still worse. The state of the law on this point was well described by Mr. Justice Miller last year when he said: "As the law stands, there is no right to a writ of error or appeal in any criminal case tried in the inferior courts of the United States. So that a man charged with a capital offence may be tried in one of those courts by a judge of no higher grade than that of the District Court of the United States, condemned and executed, without the right to a single review of that judgment. This is an anomaly in the modern jurisprudence of this country. There is probably not a State in the Union which does not provide in every criminal case which amounts to a felony, for a review of the judgment of the court of original jurisdiction." Viewed in the light of the general ideas of the right of appeal, this is a startling statement. Every litigant in the United States courts who has more than $5,000 at stake in his suit may have the judgment of the Supreme Court on his case; but if he is prosecuted on the criminal side of the court, and his life or liberty is at stake, there is no appeal. Some explanation why this state of the law has lasted so long may be found in the fact that the original criminal jurisdiction of the United States courts is limited, and yet it is sufficiently large to call for immediate reformation of some kind. Instances are on record where the denial of justice to persons convicted and sentenced in these courts has been so great that, very soon after conviction, they have been pardoned and released by the President on the advice of the Attorney-General.

In civil cases the equity jurisdiction of the judges of the circuit courts is very extended. The discretionary power to enforce the will of a single judge by granting or refusing temporary injunctions is almost absolute. There is no relief from such a temporary injunction by any ready or rapid appeal to be heard by more than one judge; it lasts in most cases for years, till the end of a long litigation, so that in practice many litigants in civil cases are almost as completely barred of the benefits of an appeal as those who are prosecuted for alleged crimes in these courts. Under the present system the United States courts are essentially one-man courts. Nearly all the bills that have been introduced into Congress on the subject have contained provisions for an intermediate appellate court in each circuit, consisting of from three to five judges.

These facts alone should have secured from Congress long ago prompt consideration and passage of some one of the many bills that have been before it. But besides the inherent defects in the system of Federal judicature as applied to the present state of the country, the failure of these courts, and particularly of the Supreme Court, to keep up with their work and dispose of the number of new cases that are coming up from year to year, has created considerable uneasiness in the minds of the judges themselves. Last winter several of the judges wrote and published long and able articles showing that the calendar of the Supreme Court was getting larger every year, although the court had made the most strenuous efforts to reduce it. The calendar has over a thousand cases on it, and every year a greater number of cases are added to it than the number the court can dispose of, so that it is growing larger at the rate of from 50 to 100 cases a year. This is not from any fault of the judges. The Supreme Court sits in Washington from early in October until late in May, and holds court in the different circuits throughout the country during the summer. Under the Constitution there can be but one Supreme Court, to which all appeals must go, and it is becoming a very serious question how this court will be able to do its increasing work and not have its decisions so far behind the age that they are practically valueless. The articles of two of the justices of the Supreme Court last winter were evidently written to influence action by Congress at its last session, but they came too late and nothing was done. If an effort be made again this fall, perhaps a reform of which there is crying need, and which has been before the National Legislature for more than thirty years, may at last be brought about.

THE WASHINGTON CONFERENCE.

THE approach of Mr. Chamberlain to our shores, and the renewed volubility of the Canadian press, admonish us that we are entering upon a matter of serious business with one of the Powers of the Old World to which we are bound by ties of language and lineage which we sustain to no other. The questions to be considered are not new. They run back to the colonial period. They have been the subject of four important treaties between the United States and Great Britain. In the course of time the issues have been slightly changed, but in the main they stand unaltered. They are all embodied in the one question, What are the rights of American fishermen on the shores of Canada? The profits of fishing depend largely upon the use of the neighboring mainland. Our contention is that the rights of fishing vessels are the same as those of merchant vessels, embracing all the trading rights that the commercial regulations of Great Britain accord to the ocean traffic of other countries, corresponding exactly to the privileges that we accord to British vessels trading in or entering our ports. The Canadian contention is that fishing and commerce are different matters altogether, that they have always been so considered by both countries, that they were acknowledged to be different in the Treaty of 1873 (the Washington Treaty), no less than in that of 1818, and that American fishing rights are now to be determined by the latter treaty, and not otherwise. The fishing interest on our side have practically conceded the last point, viz., that their rights rest upon the Treaty of 1818, but they insist that this treaty must be interpreted by the commercial privileges granted by the two countries to each other, not by treaty, but by proclamation in the year 1830. That these privileges were of a mercantile sort only is made tolerably clear by the fact that we never asserted their applicability to fishing-vessels until after we had abrogated the Washington Treaty, and that we never put fishing and trading on the same footing in our own laws until last year.

Thus it is inevitable that the first question to come before the Washington Conference will relate to the interpretation of the Treaty of 1818. That that treaty is still in force nobody questions. It is now old enough to have been formally denounced by either party, but, as it has not been, it is as binding as though it were an enactment of yesterday. What are its provisions? It gives us certain shore rights carefully drawn on the map, and excludes any other shore rights except the right to enter bays and harbors "for the purpose of shelter or repairing damages therein, of purchasing wood and of obtaining water, and for no other purpose whatever." An explanatory clause was added that "they [the American fishermen] shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner abusing the privileges hereby reserved to them." The spirit of the treaty would seem to be that the laws of humanity should be observed, but that Canada should not be made a base of operations for

American fishing vessels, except on those parts of the coast expressly granted for their use, viz., the north and west shores and the unsettled parts of the south shore of Newfoundland, and the coast of Labrador from Mt. Joly northward.

Now, the Canadian Government have put their own interpretation upon this treaty, and have undertaken to decide what are the exigencies that require shelter for fishing vessels, and what are the suitable occasions for the repair of damages. A skipper may come in shore for shelter when he thinks there is a storm brewing as well as when it is brewed. He may come in to repair his tiller or his sails, although he might be able to repair them outside. His real purpose in coming ashore may be to buy bait or other supplies. It may be within the prescriptions of the treaty or outside of them. Nobody can tell what his real purpose is, unless he is caught in an act prohibited by the treaty as understood by the Canadians. Under a strict interpretation of the treaty he may buy wood, but not coal; he may take on water, but not ice. He may not send home a package by express or mail a letter. He may not hire a seaman, or buy salt or fishing-tackle. He may not dry or cure fish. He may not stay in any harbor beyond the time necessary to repair damages. Against these narrow interpretations of the treaty our fishermen protest, and it is not to be denied that they have grounds for complaint. The first question to be considered by the conferees, therefore, is the interpretation of the existing treaty. We shall make our claims as broad as possible, expecting that the other side will look out equally for their own interests. In the event of a material disagreement as to the meaning of words, arbitration may be necessary. But it is plain that the questions of reciprocity and commercial union or the duties on fish cannot be considered until we know exactly what the law is by which both parties are bound.

FROM LOS ANGELES TO ST. LOUIS.

ST. LOUIS, October 17.

TWENTY years ago it was considered doubtful if a railroad from the Atlantic to the Pacific Coast would pay. To-day tourists have the choice between five railways—the Canadian Pacific, the Northern Pacific, the Union Pacific, the Atlantic and Pacific, and the Southern Pacific. From Los Angeles the choice, of course, lies between the two last named; and what induced me to give the preference to the Atlantic and Pacific was not so much the price of grapes on the Southern Pacific trains, and the recent "washouts" and train robberies, nor the necessity of passing through Yuma Desert, the hottest place in America, as the fact that the Atlantic and Pacific passes within twenty-three miles of the Grand Cañon of the Colorado River in Arizona. Peach Spring, the station where one has to get off for the Grand Cañon, is only twenty-one hours from Los Angeles, and the intervening country presents many attractive and unique features. First comes the suburb Pasadena, with its large hotel, charmingly situated near the foot of the mountains, the sides of which present a peculiar wavy appearance. In some places they are curiously furrowed and crevassed, as if the very mountains were trying to split themselves into town lots. The surface is bare in autumn, except for a few trees near the rocky summits; but in spring the lower slopes are covered by millions of fragrant flowers raised by magic from the dust. Other picturesquely situated villages follow, most of which, no doubt, will be flourishing towns ere long. At present they are a curious compound of unfinished buildings, tents, and the adobe houses of the Mexicans.

As the train proceeds in a northeastern direction, towards Barstow, the region of alternating ocean and mountain breezes is gradually left behind, and the arid desert of cactus, sand, and rocks which follows, makes the past scenes recur to the memory like a refreshing mirage. The sun's rays, no longer tempered by the ocean and mountain refrigerators, have it all their own way, and the wind is powerless in their clutches. For, although a strong breeze is blowing, it feels like a blast from a hot furnace, so that one hesitates whether to keep the car-window open or closed, and it is only towards morning that some refreshing sleep is attainable, even with a screen in each window. When I told the porter to wake me in time to get off at Peach Spring, at four o'clock, he laughed scornfully, exclaiming that the train was never on time, and that it would be early enough to get up at six. He was right. The train did not arrive at Peach Spring till 6:30, and half an hour later left me alone—all, all alone—in an Arizona village consisting of five saloons, six dwelling houses, a "stage" office, and an Indian camp in the background. Peach Spring is so called, apparently, because no *peach* grows within a hundred miles, and because the only *spring* in the neighborhood is four miles from the depot, whence the water is pumped to the station with an engine fed with coal that is brought there from the station. The man who has this coal contract also undertakes to convey tourists to the Grand Cañon. He is an intelligent man, whose enterprise, without any aid or even encouragement from the railroad company, has built a fair road, twenty-three miles in length (not eighteen, as the railroad circular states), generally along or in a dry river bed, which, after every freshet, calls for extra labor in clearing away the rocks wildly strewn about by the strong current. As there is no possibility of missing this road, I secured a pony of Mr. Farlee, and started alone for the Cañon; and on the whole way I saw no soul except an Indian climbing a tree near the road. Being weaponless, I met any possible scalp-hunting propensities on his part by a cordial "Good morning," which he as cordially echoed. The Indians of this neighborhood are lazy, and, with few exceptions, refuse to do any work even for good pay. Their filthiness, also, is great, and no wonder, considering that the nearest spring is four miles away and monopolized by the railroad company.

A mile or two beyond this spring is another one where the horse may be watered. During the remaining eighteen miles there is only one spring, and if the traveller misses that, he has to suffer agonies of thirst, unless he has wisely provided himself with a flask of tea or lemonade. The brisk breeze which sometimes blows only aids the physiological desiccating process, and the result is a temporary dipsomania in the frenzy of which one would gladly give a gold coin for a glass of lemonade. Nothing but forbidding cactus and a few similar tough and spiny plants can resist this heat; hence the whole region seems barren, and the few animals one may chance to see—a hawk, butterfly, rabbit, or catamount—but add to the desolation of the scene. But the mountain scenery is unique and grand, and becomes more so the nearer we approach the Grand Cañon. For the road is a regular *descensus Averno*, taking us deeper and deeper down between the prison walls; and when we reach the end of it we are almost a mile nearer the sea level than we were at Peach Spring. At a spot about a mile from the river Mr. Farlee intends to erect a large hotel. Sandstone, granite, and other fine building material lies about in profusion, and only needs to be hewn and piled up architecturally. At present there is nothing but a very primitive hut, with accommodations for about a dozen persons. The "hotel" is run by one man, whose special duty it also is to keep his end of the road in order, and a lonely life he must lead in this solitary hut, twenty miles from any other human habitation. When there are no guests to take care of, he fills his canteen with water and starts up the valley to roll the stones out of the road. In the evening he wraps himself in his blanket and goes to sleep, with the starry firmament for a roof, regardless of possible disagreeable neighbors, such as centipedes or rattlesnakes. He says he sleeps in the open air two-thirds of the time, and has not been ill for thirty-five years. Yet the heat in this part of the Cañon (which is so deep that stars are visible in the daytime, and at night I saw a million more stars than ever before) must be a terrible strain on his system, as it sometimes rises to 120 in the shade, with not a breath of air.

I shall never forgive this man, or his employer, for having nothing sour in the house except a spoonful of very bad vinegar—no pickles, lemons, or even a grain of lemon sugar—which, by the way, every traveller in hot regions should always carry with him. So I had to content myself on arrival with four cups of tea and six or seven glasses of water. The water is good, although superstitious people might hesitate to drink it, as it comes from a brook—Diamond Creek—which seems to be bewitched. Just in front of the hotel a portion of this creek, about half a mile in length, disappears every day towards noon, although above and below this place it flows on merrily and abundantly. About ten o'clock at night the water suddenly returns to the deserted portion of its bed. Mr. Farlee has repeatedly dug down many feet to find the subterranean brook-bed, but in vain. It almost seems as if the water, after leaving the cool and deep Diamond Cañon, were afraid of being absorbed by the superheated air in the open space in which the hotel is situated, and therefore concealed itself underground.

Possibly there may be a poetic Indian legend accounting in some such manner for the fact that even the broad and rapid Colorado River has in this region dug its way into the bowels of the earth until the mountains which form its bank tower more than a mile above its surface. Yet, after all, there lies more poetry and sublimity in the scientific account of the manner in which the soft water has, by infinitesimal degrees, worn its channel through these hard rocks, and even through the lava, with which Maj. Powell thinks this river-bed has been filled more than once. "What a conflict of water and fire there must have been here! Just imagine a river of molten rock running down into a river of melted snow. What a seething and boiling of the waters; what clouds of steam rolled into the heavens!" But it must be frankly admitted that those who visit the Grand Cañon, with anticipations at fever heat from reading Powell's exciting and poetic description of his adventurous trip down the Colorado, will be somewhat disappointed at first sight of this river. It is about a mile from Farlee's hotel, and is reached by following Diamond Creek, which empties into it. On comparing the mud color of the Colorado with the crystalline purity

of this creek, one realizes to what the latter owes its name. Rapid the Colorado is, and broad, and its walls do rise to the height of a mile, but they slope and recede towards the background, and in vain does the tourist look for the "granite prison-walls" rising abruptly from the edge of the water, and almost meeting above so as to shut out the daylight, their sides adorned with floating clouds and with the waterfalls and cascades of tributary streams.

Yet in truth it is foolish to look for all these things—to expect that all the wonders of Mr. Powell's long tour should be concentrated in one place for the convenience of tourists. The sad fact is, that the most sublime portions of the cañon are at present inaccessible except to those who are willing to undergo the same dangers and hardships as Maj. Powell. One can readily believe the legends of parched travellers wandering along the brink of this cañon for days, and "perishing with thirst at last, in sight of the river which was roaring its mockery into dying ears." Powell himself once spent four days trying to get down to the river. To the Grand Cañon, Diamond Creek seems to afford the only entrance. The A. and P. R. R. entertains a project of building an eighty-mile branch road from Flagstaff to the Cañon. Such a road would offer many attractions, as it would pass by some of the ancient cliff dwellings and the snow-capped San Francisco Mountains. It would, however, arrive at the top instead of at the bottom of the Cañon, which would thus lose some of its cathedral grandeur. Possibly the tourists might be let down to the river by means of a miner's shaft, in which case a ride of a few miles down the river on a boat (or "water pony," as the Indians call it) should be added to the programme. But, after all, this would be at the Marble Cañon only. For the Grand Cañon, Peach Spring will probably remain the stopping station; and for their partial disappointment in the Grand Cañon itself tourists will be amply repaid by a visit to the Diamond Cañon, which is reached by going up Diamond Creek a few miles from Mr. Farlee's hotel. Here they will find what they longed to see—perpendicular, awe-inspiring walls, not, indeed, a mile, but more than half a mile in height (2,700 feet), topped with fanciful pinnacles and domes, and producing a feeling of gloomy sublimity as refreshing to the soul as the coolness of this granite prison is to the body.

Diamond Cañon and the Grand Cañon may be visited on the day of arrival. Leaving the afternoon of the second day for the return to Peach Spring, no visitor should fail to ascend Prospect Point in the morning. It is an hour's hard climb from the hotel, but it repays the toil a hundred fold. From the summit one obtains several picturesque glimpses of the yellow Colorado, afar down, where it seems a mere brook; and of course the surrounding mountains do not appear in their true size and grandeur until one sees them from this elevated point of view. These mountains all have a curious family likeness. Their basis is always formed by a striated, vertical layer, reddish or brown; then follows a story or layer which slopes like a roof, suggesting human architectural efforts, but on a scale of infinite grandeur; and above this are several more distinct strata towering straight into the skies. It is the constant sight of these mountains, on the way from Peach Spring, that partly prevents tourists from being as deeply impressed as they would otherwise be at sight of the Grand Cañon. "They get their bellyful before they reach the river," as Mr. Farlee forcibly remarked.

After leaving Peach Springs, east-bound tourists may, if they have time, stop over at several places of interest which will claim a day each—cliff dwellings, Pueblo villages, Santa Fé, San Francisco Mountains, etc. If they lack time, the car-window still affords many pleasant sights which charm, even after the Grand Cañon, including the Cañon Diablo, 222 feet deep, which the train bridges in the midst of a plain. Beyond Albuquerque, the evidence multiplies that water is more abundant, and New Mexico has many picturesque and healthful spots, with wooded hills and green meadows, which only await the arrival of pioneers to be soon converted into populous and flourishing districts. Small pine forests make their appearance, and one readily understands why they are locally known as "parks," so clear are they of all underbrush and rubbish. In Kansas, bits of local color present themselves in the shape of immense herds of cattle, the three guardian angels of one of which (alias cowboys) race with one another and with the train quite successfully for a short distance. The train is five hours behind time, but at La Junta it is annexed by the express from Denver, which is known as the "Thunderbolt," presumably because it is only one hour behind time and loses only one more before reaching Kansas City—still in time, however, for the night train to St. Louis.

HENRY T. FINCK.

INTERNATIONAL PEACE.

HEIDELBERG, October 8.

THE Institute for International Law has lately been holding its annual session on the banks of the Neckar. No less than fourteen reports by ten special committees figured on the programme, and yet the meeting really managed, under the Chairmanship of Prof. von Bulmerincq, to discuss nearly all of them, and to further considerably several important subjects. The right of expelling aliens was deemed too delicate a question for debate, members seeming mostly of opinion that the right of a State to expel aliens cannot be questioned, and that it is beyond the power of jurists to draw the line at the exact point where the duty of self-preservation ceases to justify expulsion, and where humanity and justice forbid it. Few, if any, of the members present would, I suspect, have been ready to admit that the claims of humanity have been sufficiently considered of late by the German and Russian Governments; and all, no doubt, deplore the endeavors of the Parisian Chauvinist press to urge their own Government to similar harsh measures. Commercial rivalry seems to have much to do with this intolerant cry in France, and with the outcry against foreign spies. There being no means at hand to expel French competitors, an attempt is being made to oust German and Italian ones. As to Russia, the measures adopted by her to put a stop to the rapidly progressing Germanization of her Western provinces, are of a piece with the whole policy of "One law, one faith, one tongue," proclaimed by Emperor Nicholas, and taken up again by Alexander III. What is much more puzzling to account for is Prince Bismarck's expulsion of thirty thousand Poles, Russians, and Austrians. Public opinion was strongly against this measure; most of the expelled were peaceable citizens, whom it cruelly deprived of their means of livelihood. The argument that our Eastern provinces were in danger of becoming entirely Polish and Roman Catholic was too little flattering for Germans to be taken seriously by the public. And thus, in order to account for the mysterious action of the Government, people have been driven to the supposition that it is all due to a fit of anger, which seized the Chancellor of the Empire when he found out that nine or ten aliens had voted for Herr Rickert at Danzig, and procured a majority for the Progressist against the Government candidate. Even for those disinclined to accept this explanation, it remains a characteristic fact that it has found acceptance, and that the fate of thirty thousand law-abiding people is supposed to be at the mercy of a man dependent on his humor.

Mr. David Dudley Field presented a memoir to the Institute, setting forth that modern civilization requires an amelioration of the laws of war. He begins by quoting Admiral Aube's threat, that in the next naval war cruisers would attack English commerce on every sea, and that every power of attack and destruction would be employed against all littoral towns, fortified or unfortified, to burn, destroy, or pitilessly ransom them. He suggests that, so long as nations cannot agree to establish an Amphictyonic Council, at least something should be done to humanize the customs of war. Well worth considering as Mr. Field's remarks are, Europeans might feel inclined slightly to alter the wording of some of his statements. Thus, when he says that the Government of the United States offered to accept the Declaration of Paris of 1856 against privateering, provided that the capture of private property were declared inadmissible, we should probably prefer the following reading: Owing to the unfortunate refusal of the United States to sign the Declaration of Paris, we are as far removed as ever from the acceptance of the inviolability of private property at sea; the civilized world has still to accomplish the first step, abolition of privateering.

A project submitted by Mr. Leone Levi, in the name of the Peace and the International Arbitration and Peace Societies, proposes the formation of a standing international council of arbitration. M. Rolin-Jacquemyns advised the Institute to continue to keep as far away from Utopian dreams as from icy theory. It should avoid doing harm to a good cause by proposing what no government would think of accepting. Withal, he could not see that there was any danger in considering, from a strictly juridical point of view, whether, and to what degree, and by what means, it might be possible to restrict within certain proportional limits, to be fixed by treaties between the States of the European group, the size of the armies of these States and the amount of their military expenses in time of peace. This question might be divided into three, viz.: (1) Whether it is feasible, from the standpoint of international law, for two or more States to pledge themselves mutually by treaty to limit their respective armaments; (2) to what extent European States may enter into such reciprocal engagements, and how far these engagements will be binding upon them; (3) by what means an efficacious guarantee can be provided for such treaties. M. Rolin briefly recapitulated the disastrous consequences entailed upon Europe by the unceasing growth of armaments, of which he has drawn a striking picture in the *Revue du Droit International* (Brussels, 1887, No. 2, p. 130). He tried to show how much more the great States had to lose in case of defeat than they could possibly gain in case of victory. But the friends of humanity cannot hope to bring governments over to their side by insisting on complete disarmament—an evident impossibility; nor will they prevent wars between different peoples by exciting classes against each other, or preaching revolution. And since his colleagues of the Institute were mostly averse to the idea of appealing to the governments on behalf of "conventional disarmament," he would limit himself to a few observations. He would point out that the

English Government had not hesitated to make a similar proposal* in 1816, which was favorably received both by Austria and Russia, the latter of which expressed the wish that the next Congress should fix the proper size of each standing army for all European nations. The Belgian statesman proceeded to explain how every sovereign State derives from its right to exist full liberty to defend itself against any attack by all the means in its power, and how, for this reason, International Law, as it stands at present, does not admit any limitation of these means of defence by a higher authority. But all States are now threatened by a far more formidable danger than that of a neighbor's attack, viz.: by the exhaustion or disorganization of their vital forces by exaggerated preparations for war. Since Moltke himself admitted the existence of this danger in his famous speech of December 4, 1886, nobody has any longer ventured to deny it. It bears not only a political and economical, but also a social aspect. But, if such a strained situation does exist, is not then the duty incumbent on all European States to come to an understanding concerning the best means of meeting and attenuating the evil? It will never do to exclude a question because it has not hitherto been embodied in any treaty. Nothing is, on the contrary, more characteristic of international law than its constant tendency to enlarge its scope, to draw within its pale subjects deemed not to belong to it. The line between moral and juridical responsibility is a movable one and incessantly retreating. Treaties used to be silent respecting the duties which humanity imposes. Now the laws of war, all tending to enforce humane principles on belligerents, are recognized as *stricti juris*.

I have dwelt thus long on M. Rolin's discourse because the despatch of a British deputation to President Cleveland, proposing that future disputes between England and the United States be regularly settled by arbitration, when diplomacy is incapable of settling them, cannot, if successful, fail to promote the cause of peace all over the world, and to give a new impulse to the friends of peace in Europe. To my mind, the great approaching war with Panslavism must be fought before a reduction of European armaments by mutual consent can be brought before a conference of the Powers. But this will only be done after public opinion has been persuaded to acknowledge it as a rational idea, and after mature discussion has originated a plan which has the appearance of feasibility. When the principal nations of Europe have found their "natural frontiers," and when people have been cured of their rage for militarism by further sad experiences, advocates of conventional disarmament will be listened to. In the meantime it is very well they should ponder over the questions raised by M. Rolin-Jacquemyns, and take up a topic that has hardly been touched since 1816. THEODOR VON BUNSEN.

*Compare 'Traités conclus par la Russie,' etc., by Prof. Martens. St. Petersburg. 1878. IV. I. D. 37.

THE QUEEN OF WESTPHALIA.

PARIS, October 20, 1887.

DR. AUGUST VON SCHLOSSBERGER, Vice-Director of the State Archives of Würtemberg, has published at Stuttgart two volumes of letters between Queen Catharine and King Jerome Napoleon, the brother of Napoleon I. This fine publication does honor to the editor and to the German printer. Napoleon I. said of Queen Catharine at St. Helena: "Par sa belle conduite en 1815, cette princesse est inscrite de ses propres mains dans l'histoire." Her correspondence justifies the judgment of Napoleon, and shows a very different person from the Empress Marie-Louise.

Princess Catharine was born on February 21, 1783, in St. Petersburg. She was the second child of the Duke of Würtemberg, who became afterwards King of Würtemberg, and of Augusta, a princess of Brunswick. She was educated chiefly by her grandmother, the Duchess Sophia Dorothea of Würtemberg, of whom she wrote in her diary when she lost her: "It is to her that I owe the few virtues I possess." She had never known her mother; her father had married a second time, and her stepmother, Princess Charlotte Matilda of Great Britain, seems to have taken but little interest in her. She lived chiefly with one of her aunts till in 1807 she became affianced to Prince Jerome, to whom his brother, Napoleon, had given the crown of Westphalia, a new kingdom established after the Treaty of Tilsit. They made their entry together into Cassel, which was their capital, on the 1st of January, 1808.

The first part of the correspondence extends from 1801, at which time the Princess was eighteen years old, to the time of her marriage. In 1804, she allowed her friends to call her "l'abbesse," and she wrote: "As I never shall have a husband, an abbey is an honest retreat for an old lady." She became in fact, in 1805, Abbess of Oberstenfeld. Napoleon chose the young abbess for his brother, Jerome. There are several letters of his on the subject written to his "brother," the Elector Frederick, afterwards King Frederick.

Princess Catharine's letters to her father show that she was not much afraid of marrying Prince Jerome, who was young, handsome, of gentle manners. "There can be no question," she writes, "of a sacrifice made for you or for my country. What duty commands may be compatible with sentiment." It was a singular time, and courtship was conducted as rapidly as a campaign. Napoleon wrote to the King of Würtemberg: "It is enough to say that Prince Jerome, with a corps of 30,000 men, among them 10,000 men of your Majesty's troops, is about to enter Silesia." The King of Würtemberg gave Prince Jerome the Würtemberg order of military merit. When the campaign was ended, Marshal Bessières was sent by Napoleon to Stuttgart, and formally asked for the hand of the young Princess. The marriage was made by proxy. The Princess left Stuttgart for Paris, travelling by way of Nancy, Châlons, and Meaux. "At Phalsbourg, where we breakfasted day before yesterday, and which is a little fort, I found that the garrison was entirely made up of Hessians, who seemed charmed to see me. I cannot tell you what a sensation I felt in hearing them speak German. It seemed to me that I was again in my own country, but this illusion lasted, unfortunately, but a moment" (August 19, 1807). One can sympathize with the feelings of the young Princess, but it must not be supposed that those feelings were exactly hostile to France. The Würtembergers had joined in the last campaign of Napoleon, and the great national reaction against Napoleon had not yet begun. Prince Salm, who accompanied her on her journey, was an aide-de-camp of Jerome. "He seems very much attached to the Prince, and speaks of him with enthusiasm."

Princess Catharine met Prince Jerome at Le Raincy, a place which belonged to Junot, the Commander of Paris (it was one of the Orleans estates). She was received at the Tuileries by Napoleon, and presented to all the members of her new family. At dinner Napoleon forced her to drink wine, "to give me courage, as he said. It is true that I needed it, though I felt less embarrassed with the Emperor than with the Prince" (August 23, 1807). The mother of the Emperor, Mme. Letitia Bonaparte, made a favorable impression on her. She calls her "an estimable woman, of much merit." Jerome Bonaparte was shy, and the young Princess timid, and the first private interviews between them were somewhat painful; but the impressions made were satisfactory on both sides. There was a civil marriage first, which the Princess says was very imposing, and afterwards a religious ceremony. "The Prince," she writes two days after it, "is really a charming man, full of amiability, of *esprit*, of kindness. He already begins to spoil me." She describes in her letters to her father her new life at the Tuileries, at St.-Cloud, at Rambouillet, and there is much interest in her descriptions, as Napoleon is the centre of them. The King, her husband, had surpassed her dreams. "I ask myself if it is a dream or a reality, for my happiness is so great that I can hardly understand it. How happy shall I be to present to you the King who makes the happiness of my life" (October, 1807).

King and Queen left for their kingdom towards the end of 1807. We have the list of persons appointed for the journey to Stuttgart. The King has a grand marshal of the palace, a *grand écuyer*, a grand master of the household, a chamberlain, a marshal of the court, a secretary, all Frenchmen; the Queen has three ladies and two chamberlains, etc. Before leaving they remain a little while at Fontainebleau with the Emperor. The Queen sends some political news to her father, but adds: "I cannot give you this news as authentic, for at the court one never speaks of politics. The subject is totally banished. The Emperor never speaks of it, and does not suffer anybody to seem to know the smallest particulars." The Queen had to ask the Emperor for a private audience, in order to communicate to him a letter received from her father, a letter in which he wished to have the Emperor's opinion and approval of a marriage intended for his son. "I must confess," she writes to her father, "that I did not enter the cabinet of the greatest of men and the most illustrious of monarchs, without trembling to think that in a moment I should find myself alone with him."

She gives the whole account of the conversation, and it must be confessed that there was something alarming in the tone of the Emperor; he spoke like a Cæsar who saw all the sovereigns of the world at his feet, and who found it perfectly natural that his will should be first consulted in everything. Much has been written lately on the subject of Napoleon; we have had the scorching analysis of Taine, the defence of Prince Napoleon. It cannot be denied that the man was most extraordinary; it seems incredible that anybody should assume so naturally the tone of supreme authority. As soon as he entered on the consular functions, he assumed in his letters and despatches the tone of a man familiar with the greatest affairs of the world. I happened to read some time ago the first despatches which he wrote to the French Ambassador; they are marked by a superiority, an authority, which seems almost incredible in so young a man, who had never seen anything but the army. It seemed as if he had nothing to learn, and knew everything.

There are very characteristic remarks in the correspondence of Queen Catharine, such as this: "The King [she always calls her husband the King], knowing the levity of the French, begs you to give none of your orders to any of his gentlemen who asks them without his permission" (November, 1807). The King and Queen of Westphalia were at Strasbourg at the end of November, 1807; they visited the

King of Würtemberg at Stuttgart, and made their entry into Cassel. "The King has been perfectly well received in his new States, and it seems that their sentiments are not affected, but sincere. The people seem cheerful, happy; but the country is not as fine as my dear Würtemberg." Gen. Reubell was appointed Governor of the capital. The house at Weissenstein, a country residence of the Court, was named Napoleonshöhe. As for the château of Cassel, "it is really all you can imagine most horrible; it looks like an old donjon. . . . One sees in everything the sordid avarice of the ex-Elector. With much difficulty I found in it a bad table of pine wood. In all the city of Cassel, I could not find a writing-desk. Everything must be sent from Frankfort or Paris, and you cannot find even a bit of ribbon; they tell you that the ex-Elector could not bear it, and suffered no luxury at his court. This simplicity is worthy of the age of gold, but unfortunately we live in an age of iron." The life at Cassel was very monotonous; at one time the throne of Spain was offered to Jerome. "The affairs of Spain are a great example of the terrible results of family dissensions, and they have nearly affected my happiness and my love of repose. The throne has been offered to the King, and, if he had accepted it, I should have found myself in the terrible perplexity of choosing between my husband and my religion; fortunately there is no longer any question of this project" (May 28, 1808).

The Queen went to Liebenzell, to take the waters during the summer of 1808, and returned to Cassel in September. All the Princes of the Confederation of the Rhine were invited to Erfurt, where Napoleon was to arrive at the same time with the Emperor Alexander of Russia. The Queen of Westphalia was invited by Napoleon himself to go to Erfurt, but the correspondence gives no details on the Conference, as the Queen's father was himself at Erfurt, and he was her chief correspondent. A new war broke out in 1809. The following letter from Napoleon to King Frederick of Würtemberg shows well what the state of Germany was at that time: "I have destined the corps d'armée of your Majesty to form a reserve. I have appointed Gen. Vandamme to be its commander. He will be the only Frenchman, and will receive his orders directly from the Major-General. . . . The troops of your Majesty could not render the services which they are called upon to render, if they were not under the orders of a French general," etc. (March 17, 1809). The King protested against the choice of Vandamme, and spoke of the harshness with which this general had treated his troops in Silesia, but added: "All my officers, the Feldzeugmeister first of all, are ready to serve under any other general whom your Majesty may choose." Napoleon insisted, and Vandamme took the command. War was declared in April, and King Jerome made his headquarters near Bamberg. An insurrection took place in Westphalia, and the Queen found herself obliged to take refuge in Frankfort and in Strasbourg; the Prussians, under Schill, had entered her kingdom. But the troubles of Westphalia soon came to an end, as Napoleon had again been victorious. The Würtembergers had fought in his armies. Queen Catharine was proud of their successes. "I partake of the satisfaction which you must feel," she writes to her father, "on the subject of the affair in which our brave Würtembergers so gloriously distinguished themselves" (May 24, 1809).

Queen Catharine was still in Strasbourg in June; she then left for Spa, where she took the waters. Her husband was with an army in the north of Germany, and she was in great alarm about him. "Our fate," said she, "depends upon the Emperor." Napoleon was victorious, and she was at liberty to return to Cassel. Peace was signed at Schönbrunn on October 14 between the two Emperors of France and Austria. The King and Queen of Westphalia were afterwards invited to go to Paris. "I have never seen the Emperor more gay or in better health than he is now" (November 24, 1809). The rapidity of Napoleon's movements was incredible; we leave him at Schönbrunn, we find him again, soon afterwards, in the Tuileries. He exacted the same rapidity of movement of the Princes and Princesses of his family.

Correspondence.

"AS EVERY SCHOOLBOY KNOWS."

To the Editor of The Nation:

Sir: Not being a subscriber to the *Forum*, I have only this week been reading Gov. Foraker's article on "The Return of the Republican Party," in the August number of that magazine. The copy in my hands belongs to the library of Miami University, and I note that one of our young men has been indulging the reprehensible habit of scribbling on the margin of the library's periodicals. Says Gov. Foraker: "Practically everything he [the American farmer] produces, brings him a price from 50 to 200 per cent. higher than he ever dreamed of in free-trade times, while substantially every domestic article he buys is from 50 to 200 per cent. cheaper, and at the same time better in quality." To this the marginal scholiast observes, meditatively: "One hundred per cent. is all. Then a man is paid money to induce him to buy. Mr. F., this is stuff." The souls of our college youth are growing painfully dry and mathematical.

The Governor, somehow, meets with a singular lack of feeling among babes and innocents. What county in Virginia was it where the naïveté of a thoughtless countryman interrupted his thrilling presentation of figures on pauper wages in Spain with the embarrassing query: "Hasn't Spain got a protective tariff, Governor?"

Yours, Alfred Emerson.

Oxford, O., October 22, 1887.

THE EFFORT TO REVIVE OUR MERCHANT MARINE.

To the Editor of The Nation:

Sir: Another convention has been held by the American Shipping and Industrial League—this time at Boston—with the object of enabling "the United States, at no distant day, to reclaim her former ascendency upon the seas." It is to be noted that the tone of these conventions is always one of regret, of comparisons of our present small tonnage with that of other countries and of our own in the past, and always in the belief that, the facts being as they are, the spectacle is "melancholy" and "humiliating." "If," said the President of the Convention at Boston, "under conditions such as I have mentioned, showing our fallen commercial and naval state, the time has not arrived for such action as that contemplated by the present Convention and other kindred organizations, to what public exigency should the mercantile communities of the United States respond?"

The time has certainly come to say that the sweeping of the American flag from the ocean is a thing upon which we may in truth congratulate ourselves, for it has come about, not through sloth or lack of ingenuity on our part, but by the greater remuneration of other employments. Our spirit is not dead, but our adventures on land simply make a larger return than those upon the sea. Is this a thing to mourn over? We may, if we please, imagine a business man running his own errands, but he will prove to be a small business man. Let him once have a large and lucrative business, and he will occupy his time with what is most profitable to him, and leave the rest to subordinates. Would he grudge these others their work? Would he himself feel dishonored that he did not do it all himself, being better employed? Yet it is an exactly similar fact that our shipping conventions bewail. "Lo," they say, "we are not running our own errands! The British are running them for us! What a dishonor! What a loss of prestige!" Are we, then, idle? No, we are simply doing something better.

Once, on a sterile soil, with the ocean in front and a wilderness behind, the Americans took to the sea; now they are turning to the West, where there is greater remuneration for toil. On the sea all nations meet on an equal footing, but we alone have a more fruitful West. The shipping conventions would force us arbitrarily to deny ourselves this superiority; they would have us meet other nations on a common footing; because others can do a thing, they would have us do it too, rather than what we can do better. They cry that there is no outlet for our products. "In our present commercial paralysis there can be no efficient intercourse with foreign nations, no direct opportunity for international exchange, no American mail service—no outlet, in a word, for the superabundant products of our industrial activity"—and this in the face of the volume of our exports and imports, and of the fact that within three years so many ships were trying to serve us that they were taking our products to Europe without charge. The American capitalist of himself chooses not to compete with people satisfied with the returns to industry on the European basis; and shipping conventions can force them into it only by bounties and subsidies—that is, by giving them what others, their countrymen, have earned. Our shipping should not be unnecessarily hampered, for it should have a fair chance if, at any time, other industries become no more profitable than it is. But it is not an infant industry, which, with support now, will presently support itself. It is falling of its own weakness, and figures showing its decrepitude only show how many people have gone through the trying stage of leaving it for something else.

John F. Moors.

171 Beacon Street, Boston, Mass.

Notes.

James Pott & Co. publish directly 'The Holy Land and the Bible,' by Cunningham Geikie, D.D., in two volumes; 'Bible Topography,' by Canon Rawlinson; 'The Sceptic's Creed,' by the Rev. N. Lorraine; a new series of Canon Liddon's Sermons, four volumes in one; 'How We Got Our Bible,' by J. Patterson Smyth; 'Fragmentary Records of Jesus of Nazareth,' by the Rev. F. R. Wynne; and 'Unfinished Worlds,' a popular study in astronomy, by S. H. Parkes.

D. Appleton & Co. announce 'Weather: a Popular Exposition of the Nature of Weather Changes from Day to Day,' by the Hon. Ralph Abercromby; 'Evolution in its Relation to Religious Thought,' by Prof. Joseph Le Conte; 'Animal Magnetism,' from the French of Alfred Binet and Charles Féré; 'The Geological History of Plants,' by Sir J. William Dawson; 'The Education of Man,' by Frederick Froebel; 'International Law,' with materials for a code, by Prof. Leone Levi; 'Origins of the English People and the English Language,' by Jean

Roemer, LL.D.; 'Good Form in England,' by L. J. Ransom; 'The Divine Man,' by the Rev. George Boardman; 'The Lawyer, the Statesman, and the Soldier,' by George S. Boutwell; 'A Guide to Southern California,' by Dr. Walter Lindley and Dr. J. P. Widney; and an 'Atlas of the United States,' with county maps. In preparation is a 'History of the American Fossil Mammals,' by Henry F. Osborn, Professor of Comparative Anatomy, and William B. Scott, Professor of Geology and Palæontology, at Princeton.

J. B. Lippincott Co. have in press a volume of popular essays by Dr. S. Weir Mitchell, entitled 'Doctor and Patient.' The work is largely made up of what might be called Essays of Advice to Women.

The November number (No. 30) of the Riverside Literature Series (published monthly by Houghton, Mifflin & Co.) will contain Mr. James Russell Lowell's famous "Vision of Sir Launfal," "The Harvard Commemoration Ode," something from the "Biglow Papers," tributes to Bryant, Wendell Phillips, and William Lloyd Garrison, "An Indian Summer Revery," and other poems.

'Life and Love,' poems by Robert Burns Wilson, is in the press of Cassell & Co.

Frederick W. Wilson & Bro., Glasgow, will publish 'Smith: a Tragedy,' by John Davidson, author of 'Bruce: a Drama.' The *motif* is rebellion against the society of to-day; and "that daring," say the publishers, "which takes *Smith* as the name for a tragic hero, characterizes the whole drama."

Col. Robert G. Ingersoll furnishes a preface to the narrative of a Chicago working-girl's life, 'For Her Daily Bread,' to be issued by Rand, McNally & Co.

Cupples & Hurd, Boston, publish this month 'Gritli's Children,' by Mme. Spyri, translated by Mrs. Louise Brooks; and 'Our Party of Four,' a novel by Mrs. H. B. Goodwin.

Mr. Ad. F. Bandelier has just finished at Santa Fé, N. M., a 'History of the Colonization and Missions of Sonora, Chihuahua, New Mexico, and Arizona, up to the Year 1700.' The work has been composed in French, and will be presented to Pope Leo XIII. by the Archbishop at Santa Fé.

If the intelligibility of the home-rule question is not exactly on a par with that of the Schleswig-Holstein controversy, it is still probable that few Americans are prepared to stand a searching examination on either. A pamphlet, therefore, addressed to the British elector is calculated to assist students on this side of the water, and its price—one shilling—puts it within the reach of all. The 'Handbook of Home Rule' (London: Kegan Paul, Trench & Co.) has been edited by Mr. James Bryce, M.P., who himself furnishes two articles, of which we particularly commend that entitled "How We Became Home-Rulers." Lord Thring has also two articles, on "Home Rule and Imperial Unity" and on "The Irish Government Bill and the Irish Land Bill." Mr. E. L. Godkin's article on "American Home Rule" is reprinted from the *Nineteenth Century*, and is supplemented by his hitherto unpublished rejoinder to Prof. A. V. Dicey's criticism of it in his 'Case against Home Rule.' Canon MacColl states "The 'Unionist' Position," and Mr. R. Barry O'Brien reviews "The 'Unionist' Case for Home Rule." Mr. John Morley, with "Some Arguments Considered," and Mr. Gladstone, with "Lessons of Irish History in the Eighteenth Century," close this well-rounded pamphlet, to which Earl Spencer furnishes a brief preface.

Baedeker's 'Great Britain' (London: Dulau & Co.; New York: Westermann), a Guide to England, Wales, and Scotland, is a well-digested hand-book for travellers who wish to make a rapid tour and see what is of most interest everywhere in the countries named. The routes are well given for this purpose, but for more thorough work in the rural portions one must have recourse to Black's guides to the separate counties. The maps in the Baedeker might be more abundant, some of the more important regions, so far as picturesque interest goes, having none. The cities, however, are fairly well represented in plans. The work has been edited by Mr. J. F. Muirhead. Considerations of bulk compelled the omission of Ireland and the northern portion of Scotland; but these, it is intimated, will be provided for in a separate volume.

One is not surprised to read "seventh edition" on the title-page of the latest issue of 'Rollo's Journey to Cambridge' (Boston: Cupples & Hurd). This delightful travesty, the work of several hands, capitally illustrated by Mr. F. G. Attwood, loses nothing by time. No other single product of American undergraduate cleverness approaches it.

No man was competent to write the life of the late Wendell Phillips in the same year that the great orator died. Mr. George Lowell Austin not only essayed the task, but coupled with it a history of "the times." It was pure cramming in either case, and the result was a wretched literary performance, neither history nor biography, ill-informed, abounding in errors, defective in grasp, arrangement, proportion, and critical appreciation. Lee & Shepard have just brought out a fresh edition, for which, as in the case of the same writer's Longfellow, there is less excuse now than in 1884, the basis for a genuine life having meantime been thoroughly laid. A fine steel portrait of Phillips in his later years is the only redeeming feature of the volume.

We have received three sheets of the map of Massachusetts now being published in conjunction with the United States Geological Survey, on a scale of one mile to the inch, uniform with that adopted for the map of New Jersey. The work is in charge of Mr. Henry Gannett, Chief Geographer, and of three Massachusetts Commissioners, with Gen. F. A. Walker at their head. The execution is very clear, in three colors, with contour lines of which the altitudes are set down, and with roads. The "Greylock Sheet" is well named, as this mountain mass occupies nearly a third of the area mapped, and the "Northampton Sheet" might fittingly have been named after Mt. Holyoke, and the "Worcester Sheet" after Mt. Wachusett. These several tracts embrace on the whole the greatest scenic glories of Massachusetts, and some of the most interesting geologic features. The glacial character of Worcester County, with its crumpled surface and ponds innumerable, speaks to the eye.

The first annual report of the Commission of Colleges in New England on Admissions Examinations is now published, and may be had of Prof. W. C. Poland of Brown University, Providence. It presents little in the way of accomplishment beyond the clarifying of the Commission's functions and the establishment of friendly relations with the other educational bodies between which it mediates. Its constitution and by-laws, and its doings, fill a thin pamphlet of sixteen pages. We need hardly remark that this movement deserves to be watched by all heads of colleges and preparatory schools throughout the country.

We might have added to our mention, last week, of the fifth volume of the Nova Scotian Historical Society's Collections, the second important paper, a "Journal" kept by William A. Gordon, grandfather of Chinese Gordon, during the siege of Louisburg in 1758. It is a singularly colorless narrative, but gives in many instances minute accounts of the day's events, together with lists of ships, regiments, ordnance, etc., both of the French and English. In these, as well as in some other unimportant details, this journal differs slightly from the authorities followed by Mr. Parkman in his 'Montcalm and Wolfe.' There are one or two instances in which the dryness of Gordon's catalogue of events is slightly relieved, as when he records that "Gen. Wolfe was in this Skirmish and as usual in the most Danger." Telling of a certain sortie of the French, he adds that they were "the most of them much in Liquor." It is noteworthy that the last entry of the journal is a "Return of Men who went as Volunteers to erect the two last Batteries against Louisbourg with me"—evidently a dangerous duty, for which he was anxious that the soldiers, forty-nine in number, should receive due credit. In his account of the erection of these batteries, however, he makes no mention of the fact that he was in command of the force, nor does he make any reference whatever, if we are not mistaken, to himself or his services. He was with Wolfe at the taking of Quebec in 1759, and participated in the capture of Moro Castle in 1762. The genuineness of the Journal is certified to by his son, the late Lieut.-Gen. H. W. Gordon.

The *Berkeleyan*, the literary organ of the University of California, reprints in its October issue Mr. J. C. Rowell's List of American Sonnets, correcting Mr. Lowell's confused name, and also admonishing us that it was in the *Berkeleyan*, and not elsewhere, that this list and the accompanying essay were first published.

In *Modern Language Notes* for November, Dr. R. Mahrenholtz of Dresden reviews Edmond Scherer's recent Life of Melchior Grimm. Incidentally, he defends Rousseau's credibility in his account of Grimm against Scherer's imputations, and it is pretty to see Frenchman and German thus taking sides opposed to the bias of their respective nationalities. Dr. Mahrenholtz anticipates much from Prof. Jansen's forthcoming Life of Rousseau.

The "process" engraving of a fine death-mask of Pascal, which is still preserved, is the most valuable feature of *L'Art* for October 1 (Macmillan). It is accompanied by a hitherto unpublished letter from an eye-witness of his death, describing his last hours. A chapter from the forthcoming work of Henri Delaborde on the Raphaelite engraver, Marcantonio Raimondi, with illustrations; and a paper on Ter Borch (Terburg), by Émile Michel, also lend interest to this number.

Of the three plates which accompany the *Portfolio* for October (Macmillan), Mr. Pearce's etching of the interior of Lincoln's Inn Hall falls far short of a good photograph. G. Reid's "Dornoch" is a pleasing expanse of moor, of which the photogravure, in the absence of color, almost suggests a sea rather than dry land. But the gem of the number is the Norfolk landscape "Langmere," by Lance Speed—a charming type of local English scenery. Mr. William Armstrong continues his discussion of Scottish painters, taking up Leitch, Bough, Manson, and Chalmers.

We read in *Le Livre* for October of the finding, by M. Henri Bouchot, in the binding of a book of prayers in the National Library, of two portraits of Charles VIII. and Anne of Brittany. They are the only ones from the life known to exist, and are painted on a mahogany panel. M. Bouchot was also the discoverer of a portrait of Henri IV. at twenty years of age.

We have received from Mr. Christern the 'Nouveau Dictionnaire classique illustré' (Paris: Armand Colin), by M. A. Gazier, who does

well everything that he undertakes to do. It is an elementary work prepared for use in the French schools; but, from its completeness and the variety of information it contains, it is an excellent book of reference for all students of French. There are over six hundred illustrations, of which seventy are *figures d'ensemble*—that is, not pictures of isolated objects, but larger illustrations, in which the names of various parts are clearly indicated. Thus a *château* is given, with the names of all the separate parts clearly marked upon it, from the *girouette*, the *crête*, the *chatière*, and the *créneaux*, down to the *clôture* and the *pont-levis*. The nineteen maps intercalated in the text form of themselves a good little atlas. It is not a mere dictionary of words alone. It contains much historical, geographical, literary, and other information—as much as an ordinary reader of French would need to clear up the usual difficulties that present themselves. For those who wish to learn French according to the new methods, that is, with as little interposition of English as possible, it would be an invaluable aid.

Signor A. De Gubernatis is about to recast his 'Biographical Dictionary,' under the title of an 'International Dictionary of Living Writers' (*Dizionario Internazionale degli Scrittori Viventi*). He desires that any information pertinent to this work may be sent him at Florence, Villino Vidyâ, Viale Principe Eugenio.

We learn that Prof. Willard Fiske's bibliography of Petrarch's 'De Remediis' is now completed, even to the index, but its appearance may be delayed for mechanical reasons.

A collection of the letters and writings of Emin Pasha is about to be published by Brockhaus of Leipzig. Dr. Schweinfurth and Prof. Ratzel are the editors.

Last month was begun the publication of a *Zeitschrift für Afrikanische Sprachen*, edited by C. G. Büttner, inspector of the East African Mission in Berlin. It will appear quarterly (Berlin: Asher & Co.; New York: Christern). The first number contains, among others, an article on "Negro Folk-Lore of the Gold Coast," compared with that of other African tribes, by J. G. Christaller.

—At the recent meeting of the American Antiquarian Society, Prof. F. B. Dexter presented an important paper on "The Estimates of Population in the New England Colonies." The sources of information are so scattered, and at first sight so contradictory, that historians have been afraid to take the subject up systematically. In most of the colonies official enumerations of population were neither frequent nor accurate; but we are able to supplement them by lists of voters, taxpayers, or numbers liable to military duty. Above all, our knowledge of the principles governing the growth of population enables us to compare the different estimates, and reject those which are distinctly unreliable. The value of the material varies greatly in the different colonies, Rhode Island being decidedly the best in this respect, and North Carolina probably the worst. But, taking good and bad together, we have enough independent pieces of evidence and methods of procedure to make our general result quite trustworthy—more so, perhaps, than any of the individual estimates would be if taken singly. The general conclusions are that in 1640 the British colonies contained an aggregate population of a little over 25,000 whites—60 per cent. in New England, most of the remainder in Virginia. In 1660 the total had increased to 80,000—half of them in Maryland and Virginia. In 1689 the number was probably a little over 200,000; it reached half a million in 1721, a million in 1743, and two millions in 1767. This period was marked by rapid growth of the Middle Colonies. Although the increase just before the Revolution was rapid, the population at the outbreak of the war cannot have been much more than two and a half million. These figures are on the whole somewhat lower than Bancroft's; for the later dates there is a tolerably constant difference of four or five per cent. The Revolutionary War caused a sudden check to the growth of population; in Rhode Island and Georgia there was an absolute diminution. In spite of the estimate of C. B. Elliott in 'Walker's Statistical Atlas' (1874), giving more than three million in 1780, it does not seem probable that this number was reached until two or three years after the close of the war. But at the time of the census of 1790 the population of the States had reached 3,900,000; and the Territorial settlers would bring the number above four million.

—'China in America: a Study in Social Life of the Chinese in the Eastern Cities of the United States' is the title of an agreeably written essay read by Mr. Stewart Culin of Philadelphia before the American Association for the Advancement of Science (Section of Anthropology), at their recent meeting in New York. An uncolored map of that portion of the Province of Kwang Tung from which all the Chinese laborers come is prefixed to the pamphlet now printed. The tract is little more than 100 miles square, from which come those "Mongolian hordes" which exist in some imaginations, and all are enrolled in the Six Companies in San Francisco. The ties of kindred preserved with so much care in China are recognized here, and those from the same section keep much to themselves, having separate shops, and, when their numbers warrant, assembly rooms. Thirty or forty of the village clans are represented in the Eastern American cities, that of *Li* outnumbering any other; and the age-enduring feuds of the old country have a second probation in this place of existence. The immigrants are mostly young men who have left home before the usual time of marriage, though a few are husbands and fathers. The discovery of gold in California first set in motion the trans-Pacific emigration, which later on was swelled in volume after the suppression of the Triad insurrection. The Triad was a secret society having in view the overthrow of the present Tartar dynasty in Peking, and, during the Tai Ping rebellion, attempted a revolt, which was crushed with much bloodshed. Many thousands of the rebels then fled across sea, and this was the golden age of the Pacific Mail Company's steerage traffic. After the completion of the Union Pacific Railway, the laborers out of employment went into the mining camps, and, in the absence of women, became laundrymen, soon obtaining a monopoly of the business. When fifty Chinamen were imported to Belleville, N. J., the wide-awake immigrants discovered the large cities near by, and, the news spreading to California and China, the Eastern States were soon colonized with sporadic Orientals. About $100 is the average amount of capital needed to start the laundry business, the owners clearing each from $25 to $70 per month, the hired men receiving about $7 a week with board and bunks. The work is from cock-crow until near midnight, the meals two a day, and the ordinary holidays Sunday and part of Monday. The life of the colony revolves around the shop, where often is a restaurant, with post-office, dispensary, opium den, barber-shop, and tribunal of arbitration. A great many most interesting data have been gathered by Mr. Culin, and the study of his pamphlet cannot fail to profit all who wish to know more of the capable and extraordinary people from the oldest of nations.

—In No. 129, 130 of the *Zeitschrift* of the Berlin Geographical Society, Dr. W. Heyd announces the discovery of two commercial routes from India to the West not hitherto described. Tana (at the mouth of the Don) and Trebizond were two of the most important stations in the India trade in the Middle Ages. Over the routes through Tana passed a large part of the spices,—*e. g.*, pepper, ginger, nutmeg, cloves—for the West. The price of spices is said to have doubled in Italy, when the Italians were for a time shut out of Tana in 1343. The chief overland routes to Tana from India were through Cabul to Urgenj (Khiva) by the Oxus, then by land to Tana via Astrakhan. It was this route in the main that the elder Polos took in 1260 on their way eastward. The other route led through Persia to Asterabad, then by water to Astrakhan, etc. Merchants from China generally pursued the first-mentioned route. But these routes in the later fourteenth and early fifteenth centuries grew unsafe, and Western traders came to limit their expeditions to the ports at the end of the caravan roads. As they ceased to penetrate the interior, they also ceased to give any information about the routes. The Tana-Peking route became no longer traversable, yet Tana continued to be prosperous until the attack of Timur (1395), and even later. Trebizond also continued to be well supplied with Eastern products, though the condition of Persia (the old Trebizond route passed through Tabriz) had become critical and even dangerous. The explanation of this uninterrupted traffic has been sought in vain, for we have no contemporary information for the long period between Pegolotti (1340) and the fall of the empire of Trebizond (1461).

—It is this gap in the history of the Eastern trade and the records of historical geography that Dr. Heyd believes he has now filled. In the inexhaustible diaries of Marino Sanuto, he has lighted upon three letters from Donato da Lezze, a Venetian envoy in 1514 to the seat of war between the Sultan, Selim I., and the Persian ruler, Ismail Sophi. In the second of these letters Donato gives us the surprising information, derived from Armenian tradition, that, before the fall of Constantinople, Tana and Trebizond were in direct communication with Bassorah by caravan roads. According to this report, spice ships from India did not come up the Red Sea, as later, in Donato's day, but up the Persian Gulf to the mouth of the Euphrates; there the cargoes were transshipped in smaller vessels to Bassorah. The routes then divided. One went thirty days' journey of twenty-five miles each to Trebizond The intermediate stations are not mentioned, but Erzengan would seem to have been one. The other route went to Tana as follows: Up the Tigris, eight days; then four days to "Chixan" or Khisan (a little south of Bitlis); thence along the eastern shore of Lake Van to Pendemai (Bend-i-mâhi), which was about eight miles east of Arjish. The route then went northeast eight days to Shamaka, and thence four days to Baku. Thence the goods were shipped to Astrakhan, and some distance up the Volga, whence it was sixteen days' journey overland to Tana. That this information was derived from Armenian tradition does not impair its trustworthiness. Though the distances are often understated, the geographical references as a whole substantiate Donato's report, and Dr. Heyd is sure that these routes may be added confidently to those previously known. When they came into use is uncertain, but the tradi-

tion says they ceased to be used after the fall of Constantinople.

—The fourth *fascicule* of Dumont and Chaplain's 'Les Céramiques de la Grèce Propre' includes chapters xvii-xx of the first volume, and describes the leading types of the vases of the sixth and early part of the fifth centuries B. C., beginning with those vases of the Corinthian style in which the human figure predominates, and for which M. Dumont maintained a purely Corinthian origin, although up to the time of his death not one example had been found outside of Italy. His editor shows that subsequent investigations and discoveries have done much to corroborate his opinion, and to weaken the arguments of his opponents, who, following Brunn, believe these vases to be late Etruscan imitations of archaic Greek styles. Even Helbig, in his 'Homerisches Epos,' renounces the opinion he formerly held, that they were made at Cære, and admits them to be genuine Greek productions of the sixth century. Chapter xviii is an admirable summary of what is known of the characteristics of the Chalcidian, Bœotian, and Rhodian styles of the periods described, though it contributes nothing new to the subject. As a whole, the most commendable feature of the work thus far is its lucid, comprehensive descriptions of the distinctions between the various types of the vases of the early epochs of Greek art, and for this it is of great value to the student. The editor has inserted a chapter on the "Type of the Greek Colonies in Africa," rightly believing that the discoveries at Naukratis in 1885 were of sufficient importance to warrant this, although no such chapter was included in M. Dumont's plan. Mr. Petrie's excavations at Naukratis brought to light just enough to raise a hundred questions without answering any of them, and to show that it is of the utmost importance to our knowledge of the beginnings of Greek art, and the amount of influence exercised upon it by Egypt, that Naukratis should be thoroughly investigated. It is more than likely that much of the Egyptian feeling in early Greek decoration, which has hitherto been supposed to have come to Greece by way of Cyprus, may have been communicated to the Greek world directly from Naukratis; and it is noticeable that the lotos pattern, so frequent on Greek vases of the period of development, is found on the earliest specimens of the vases of local Naukratian manufacture, doubtless borrowed directly from Egyptian models at hand. What more fertile locality or more worthy subject could the American School at Athens desire for its labors?

—In the last number of the *Gazette Anecdotique* (New York: Duprat) a very interesting summary is given of various paragraphs that have appeared in the French papers of late about Louise Michel and her literary labors. She has commenced the publication of a series which will comprise six volumes, under the revolutionary title of the "Série Rouge." The first of these, 'Les Microbes humains,' has already appeared. The five others will be entitled 'Le Monde nouveau,' 'La Débâcle, ou le Cauchemar de la vie,' 'Premiere Étape,' 'L'Épopée, ou la Légende nouvelle,' and 'D'astre en astre.' The general idea of this "red series" is a supposed association of all the victims of the laws and customs of the present social system, the *rebutés, dégoûtés, déclassés*, who are supposed to have founded a sort of phalansterian colony somewhere near the North Pole, where they live in full liberty, with no laws or hindrances of any kind. She has placed this choice set of worthies in such an inhospitable region in order that they may purify their hearts and elevate their spirits by their struggles with the elements. Besides the second volume of her 'Mémoires,' which she is now preparing, Louise Michel has several other works on hand, among them a volume of verse called 'Les Océaniennes.' After the completion of these, *la grande révolutionnaire*, as her friends are pleased to call her, will attempt to civilize some of the savage races of the Pacific, expecting to find there virgin soil, wherein her revolutionary and anarchical ideas will thrive. All this is seriously proposed by this eccentric lover of the degraded classes, who has been interviewed of late in her retirement at Levallois-Perret.

ENGLISH AND FRENCH IN NORTH AMERICA.

The English and French in North America, 1689–1763. Narrative and Critical History of America, edited by Justin Winsor. Vol. V. Boston: Houghton, Mifflin & Co. 1887.

In few historical works, whether on the co-operative plan or not, has a more dramatically impressive grouping of the material been attained than in this. Three consecutive volumes having been devoted to the attempts at settlement by the Spanish, the English, and the French respectively, this volume now follows close upon them with the inevitable conflict between the French and the English. The prize contended for in this conflict was the possession of North America; and within the pages of this volume may be traced the successive stages in its development, and its culmination in the campaign of Quebec and the abandonment of the French claims. It is not a little singular that a conflict regarded by Franklin and others among the colonists, and by modern British historians like Green and Seeley, as so momentous in its bearings, was of so scant interest to the great mass of Englishmen at home, as the examination of contemporaneous satires cited by Mr. Winsor would seem to show, and even to the Ministry itself, up to the later years of Pitt's administration. This absence of intelligent interest on the part of the home Government has an important bearing on the history of the struggle, since otherwise it is almost impossible to account for the feebleness and incapacity of the English military measures undertaken one after another. The movements and the correspondence of the French Government show a much more intelligent conception of the problem—indeed, an almost perfect appreciation of what in more modern times has been called "the key to the continent." Fortunately, however, for the English, the feebleness and incapacity of the French leaders actually sent over were even greater than their own, and were united with an appalling degree of financial corruption. To these compensating conditions, perhaps, is to be attributed the final success of the English—a success, however, which it required nearly half a century to attain.

As in the previous volumes, so in this, the separate groups of colonies along the Atlantic coast during the period under examination are assigned to separate chapters. Thus the chapter entitled "New England" is by Mr. Winsor himself; that on "The Middle Colonies" is by Mr. Fernow, to whom had been assigned the chapter on "New Netherland" in the previous volume; "Maryland and Virginia," by Mr. Winsor; and "The Carolinas," by Mr. Rivers, the last-named being characterized by a certain quaint stateliness of style somewhat rare in these pages. Georgia, as being the latest founded of the thirteen colonies, makes in this volume its first appearance for separate treatment in an elaborate and carefully written chapter by Mr. Charles C. Jones, jr.

The remaining three chapters, written respectively by Mr. Andrew McFarland Davis, Mr. Charles C. Smith, and Mr. Winsor, deal with territory other than that included in the Thirteen Colonies—namely, the New France which Mr. Parkman has made so peculiarly his own as a field for historical research. Naturally, one who deals with any portion of its early history will make large use of what Mr. Parkman has already put in print; yet this volume includes, it should be noticed, "the period between 1700 and 1748" which Mr. Parkman, in the preface to his 'Montcalm and Wolfe,' tells us "has been passed over for a time." Mr. Parkman's manuscript collections would appear, however, in this as in the preceding volume, to have been placed entirely at Mr. Winsor's disposal. In Mr. Davis's chapter, on "Canada and Louisiana," the policy of the French Government is well indicated, by the chain of forts connecting the mouth of the St. Lawrence with the mouth of the Mississippi, the effort to establish a second chain within the other, and thus crowd the English gradually to the seaboard, the widely extended alliances of the French with the Indian tribes, and (as a graphic episode in the series of movements) the burying of lead plates, suitably inscribed, at the mouths of rivers whose banks the French thus sought to occupy in the name of His Most Christian Majesty. And yet, in spite of these barriers, in spite of the determined efforts of the French to crowd them out, the English colonists of the seaboard broke through them all, penetrated beyond the Alleghanies, beyond the Mississippi even, and still later to the shores of the western ocean. The anniversary of the establishment of civil government in the "Territory northwest of the River Ohio," to be observed with fitting ceremonies during the coming year, will emphasize once more the genius for political organization which has from the beginning been characteristic of the Anglo-American citizen on our soil.

The chapter on Acadia, in this, as in the preceding volume, is by Mr. Smith, and is of uncommon interest. No more fundamental difference, indeed, in point of political tendencies, can be easily conceived of than that between the Anglo-Americans of the Thirteen Colonies, as above indicated, and the colonists on the Acadian or Canadian side of the line. It is instructive, moreover, to notice how closely this fundamental difference connects itself with the attitude taken by these colonists respectively, in relation to the home Government's conception of the nature and function of colonies. "A colony," as Mr. Davis has well remarked in the opening chapter, "was not looked upon at that time as forming a part of the parent State. It was a business venture, entered into directly by the State itself, or vicariously by means of a grant to some individual or company. If the colony did not earn money, it was a failure. Spain had derived wealth from ventures of this sort. Other nations were tempted into the pursuit of the same policy in the hope of the same result." The difference to be traced, even at this early period, between those colonies which subsequently became independent and those which did not, was that the latter were satisfied to accept, almost in its fulness, this European conception of their relations and powers, while the former were, from their English birth and training, their inheritance of English principles of civil liberty, and their almost unfailing tendency to self-government, disinclined from the first to accept any such view. Their charters might, it is true, be merely grants to trading companies; in spite of that, they formed themselves into so

many bodies politic. The home Government might assert and painfully reassert its control over all matters of colonial administration; nevertheless, whether by tacitly ignoring or by boldly defying the external authority, they went on organizing local self-government. Under such conditions, an independent republic was apparently inevitable, as it is, indeed, now recognized to have been by the later historians on both sides of the Atlantic. That a difference in temperament counted as well (if not as much) as a difference in political training or aptitude, on the two sides of the border, can hardly be questioned.

"In a wandering red man," says a recent writer, "the matter-of-fact New Englander of the last century would scarcely have seen anything more than 'a great, naked, dirty beast,' a benighted heathen and a menace to his safety; in the shaggy bear moving slowly across a snow-covered landscape, nothing more than the basis for a probable sale of furs at the nearest market. The Acadian or Canadian habitant, however, could see in the one an idealized warrior of the forest, an interpreter of the secrets of nature; and in the other a mythical character in the local folk-lore, celebrated in village songs about the winter fire or the summer merry-making."

The critical and bibliographical contributions by Mr. Winsor which accompany the last two chapters of the volume are noteworthy even for this work. They cover more than 125 pages of fine print, with frequent maps and facsimiles. The portion devoted to "The Maps and Bounds of Acadia" furnishes a most instructive survey of the "historical geography"—to use Mr. Freeman's expression—of the northeastern settlements. The boundary towards the Thirteen Colonies is shown to fluctuate from latitude 43° 30′ (that of Cape Elizabeth and Lake Winnepesaukee), as claimed in the La Hontan map of 1709, to the limit of Passamaquoddy Bay in 1763. Some of the most interesting of these boundary questions were by no means settled in 1763, but have been passed on as an inheritance to our own republic, and have formed the subject of comparatively recent diplomatic negotiations. Twenty-four other maps of Acadian territory, ranging from 1500 to 1691, in addition to those actually reproduced here, are brought into the field for comparison by references to preceding volumes. In a previous volume, it will be remembered, Mr. Winsor had laid down some general principles as to the interpretation of early maps (vol. iv, p. 33), which are not unlikely to be accepted as canons. Directly in line with them is his criticism on Carroll, in the present volume, that in omitting a certain map from his 'Historical Collections,' as being "very incorrect," he had lost sight of "the fact that the incorrectness of early maps is an index of contemporary ideas with which the historian finds it indispensable to deal" (vol. v, p. 338). In twelve pages devoted to an examination of the grounds and motives of the removal of the Acadians in 1755, Mr. Winsor presents us with another of those thorough and exhaustive reviews of the evidence which have given this work so much of its value. The reader will readily recall earlier instances in his notes on the Verrazzano letter, on M. Margry's 'Mémoires,' and on Hennepin's claims, in the preceding volume, and the much briefer note on the spurious Montcalm letters, elsewhere in the present volume.

In the final chapter, on "The Struggle for the Great Valleys of North America," Mr. Winsor is on ground recently made so familiar in Mr. Parkman's two volumes, 'Montcalm and Wolfe'; yet his treatment of the subject is far from being a mere paraphrase of Parkman, and has a distinct individuality of its own. Here and there, indeed, he makes a very palpable point, as when (at page 533) he takes issue with John Fiske, to show that the actual result of the Quebec campaign could hardly be called inevitable or certain; or when (at page 572) he shows the losses to the historical student, in the conception to be obtained of Washington's character, resulting from Sparks's peculiar methods of editing his letters; or when (at pages 528 and 587) he cites some astonishing instances of statements which Mr. Bancroft has let "stand in his final revision." The reader, as he follows the development of the narrative, is made to see in how true a sense the seeds of independence and revolution were planted during this epoch in the history of the Thirteen Colonies. For them the long and tedious French and Indian hostilities constituted a period of discipline and preparation, both for the military campaigns which they were themselves to conduct against the armies of the mother country, and no less for the constructive work of statesmanship by which those military movements were to be supplemented. Throughout this volume, devoted to the pre-Revolutionary period, one comes upon such names as those of Franklin in civil affairs, and, in military service, of George Washington, Daniel Morgan, John Stark, and Israel Putnam—names destined to become splendid, though by no "sudden making," in the War of Independence. "The great decisive duel," to use Mr. Seeley's language, "for the possession of the New World," was at last settled in favor of the English; but this very success had its disastrous side. Their own colonists, relieved at last of the tedious but salutary discipline of the long struggle, now found time to turn that discipline to real account, and to establish on these shores an independent republic.

The proof-reading throughout the volume has been extremely careful. We note a few misprints for correction in subsequent impressions of the work. Popple's 'British Empire' is cited as "People's" at the foot of page 143. Locke's biographer, Fox Bourne, appears as "Fox Browne" at page 336. "Beaufort," near the foot of pages 545 and 546, should be "Beauport." Of the two mentions of Langlade on page 568, the second, as cited from the *Revue Canadienne*, appears as "Langdale." "*Mt.* Pleasant, *Va.*," on page 570, should obviously be "*Pt.* Pleasant, *W. Va.*" On page 599 the Moravian, Christian Frederick Post, is cited as "Charles Frederick Post."

BOOKS ABOUT THE STAGE.

The Life of Mr. James Quin, Comedian. With a Supplement of Original Facts and Anecdotes. London: Reader; New York: Scribner & Welford.

Yesterdays with Actors. By Catherine Mary Reignolds-Winslow. Boston: Cupples & Company.

Memories of an Old Actor. By Walter M. Leman. San Francisco: A. Roman Co.

Le Théâtre en Allemagne, son Origine et ses Luttes (1200–1760). Par Ida Brüning. Preface de Henri de Lapommeraye. Paris: E. Plon, Nourrit & Cie.; New York: F.W. Christern.

La Comédie et les Mœurs en France au Moyen Âge. Par L. Petit de Julleville. Paris. New York: F. W. Christern.

THE original edition of 'The Life of Mr. James Quin,' "printed for S. Bladon, in Paternoster Row," London, in 1766, is one of the very scarcest books in histrionic biography. It is greatly sought by collectors, partly, perhaps, because of its rarity, and partly because it is the only life of Quin ever published. It is not treasured for any merits of its own; as Mr. Robert W. Lowe said in his own exact and admirable biographical sketch of Quin in the first volume of 'Actors and Actresses of Great Britain and the United States,' "it is a wretchedly incorrect and stupid compilation." In the present edition (on which we find the name of no editor) the bulk of the book has been doubled by a reprint of the report of Quin's trial for killing a man, and by the collection of a lot of scraps, anecdotes, epigrams, etc., most of which are unauthenticated by a reference to any book. Indeed, we are inclined to echo Mr. Lowe's condemnation of the original book, and to declare the supplement "a wretchedly incorrect and stupid compilation." Anecdotes are told in a slovenly way, with the point of the story extended until it is a mere vanishing point. References to Quin in Cumberland's 'Memoirs,' in Davies's 'Miscellanies' and 'Life of Garrick,' in Barry Cornwall's 'Life of Kean,' and in Bernard's 'Retrospections of the Stage,' are all neglected. Quin was one of the first wits of his time, as well as one of the best actors, and it is a pity that his jests and gibes should not be set down fairly in his biography. It was Quin, for example, who made a retort worth recalling just now, when the reform of the House of Lords is again in question. At a dinner party at Bath, one of his jokes caused a general murmur of delight, and a nobleman present, who was not illustrious for the brilliancy of his ideas, exclaimed, "What a pity it is, Quin, my boy, that a clever fellow like you should be a player!" With a flash of his eye, Quin returned, "What would your Lordship have me to be — a Lord?"

Of the books about the stage which crowd the shelves of the collector, more than half fall into two broad divisions—the catchpenny and contemporary biography, of which this 'Life of Quin' is a fair sample, and the autobiographic collection of reminiscences, of which the next two books on our list are average specimens. Mrs. Winslow's 'Yesterdays with Actors' and Mr. Leman's 'Memories of an Old Actor' are not unlike a hundred other volumes of rambling recollections. Books of this class are generally genial in tone—at least as far as their allusion to persons is concerned; in their references to the present condition of the drama they are not infrequently ferocious, for there is no firmer *laudator temporis acti* than the veteran of the footlights when he sits down to recall his youth, and insensibly glides into a comparison with the present. Books of this class have no great literary pretence—indeed, the author is often apologetic; but, for all that, he is likely to be a neat hand at an anecdote. The current of the narrative flows easily, and no one has a right to quarrel with the narrator if, on a closer inspection, some of the swans which float into view, prove to be little better than geese. If not absolutely uncritical, the retired "professional," when he takes his pen in hand to tell the tale of his triumphs, is seldom exacting. The sequence of his story is not rigidly chronological, and his dates are rarely impeccable. Both 'Yesterdays with Actors' and the 'Memories of an Old Actor' are filled with gentle gossip about the players of the past, and naturally enough the central figure in this gentle gossip is the gossiper himself or herself. Both books are welcome, and both will help the student of the stage to understand the character and ability of certain of the chief performers of the immediate past. Both have not a few pleasant anecdotes agreeably told. Mrs. Reignolds-Winslow's recollections of Charlotte Cushman and of Edwin Forrest soften the outlines of two austere, towering figures in the history of the American theatre. Mr. Leman revives the already fading fame of Thomas Abthorpe Cooper, of Josephine Clifton, and of Master Burke; and he offers great

assistance to any one attempting to set forth the story of the stage in California, where the author has been living since 1854. In typographical accuracy and taste 'Yesterdays with Actors' is far superior to 'Memories of an Old Actor,' which is a rather coarsely put together product of the Californian press, adorned with but a single illustration—the rude but vigorous frontispiece portrait of Mr. Leman. Mrs. Winslow's pages are enriched by little "process" cuts, portraits of actors and actresses of the past twenty years, and by more important photogravures, of which there are eight; the best of them, perhaps, being a reproduction of Mr. Vinton's full-length portrait of Mr. William Warren.

In a brightly written preface M. Henri de Lapommeraye, one of the best equipped of French dramatic critics, sketches in outline Ida Brüning's career on the stage, not omitting her failure as the manager of a German theatre in Paris a quarter of a century ago, and not forgetting that a granddaughter of hers is now a promising member of the fine company of the Odéon. The history of the German theatre which the Austrian actress has compiled is brightly written, and although not a work of original research, it is useful. So far as we know, there is no similar book either in French or in English. All readers of Lessing's 'Dramaturgie' will find here an excellent introduction, enabling them to understand far more easily than before the great critic's point of view, his aims, and his indignations. Here we can see plainly enough the growth of the French influence which dominated the German theatre all through the last century, and drove out the native drama that might have been developed into a true national comedy. The French drama invaded Germany in force long before it crossed the Channel to England as other than an occasional and friendly visitor. In the last century, English influence was almost as great on the French stage as was French influence on the English; and the international borrowing was not unequal. In fact, it was only in this century, and after the vogue of Scott's novels had turned the attention of the authors of England from the drama to prose fiction, that the French playwright possessed himself of the English stage. But in Germany there was no national dramatic literature to set a high standard, and the blind imitation of French models began early and persisted long. One of the illustrations in this book of Ida Brüning's shows that, in the beginning at least, Germany was independent of France. It is a sketch of a mystery acted at Nuremberg in the Middle Ages, exhibiting the platform or theatre with its triple stage, one above the other, the uppermost representing heaven, the lowest hell, and the intermediate the earth. This may be compared advantageously with the "set" of the mystery of Valenciennes, a model of which is in the Library of the Opéra in Paris, and was engraved to illustrate an account of that library published in the *Magazine of Art* two years ago.

M. L. Petit de Julleville, one of the professors of the Sorbonne, is writing a history of the theatre in France from the very beginning. Two portly volumes on the mysteries were published in 1880. Now he has taken a step further, and in 'Les Comédiens en France au Moyen Âge,' and in the present volume on 'La Comédie et les Mœurs en France au Moyen Âge' he considers the origin of the regular drama—the moralities, the farces, the *soties*, the monologues, and the satires which abounded just before the Renaissance. Space fails us now to give this solid work the careful examination to which it is entitled; and for the present, at least, a brief but hearty commendation must suffice.

VERNON LEE'S ÆSTHETICS.

Juvenilia. Being a second series of Essays on Sundry Æsthetical Questions. By Vernon Lee. Boston: Roberts Brothers.

Vernon Lee has in several books distinguished herself for certain qualities not always found and not always desirable in the writings of women. There is a delightful frankness of assumption, an assurance of opinion, a quiet reliance on the sufficiency of her intuitions to dispense with the system generally needed in æsthetical study, and a serene contempt of logic as unnecessary to the feminine judgment, which is, to any one looking merely for the personality of the writer, fascinating. The combination shows juvenility and sometimes extreme crudity of judgment, and now and then is even irritating to one who regards sound opinions and real increment of human knowledge as the desiderata in literary education; but even such a reader can find pleasure in the gambolling of Vernon Lee among difficult problems, as he would in the frolics of an interesting child in his flower beds. Vernon Lee has never any misgivings as to her mastery of any matter to which she turns her attention ever so briefly. She has evidently read much, but in her reading there could have been nothing scientific. She observes well what passes before her, and (but for an occasional aping of Ruskin) describes well; but the moment her feet ought to touch what must be regarded as firm rock, the scientific basis of æsthetics, she drops into what are verily "Juvenilia."

Of the series of essays which compose this book, by far the best, and very good in its way, is that entitled "Don Juan (con Stenterello)." It is a description of an Italian theatre, with much local color and a charming playfulness of style. The play is described *in situ*, with all its accompaniments—the *entr'actes* filled up with the author's sparkling drama.

"The curtain had fallen between the last act but one and the last. We had witnessed the violent abduction of *Doña Anna* and the pathetic death of the respectable *Commander*, villanously run through the body by *Don Juan Tenorio*. . . . And we had actually beheld (so genuine is the supernatural even in the twopenny theatre of the Borgo Ognissanti), the white marble *Commander* shaking with laughter on the top of his cardboard bronze charger, and showering upon the horrid blasphemer and his servant a rain of flour from his whitened face and drapery at every special piece of the clown's humor. . . . After an universal roar of laughter in recognition of the last words of the clown, 'Sir, sir, he's gone and rolled down the staircase. Boum! boum! he's gone and broken himself into an hundred pieces!' the audience began to rise, to stretch their stiffened arms and legs, to yawn and hum; while there resounded from behind the curtain the hammering which was to furnish an appropriate hell wherein to damn the unrepenting sinner."

We cannot quote more of this little essay without injustice to the graver elements of the book, nor do more than notice the following essay, "Signor Curazio," which has a good deal of the same merit—not, however, without much wordy speculation and unsubstantial criticism, meant to be profound.

The moment the author gets away from legitimate record of genuine and healthy impressions from the external world, she grows diffuse, labored, and often nonsensical. She speaks of her youth, "when I, too, had looked upon the world as a tract of springtide country through which one might wander, calm and *wise, like an antique statue*, in search of the great dualism: the Good and the Beautiful." She expresses doubts on certain solutions of social problems, but concludes in this wise: "This seems certain: in order that the great mass of mankind, which has neither *peace*, nor *dignity*, nor *beauty of life*, should obtain a small allowance of any such qualities, it becomes necessary that we, who happen to possess thereof, should deprive ourselves of a portion for their benefit." If any of Mr. Morris's most erratic and incoherent followers have ever laid down so preposterous a doctrine as this, we have not met with it. She speaks of "what to me must always seem one of the most impressive of all spectacles, *short of hell*—the Tyne at Newcastle." Hell is a good strong word, and to some people it has a meaning, but to our author, in her comparison, none.

But since Vernon Lee sets out on a quest for the æsthetic, it is better to leave side issues and see what her æstheticism really amounts to. Of the distinctness of terminology indispensable to progress in so ill defined a science as æsthetics, she has no conception. In "The Lake of Charlemagne"—an essay on Association, with which the Emperor has as much to do as the pebbles in the French cook's soup with its quality—we have the following definition (one of the few attempts at precision in the book):

"Association means the investing of one object, having characteristics of its own, with the characteristics of some other object; the pushing aside, in short, of reality to make room for the fictions of imagination or memory. *Now, in a work of art*, or a thing of nature which can afford artistic pleasure, *there is*, as in man, woman, beast, plant, or stone, *nothing so important as its reality*. This reality, this sum-total of all its actually existing characteristics, means, in the work of art, all the labor expended in producing it, all the good luck enjoyed in finding it, all the pleasures that it may give. In practical concerns this is recognized by every creature; we do our best to get all the reality of man, woman, beast, or plant, knowing that on that reality depends all it can do for us or that we must do for it. *But in all æsthetical matters the case is different: we do not seek for the reality of the work of art, do not ask ourselves what it is.* The reality of a work of art is that by which we recognize and remember, that of which we can make a copy, the identical and individual, which to all men similarly constituted must appear the same; the form, this form, the visible shape of picture or statue, the audible shape of symphony or song," etc., etc.

Juvenilia indeed!—what we used to call sophomorical. Association is not gifting one object with the characteristics of another, but so linking two objects by some common attribute that one shall bring up the other. What the author describes is metaphor; what she defines as "reality" is individuality.

The entire essay on Association is incoherent padding, sent to the printer apparently without the trouble of revision; and the reader comes from it with a sense of having spent some time over a word-puzzle for which no key exists. Reality is that by which any object is distinguished from a phantasm—an attribute of what exists, in distinction from that which is supposed or imagined; and that a writer on æthetics should embark with such elementary ignorance as is shown in the above-quoted definitions, is a curiosity of literature. There is scarcely a page of the essay in question which does not contain some demonstrable absurdity, or utterly inextricable tangle of words meaning *au fond* nothing at all.

In "Botticelli at the Villa Lemmi," we have a clearer exposition of the author's feeling about art in the following passage, which is intelligible, but intelligibly low as to its æsthetical standard—in fact, vulgarly ignorant:

"Nor do I know whether a collection of Phidian and Praxitelean gods and goddesses looking like so many maimed and scrofulous creatures out of Orcagna's 'Triumph of Death' would have pleased a Greek; nor whether, in our prudery about restoration, we are not in reality

respecting less the genius of the great masters, who planned whole, entire, healthy figures, than a ragamuffin's hand which defaced their work. Be this as it may, our modern fear of restoration greatly increases, instead of diminishing, the natural difficulty of assimilating impressions of beauty. It is left to our minds to reconstruct the mutilated statues; and, after the greatest strain in this direction, we go away with the impression not so much of some living beauty, as of depressing, puzzling, and often actually revolting imperfection."

Passing by the evident incompetence of the author to understand why the restoration of antique statues is not any longer permitted by good taste, there is here a refreshing avowal of what in art would be analogous to illiteracy in letters. She frankly adopts a standard of appreciation which is the object of caricature in parvenus, whose estimate of the value of a statue is regulated by the whiteness and spotlessness of its marble. The diatribe on the removal of the frescoes of Botticelli from the Villa Lemmi carries on this demonstration of the curious insensibility of Vernon Lee's mind to all æsthetical consideration, direct or remote, and logically leads to the prohibition of galleries of old pictures, and the relegation of these to positions that make them mere accessories in a general picturesqueness, of which age, dirt, and decay form elements.

"Apollo the Fiddler," apropos of the "Parnassus" of Raphael, takes a course of verbal gymnastics over a point clear to all art students —the invariable practice of the painters of the great epoch to employ such symbols as were most distinct in their appeal to the minds of the public for whom they were intended. No really great painter could possibly be a scientific archæologist, and the violin was, when Raphael painted, the instrument which best symbolized mastery in music. It is a good point to construct padding about, but such padding as this is too destitute of lightness and humor to be good of its kind.

"These things [anachronisms, etc.] were not intended to logically coalesce; they merely pictorially harmonize. The gentlemen in furred robes and ladies in high coifs who knelt at the foot of the cross, the pages holding the caparisoned horses, and the half-naked St. Johns and red-hatted St. Jeromes of Van Eyck's and Memling's pictures, were not supposed to be really coexisting with the fainting Virgin, the sobbing Magdalen, the bleeding Redeemer; the cross was not really supposed to be erected in front of a Dutch castle farm-house," etc., etc., etc.—

the hypothesis of Vernon Lee being that

"the agony on the cross, the anguish of the Virgin and her attendants, touched people's hearts; the knights and ladies and horses impressed their imagination; the barn door, the drawbridge, . . . tickled their fancy; the singing angels sounded delightful; and the whole—to us so incongruous—picture was enjoyed like some great play, in which there is tragedy and comedy, and pastoral and allegory, all mixed together, and the whole effect of which is delightful."

Misapprehension more complete of all the conditions of early (and indeed all great) art it is difficult to conceive than is conveyed in this absurd theory. The religious painters were simply artists; their power lay in the vivid conception of the scenes they painted, as actualities. They painted the ladies of their day as the only ones they had any conception of, the houses about them as those alone of which they had mental vision; and even the angels were articles of profound faith. Nothing is more perfectly in evidence than that the painters alluded to were historical to the full power of their knowledge and imagination. Vernon Lee's interpretation is impossible as mental operation in the artists, and opposed to everything we know as fact.

The only explanation of all these absurdities is that the author has no real perception of art, and reasons of it—as a blind man might of colors —from information, the reflection of other minds. It seems a pity that so gifted a writer should waste words in a province to which she is not in the least adapted.

Society in the Elizabethan Age. By Hubert Hall, of H. M. Public Record Office, author of 'A History of the Customs-Revenue in England,' etc. With eight colored and other plates. London: Swan Sonnenschein, Lowrey & Co. 8vo, pp. 291.

Mr. Hubert Hall has a well-established reputation as one of the most learned and accurate of English antiquarians. His labors heretofore have been chiefly in the Middle Ages, and in the field of accounts and statistics, so that it is with something of a surprise that we receive from him a delineation of society in the sixteenth century. But we find here the exactness of information and the thoroughness of research to which we are accustomed, and gladly recognize that here too he has shown himself an authority.

The plan of his book is interesting, and perhaps unique. Certainly it promises a vivid as well as a truthful picture, for it is thoroughly concrete, and associates itself at every point with definite personalities. He takes several classes of society, ten in all—the landlord, the merchant, the churchman, the lawyer, etc.—and devotes a chapter to each, in each case selecting some person well adapted to serve as a type of that class. Thus, the churchman is Dr. Richard Cox, Bishop of Ely; "Sir John Popham is the lawyer *par excellence*"; the burgess is one George Stoddard; while the entire book, so far as possible, centres about the personage of the man who is at once landlord and courtier, "Wild Darrell"—"that Lord of Littlecote whose evil fame has descended to us from a barely contemporary gossip, and is now best known through the exquisitely pathetic ballad of 'The Friar of Orders Grey.'" "I may claim," he says, "the first credit of having redeemed the character of Wild Darrell from the most part of the odium which has unwittingly attached to it. He is here in fact (to pursue my metaphor) the hero rather than the villain of the piece."

The defect of this plan is, of course, that it offers not a picture of society as a whole, but a series of pictures of different phases of society. No doubt this is an easier thing to do, and perhaps a more useful thing to do. At any rate we must acknowledge that the several pictures are so skilfully brought into relation to each other, that there is a much greater variety in the combined view than we should have thought likely. Mr. Hall's conception of society in the Elizabethan age colors every part of the book, and leaves, on the whole, a single impression on the reader's mind—and that is a very sombre one—of an age which was essentially corrupt and sordid, with very little honesty, good faith, or religion. Really, if he has rescued Wild Darrell, and made him out to be a very good fellow, as things went, he has made up for it by putting nearly everybody else in Darrell's vacant place. For all this he gives book and page, and—concrete all through in his presentation—fills his pages with stories of frauds and crimes, all authentic. But the reader, in following the career of the covetous Bishop Cox or the crafty grocer Stoddard, sees nothing that is new or strange. These are just such men as are found in every age and in every country—along with men who are better and even worse; and, if we are not mistaken, it would not be hard to match Mr. Hall's worst character, even in the ages of faith which he looks back to with regret.

For the key to his work the thought which pervades the whole, and, we may say, gives it its unity of tone, is the conviction that the Reformation was the great source of social decay and demoralization. We must, of course, recognize it as a disturbing cause, and therefore as a source of demoralization—both because society cannot pass through any so severe a shock without some demoralization, and because, *on its official side*, it was in truth vile and despicable. But it had another side, which is as completely ignored by Mr. Hall as are the crimes and abuses of the Church in the day of its power. It does not seem ever to occur to his mind that society, much less the Church, had any shortcomings before the Reformation. But, to take only one aspect of society, the economic decay which he attributes to the Reformation (at least by implication) is shown by as well-qualified a scholar as he, Prof. Rogers, to have begun before that event, and to be the outcome of causes wholly independent of it, some of which, indeed, were at work even in the fifteenth century, when the Church was in the plenitude of its power.

The details of social history, from this point of view, are often entertaining and suggestive. For example, p. 75, as to the change of diet at this period:

"In an earlier age the people fed more on the fruits of the earth than on the beasts of the field, and their beverage was mild in proportion. Fish was enormously consumed, and so, too, were white meat and dairy produce. Tillage on a small scale produced cheap cereals and vegetables. Bacon took the place of beef. In fact, bread was cheap and butchers' meat was dear, than which no healthier sign can exist of a nation's welfare. The mass of the people drank grain-beer and cyder; the upper orders and their retainers drank French wines or Rhenish. The change came with the social Renascence of the middle sixteenth century. Tillage was changed for pasture-grazing. Grain was dear, and coarse meat was cheap. Bacon and fish went out of use. Game and poultry became luxuries, and vegetables were practically unknown. The people fed on salt-beef or roast and inferior mutton, with bad meal; and this monotonous cheer they washed down with potent liquor. The very ale had undergone a change. . . . The wines, too, were the strong, luscious, and fiery vintages of Spain or Italy, rather than the French clarets, for we had no Gascony now to conciliate, but were content to play the game of Spain against our ancient suzerain."

This is a good specimen of the author's style of thought and diction. He closes his preface with the words: "I have unearthed these gems; I have cut, polished, and set them as I was best able; if you do not admire the handiwork, I pray you, value the purity of the stones." In this we find an intimation, perhaps, of our judgment upon the book as a work of literature. Mr. Hall, an antiquarian of the first rank, has not the gift of graphic and elegant speech; he lacks the power of arranging his materials so as to present a vivid as well as accurate picture of the times. A book upon society should be, above all things, picturesque; statistics here have no value, except as throwing light upon social forces and movements. With many entertaining paragraphs and a large array of important facts, Mr. Hall somehow does not succeed in placing his characters before his reader as real men and women. Read the book with care, and it is full of solid information; try to derive from it a clear and adequate understanding of what English society was in the age of Elizabeth, and you find that, after all, you have in your possession an array of isolated facts rather than a complete representation.

Daring and Suffering: A history of the Andrews raid into Georgia in 1862, by William Pittenger, a member of the expedition. 8vo, pp. 416–55. New York: The War Publishing Co. 1887.

This is a narrative of one of the wildest and

most thrilling adventures of the war. Twenty-four men in disguise left the camp of Gen. Ormsby Mitchell in middle Tennessee, in the early days of April, 1862, passed the Confederate lines in groups of three or four, reached Chattanooga, where they took the ordinary railway trains, and made rendezvous at Marietta, Ga. Then, taking an early morning train northward, they uncoupled the locomotive with three box cars, while the train hands and passengers were at breakfast, and made off in the presence of a Confederate camp and of numerous onlookers. Their purpose was to burn bridges and cripple for a time the use of the railway.

The audacity of the capture has perhaps never been paralleled, though the results were practically nothing. The men were so closely pursued that they were unable to burn the bridges or even to delay greatly their pursuers. After running terrific risks of meeting other trains, and showing wonderful fertility of resource in deceiving the road agents and employees at stations where they were forced to stop, at last, near Chattanooga, they left the train and scattered; but the neighborhood was aroused, they were hunted with dogs, and all were taken prisoners. Eight of them were hanged as spies, but, through fear of retaliation upon Confederate prisoners in similar case, the rest were not brought to trial. After months of imprisonment, they broke jail at Atlanta by overpowering their guards in a most daring way, and eight succeeded in escaping by divergent routes —some to the Gulf, some down the Tennessee, some through the Carolina and Tennessee mountains. The remnant were finally exchanged about a year after their capture.

A brief account of the expedition, and of the wonderful experiences and terrible sufferings of the survivors, was published by Mr. Pittenger in 1863, with a title similar to that of the present book. This is a revised and enlarged edition, in which the writer appears to have collated the facts since learned from his comrades, and compared the whole with the official records of the war, both national and Confederate. The result is a book which deserves to remain a permanent part of the war literature, as a unique account of the most strange and even romantic experiences, and an authentic revelation of the characteristics of the American volunteer soldier, his courage, coolness, intelligence, self-reliance, and resources. The men who performed this exploit were types of their class, and we doubt if there can be found anywhere else so satisfactory evidence of what were the physical and moral characteristics that made the patriotic young volunteers of 1861 the unrivalled material for an army which they unquestionably were.

The writer of the book was a corporal in an Ohio regiment, taught in the country schools of his district, and himself a common-school teacher and inchoate law-student when he enlisted. In the sufferings of the military prison he sought religious consolation, and vowed to devote himself to the ministry if he escaped alive. He kept his vow, and has been, since the war, a Methodist preacher in New Jersey. He has shown no little tact and skill in his narrative, which is written in a modest and clear style; so that in form as well as in substance it deserves to rank high among vivid stories of adventure.

The only criticism which can be fairly made upon the book is that the author has, not unnaturally, sought to magnify the military importance of the "raid," and to pass judgment upon the military plans of Halleck, Buell, and Mitchell without fully qualifying himself to do so. His theory is, that the expedition was an essential part of a plan conceived by Gen. Mitchell to make an advance in force upon Chattanooga, and that but for the accidental delay of twenty-four hours in the execution of the raid upon the railway, Mitchell would have been in Chattanooga with his division. But Mitchell's correspondence with Gen. Buell, his immediate superior, and with the War Department shows that at this time there was no thought of crossing the Tennessee to reach Chattanooga. On the contrary, Mitchell was looking southwestward as the direction of promising movement, and to coöperation with the army under Halleck in its advance upon Corinth and against the Confederate army under Beauregard. The task assigned Mitchell was to cover the communications of Buell against efforts of the enemy from the east and southeast, but to coöperate in so doing with what was intended to be the great movement of the campaign from Pittsburgh Landing as a base. His brilliant march upon Huntsville, Ala., was justified by the fact that it made the line of the Tennessee, covering Halleck's left flank, an easily defensible one, while it also made a great gap in the railway communications of the Confederates between Corinth, Miss., and Chattanooga. It had this peril in it, however, that it took Mitchell so far to the south of Nashville as to make it possible that Kirby Smith would march upon that place from East Tennessee, turning Mitchell's positions.

But Mitchell, with a natural desire for service in connection with the larger movement, was urging the reinforcement of his own column, not for the purpose of moving against Chattanooga, but, to use his own words, "to advance promptly upon Tuscumbia and throw myself in the rear of the enemy (Beauregard), to Jacinta on the Mobile and Ohio Railroad." As has been suggested above, this would have been in the opposite direction from a movement on Chattanooga, which Mr. Pittenger supposes to have been the ultimate object of Mitchell's march upon Huntsville.

In his correspondence with his superiors, Mitchell does not mention the Andrews raid, and it is quite clear that he regarded it merely as a *ruse* to attract the enemy's attention in another direction from that in which he hoped to move, or to delay their concentration of troops to attack his left flank while he might be moving toward his right.

All this does not detract from the value of Mr. Pittenger's book as a narrative of the actual experiences of the heroic little band of which he was one; but it is necessary to point out the limitations of his authority in matters of history, and to warn the reader that the unquestionable reliance which may be placed upon his account of what he saw, must not be taken as a reason for receiving with the same confidence his opinions upon the campaign plans of Buell or of Mitchell.

Bodyke, a Chapter in the History of Irish Landlordism. By Henry Norman. G. P. Putnam's Sons. 1887.

THIS reprint of letters contributed to the *Pall Mall Gazette* and other journals, relating to the sad and terrible events which took place at Bodyke, in County Clare, last summer, contains much piquant and racy descriptive writing, but will not help the reader to clearer insight into the Irish land question. Deep as must have been the sufferings of the poor people, it is difficult to resist the impression that there was something theatrical in the manner in which the tenants and their friends carried out their protest. The reader may be puzzled at the mixture of moral protest and physical force, and may find it difficult to feel as indignant as is the narrator over the black eyes and baton bruises received by the people in conflict with "emergency men" and police, into whose faces they themselves had thrown boiling water and quicklime. It is unfortunate for readers who desire unbiassed narratives regarding events such as are now proceeding in Ireland, that it is almost impossible to gain information unless from persons somewhat behind the scenes upon one side or the other, or who live in close intimacy with the chief actors, as did Mr. Norman for some weeks, with Father Murphy and his kindly and jovial coadjutors at Tomgraney.

Henry Holt & Co.,

Publishers,

NEW YORK.

HYMNS OF THE FAITH.

A Hymn and Tune Book for Congregational Use. With Psalms. Edited by George Harris, D.D., and William Jewett Tucker, D.D., Professors in Andover Theological Seminary, and E. K. Glezen, of Providence. 12mo, cloth, $1.50 *net.*

This selection of hymns is adapted throughout to the purposes of worship. The music is drawn from the best English, German, and American sources, and has the character and variety suited to congregational singing. The book contains about 650 hymns, and a portion of the Psalter arranged for chanting or responsive reading. The names of Profs. Harris and Tucker are sufficient guaranty of the excellence of the hymns, and Mr. Glezen is well known as possessing admirable taste in church music.

**** For terms in quantities address*

HOUGHTON, MIFFLIN & CO.,

BOSTON.

11 EAST SEVENTEENTH STREET, NEW-YORK.

MEMORY

Wholly unlike artificial systems.
Any book learned in one reading.

Recommended by MARK TWAIN, RICHARD PROCTOR, the Scientist, Hons. W. W. ASTOR, JUDAH P. BENJAMIN, Dr. MINOR, &c. Class of 100 Columbia Law Students; two classes of 200 each at Yale; 400 at University of Penn., Phila.; 400 at Wellesley College, and three large classes at Chautauqua University, &c. Prospectus POST FREE from PROF. LOISETTE, 237 Fifth Ave., N. Y.

NEW BOOKS.

SIR WALTER SCOTT'S POEMS. Revised, corrected, and edited, with notes and commentaries. By William J. Rolfe. Royal 8vo. With 350 illustrations. Full gilt, $10; half-calf, $13; tree-calf, or full morocco, $16. The popularity of Scott's poetry, the unique position of this edition for scholarship and accuracy, and the number, variety, and beauty of the illustrations (which cost over $25,000) combine to assure for this book immediate popularity.

GERALDINE. A Rhythmical Romance of the St. Lawrence. 8vo. Beautifully illustrated. $3.50; in full morocco, tree-calf, or flexible calf, $7.50. The extraordinary popularity of 'Geraldine,' the interest of the love story it enshrines, and the vivid pictures of scenery of the Thousand Islands, etc., indicated the book as especially appropriate for illustration. The scenes depicted have been drawn from nature by a special artist.

A FLOCK OF GIRLS. By Nora Perry. $1.50. This attractive volume will be sought by all who love innocence and beauty and strength.

JUAN AND JUANITA. By Frances Courtenay Baylor. $1.50. This delightful story was published in *St. Nicholas*, and the book includes many hitherto untold adventures of the hero and heroine. There are many illustrations, which vividly show forth Indian and Mexican manners, scenery, and costume.

**** For sale by all booksellers. Sent postpaid, on receipt of the price by the Publishers,*

AMERICAN JOURNAL OF PSYCHOLOGY.

G. STANLEY HALL, Ph. D., EDITOR.

VOL. I, No. 1, November, 1887, is now ready, containing 206 pages, octavo, and numerous plates and cuts.

127 pages are devoted to original papers, and 79 pages to reviews and digests of recent psychological literature and to psychological notes.

Single numbers, $1.00. Subscription to yearly volume of four numbers, $3.00.

Remittances may be addressed to the Publisher of the AMERICAN JOURNAL OF PSYCHOLOGY, BALTIMORE, MD.

ORIGINAL EDITION

OF THE WORKS OF

GEORGE ELIOT,

Complete in 38 volumes. Cloth, uncut, as published, $175.00.

DUPRAT & CO., BOOKSELLERS. *5 East 17th St.,* NEW YORK.

Catalogue of rare books sent on application.

PARTIES who last Christmas failed to secure a "Moravian Rag Doll," 12 Church St., Bethlehem, Pa., should send postal note for $3.30 at once, or be again disappointed in finding supply exhausted. Description cheerfully sent. Mention *Nation.*

A BARGAIN.—Littell's Living Age, 142 vols., complete from beginning, uniform binding in red backs, with Roth's Index, ten numbers. Price $150. Address LIVING AGE, Nation office.

LITERARY AGENCY.—J. P. McAuley, 350 W. 55th St., will search libraries, offer MS. to publishers, and do other light work for out-of-town readers and writers.

CHATTERBOX AGAIN!

The Largest, Brightest, Best Illustrated, and Cheapest Annual is CHATTERBOX for 1887. No book for young people compares with it. Every one of the 200 full-page illustrations is expressly designed by the best-known artists for this book, on which OUR PRESSES NEVER REST, running day and night from January to January. Illuminated board covers, $1.25. Cloth, $1.75.

LITTLE ONES ANNUAL

Is the very best book for children ever made in America, consisting of numerous short stories and poems by well-known writers, capitally illustrated by the best American artists, with original drawings specially engraved for this work by Andrew. Illuminated covers, $1.75.

Estes & Lauriat, Publishers,

299, 301, 303, 305 Washington Street, Boston.

Worthington's New Books.

NEW BOOK BY MISS LATHBURY.

TWELVE TIMES ONE.

By Miss M. A. Lathbury, artist-author of 'Seven Little Maids,' $1.75.

WORTHINGTON'S ANNUAL FOR 1888.

Illustrated with upward of 500 original engravings, printed in color, and several beautiful chromo illustrations, 4to, boards, $1.50. Cloth, gilt ex., $2.50.

KNICKERBOCKER JUNIOR.

A Charming Book for the Young. Beautifully printed and bound in a rich new cover. 4to, boards, $1.25.

ROYAL PICTURE BOOK.

A most charmingly illustrated Gift Book containing large and beautiful engravings, with descriptions in Poetry and Verse. 1 vol., royal 4to, $1.50.

WORTHINGTON CO., 747 Broadway, N. Y.

SPANISH SIMPLIFIED

Will be found an eminently practical method for self-instruction in the Spanish language. It is by the author of 'German Simplified,' and on the same plan. To consist of ten numbers (with Keys), at 10 cents each. No. 3 now ready. A new number will be issued on the first of every month until the set is complete. For sale by all booksellers; sent, postpaid, on receipt of price (in postage stamps), by Prof. A. Knoflach, 140 Nassau St., New York. Persons sending $1 will have the numbers sent to them as soon as issued. Prospectus mailed free.

THE most important French publication yet attempted in America is the new and handsome edition of VICTOR HUGO'S 'LES MISERABLES' which W. R. Jenkins, 850 Sixth Avenue, New York, has just completed in five volumes. The work has been very tastefully printed from new long primer type on fine paper, and fulfils in every respect the promise of the publishers that it should be an excellent and attractive edition, cheap, and convenient in size. It may be had for $4.50 in paper; $6.50 in cloth, or $13.50 in half calf.

A MARVELLOUS BOOK.

TALES BEFORE SUPPER.

From Théophile Gautier and Prosper Mérimée. Told in English by Myndart Verelst. And delayed with a proem by Edgar Saltus. Cloth, $1.00; paper, 50 cts.

"The 'Tales Before Supper' belong to an order of odd and entertaining stories which can never be too plentiful for the delectation of readers who like ingenious plots, fine workmanship, and fiction that does not tax one's thinking power."—*Mr. Geo. Parsons Lathrop.*

Published by BRENTANO, 5 Union Square; 101 State Street, Chicago. For sale by all booksellers.

WHAT am I offered for? '*Exposition of Old and New Testament,*' 2 v., folio, upwards of 100 engravings, by Matthew Henry. W. & J. Stratford, June 15, 1793. The copy is perfect. "THE BOOK ANTIQUARY," Easton, Pa.

ADVANCED COURSE FOR FRENCH STUDENTS.

FRENCH EUROPEAN MAGAZINE, for school and family; 26 numbers a year, postpaid, for $1.10. Specimen number mailed to any address. E. ROTH, 337 S. Broad St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 10, 1887.

The Week.

THE elections of Tuesday were fruitful of lessons, some of which are of the highest importance in their bearing upon the future of our politics. It is seldom indeed that a contest in an "off year" has results of such significance, and on the whole of such encouragement to the friends of good government. The first thing to attract everybody's attention is the collapse of the Labor party. Henry George's vote in this city is but a trifle more than half what he received last year, and in the rural districts it scarcely rises above the dignity of scattering. Moreover, it is clearly shown that the Labor party has drawn about equally from the two old parties, and that the Republicans have lost as much by it as the Democrats. The Republican managers have devoted a great deal of energy and spent a great deal of money to build up a labor party, with the avowed expectation that it would carry off enough Democratic votes to let them slip in, and it turns out that George has hurt them more than he has the Democrats. The Republican managers will now, of course, stop coddling the Labor movement, while George's loss of almost half his strength in this city shows that his party, left to itself, must fall to pieces. It is thus assured that the national contest of 1888 will not hinge upon the Labor vote, and that is a tremendous gain.

The breaking down of the Labor annex involves the collapse of the Blaine boom. The building up of the George party was the especial work of the Blaine influence in the Republican party, which always seeks to achieve victory by intrigue rather than by principle. It was another attempt of the same sort as the Butler movement in 1884, and the particular friends of Mr. Blaine have chuckled over the clever "dodge" by which George was to carry off enough Democratic votes in New York and Brooklyn to give their favorite an easy plurality. This has been admitted by them to be the only device by which Mr. Blaine could hope to carry New York in 1888, as they virtually conceded the certainty of his defeat in a fight upon the old lines of 1884. The result of the vote on the State ticket on Tuesday shows the absolute hopelessness of an attempt by Mr. Blaine to carry New York next year; and as "Steve" Elkins has recently announced that Mr. Blaine "will not accept a nomination at all unless he feels perfectly sure of success," the country may expect soon to hear authoritatively that he will not run in 1888. In short, the result in this State means that we are rid of the danger of Blaine as a Republican candidate for President.

Col. Grant's weakness as a candidate is very apparent. The Twenty-first Assembly District, which is not only the leading brownstone district, but also a Republican stronghold, actually gave Cook, the Democratic candidate for Secretary of State, a majority of 271 over Grant. In fact, Grant's vote shows a falling off from Roosevelt's in nearly every district, being about 2,000 less in the entire city, and Roosevelt's was fully 18,000 less than the regular Republican vote. Grant is also far behind all the leading local candidates, having nearly 6,000 votes less than Knox, 7,000 less than Van Rensselaer, and 6,000 less than Shea. This is not a favorable showing, and is likely to put an end to the "illustrious-father movement" so far as concerns the Presidential campaign of next year. The large and solid vote for Cook, on the other hand, shows that the Independent sentiment of this city was so strongly in favor of giving to the Cleveland Administration the moral support of a Democratic victory in the State, that Col. Fellows's candidacy could not shake it.

One of the worst effects—we doubt if it be not the very worst—of the nomination of candidates whose personal character is bad, by party organizations, is that it one way or another drags respectable members of the party, before they know it, into the defence of or excuse of all sorts of failings and rascalities which they would, at other times and in other situations, blush to shield or palliate. The lamentable position into which Mayor Hewitt got himself about Fellows's weaknesses is a shocking illustration of this. To have to endorse such a career as Fellows's as a "simple Christian life," and to have to make light of a loan from Tweed in the midst of his trial, and of the repudiation of gambling debts by "a simple Christian," is surely woful humiliation for a gentleman of Mr. Hewitt's standing in the community. But, not satisfied with the abasement of the Mayor of the city, the promoters of this deplorable Fellows nomination went to Washington and got from the President of the United States a letter which we presume every honest voter, of whatever party, in New York read with shame and sorrow, in which he was made to say that—

> "I know nothing which, if I were a voter in the city of New York, would prevent my support of Mr. Fellows's candidacy without the least misgivings as to his fitness, and with considerable personal satisfaction."

We take leave to inform the President that his knowing of nothing that would prevent his supporting Mr. Fellows's candidacy (to be sure, this was written before the exposure of the Tweed and the gambling transactions), is a striking proof of the impropriety of his interfering at all in local contests of this nature. Decent citizens of all parties are trying hard to get municipal affairs out of party politics, both national and State. Mr. Cleveland has had sufficient experience of municipal government to know both the importance and difficulty of this task. He ought not, therefore, to permit himself to throw his influence on either one side or other, filling the office which he fills and living at the distance at which he lives, even if he were as fully informed, as he must be grossly ignorant, of New York city politics. But to send on a written endorsement of a candidate of whose life and manners, we are bound, out of respect for Mr. Cleveland's person and office, to presume that he knew nothing, or next to nothing, and whose defeat almost every disinterested and intelligent voter of both parties in the city was trying to compass, was something very hard to bear. To say that it was a gross violation of the proprieties of the Presidential office is to criticise it very mildly. We will add that if any one persuaded him that it would add to the support which was unflinchingly given him in this city and State, without which he could not have been elected and cannot be reëlected, he has been grossly imposed on.

We advise fathers of families to look carefully after their household reading during the next ten days, because, unless we are agreeably mistaken, the scandal and crime tanks of our morning contemporaries must by this time be very full. During the past fortnight, they have been giving their attention almost exclusively to politics, and, of course, in that period the real "news" must have accumulated immensely. Many a plumber's wife must in that interval have eloped with his "helper," many a butcher boy run off with the "fifteen-year-old daughter" of an oyster-opener, many a bartender attempted suicide in a brothel, and many a hackman tried to kill his paramour with a cart-rung. In fact, the variety of the filth and silliness which can be turned on is doubtless very great, and when "Ananias," and "Judas," and "Flopover," and "the Bilk" get through with the election, they will make things lively in quiet homes with their little pictures of life and manners.

In his speech in Brooklyn on Tuesday week, Gov. Hill gave a dignified and accurate statement of the conduct of the Republican majority in the Senate in "hanging up" his nominations for Quarantine officials. He was entirely right in saying that in following the course that it did, the "Senate grossly abused the power of confirmation vested in it by the Constitution and the laws." We have repeatedly expressed the same opinion. However much we may differ with the Governor in other matters, we are bound to say that in this his course throughout has been in the interest of good government and the faithful administration of the laws, and as such has commanded the approval of every right-minded citizen. His explanation in Brooklyn of the causes for the Senate's action is also entirely moderate and truthful. He said that the Republican Senators had refused to act upon all nominations, no matter how good, in order to keep in office, four and five years after their terms had expired, Republicans who

were not even faithful officials, and that the Senators had taken this extraordinary course because the Quarantine departments "were controlled by a faction in the Republican party, and the fees and perquisites arising to that faction from such control amount annually to nearly $100,000, and a majority of the Senate were in sympathy with that faction, and refused to disturb its power, no matter what the public interests or the Constitution required."

Gov. Ames of Massachusetts, in an interview with a representative of the Springfield *Union*, says: "The statement that Dr. Burden told me that a veto of the bill would cost the Republican party 10,000 votes, is entirely false, as well as the statement that I gave anybody to understand that it would be vetoed." Inasmuch as it now appears that the Governor, after showing the gentlemen who waited upon him what he calls the prepared statement of reasons against the bill, asked them whether they thought the passage of the bill would do much harm, and whether vetoing it would not lose the party many votes, and these questions left the gentlemen in a very disagreeable state of doubt as to his final action, it would seem that our statement that they went away "fully satisfied" was erroneous. Of one thing, however, these gentlemen are quite sure, namely, that the Governor did acknowledge that the plank in the Republican platform which pledged the party to resist covert attacks upon the Civil-Service Law of the State, was directed against a soldiers' exemption bill, and that he had specifically agreed to stand by that plank. When, shortly after, the bill was signed and the gentlemen heard on credible authority that the Governor had met a State Senator—we never heard Dr. Burden's name mentioned before—who remarked that such action would lose the Republican party 10,000 votes, which decided the Governor against the veto, it was taken as fully in accordance with the Governor's weakness disclosed to them. Thus the main point of the matter remains as before, that the Governor agreed both before and after his election to stand upon the plank pledging resistance to covert attacks upon the civil service, and that he acknowledged that the Soldiers' Exemption Bill was exactly the thing the plank was intended to cover; but for fear of losing votes on the one hand, and in hopes that the bill would not do all the harm its advocates intended on the other, he set aside his pledges and his own belief in what was best for the Commonwealth, and signed the bill.

The Hon. Adin Thayer of Massachusetts publishes a letter on the tariff, the internal revenue, and the Treasury surplus, advocating the repeal of the tax on distilled spirits rather than the lowering of any duties on imports. He argues that it is a great mistake to suppose that any more whiskey would be consumed if it were cheaper in price. On the contrary, he thinks that the amount used as a beverage has been about the same under all rates of tax, whether two dollars, or fifty cents, or ninety cents per gallon. He is slightly inconsistent, however, in saying that if the national tax were repealed, the States and local communities could get more revenue from licenses, for if the rate of tax makes no difference in the amount consumed, the States and local communities can raise the licenses to any figure they choose regardless of the present excise tax of ninety cents. Another inconsistency in Mr. Thayer's argument is that he seems to favor prohibition, which, if it could be enforced, would cut off both local and national revenues. The sum and substance of his appeal to the voters of Massachusetts is, that it would be better to run the risk of having either free whiskey or no whiskey (immaterial which), rather than touch the tariff, although he concedes that the latter needs revision in respect of worsted goods, in order to keep out the foreign product more effectually. Mr. Thayer is the first recruit picked up by Mr. Randall, outside of Pennsylvania, for the abolition of the whiskey tax.

Mr. Thayer is followed by the Hon. Alexander H. Rice, who writes his views on the subject of the tariff to the Boston *Journal*. Mr. Rice takes a much more cheerful view of the situation of American industry, for while Mr. Thayer is quite sure that Massachusetts would be plunged into swift ruin by any meddling with duties on imports, except in the way of increasing them, and can point to no time when she will not be so ruined, Mr. Rice looks forward to a period when America will be the only free-trade country in the world, and when all other nations, especially Great Britain, will be shielding themselves against our cheaper manufactured goods by protective tariffs. Mr. Rice, however, displays much prudence as to times and dates, for although he says "*Now* is our great opportunity," he immediately adds that it is "at the same time a season of peril." He thinks that we cannot *now* adopt free trade or horizontal tariffs, or move any faster in that direction than our conditions warrant, but that "tariff duties should be revised and reduced wherever it can be done without crippling our industry." And again, he says that "duties should be reduced at stated periods according as our industries, skilfully managed, are able to compete with those of other countries." What kind of evidence should be taken to show that any protected industry is able to compete, or to prove that it is "skilfully managed," Mr. Rice does not in the remotest manner indicate. A few years ago the manufacturers of quinine were unanimous and vociferous in saying that they could not compete with other countries, and were speechless with indignation when told by Congress that they would have to do so. Since that time they have been doing pretty well, we believe, although quinine has fallen to about one-seventh of its former price. If Mr. Rice will ponder upon this remarkable and really crucial test, he will, we are sure, when he comes to write his next letter, indicate some time when it will be safe to reduce the duties on blankets and coarse woollen goods, which, according to the last published words of Mr. John L. Hayes, are unreasonably high. We wonder that Mr. Adin Thayer did not challenge Mr. Hayes upon this point while the latter was still living. The trouble with Mr. Thayer and Mr. Warner Miller, and all the other extremists, is, that however much the tariff may need cutting down, in the sole interest of American industry, they dare not begin at any particular place lest the foundations of the whole structure be undermined. It is this fear that leads Mr. Thayer to favor the repeal of the whiskey tax rather than of the sugar duties.

Dr. McGlynn's hints, at the Labor mass-meeting last week, that in some way or other he would soon be taken back into the Catholic Church, were evidently made for campaign purposes. It has been plain for some time that his anti-Catholic attitude was having a damaging effect upon Henry George's following, and last Friday's declaration was apparently made to counteract this as much as possible. If the idea could be got abroad that McGlynn was not really anti-Catholic, since he was likely to be taken back into the Church again soon, Catholic laboring men might be made to believe that in voting for the George-McGlynn ticket they were not voting against the Church after all. So he said: "I am happy to tell you that I have all manner of evidence that they (the Church authorities) have already seen their mistake, and that the misconceptions and the false notions of some local authorities are being corrected and overruled by a higher authority. They'll be glad after a little to see some decent escape from the consequences of their mistake. I need no longer keep it secret that steps have been recently taken, and are being taken now, to bring before the highest authorities of the Catholic Church the view of the propriety of ending the blunders that have been committed, and of inviting me to a proper hearing of this case, after having made some reparation for the outrage upon justice and decency and common sense that has been committed." We are saved the necessity of commenting on this by the emphatic statement of Archbishop Corrigan the next morning, that there was not a word of truth in it.

The Secretary of the Treasury has increased his deposits in national banks by something over $6,000,000 during the past month, thus restoring to the circulation the greater part, although not the whole, of the excess of receipts over disbursements. This, as the *Financial Chronicle* remarks, is only a temporary expedient. It serves to hinder or delay an oncoming crisis which can only be averted by Congressional action. The successive steps taken by the Secretary since the beginning of September to relieve the pinch which the normal operations of the Treasury are all the time working to produce, have dulled the public apprehensions. We hear little now about the anomalous and dangerous conditions of the public finances, because the sore spot has been poulticed. But everybody who looks forward a few months must see that there are limits to

the depositing of public funds in banks. The purchase of bonds in the market by banks in order to secure deposits serves to advance their price the same way as Government purchases, but with the difference that the banks must look forward to a time when the deposits will be drawn out and the bonds be resold, the sales operating to depress the price in the same way that the buying advanced it. In other words, the bank which avails itself of Government deposits must make bond speculation a part of its business, and must take the chance of being loaded up, when the money is called for, with bonds that cannot be sold without loss. No bank will put any large part of its capital at risk in this way. The present remedy is, therefore, only an emollient, temporary and partly illusory, since it has served to turn public attention away from a fixed and progressive disease.

Of remedies for this disease there is only one that has any real curative force, and that is the reduction of taxes. The refunding of the 4 per cent. bonds by the payment of a present premium and the issue of a new obligation at 2½ per cent., even if it should be successfully and fully accomplished, would not carry us, on the present plane of receipts and expenditures, more than a year and a half, leaving still two years before the 4½ per cents fall due. But if the 4½ per cents were due now, they would be gulped down by the surplus in about two years. Then we should be confronted by the same problem that meets us now. The truth is, that with every expedient that existing laws afford or that new ones can supply (except downright profligacy in expenditure), there will be great difficulty in disposing of the surplus in the next eighteen months. Reductions of taxation can hardly get in play sooner than that, however diligent Congress may be in passing laws to that end. But reduction of taxes is the only remedy.

William H. Harper of Chicago, the author of the Illinois High-License Law, has been giving recently some additional figures about its successful working which are very striking. The law levies a uniform license of $500 upon liquor-selling and of $150 upon beer-selling, and permits any community to increase, by majority vote, these licenses to any limit it pleases, or to refuse, by the same vote, to grant any license whatever. This, it will be observed, is a combination of the high-license and local-option principles which virtually makes public sentiment in every community the regulator of the liquor traffic—the only exception being that no community can allow liquor-selling without taxation. The union of the two principles has worked admirably in Illinois. In many counties, estimated as comprising two-thirds of the soil of the State, actual prohibition prevails. The license fee has been raised by popular vote to $1,000, $1,500, $2,000, and in some instances to $2,200, with the result of completely suppressing the traffic. In the larger cities the $500 fee has had the effect of greatly reducing the number of saloons. According to Mr. Harper, Chicago, under the old law, with a population of 450,000, had 3,800 saloons, yielding a revenue to the city of about $200,000 a year. Under the present law, with a population exceeding 700,000, there are only 3,600 saloons, and the revenue from them is $1,750,000

In other cities the effect is equally satisfactory. In the State at large the grand total of saloons has been reduced from 13,000 to less than 10,000, in spite of the increase in population during the four years that the law has been in force, and the revenue from the liquor traffic has been increased from $700,000 to nearly $5,000,000. Crime has also decreased, and the number of arrests has materially diminished. The best effect of all is, that in Illinois the liquor question has been taken out of politics. Public sentiment so generally sustains the law that neither of the great political parties thinks of disturbing it.

While most of the current gossip about changes in the Cabinet is unworthy attention, it appears to be generally accepted that there will soon be a new Secretary of the Interior because of Mr. Lamar's appointment to the Supreme bench. An occasional criticism upon this selection is made because of the fact that Mr. Lamar has never served as judge of any lower court. It is true that, as a rule, the men chosen as judges of our highest tribunal have had previous experience upon the bench, but there have also been conspicuous exceptions to the rule. One of these is found among the present judges. Mr. Miller began life as a physician, and practised in a rural region of Kentucky for eight years. He was thirty years old before he began the study of law, and he had never sat upon any bench when, twenty-five years ago, President Lincoln made him a judge of the Supreme Court. The eminence of his judicial career shows that the most important element in the matter is the character of the man, not the length of his service as a lawyer nor the question whether he has been a judge in a lower court.

The debate in the French Chamber over the bill converting the 4½ rentes into 3s touched on one of the most curious and peculiar points in French politics. It has been very well known ever since 1875, that is, ever since the recovery of the country from the invasion, that the Government could borrow at 3 per cent. But, owing to the wide diffusion of the rentes among small holders, "petites gens," as they are called—that is, peasants, artisans, and small shopkeepers—every Ministry has shrunk from the unpopularity of asking them to accept a lower rate of interest. The Rouvier Ministry has been driven into it by the absolute necessity of finding additions to the revenue in order to arrest the annual deficits. The bill was passed by a majority of 276 to 161 on the Ministers promising to get from the conversion "$12,000,000 for armaments, without increasing the burdens of the State." This tap of the drum carried the day.

President Diaz has just had his Secretary of the Treasury send to the Mexican Congress the draft of a new law which promises to be of considerable social and political as well as financial importance. It relates to what is known as the "nationalized" property of the country. This means the vast amount of real estate wrested from the Church, in one stroke of confiscation, by Juarez's law of July 12, 1859. The total has been variously estimated at from one-fourth to one-third the value of the entire real estate of Mexico, probably representing an amount not less than $300,000,000. Nothing like that sum has ever been realized by the Government, however. The laws regulating the sale of these public lands and buildings have been only partially successful. The Clerical party has, of course, strenuously withstood them, consistently maintaining their invalidity, and predicting the return of all this property, one day, to its rightful owner, the Church. The acknowledged instability of preceding Administrations, joined with the threats of the Clericals, and the practical excommunication by the Church of any one daring to bid in a piece of the sacred property, produced a natural feeling of uncertainty as to a title acquired under these circumstances. The result has been that what has been sold has been disposed of at ruinous prices, and that the Government has still on hand a large amount of such unproductive property. What to do with it has been a standing puzzle.

What Gen. Diaz now proposes is a measure designed to put at rest all discussions about a legal title to property of this description, and so to induce investors to look with more favor upon it. The new law authorizes the Treasury to issue a certificate to all who hold or may acquire a piece of these former possessions of the Church, which shall be held in all the courts as superior to any other claim or title. Provision is also made to extend the operations of "nationalization" to property which the clergy may have got into their hands since the laws of reform were passed, or which they may hereafter come by. A clause provides that all buildings actually needed and actually in use for public worship or beneficence shall be excepted, though the title even to these, it is tacitly implied, vests in the Government. To the latter also belongs, of course, the right to judge how many churches are "needed." The financial cat in the meal appears not only in the hope of increased sales under the guarantees of the new law, but also in that provision of the law which compels the holders of certificates (and all will have to get them) to pay a fee of $5. The whole proposal witnesses to the severe monetary strain under which the Administration is laboring, as also to the extent of the late anti-Clerical reaction. Two years ago, when everything pointed to Conservative ascendency, the law would have been out of the question.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 2, to TUESDAY, November 8, 1887, inclusive.]

DOMESTIC.

THE results of the most important elections held on November 8 were as follows: The Democratic State ticket in New York was elected by an increased majority, but the Republicans retain control of the Legislature. In New York County, Fellows, the regular Democratic nominee for District Attorney, was elected by more than 20,000 majority over Nicoll, the candidate of the Republicans and Independents. The United Labor vote in New York city, which was 68,000 last year, was only about 37,000. Chapin (Dem.) was elected Mayor of Brooklyn. In Ohio, Foraker (Rep.) was reëlected Governor by an increased majority. Ames (Rep.) was reëlected Governor of Massachusetts. The Democrats elected a majority of the members of the Legislature in Virginia, and put an end to Mahone's hope of election to the United States Senate. In the Second District of Rhode Island a Republican was elected to Congress. In Maryland the whole Democratic State ticket was elected, against the opposition of the Republicans and the Independent Democrats.

The United States Supreme Court, November 2, denied the petition for a writ of error in the case of the condemned Chicago Anarchists. The Court held that the first ten amendments to the United States Constitution are limitations upon Federal and not upon State action, that the jury law of Illinois is upon its face valid and constitutional, and that it does not appear in the record that upon the evidence the trial court should have declared the juror Sanford, against whom complaint was made in the petition, incompetent.

On the night of November 5, Engel, one of the condemned Anarchists in Chicago, tried to kill himself by drinking laudanum. He was aroused from his stupor and resuscitated. The cells of all the Anarchists were searched next day, and in Louis Lingg's cell were found four dynamite bombs. They were under his cot, hidden beneath a mass of papers, and were enclosed in a wooden box. All these criminals are now forbidden to hold intercourse with their friends. Gov. Oglesby every day gets great numbers of petitions to pardon them or to commute their sentence. The day set for their execution is November 11, and every day the excitement and uneasiness in Chicago increase.

The finding of bombs in Lingg's cell has somewhat checked the boldness of those who are trying to work up a sentiment of pity for the condemned men. On November 8 a large company of the Anarchists' friends left Chicago for Springfield to make an argument before Gov. Oglesby in their behalf. The police of Springfield have taken precautions against violence.

Petitions have been presented for the pardon of the Chicago Anarchists to United States Ministers McLane in Paris and Phelps in London by committees of French and English Socialists.

Mr. Joseph Chamberlain, the chief representative of the English Government on the American-English Fisheries Commission, arrived in this city November 7. "As to the fishery business," he said, "I may say that I do not expect any difficulty in the settlement of it. I have not mapped out any plan on the subject for the Conference. I think it would be a disgrace if two friendly nations could not settle amicably a matter of this kind. I do not expect there will be any difficulty with the British House of Commons in the matter." Some of the Opposition Canadian papers continue to make very bitter comment on Mr. Chamberlain's appointment.

On November 5 Gen. Ruger ordered the Crow Indians in Montana to surrender those of their number who had fired at the agency. They offered to give up Sword-Bearer, the chief, but not the rest. The Indians were then attacked by Gen. Ruger's forces, and after a short fight, in which a white corporal was killed and two privates wounded on the one side, and Sword-Bearer and three other Indians were killed on the other, the Indians fled.

The accounts of the Post-office Department show an excess of expenditures over all revenues in the last fiscal year of $3,554,068. The excess in 1886 was $6,679,130, and in 1885, $6,756,344.

The Territorial Supreme Court of Utah, November 7, appointed United States Marshal Dyer receiver in the suits against the church property in excess of the limit fixed by Congress, and to wind up the affairs of the Perpetual Emigrant Fund.

The Supreme Court of Mississippi, November 7, affirmed the decision of the lower court in the habeas-corpus case of Hamilton, the murderer of Gambrell, the Prohibition editor, refusing bail to Hamilton.

S. M. Robertson (Dem.) has been elected to Congress from the Sixth Louisiana District by a small majority. His total vote was not more than 5,000.

At Pattersonville, Louisiana, November 5, four negroes were shot dead by a sheriff's posse or a military company, both which were guarding the town, a threat having been made by the negroes to burn it. The trouble grew out of the strike by the negro laborers on the sugar plantations.

A vote was taken in Dakota, November 7, on the question whether or not the Territory should be divided, so as to apply for admission into the Union as two States. There was a light vote, and the party favoring division was well organized and cast a majority of the votes.

A prohibitory amendment to the Constitution of Oregon was defeated November 8 by a majority of about 3,000.

In the country about Centralia and Charleston, Ill., and in parts of Indiana where there has been a long period of dry weather, much valuable timber has been burned, and the forest fires have destroyed fences and farms and residences.

The bodies of twenty-two persons who were drowned when the propeller *Vernon* went down on Lake Michigan have been recovered. It has been reported that the captain was a drunkard, but the coroner's jury censured only the captains of the vessels that passed the wreckage for failing to report at the nearest ports, so that relief expeditions might have been despatched in time to save some of the persons floating on rafts.

The New York Chamber of Commerce adopted a resolution November 3 favoring the purpose of the British Peace Commission, and appointed a committee of five members to investigate the possibility of a material expansion of our commerce with Canada.

The Advisory Committee of Plymouth Church, Brooklyn, on November 3 unanimously voted to recommend the selection of the Rev. Charles A. Berry of Wolverhampton, Eng., as successor to the late Rev. Henry Ward Beecher.

At a United Labor party meeting in this city November 4, Dr. Edward McGlynn, the excommunicated priest, declared that the authorities of the Catholic Church would "be glad after a little to see some decent escape from the consequences of their mistake. I think I need no longer keep it secret that steps have been recently taken, and are being taken now, to bring before the highest authorities of the Catholic Church the view of the propriety of ending the blunders that have been committed, and of inviting me to a proper hearing of this case, after having made some reparation for the outrage upon justice and decency and common sense that has been committed." Archbishop Corrigan of this city said the next day: "The whole story is a campaign document, in my opinion, and has no value whatever. The status of Dr. McGlynn's case is unchanged, and there is no chance of its being reopened or reconsidered until he submits and presents himself at Rome in response to the command of the Holy Father."

The German opera season in this city was begun November 2 with the performance of "Tristan and Isolde."

The yellow fever at Tampa, Fla., is subsiding. There have been about 350 cases.

Richard H. Manning, an old and highly-respected citizen of Brooklyn, well known in philanthropic circles, a life-long friend of Horace Greeley, and one of his executors, died in that city on November 2, in his seventy-ninth year.

FOREIGN.

The indisposition of the Emperor of Germany November 1, and for two or three days following, caused some excitement in the European stock markets. By November 5 he was well enough to present himself at the window in the palace where the public are accustomed to greet him.

There has been a recurrence of the disease of the throat from which the Crown Prince of Germany has suffered. Dr. Mackenzie, the English physician, has gone to San Remo, where the Prince is. The latest report is that his condition is alarming, although there is no fear of immediate death.

The Prince's condition has, however, caused a general feeling of uneasiness throughout Germany.

The rifles of the French and Russian armies are better than those now used by the Germans, and the German War Office has decided to manufacture a new small-bore arm and to substitute it for the present one.

Twelve thousand more persons have emigrated from Germany during the nine months of this year than during the corresponding period last year.

The *North German Gazette* (Berlin), Prince Bismarck's organ, referring to the services rendered to Germans in Paris during the Franco-Prussian war by the late Mr. E. B. Washburne, says: "Germany will not forget Mr. Washburne, who at that time, despite the blind hatred of the French people, protected the Germans remaining in Paris," and it declares that by his efforts the cordiality and close relations of the two race-related people were greatly strengthened, and that Mr. Washburne has secured grateful and honorable remembrance in German history.

The negotiations for a treaty of commerce between Germany and Austria have been checked by the intention of Austria to extend her bounty system on sugar and brandy exports. The Berlin Government declares that the Austrian proposals tend towards a competition dangerous for Germany in the sugar and brandy markets of the world. At the outset of the negotiations the German Government intended that the increased duty on cereal imports should balance the Austrian increase of export bounties. This idea has been abandoned, and Germany is now disinclined to concede to Austria a favored-nation treaty.

A Vienna report says that the new triple alliance provides for combined military and naval action by Germany, Austria, and Italy against any attempt to disturb the balance of power in Europe, and that territorial modifications shall be compulsory before the three allied Powers will consent to sign a treaty of peace. The treaty further provides for combined action for the conclusion of peace. No one of the three will be allowed to desist from war or to treat separately without the consent of the others. It is reported that Lord Salisbury has given in his adhesion to the new alliance, which is spoken of as a new triple alliance with a British annex.

Count Andrássy urged before the Hungarian Delegation in Vienna, November 5, that the present was a most opportune time for the Powers to recognize Prince Ferdinand of Bulgaria, and he begged Count Kálnoky to use his influence to that end. Count Kálnoky, in answering, dwelt upon the necessity of patience and the conciliation of Russia. Count Andrássy argued that, after all, Russia and France had joined hands in Bulgaria, and the removal of that obstacle would doubtless be the removal of many possible sources of conflict such as had already arisen and might arise again. Otherwise he concurred in Count Kálnoky's policy, but he feared the results of delay.

November 8 the Committee of the Hungarian Delegation made a favorable report on Count Kálnoky's policy, but Russian comment has become more and more threatening. The St. Petersburg press insists that the Government shall take diplomatic action to elicit from other Powers than Austria a distinct declaration whether they wish the Berlin Treaty to be respected, so that if they do not, Russia may be free to protect her interests.

It was reported from St. Petersburg by way of Vienna, November 3, that another Nihilist plot had been discovered, and that the police raided the house of an apothecary where the conspirators had their headquarters, and bombs were found. At the same time great commercial distress was reported. The Bank of Moscow is said recently to have put up at auction 460 estates, for which it was impossible to pay the interest on the mortgages.

The report of the Committee appointed to inquire into the Caffarel scandal came up for discussion in the French Chamber of Deputies November 5. M. Rouvier, the Premier, denied that the politicians had levelled the scandals against President Grévy. He was opposed to an inquiry. He admitted the justice of the feeling which inspired the Chamber, but thought it was better to let matters take their natural course. A motion that the inquiry be general, and that it extend back as far as May, 1877, so as to include the time of the advent of the De Broglie Ministry, was carried by a vote of 264 to 257; and the Committee's report, which declares that only an inquiry can satisfy public opinion, was adopted, 445 to 84.

The French Chamber of Deputies, November 8, chose the Committee which will investigate the Legion of Honor decoration scandals. It consists of ten members of the Extreme Left, six Radicals, three members of the Moderate Left, and three of the Right.

The trial of Gen. Caffarel, Mme. Limousin, Mme. Ratazzi, and Gen. d'Andlau, for selling Legion of Honor decorations, was begun November 7. All the defendants were present except Gen. d'Andlau. The rumor is still published that President Grévy will soon resign.

The French General Caffarel, during his trial, November 7, for selling decorations, admitted entering into business relations with Mme. Limousin "to obtain resources to relieve his embarrassments," and said he interested himself in applications for Legion of Honor decorations solely to oblige her. He denied that he received any money for them, or that he divulged the plan for the mobilization of the Seventeenth Army Corps.

The French Government bill to convert the 4½ per cent. rentes into 3 per cents was passed by the Chamber of Deputies November 3 by a vote of 276 to 161. An amendment to convert them into 4 per cents was rejected—344 to 172.

The Suez Canal convention between France and England has been carried to Constantinople to be submitted to the Porte. Italy, Austria, and Germany have announced their adherence to the convention, but Russia has not made reply.

English and Spanish colonists have arrived on an island at the mouth of the Orinoco, to settle there, with the help of the Venezuelan Government.

The Imperial Commissioner at Cape Colony has officially notified the British Government of the discovery of extensive gold fields in the northwest part of the Cape Colony district.

On November 2 Wm. O'Brien was quietly removed from the jail at Cork to the Tullamore Jail, fifty miles from Dublin. The cell in which he was placed is six feet by eight, and he sleeps on a plank bed. The Irish Prison Board directed that he wear the prison uniform, and be treated in every way as an ordinary prisoner. But he refused to put on the uniform, and was given a diet of bread and water as a punishment. November 7 a large crowd, reported to consist of 8,000 persons, assembled in front of the jail and made a demonstration. Thomas Sexton, Member of Parliament, at a meeting of the Dublin Corporation, proposed that the Council adjourn without the transaction of the ordinary business as a mark of respect for William O'Brien, and the motion was carried.

On November 8 O'Brien was removed to the prison infirmary on the order of the physician.

The Home-Rule Union of London, November 3, adopted a resolution of sympathy with Messrs. Blunt and O'Brien, and resolved to continue the agitation in Ireland with the aid of English speakers. A sympathetic letter was read from Mr. Morley, and Mr. Blunt made an address. Mr. O'Brien's paper, *United Ireland* (Dublin), contained an article, November 3, saying: "Henceforth the people will make the landlords hostages for Mr. O'Brien's safety. The plan of campaign will become not merely the tenants' weapon of defence, but an instrument of vengeance. Will Irishmen remain quiescent, and not raze his torture-house to the ground? Please God, not quite. If Mr. O'Brien is harmed, for every hair of his head Irishmen will exact compound vengeance." In the same issue of the paper, reports of a number of meetings of "suppressed" branches of the League were published.

Mr. Balfour, Chief Secretary for Ireland, addressed a large audience at Birmingham November 4, speaking chiefly of the Irish question and Mr. Gladstone. Except as regards the offer of the plundering of the Scotch and Welsh churches as a bribe for the dismemberment of the empire, Mr. Gladstone displayed little interest in anything except the Irish question, and no man had done more to make it impossible to ignore the Irish question. Mr. Balfour declared that not one of the evictions now occurring could have been prevented, even if the amendment which Mr. Gladstone wanted had been inserted in the Land Bill. Mr. Gladstone's criticisms on land legislation were strange, indeed, coming from a man who for sixteen or seventeen years had fruitlessly tinkered with the question. In regard to the unhappy affair at Mitchelstown, Mr. Gladstone had attacked him personally for not listening in silence to bitter attacks made on men who spent their lives in defence of the law. The demon of inaccuracy had pursued Mr. Gladstone even to his assertions on this subject. But it was unnecessary to enter into details in justifying the police. If, as the Nationalists and Mr. Gladstone delighted to say, the police were defeated and routed, could any one blame them if they fired? The truth was, the Nationalists, including Mr. Gladstone, must choose upon which horse they will ride. If they choose to triumph in the defeat of the police, let them not blame the police for firing in self-defence. If they choose to say that the police were brutal butchers, and that they fired without cause, let us hear no more of this indirect triumph in their defeat. Mr. Labouchere has written a long refutation, as an eyewitness, of many of the assertions made by Mr. Balfour in his Birmingham speech.

A dinner was given in London, November 4, by the United Service Club to the Duke of Cambridge, in honor of the fiftieth anniversary of his entering the British Army.

Mr. Michael Simon was elected a magistrate at Glasgow, November 4, the first Jew ever chosen to that office in Scotland.

The unemployed in London continue to parade the streets and to make demonstrations, but the excitement they recently caused has subsided. A meeting was dispersed November 4 on complaint of shopkeepers that their customers were kept away by fear of the unemployed.

Baring Brothers of London have engaged to aid the Steam Navigation Company of Genoa to establish a line of steamships between Genoa and the mouth of the River Plate, the passage to occupy seventeen days.

The steamer *Hawarden*, from Savannah, put into Queenstown November 3, with her cargo of cotton on fire. Two hundred bales had been thrown overboard in the vain hope of extinguishing it.

Mme. Goldschmidt (Jenny Lind), the celebrated Swedish singer, died November 2, in her sixty-eighth year. She was buried in a quilt that was presented to her by American children.

The Truro Cathedral, the first built in England by the Established Church since the Reformation, was opened November 3.

It was officially announced at Rome November 7 that cholera had become extinct in Italy.

Another transport, with 2,000 Italian troops, sailed from Naples for Massowah November 6.

A monument to Garibaldi was unveiled at Tunis November 6 in the presence of a vast company, including many notable persons.

The programme of the ceremonies attending the celebration of the Pope's jubilee, which was made public November 7, shows that on December 31 the Pope will receive the members of the International Committee, who will present him with a gift of 1,000,000 lire; January 1 he will celebrate mass in St. Peter's; January 2 he will hold a public reception at the Church of San Lorenzo; on the 4th and 5th he will receive foreign deputations; on the 6th he will open the exhibition of the gifts sent to him, and on the 15th he will canonize ten saints.

Baron Hirsch, who has made a fortune in building railroads, largely in Rumania, and has long been noted for his generosity, has begun the distribution of 100,000,000 francs among all the European Jewish charity institutions.

Advices from Henry M. Stanley under date of August 8 are that the expedition was advancing towards the western shore of Albert Nyanza. The men were greatly fatigued. The most important chiefs of the country through which they had travelled readily complied with their request for food. Stanley halted for four days to reorganize the expedition, and then, leaving thirty men to guard this new camp, proceeded towards Albert Nyanza.

A new Peruvian Cabinet was formed late in October, with Dr. Raymondo Morales as Minister of Justice and President of the Council. A commission of engineers appointed by the Peruvian bondholders at London are examining the railways on which the money was expended. They are to report on the chance of an increase in business if the roads are extended as originally planned.

A Chilian steamship with a scientific commission on board is on a voyage to the South Sea Islands and Australia. The specimens obtained will be added to the National Museum at Santiago de Chili.

THE EXECUTION OF THE ANARCHISTS.

THERE is much to be said in favor of such slowness of judicial process as has marked the Anarchist cases, but there is one great objection to it, and that is the opportunity it affords to people to forget the atrocity of the crime, the sufferings and sorrows of its victims, and to lash themselves into sympathy with the doomed criminals. It is now a year and a half since the bomb-throwing in Chicago. During the following six months people's minds were occupied with the horrors of the resulting slaughter and maiming of the police, about forty of whom were killed or disabled in the discharge of their duty, and with the devilish malignity of the attack on them. At that time nobody—not even, we think, the firmest opponents of capital punishment—ventured to suggest that there was any place in this world for the bomb-throwers, or that the removal from it of such tigers was not a solemn duty to human society.

Since then, however, a good many people—some of them clergymen, some philanthropists, and some simply soft-headed people who sign all papers presented to them which do not impose pecuniary obligations—have had time to forget all about the police, and all about social security, and all about the Anarchists' teachings and aims, and are trying to get Governor Oglesby to commute the sentences of the men now awaiting execution. We have no fear that he will be weak enough to pay any attention to them. But there is great reason to fear that the agitation in their behalf may do much to weaken the deterring influence of their fate on their surviving brethren, seeing that several men of good standing and repute for common sense and patriotism are lending their countenance to it. There are some considerations which these persons have apparently overlooked in doing so; and we would therefore earnestly urge upon their attention, and the attention of all concerned, the following points:

(1.) That anybody who has any doubt of the complicity of the whole seven malefactors now awaiting sentence in the awful crime of May 4, 1886, either has not read the judgment of the Supreme Court of Illinois, on the appeal, in which the whole case, both facts and law, is elaborately reviewed; or if he has read it and has not been convinced by it, should so far question his power of weighing the pros and cons of a case of this nature as to feel it his duty to be silent about it, and to abstain from all attempts to influence the conduct of those whom the law obliges to act in it. Nothing but thorough acquaintance with the evidence produced on the trial, and thorough mastery of the reasoning applicable to questions of probability, warrants anybody in asking Gov. Oglesby for a pardon of the prisoners on the plea that they, or any of them, are innocent, or that some are less guilty than others. That is to say, that any one who tries to embarrass him or shake his nerves in the performance of such an awful duty as now devolves on him, without feeling well assured that he knows thoroughly what he is talking about, is guilty of a gross violation of social morality.

(2.) That those who ask for a pardon through dislike of capital punishment, should remember that the opposition to capital punishment in modern times has been everywhere based on the assumption that murder will be committed through private, individual hate, or for purposes of robbery, and that the substitutes suggested for this punishment have not had in view attacks on the whole social organization by sects of conspirators, claiming the right of slaughter and devastation as in open war; that therefore, holding the lives of Anarchists sacred, after they have massacred policemen, would be very like promising foreign invaders that resistance to them with weapons of any description would be strictly forbidden, and that the most they had to fear in case of failure was a short period of detention.

(3.) That should Gov. Oglesby even commute their sentences, the arguments in favor of commutation would, as the memory of the crime grew more faint, be every year used, and with increasing force, in favor of complete pardon; that, in fact, their right to a pardon would become a political issue in the State elections, and that demagogues would soon bring about their liberation, until probably, in five or six years from this time, we should witness the shocking spectacle of the joyous, unrepentant freedom and activity of a band of convicted assassins preaching with renewed vigor the gospel of arson and murder in the very streets which they had reddened with the blood of the officers of the law. No civilized community can afford to offer such a sight as this.

(4.) That although, as Judge McAllister of Chicago says, the hanging of these men may make "them martyrs in the opinion of thousands of people," this is the less of two evils. Society can stand their being considered martyrs by a great many thousands of people; but it cannot stand their finding ready imitators even among a few hundreds. Nobody is hurt by anybody's considering Spies or Lingg "a martyr," but it would hurt a great many to have even a dozen men conclude that there was no risk in following his example.

(5.) That it must not be forgotten that these criminals are all but one foreigners and new arrivals, who have left behind them in Europe thousands infected with their ideas and as averse from the dull routine of regular industry, who are watching the case of their forerunners in this country with intense interest, to see if armed attacks on the social organization can be made with more safety here than in Europe. To allow the murderers of the Chicago police to get off with what would certainly prove a short term of imprisonment, would confirm them in their belief that the absence here of the great display of police and soldiery with which they see the law made terrible in the Old World, really means weakness of the public force, and inability of society to defend itself against anybody who chooses to disregard its obligations or dispute its authority. It would, in fact, operate as an invitation to all the ferocious malcontents of France, Germany, and Russia to come here and work out their theories whenever they could raise their passage money, or found the pursuit of the hangman in Europe too hot for them.

There are signs that the discovery of bombs in the cell of Lingg, the Anarchist, in the Chicago Jail is doing something to bring the friends of "clemency," in that region at least, to their senses, and the petitioning for pardon or commutation has visibly declined. The probabilities are that Lingg meant to blow up himself and as many others as possible whenever he found that hope was at an end and the inevitable hour had come. In other words, his tigerish nature was not in the smallest degree softened by the long period of suffering and anxiety through which he had passed.

A great deal of the effort made to save the Anarchists from the gallows is due to the impression that they are being punished for their opinions, and that even if it be just, it is bad policy to punish men for their opinions, because, if these opinions are noxious, the persecution or martyrdom of the authors only helps to spread the poison. It has to be borne in mind that the State of Illinois has acted on this theory for several years. For fully ten years the city of Chicago has been a hotbed of Anarchy, in which the slaughter of well-to-do people and the destruction of their property was freely and openly advocated, without any interference from the authorities. The result was that the militant or homicidal Anarchists every day gained strength, and the dreamy, persuasive Anarchists were every day pushed more and more into the background.

The lesson of all this is, that the only opinions which a civilized community can treat with either respect or indifference are opinions which, even if embodied in action, would not menace its existence. Our traditional Anglo-Saxon respect for free speech is based on the assumption that public speech is always intended in free countries to persuade people into agreement with the speaker for purposes of legislation, and that the agreement aimed at is therefore a lawful one. The notion that we must tolerate speech the object of which is to induce people to break up the social organization and abolish property by force, is historically and politically absurd. The notion that we must not do whatever is necessary to prevent men's publicly recommending murder and arson, because they are sincere in thinking murder and arson good means to noble ends, is worse than absurd. It is, as we see, full of danger for everything we most value on earth.

It is a great pity that we cannot shut up the mouths of the Anarchists by love. But as we cannot shut them up by love, we must do it by fear, that is, by inflicting on them the penalties which they most dread; and the one most appropriate to their case when they kill people, is death. The frantic exertions they are making just now to escape the gallows, and the joy with which they would welcome a "life sentence," shows clearly that the gallows is the punishment the case calls for. For violent incitements to murder and pillage, imprisonment will

doubtless suffice; but for actual murder and pillage there is nothing likely to prove so effective a deterrent as death. Those who oppose this view can only do so successfully by maintaining that society has no right to defend its own existence, and that murder and arson are evils only when the murderer's motives are low and selfish; that if he can show that he means well, and has at heart the elevation of the poor, he should be treated with the respect due to prophets and apostles. If the propagators of these grotesque fancies only knew the encouragement they were giving to the contempt for law which makes both the rich briber and semi-barbarous lyncher the curse of American politics at present, we feel sure they would pause in their efforts to save the community the loss of the vagabonds and ruffians who are now awaiting execution at Chicago.

TRUSTS, TARIFFS, AND WAGES.

The Paper-Bag Trust is the latest combination formed for the purpose of creating or maintaining a monopoly in trade. Heretofore the paper-bag people have been so well shielded by patents that they have not needed any other protection. But the patents will come to an end by and by, and it has been deemed prudent to get the business into bomb-proof condition before that eventuality takes place. The number of such Trusts is increasing at a very rapid rate. We have been expecting to see some defence of them from some able lawyer or skilled dialectician like the Hon. Warner Miller or the Hon. William Walter Phelps, but as none such has been made, we feel constrained to undertake the task ourselves.

It is constantly affirmed, and generally admitted without proof, that the object of a protective tariff is to enable manufacturers to pay high wages, and that without such protection wages would fall to the level of—nobody knows what. Formerly the English level was taken as the standard, but since English wages have advanced very near to our own level, there has been a general tendency among protectionists to substitute French, German, Italian, and East Indian wages as a standard of misery to be avoided by putting the American producer in funds, and thus enabling him to pay high wages and deal liberally with his men. Willingness to pay high wages is of no practical value unless one has the money to pay with. A steel-rail manufacturer, for example, might be penetrated with a desire to raise the wages of his operatives, but his good intentions would be frustrated if he could not sell his goods at a sufficiently high price to reimburse him for the advance. We have never heard of a convention of employers called to consider how they might increase the pay of their employees, although we have been witness to many that have been held for the contrary purpose. Theoretically there ought to be a standing committee of all the protected interests constantly devising means to put up wages and keep them up, since every high-tariff speech, book, pamphlet, trade circular, and newspaper article declares that this is the great end and aim of duties on imports. But somehow we never hear of any efforts of this sort. On the contrary, we are always hearing of disputes between the workingmen and their employers on this question, in which the latter are striving by every means to neutralize and frustrate the beneficent ends of the tariff by keeping wages down to the lowest possible point.

For a quarter of a century Congress has been saying to the protected classes, "Take as much money as you please from the public and give satisfactory wages to your laborers. We will not ask you to show your balance sheet or furnish any statement of receipts and disbursements. We will pass laws giving you the monopoly of the American market, and we shall expect you to make a fair division with your employees. We will take care of the rich and the rich will take care of the poor." Well, the end of the twenty-five years since the Morrill tariff went into effect finds the strife between employers and employees as bitter as ever. We have not advanced an inch towards the desired and much promised adjustment of equitable and pacific relations between the two parties. It may be said that it is unreasonable to look for such a settlement, because, however high wages may be, the laboring men will always ask for more, and that if wages were doubled by a magician's wand to-day, the trade-unions would begin to plot for an increase to-morrow. The corollary of this proposition is that, however much money Congress may put into the pockets of the protected classes at any time, it will be best for them to keep it all and never pay a cent more in wages than they are compelled to. This is exactly what happens, what has always happened, and always will happen. The employers have wisely governed themselves in the matter of wages by the law of supply and demand. They have looked forward to a time when domestic competition would reduce their profits, and have acted upon the business principle of making hay while the sun shines, putting everything in their pockets that the law allowed them to take.

Now that domestic competition has become an unpleasant matter, we find a new kind of monopoly starting up in every direction under the name of Trusts. The object of a Trust is to secure to the present producers of a given article, such as lead, sugar, India rubber, cattle, straw-board, paper bags, saddlery hardware, cotton-seed oil, petroleum, and what not, absolute control of the market, so that they may keep out all new comers and charge what they like for their goods. A Trust is a supplementary protective tariff in its effects, although not in its origin. It depends on the tariff for its efficiency in so far as foreign goods of like character are offered for sale and might be brought in competition with those produced by the Trust. The article of lead, for example, which has recently been "trusted," is protected by a duty of two cents per pound. The repeal of this duty would break up the Trust and put the lead producers on a plane with the American people in general—that of making a living by fair competition with their fellows. And so of sugar, India rubber, and many other things protected by these newly devised Trusts.

There is manifestly a growing uneasiness in the public mind regarding these Trusts. It is not a pleasant thing to contemplate the chaining of the whole people to a series of monopolies controlling the necessaries of life, in the same way and upon the identical plan adopted by the Standard Oil Trust. Nobody has opened his mouth to defend them, and this is all the more wonderful since the very same argument that defends the protective tariff, and without which the latter would long ago have crumbled in ruins, is equally available to defend the Trusts. If an artificial monopoly created by Congress through duties on imports serves to increase wages, must not a monopoly created by other means have the same effect? Can anybody give a reason to the contrary? If good profits in business enable the employers to pay high wages, and if the profits insure that result, does it make any difference whether the good profits come from a tariff or from a trust? Obviously not. If Congress enacts that lead mining shall yield two cents a pound more than its natural price in order to help the workingman, must not any other agency which yields the same result have the same effect — always supposing that Congress takes no steps to see that the workingman gets his share? We throw out this hint to Mr. Warner Miller, Mr. Wm. Walter Phelps, and all the workingman's friends, hoping to see this venerable argument put in more attractive shape than we have been able to present it in.

THE PANAMA CANAL.

M. de Lesseps has adjourned for still another year the opening of the Panama Canal, but has now fixed the precise date for the event, viz.: February 3, 1890. This exactness must be premonitory of a fresh call for funds. The last supplies were secured on terms so extremely onerous as to suggest that there is a limit even to French middle-class credulity. The money on hand will not carry the company through the calendar year 1888. If the shareholders see a deficiency in prospect for continuing the work through the succeeding year, there will be an alarm and the stock will decline. But a decline of the stock will prevent the negotiation of new loans. M. de Lesseps must, therefore, keep a full treasury. He must not only anticipate his wants, but he must prevent other people from anticipating a shortage at any time before the period set for the opening of the canal.

The belief is generally held in this country that M. de Lesseps will never finish the Panama Canal, that no private company will ever finish it, that the present company will become utterly bankrupt, and that when it goes down, the greatest financial disaster of modern times will have supervened. It would be difficult, we imagine, to collect together any body of capitalists and contractors outside of France who would agree to take

the Panama works as a free gift as they stand to-day, and bind themselves to finish the canal on the 3d of February, 1890, or at any other date. It would certainly be impossible to form such a syndicate in the United States, where more accurate knowledge of the difficulties to be overcome exists than in France, or in any other country having the means to undertake such an enterprise. It is hardly open to doubt that the French Government must eventually take up the work, by subvention or guarantee, or that it will tumble into such financial ruin as will shake the very foundations of the Government. How ought we to regard the former eventuality?

We are more interested in the piercing of the Isthmus than any other people who have no money invested in it. Grant that the work will be done somehow and sometime. Great Britain will at first send more tonnage through it than we, but we shall be gaining on her from the start, and shall finally overpass her. But we have more than a commercial interest in the canal. We have political interests also. It has been commonly and rather lightly held that our political interests are opposed to a French canal at Panama, but would be promoted by an American one at Nicaragua or Tehuantepec. But since Panama, Nicaragua, and Mexico are all foreign countries to us, and since the ocean which washes their shores is approachable to all, the difference between them in a political sense, supposing all three to be built, is wholly imaginary. In case of war our canal at Nicaragua would be blockaded as easily as a French canal at Panama. We should have no more use of the one than of the other. If we are strong enough to hold that of Nicaragua and keep it open, we shall be strong enough to seize that of Panama. Both will be under Central-American jurisdiction, and the Governments of those countries will be peculiarly susceptible to our influence, because they look to us for protection against Old World trespass and invasion.

It is too late to say that our interests are opposed to any canal. We have allowed the Panama enterprise to be undertaken, and it is accordingly a matter of indifference whether the money to finish it comes from one source or another. France can acquire no jurisdiction by lending her money or her credit that she had not before. Nor could she acquire any by buying out the Lesseps Company and finishing the canal on Government account. The question for us, therefore, is whether it is for our advantage that water communication should be opened between the Atlantic and the Pacific. If this admits of affirmative answer, and if it be acknowledged also that great financial loss is involved in the work by whomsoever undertaken, it follows that we have no objection to the expenditure of French capital at Panama. Would it be for our advantage if the Straits of Magellan had been situated at Panama when the world was made, instead of being cast at the southern extremity of the continent? Would our commerce be in better plight if some earthquake in primeval times had opened a waterway through the Isthmus? Such a waterway would be free, or subject at most only to inconsiderable tolls like the old Scheldt dues. There can be but one answer to this question. If nature had provided a strait at Panama like the Strait of Gibraltar, we, in common with all other nations, should be greatly the gainer. Therefore we shall be the gainer by an artificial strait which costs us nothing, and it can make no difference to us whether the money to complete it comes from French investors or French taxpayers. Certainly it is not for our interest that the greatest panic and crash of modern times should fall upon France next year or the year after, since panics are like tidal-waves—they have no respect for national boundaries, but sweep the whole commercial world. If that crash comes, we shall get our distributive share of it.

THE AMERICAN ORIENTAL SOCIETY.

NOVEMBER 2, 1887.

THE fall meeting of the Society was held in Hopkins Hall, of the Johns Hopkins University, Baltimore, on October 26 and 27. The sessions were well attended, not only by members of the Society, but also by many of the professors and students of the University. Prof. Whitney, the President, was again prevented from occupying the chair, though he sent a verbal message, assuring the Society of his better health and of his continued interest in its proceedings. Dr. Hayes Ward of New York presided. A considerable number of distinguished scholars were elected honorary members of the Society, among them Prof. Ed. Sachan, lately appointed dean of the new school for living Oriental languages at the University of Berlin, Col. Whewell, Profs. Kielhorn and Bühler, and Sir Henry Rawlinson, the well-known Assyrian scholar.

Prof. Lanman of Harvard read some interesting communications from members and friends of the Society. Prof. Holtzmann of Freiburg wrote that he was at present at work upon an introduction to the Mahābhārata. M. Ed. Naville thanked the Society for its resolution congratulating him upon the completion of his edition of the Egyptian Book of the Dead. Dr. Jackson of Columbia College, now studying in Halle, announced the steady progress made by Prof. Geldner in his great edition of the Avesta. Mr. Lawrence Mills of Oxford sent the thirty-first volume of the Sacred Books of the East, containing the last part of his translation of the Avesta. Mr. Rockhill of the American Legation at Peking sent a very lengthy communication upon the "Commercial Relations of China and Corea," accompanied by some beautiful specimens of Corean cartography. From Mr. Rockhill's very accurate observations, it appears that the population of China is not at all far from the traditional four hundred million.

A large number of papers were presented and shorter communications made. The chief interest of the meeting seemed to centre in the philology and history of the Assyro-Babylonians; owing, no doubt, to the excellent work done in Baltimore by Prof. Haupt and his Semitic Seminary. The first paper read was by Prof. Haupt, on "A Proposed Grammar of the Assyrian Language," which he intends soon to publish. Prof. Haupt sketched in a few pithy sentences the different stages in the history of the Assyrian language, from the oldest inscription upon an egg-shaped piece of marble, dated 3800 B. C., during the rule of King Sargon of Accad, down to the Birs-Nimrud cylinder of Antiochus, son of Seleuchus (293 B. C.). Prof. Haupt dwelt especially upon the relation of Assyrian to Hebrew and Ethiopic. Prof. Bloomfield of Johns Hopkins read some "Contributions to the Study of the Atharva Veda." A short paper was then read by the Secretary from Prof. Lyon of Harvard upon "A Collection of Babylonian Tablets in Harvard College Library." The Metropolitan Museum of New York is the only institution in this country which has a large collection of original Babylonian and Assyrian antiquities. About thirty years ago the New England colleges had casts made of the principal inscriptions in the European cabinets. This present collection of original documents is therefore the more interesting. It contains fifty-eight tablets or fragments of tablets from Babylonia. They are all of the kind technically called "contract tablets," and give us an excellent insight into the social and private life of the time. The material is partly baked, partly unbaked brick. These tablets were dug up by the natives and sent to London, whence they came by purchase into the possession of Harvard College. In connection with the foregoing it may be mentioned that Dr. Cyrus Adler of Johns Hopkins University announced that the National Museum at Washington is about to form a complete collection of casts and facsimiles of seals coming from Mesopotamia. It is intended eventually to include cylinders, slabs, and tablets in the collection.

The evening session, coupled with a reception tendered to the members of the Society, was held at the house of President Gilman. Papers of a more general nature were read, and works of archæology laid open for inspection. The session was a very enjoyable one in every way, and was greatly appreciated by the members of the Society. Mr. H. F. Allen of Johns Hopkins announced that Prof. Paul Haupt, together with the members of the Semitic Seminary, intended to compile an Assyrian glossary for the practical use of students. This is in no way to take the place of the large dictionary of Prof. Delitzsch, now in course of publication in Leipsic. Dr. Hayes Ward exhibited some Babylonian stones, and a seal which was conclusively shown to be a forgery. Prof. Frothingham of Princeton described the remains of an old monastery in Italy with the aid of a number of photographs. The chief feature of this monastery was a twelve-sided tower. President Gilman spoke at some length upon the history of the manuscript containing the very important "Teaching of the Twelve Apostles." A photolithographic copy of the MS. is soon to be published, and the Society was able to examine some of the photographs.

The Thursday morning session was opened by a paper sent in by Prof. Isaac Hall of the Metropolitan Museum, New York, containing a translation of the Nestorian directions for washing the dead. Dr. Stephen D. Pete had a paper entitled "Animal Worship in the East and West Compared." The prevalence of animal worship is very widespread in ancient religions. The custom is a very old one; it is a form of universal religion, and a connecting link between prehistorical and historical times. Among the animals thus worshipped the hare plays a prominent part. The historical connection between different countries is not sufficient to account for this great prevalence. The worship of animals passes through all the stages of development of the human race. Prof. Bloomfield followed with a discussion of the "So-called Fire-ordeal in the Vedas," with especial reference to Atharva Veda ii. 12. The later law books recognize nine such ordeals of fire, and it was supposed that this hymn was to be sung at such an ordeal. Prof. Bloomfield, however, is of opinion that the hymn contains an

imprecation against the enemy. Dr. Jackson sent a communication "On the Significance of the Gathas in the Avesta, and a Translation of the Fifty-fifth Chapter of the Yashna." The Gathas contain the oldest parts of these sacred writings. In the Yashts Zoroaster is differently described. The Zoroaster of the Gathas is real and historic. Here we find the origin of the Zoroastrian religion. Prof. Hopkins of Bryn Mawr, in speaking of "Proverbs in the Mahābhārata," pointed out some singular coincidences in this kind of literature between Grecian proverbs and some of these old Indian sayings.

Turning again to Assyria, Dr. Hayes Ward spoke on the Abuhabha figures found by Rassam some years ago. He offered some very excellent suggestions in explanation of certain symbols found upon these figures. Dr. Adler followed with a paper on "The Views of the Assyrians on Life after Death," with especial reference to a recent publication upon the same subject by Dr. Jeremias. The materials for this inquiry are very varied—the narrative of the descent of Ishtar to Hades, the prayers in the historical inscriptions, and the execrations. Of especial interest is a bronze plaque representing the four divisions of the earth. The lowest division is assigned to Hades. The Assyrians and Babylonians thought that punishments and rewards came to man in the flesh. They knew, indeed, of an existence after death, but imagined that all mankind would then be upon the same level. There was no real reward and punishment. Dr. Adler read a second paper on "The Death of Sennacherib and the Accession of Esar-haddon." The exact dates of these two events could until recently not be definitely settled. The Babylonian Chronicle, however, published lately by Dr. Winckler in the *Zeitschrift für Assyriologie*, clears up the difficulty occasioned by the conflicting accounts. Sennacherib was murdered by one of his sons in December of the year 681 B. C. An insurrection followed, which only closed in February of the next year. The date of the accession of Esar-haddon, therefore, must be placed in the year 680, and not 681, as has heretofore been done. (See also Schrader, 'Die Keilinschriftliche babylonische Königsliste,' p. 21 seq.)

The Society then adjourned to meet again in Boston on the first Wednesday in May, 1888.

R. J. H. G.

GENERAL REFORM TENDENCIES IN ENGLAND.

LONDON, October 25, 1887.

THE chief political events during the past fortnight have been Mr. Chamberlain's tour in Ulster and the speeches of Mr. Gladstone and Lord Hartington at Nottingham. Lord Rosebery also made an effective speech at Castle Douglas, and the arrest of Mr. Wilfrid Blunt at Woodford is one of those incidents, sure to occur under the present repressive system in Ireland, from which neither party can hope to reap anything but ridicule and scandal. In Mr. Chamberlain's speeches there was no lack of the boldness and dexterity of so powerful a political gladiator. They have encouraged and stiffened the backs of the Ulster Protestants and their allies and connections on this side of the Channel. But the cartoon in *Punch* depicting him as a messenger of peace flourishing a shillalah expresses the prevailing sentiment of his former Liberal friends and admirers, who regard with much bitterness the tendency of his speeches to inflame the intensity of sectarian hatred. The most remarkable part of Mr. Gladstone's speeches, and that which will have the most abiding result, was the passages in which he emphasized the necessity of an effective supremacy of the British Parliament as part of his scheme of home rule. This point, as it stood on the naked lines of the bill of last year, was a stumbling-block to many an elector; and Mr. Gladstone's opponents who complain of the absence of any concession in the Nottingham speeches, may find that his reasonable exposition of this principle of his scheme will advance it more than any specific concession, such as the separate treatment of Ulster, would have done—indeed, there is good reason to doubt whether the Ulster Protestants would desire separate treatment.

In a commentary on one of Mr. Gladstone's speeches by Lord Randolph Churchill at Sunderland, he laid stress on an argument of which we are likely to hear more. His name has now for some years been associated with what is called Tory democracy—a Tory Government with a Liberal or even Radical programme. The appearance of the home-rule question has greatly increased the plausibility of such a conception, because it supplies to Tories professing their willingness to pass Liberal measures a tangible difference, on which they can take their stand, between themselves and the accredited Liberal party. Accordingly, last year at Dartford, Lord Randolph Churchill, then a member of the Government, sketched in some detail a plan of Liberal reforms which he was prepared to carry out. This programme was shortly afterwards practically disavowed by Lord Salisbury, who at the same time struck the keynote of the policy of repression in Ireland, which they afterwards carried out in the legislation of last session. Now Lord Randolph returns to the charge. Commenting on Mr. Gladstone's forecast of Liberal legislation, he says: "I am willing to accept the principle of one man one vote, to hand over the control of the liquor laws to representative bodies, to prohibit settlement of land beyond existing lines, to make elementary education free. I am ready to do all that Mr. Gladstone would do for you, with this difference: I am prepared to do it at once; whereas, if home rule must be settled first, these measures cannot be taken up for four years."

There are many points in which Lord Randolph's outline of promised reforms comes short of what an advanced Liberal would demand and a Gladstonian Government would grant; and besides home rule there is one reservation, disestablishment—no step in that direction is to be taken in any part of the kingdom. But still, as a programme laid before a Conservative audience, these proposals are startling. How far will they be accepted? This week the *Economist* advances substantially the same argument in favor of the Government and against home rule. This is one way, though not the only way, in which the home-rule controversy has given an impetus to democratic changes. At the outset there is little doubt that the mass of the Tory party would have been more opposed to a great and deliberate advance along the whole line of legislation than even to the concession of home rule for Ireland. There is much truth in Mr. Gladstone's representation at Nottingham, that home rule is not in itself a party question; and many believe that, but for the Liberal Unionists, the Tories would have produced a plan of home rule which might have supplied the basis of a settlement. In conversation this is not always denied by Conservative politicians. Now, however, a statesman who is no stranger to negotiation with the Irish Nationalists, and whose adoption of a home-rule policy would have surprised nobody, offers to his party the policy of defeating their opponents by appropriating their schemes. This is education after the manner of Lord Beaconsfield. Will the pupils be docile? It is probable that, though previously discountenanced by Lord Salisbury, and in spite of some resistance to be expected from Mr. Goschen, the new counsels and the new policy will greatly modify the current of Tory politics. And the change will be made not so much as a concession to the Liberal consciences of the present Parliamentary Liberal-Unionist party, whose votes may be depended on to keep Mr. Gladstone out of power, as by way of an effort to gain the country to their side.

Nor is it naked desire for office which will lead Tory politicians to break with their traditions, and perhaps forget pledges given and taken. They have an instinct—from their own point of view a sound instinct—that almost any amount of specific concession is better than that the reins of power should be snatched from the hands of men animated by a conservative spirit. In my last letter I pointed out the advantage which the Government hoped to reap from presenting in Ireland the law on one side and their opponents on the other. In the game of chess which is proceeding, next to that move the most formidable to the home-rule party is the claim of the Tories to be anxious to pass useful reforms which the Gladstonians are obstructing. In meeting this danger, the Liberals may take heart. The leopard cannot change his skin. The Tories will not pursue a general policy pervaded with the spirit of democratic progress. Last session the Government took up a nominally liberal attitude with regard to the Coal-Mines Bill and the Truck Bill, but these bills in their passage afforded numerous illustrations of the difficulty with which concessions in the interests of labor are yielded by a Tory majority.

If Tory statesmen show a disposition to compete for the credit of Mr. Gladstone's programme, it is natural to inquire next what new questions are likely to push themselves to the front, though they have not yet met with official patronage. The question of payment of members has been brought into at least temporary prominence by special circumstances. The trade-unions, out of whose funds the expenses of Mr. Burt and Mr. Fenwick were defrayed, have by a large majority decided that their funds are no longer to be applied to such purposes, and it is possible that the result may be the withdrawal of these gentlemen from the House of Commons. All the practical mining members have played a useful and creditable part in the House. It may be said of the labor members generally that they are conspicuous for those qualities of respect for Parliament and self-respect which Conservative critics maintain are disappearing as the assembly becomes more democratic. Mr. Burt's retirement would be a public loss. He enjoys the respect of all sections of the House, and, but for his modesty, caution, and apparent lack of ambition, his abilities might lead him to a still more prominent position than he occupies. As to the payment of members, many advanced Liberals are eager for it as the removal of a bar which excludes all but comparatively rich men from the council of the State. Others, who do not withhold their approval of the principle, would prefer to see the practical demand limited for the present to the imposition of the public election expenses on the rates. This change would make a vast difference to poor candidates. All sections of the Liberal party are united in demanding it. On the other hand, a sudden adoption of the principle of payment might be attended with inconvenience and abuse.

A more important question is, how far what may be described as socialistic principles have obtained any hold or are gaining ground among the new electorate. Take, for example, the nationalization of the land. Apart from the utterances of systematic Socialists, it is rare in the country to hear a speech in favor of such a change, and I am not aware that any responsible leader of public opinion in or out of Parliament has openly declared for it, though here and there a stray member of Parliament might be found who has done so. If this estimate be correct, there can be no general desire to attack the institution of private property. As a workman said to me the other day: "There would have to be a division every Saturday night." That is the view of the average British workman. But this must be taken with two qualifications. With respect to land the widest freedom will be claimed of requisitioning it on fair terms for public purposes, and overriding unfair contracts in regard to its occupation. The Irish Land Acts, the Crofters' Act, the Allotments Act of last session, have established that no limit to the fair application of this principle will be tolerated.

Secondly, there is a disposition to scrutinize the title to real property more closely than before. Take the case of minerals, such as coal and iron. In most countries these are national property. In this country they are private property. In most countries the royalties exacted for working the minerals are greatly less than here, and it is proportionately easier for the lessee to work the mine at a profit. The royalties are often fixed by a lease for a long period, and there are instances in which it has become impossible, owing to the fluctuations of the market, to work a mine at a profit after paying the royalty. The universal adoption of a sliding scale, the recognition of the principle that the landlord's share is to be proportionate to the return, would much abate the grievance. But some call for abolition of royalties as unfairly handicapping the trade. Not a few persons claiming to represent the working miners, or anxious to gain their confidence, call loudly for the abolition of royalties; but the probable effect upon wages is rarely examined with care, and if they have thought out the matter, few have been bold enough to say either that they would or that they would not recognize the claim of the owners to compensation.

The same industries afford a recent illustration of another tendency which may be regarded as an approach to socialistic principles—the readiness of the State, or the demand upon the State, to take the responsibility of controlling private contracts. In the largest coal fields of England the period during which the men work underground does not exceed, if it amounts to, eight hours. This is due to the action of the unions. But in the greater part of Scotland, where organization is weak, the hours of labor are often ten. The workmen, through their members of Parliament, asked for a statutory limitation to eight hours. This was not supported by the English mining members, and it was energetically opposed by other prominent members identified with trade-unionism, and the proposal was defeated by a large majority.

C. D.

IRELAND UNDER COERCION.

DUBLIN, October 29, 1887.

NONE but Irishmen who have attained middle life, and have already lived through and felt three acute cycles of agitation, coercion, and consequent demoralization and increased embitterment, can understand the sinking of heart with which we find ourselves in the midst of another such cycle. Measuring the forces opposed to self-government, and the manner in which coercion begets circumstances that furnish plausible reasons against reform, I cannot encourage hopes of speedy settlement.

Mr. Balfour and Lord Londonderry have settled down to the work of coercion, armed with one of the most stringent coercion acts passed for Ireland since the Act of Union—more stringent comparatively than appears, in that the Government have now at their disposal a more perfect telegraphic and railway system than was formerly available. They have, as before, an army of 11,000 police dependent on the Castle, any number of military, and an obedient paid magistracy, thirsting to humiliate their natural opponents, the people and their leaders. As yet the work is in its preliminary stages, but we have seen enough to enable us to anticipate the probable results of the policy; we have had much bludgeoning and bloodshed, and several persons have lost their lives, yet the landlords are in the main no nearer to the recovery of their rents. The Government is acting with considerable astuteness, within the limits of its policy. When the proclamations suppressing the League in certain districts were first posted, we expected wholesale arrests of those who, despite them, attended meetings of suppressed branches. There has been nothing of the kind. The Executive saw that the Irish prisons would not hold a tenth part of those willing to defy the law. They have not even summoned or arrested the conveners and chairmen. They have adopted the policy of hunting and dispersing when within their power, of watching and taking down names, of punishing rather the publishers and prominent approvers than the originators of the proceedings, and impeding as far as possible the sale of newspapers containing reports of them.

The first press prosecutions against the Lord Mayor and Mr. O'Brien failed on account of the clumsy manner in which the cases were manipulated by the crown lawyers. That against Mr. Walsh, editor of the Wexford *People*, has been more successful. He was charged on a number of counts, and has been sentenced to three months' imprisonment. His offence was publishing proceedings of suppressed branches of the League, in such a spirit as to encourage the promoters continuing to act in defiance of the proclamation. Taking the simple reading of the act, the paid resident magistrates could not but convict; their animus and obedience to the desires of the Government at whose pleasure they hold office were shown in the term of imprisonment, and in their adjudging hard labor. The number of main prosecutions under the act is already considerable. Besides Mr. Walsh, we have Mr. Hayden of Mullingar, another journalist. William O'Brien and John Mandeville are up on appeal, and are almost certain to have their three months' sentences confirmed. Mr. Cox, M. P., Mr. Sheehy, M. P., and several others are on Mr. Balfour's list, not to mention smaller fry, such as Mary Anne Lawler, a little girl of thirteen, near Wexford, who received a fortnight's imprisonment for "intimidation"—the "intimidated" parties swearing that she had in no degree frightened them, and she herself declining to submit to the indignity of accepting the magistrate's alternative of entering into recognizances to "be of good behavior." Since her release, she has been presented with a gold watch and chain, rosary, and prayer-book by the ladies of the "Liverpool Shamrock League," besides gifts from other sympathizers. Meetings announced for several days have been "proclaimed" only a few hours before the specified time. Mr. Wilfrid Blunt has just been sentenced to two months for attempting to hold a meeting of English sympathizers within a district where meetings called with the object (in police opinion) of intimidation were forbidden. In Cork city the Court-house, where a meeting was to have been held under the auspices of the Mayor and High Sheriff, was without warrant seized and occupied by the military and police. In fact, the police, acting under Castle instructions, can do exactly what they like; the only remedy against them is by appeal to police magistrates or to judges who are hand and glove with the ascendency party. In cases where it has been possible to appeal to juries, and the juries have given verdicts against the police, the warrants have not been executed.

The character of the imprisonment accentuates a striking difference between this and Mr. Forster's régime (Nationalists now even sometimes speak of him regretfully as "poor old Forster"). The "suspects" were allowed ordinary dress, association with companions, food from without, correspondence, daily visits, and unlimited literature. We are now to have rigid prison discipline, prison clothes and food, the plank bed, entire exclusion—exactly the treatment of ordinary malefactors undergoing similar terms. Imprisonment at the best is imprisonment. I saw many a man permanently broken in mind and body under Mr. Forster, and such results are now likely to be more marked. Mr. Forster's coercion was for a limited term. The present powers of coercion are permanent. Will this act yet be outdone in the future? Shall we have people speaking regretfully of "poor young Balfour"? The danger of coming into contact with such coercion will doubtless have a sedative influence upon some, but upon most the effect will be entirely opposite. It will leave behind incalculable dregs of mischief and ill feeling. So far as the suppression of open-air meetings is concerned, the Government will be favored by the weather, which, after an unprecedentedly fine spell of many months, appears to have broken for the winter. Their policy evidently is to localize their difficulties, and by striking down a few such men as Mr. O'Brien, the Lord Mayor, and Mr. Walsh, to paralyze what they have most to fear—the action and influence of the Irish national press. In this they have been to some extent successful. A large amount of capital is embarked in Irish journalism. Sensitiveness regarding dividends and their personal safety with men who have not themselves very decided convictions, has already borne its natural result, in an avoidance of reports or news that might bring editors within the meshes of the law. *United Ireland* (Mr. O'Brien) and the *Nation* and *Weekly News* (the Lord Mayor, T. D. Sullivan, M. P.) have nailed their colors to the mast.

The results of this coercion policy cannot be doubted by any one who has carefully watched the current of Irish history. It is possible, however, that the Government may be able for a time by present appearances to justify it to their supporters. The throwing up of their well-paid commissions and ultimate life pensions by some of the police is a new feature in the situation.

Most Irishmen now privately acknowledge that home rule in some form, and a complete settlement of the land question, are inevitable. This being so, the aggregate support here of the present policy is difficult to understand. There are four daily papers in Dublin—the *Freeman* and its *Evening Telegraph*, the *Irish Times* and its *Evening News*, the *Daily Express*, and *Evening Mail*. The collective circulation of the last three, strongly anti-National, about equals that of the *Freeman*. These papers thoroughly

endorse Mr. Balfour's policy, and speak of him almost as a heaven-sent ruler. The *Union*, the special organ of the landlord and anti-National party, writes this week:

"Nothing could be more encouraging than the present position of affairs. In Ireland the conspiracy to make government impossible is making its final and unsuccessful effort. . . . The Crimes Act is working most efficiently at last, and in a few months' time we predict a marvellous change will have come over the scene."

The want of real statesmanship in the ascendency and business classes, their blind opposition to all reforms until forced upon them, has been one of the most deplorable outcomes of the legislative union. Neither in public nor in private is there any condemnation of the present Government. The one apparent object of these classes is to keep the people down, their one idea of the popular movement, that it is for the cutting off cows' tails in furtherance of a policy of robbing the landlords and severing the connection between England and Ireland. There is much danger in store for us in that now, as formerly, the movement is being left to the guidance of such a small body of agitators out of touch with the commercial and in the main with the cultured classes. I went down to Wexford the other day to witness Mr. Walsh's trial, and could not but remark that there was little real interest in the transaction, except among the poorer classes. In Dublin, apart from English strangers, the number of citizens of weight at political gatherings is small. Doubtless many think they can wait, and come in when it is safe, and agreeable, and convenient. Entire accord with the principles and practices of the Nationalists would not be called for; but surely a little sympathy would be natural—some acknowledgment that there must be some reason for the turmoil, and unrest, and misery that we have here generation after generation—a little doubt as to whether putting respectable men upon plank beds and prison diet is the best way to get in rents, to quiet the people, and to unite the two countries. None really gain by a continuance of this sort of business but the thriftless and idle, who, under cover of agitations such as the present (inevitable under present arrangements), living in the midst of society where hatred of particular laws and institutions leads to toleration of lawlessness in many directions, have ample opportunities for indulging their proclivities and demoralizing others. When intellects like Mr. Gladstone's, Mr. Morley's, and Earl Spencer's acknowledge the futility of attempting any longer to combat the main current of Irish thought, and believe that it can be turned into safe and beneficent channels, a blind continuance in opposition is not likely to be justified.

That attendance at all meetings of the League, in Dublin as elsewhere, has long been marked by detectives, has of course, a deterrent effect upon some sympathizers. The extremely bad arrangements at the more important Dublin meetings—the crushing and squeezing, the closeness and noise—doubtless prevent the presence of many who are really with the movement. Men are alarmed by the fact that the attitude of the rank and file tends to support the non-payment of all rents and to encourage general lawlessness. Thus the real issues are obscured, and difficulties are placed in the way of a thoughtful consideration of what are likely to be the average common-sense opinions and desires of the people.

Mr. Chamberlain's visit contributed nothing towards the solution of difficulties. His arguments against intrusting the people with the management of their own affairs told as much against county boards as against a parliament in College Green. If the Government of England had been arranged in accordance with the wishes of the minority in a well-defined district, there could then have been no effectual reforms. If we must have a separate government for the corner counties of Ulster, so as to guard the interests of the Protestants residing therein, we must also have special guarantees for the Catholic minority in those counties. The persistent harping of Mr. Chamberlain and his friends upon separation is waste of time and energy. No visible Irish party, no known Irish politician, wants a home rule that would involve separation in any sense of the word. If we Irish were a distinctly and markedly inferior race, a permanent coercion policy might be more intelligible; if we have within us the same elements of good as other races, the degradation of some of our people under the present régime is no argument against the possibility of our elevation under happier circumstances.

Two reasons may be given for sustaining a stolid coercive policy at present: (1.) The landlords may hope thus to obtain better terms, and the ascendency party to whittle down whatever scheme of home rule is next propounded. (2.) A settlement of the Irish difficulty upon national lines largely depends upon the health of two men, one of whom is far advanced in years, and the other so weakened by illness as to be unable to take an apparent part in public affairs outside the House of Commons. Those who believe that the national difficulty is only transitory—that if further agrarian and other reforms are passed, this, the most objectionable factor in the agitation, will eventually disappear, may feel justified in intrenching themselves behind the present policy, on the chance that the death of one or other opponent may tend to help them out of a dangerous crisis.

D. B.

THE INSTITUTE OF INTERNATIONAL LAW.—II.

HEIDELBERG, October 14, 1887.

As a full account of the proceedings of the Institute of International Law will soon be published in the Review which appears at Brussels, I suppose I may, as in my last letter, limit my report to points of general interest. The Grand Duke of Baden's presence at one of the sittings was chronicled as the first case of the attendance of a crowned head. England was represented by Messrs. Westlake, Thomas Barclay, W. E. Hall, and Prof. Holland; France, by Profs. C. Lyon, Caen and Lehr; Switzerland, by Profs. Moynier, Orelli, König, and Brocher de la Fléchère; Belgium, by M. Rolin-Jacquemyns and Profs. A. Rivier, A. Rolin, and Nys; Russia, by Prof. Martens. Besides these I may mention Prof. Brusa from Italy, and Geffcken, Perels, Von Bulmerincq, Von Bar, Von Martitz from Germany. In the name of the University of Heidelberg Prof. Holsten welcomed them in a speech setting forth how the selfishness of nations was just as much the root of all evil in public life as of individuals in private life. The idea of ennobling the relations of nations and raising them to a higher level was considered absurd by some; but all grand and fertile ideas, Christianity included, had shared the same fate, and therefore it should not deter the Institute from prosecuting its work. Prof. A. Rivier then read the annual report, and pointed out how Heidelberg might be proud of its teachers of international law, from Samuel Puffendorf, Cocceji, and Textor down to Zachariä, Klüber, Hegel, Robert von Mohl, and Bluntschli. Just because the town and castle had suffered so much from barbarous warfare, they reminded us how much more humane warfare had become since the reign of Louis XIV. On the relative merits of masses and classes Prof. Rivier expressed an opinion greatly at variance with those current among Gladstonians. He maintained that there was a growing danger to peace in the predominance of ignorant masses with their vulgar admiration of force, whereas governments and the ruling classes were making great efforts to render the relations between different countries more friendly.

The truth of these words as regards the actual condition of things in France and Germany, and to a certain extent in Russia, is indisputable. At the same time I venture to think that if the rulers of the great Continental Powers were to make a more courageous stand against rampant chauvinism, and to conceal a little and suppress their military predilections and preoccupations, they might be more successful in paving the way for a better understanding between their peoples. Nothing, moreover, would draw European nations closer together and tend more to allay rancorous feelings than commercial intercourse on free-trade principles—instead of which protection is indefatigable in daily raising up new barriers between neighboring countries; and in an age when the facilities for intercourse and exchange of goods have so marvellously augmented, governments have failed to avail themselves of these two most precious and efficacious of all instruments for promoting peace and good-will among men. The latest novelty in European politics is in fact an attempt to bring about an immense Customs' Union, which would isolate central Europe from East and West, and, so to say, undo the work of a century. For it was the Revolution of 1789 which started the idea of uniting all nations into a commonwealth of fraternity and liberty, and it was free trade that not unsuccessfully took up a task which the Revolution and its heirs had shown themselves incompetent to accomplish. Heavy duties on all foreign goods, coupled with intolerance and persecution of aliens, are now, alas! busy unravelling the precious tissue woven by the principles of free intercourse, free trade, and free immigration.

The first point treated by the meeting was the conflict of laws of marriage and divorce. A string of resolutions were adopted laying down the opinion of the Institute on the matter. As to the forms of celebration of marriage, the law of the place where it is consummated is, as a rule, to hold good; with regard, on the other hand, to the necessary conditions for the validity of the act, such as age, consanguinity, consent of parents and guardians, publication of banns, etc., preference is given to the law of the country to which the parties belong. A marriage annulled or divorced in one country is to be considered so everywhere.

A debate was raised on Prof. Lorenz von Stein's proposals concerning the administration of public and private railways in time of war. The suggestion that neutrals should be allowed by belligerents to run trains in an invaded country, and to keep up communications which must otherwise remain interrupted, is curious, as showing to what extent railways, formerly supposed to be simply a private concern, are now looked upon as not only of public, but of international concern.

For the navigation of international rivers a code of rules, submitted by Prof. Martens, was accepted with a few modifications, partly taken over from a counter-proposal by M. Ed. Engelhardt. The principle laid down at the Congress of Vienna, and much deviated from ever since, is firmly reasserted, viz.: that the navigation

of the whole course of international rivers, from the point where each of them becomes navigable as far as the open sea, shall be entirely free, and may not be interdicted to any flag whatsoever. Art. 1 improves the usual stipulations by imposing on the contiguous States the *obligation* of regulating, by common accord and in the interest of all, everything that concerns the navigation of the river they have in common. In reserving to each State the right of concession with respect to "le petit cabotage," I think the Institute would have done well in accepting the definition of that term proposed by M. Engelhardt as "the exclusive and regular traffic between different ports belonging to the same State." The last article proposes that property on board ships navigating international rivers shall, in time of war, enjoy the same protection as private property on land.

The debate on extradition did not lead to the modification of any of the twenty-six articles adopted by the Institute at its Oxford meeting, of which art. 13 declares that extradition is not to take place for acts of a political nature, while art. 14 lays down that acts bearing the character of crimes, according to common law (murder, arson, theft), are not to be excepted from extradition for the sole reason of their originating in a political motive, and that before giving up a criminal a State will have to consider whether an act committed during a political rebellion, a civil war, or an insurrection would or would not be excused by the customs of war. We are told that in Italy a new law of extradition is being prepared, which will return to the old principle, and refuse extradition for all cases in which the crime partakes of a political character. It would be sad to see such a reaction taking place in Europe at the very time when public opinion in England and America has become aware of the harm done to civilization by the protection accorded to the Irish dynamiters and Prof. Mezeroff.

The Institute made a vigorous step towards reform of maritime law by adopting, with slight modifications, the whole code drawn up by Prof. von Bulmerincq, and containing 122 paragraphs. They embody an entirely novel and highly important principle, viz.: that the upper prize courts should be, not national, but international. The author does not abandon his notion that, as no one ought to be judge in his own cause, the reform should be pushed still further, so that the lower prize courts should equally contain judges selected from neutral nations. But against the opinion of Prof. Martens and others, that few Powers are as yet likely to acknowledge international jurisdiction in this matter, he was glad to obtain a majority in favor of the establishment of prize courts of appeal. When war breaks out, each belligerent is to create such a court, of which he names the president and one member besides, at the same time inviting three neutral Powers to appoint the remaining three judges. Thus the Institute has again attempted to bring the usages of war into accordance with the postulates of modern civilization, just as it voted in former sessions that none but the men-of-war and the military forces of belligerent States should in future have authority to detain, visit, search, or seize merchant vessels during naval warfare; that privateering be forbidden, except as a means of retortion against States employing privateers, and that private property at sea be not liable to seizure, whether belonging to neutrals or to the enemy, except in cases specially provided for, such as when a vessel assists in hostilities or breaks a blockade, or where the cargo is intended for the enemy, etc., etc.

A very interesting debate sprang up on the further question of pacific blockades. M. Geffcken denied that a blockade could ever be anything except a warlike measure. To persons maintaining the opposite view he was ready to reply in the words addressed by the Turkish Minister to the foreign representatives after the battle of Navarino in 1827: "You first break a man's head and then declare that you are his friend!" Prof. Brusa supported the view that a pacific blockade should only be admissible as a measure of police resorted to by a majority of the great Powers of Europe against one of the smaller European States, of which they must more or less be considered the natural superintendents or guardians. All were agreed that where no state of war, but only a state of reprisals, existed, the commerce of third Powers could not justly be interfered with or restricted —except, possibly, with regard to arms and ammunition. France had certainly tried to go beyond this line during the blockade of Chinese ports in 1884, but England protested at once against the idea that a pacific blockade could confer on the blockading Power a right to seize neutral vessels. Prof. Martens pointed out that during the blockade of Greek ports in 1886 by the great Powers, foreign vessels were not prohibited from entering the ports—in fact, that they were not visited at all, so that they were even able to import contraband of war during the blockade. Mr. Westlake maintained that a State should always have the liberty to treat a pacific blockade as an act of warfare, if it felt inclined to do so. A majority declared in favor of recognizing pacific blockades as legitimate, for the sake of preventing a greater evil, war. Finally the following resolution was adopted:

"The establishment of a blockade when there is no war (*en dehors de la guerre*) is not to be considered as contrary to international law if the following rules are adhered to: (1.) A pacific blockade must be officially declared and notified and must be kept up by a sufficient force. (2.) Ships of the blockaded Power which do not respect such a blockade may be sequestrated. When the blockade is over, they must be returned to their owners with their cargoes, but no indemnity need be paid. (3.) Vessels belonging to other Powers may freely circulate, notwithstanding the blockade."

Considering the intolerant and inhuman proceedings of Spain in the Caroline Islands, and the sad refusal of the United States to join England and Germany in prohibiting the liquor traffic in Australasia, it is a pity that the Institute found no time to take in hand the excellent codes proposed by M. Engelhardt and Prof. von Martitz with reference to the occupation of new territories, treated in chapter vi. of the African Conference in Berlin (February 26, 1885). The principal rules proposed by Martitz are: Every region that is not effectively under the sovereignty or the protectorate of one of the States forming the international community is considered as no man's land. Possession is taken by establishment of a responsible local power provided with the necessary means for maintaining order, and for insuring the regular exercise of its authority within the limits of the occupied territory. The authority established in an occupied territory is bound to respect and to insure the respect of acquired rights, . . . both of the natives and of subjects of civilized States. International law imposes on the occupying nation the duty of conserving and educating the native population, and of furthering its moral and material welfare. . . . In order to protect the natives against the evils consequent upon the abuse of strong drinks, the sale of such drinks shall be duly regulated and controlled. M. Engelhardt has further proposals to make, *e. g.*, that liberty of conscience and religious tolerance shall be guaranteed as well to the natives as to the citizens of the occupying Power or to foreigners; that all flags shall have free access not only to the coast of such territories, but also to navigable waters in the interior which are in direct communication with the sea.

I may conclude by mentioning that Dr. Mittermaier sent a paper recommending inter-State arrangements for preserving the purity of river water as regards international rivers. As the *vis inertiæ* opposes itself with so much force in many countries to the adoption of efficacious measures for the above object, it seems rather a good idea to try to bring international opinion to bear upon it. Questions of universal interest may possibly sometimes be solved by coöperation, which it has been vainly tried to remedy by the action of public opinion in an individual State. THEODOR VON BUNSEN.

Correspondence.

THE COUNCIL OF NICÆA.

TO THE EDITOR OF THE NATION:

SIR: Is it really true that the Council of Nicæa was surrounded with such an awe as you describe, and that the fact of serious disagreement among its members was so carefully and successfully concealed? I am not deep in church history, but from a good many accounts of the Council which I have read, Protestant and Catholic, I had always supposed that the whole Eastern Church at least became in a very short time possessed of the news that a considerable part of the Nicene bishops, and a large part of the bishops generally, inclined strongly to Arianism, in spite of the Council. And how could the schism have maintained itself for so many years within the Empire, and for generations outside of it, if the mere decision of a General Council was held as precluding further inquiry, or as valid except so far as it actually did express Scripture and œcumenical tradition? Do we not too easily transfer the notions of the Vaticanum to the early times?

Baur, at least, cannot be accredited with any superstitious reverence for a General Council, and he treats the collapse of Arianism as inevitable, from its being essentially in contradiction to the absoluteness of Christianity. At the same time, he treats the less complete success of Ephesus and Chalcedon, which had every formal claim to œcumenical reception, as due neither to the smaller attendance of bishops nor to intrigue or imperial will, but to their less successful solution of the problems before them. If these councils deserve in many respects to be compared to our political conventions, it seems that they may very well be compared with them in this also, that their decrees never settled into final acceptance until the matter of which they treated had come as near a final decision as was possible during the centuries through which the Catholic Church had no essentially new materials of thought.

As to the Council of Springfield, it must be said for the majority, that its overwhelming victory was fully assured beforehand, and that it does not seem to have the slightest wish to disguise the intensity of the schism. If the minority were only as well inclined to accept the challenge to division as the majority to deliver it, there are at least a few adherents of the losing cause who would be greatly delighted.

Faithfully yours, CHARLES C. STARBUCK.

ANDOVER, Mass., October 31.

[We did not imagine that our illustrative

allusion to certain aspects of the Council of Nicæa would be pressed as if meant for a full description of that gathering. Our opinion remains unchanged that its contrast with the Springfield meeting, in the points we suggested, and in the general terms we used, can be successfully maintained.—Ed. Nation.]

LIBERALIZING THE PENSION SYSTEM.

To the Editor of The Nation:

Sir: I enclose a cutting from a circular that has come into my hands in my character as an "old soldier" (which I am proud to be in the honorable sense of the phrase). I also clip out for you the display lines, intended, I suppose, to "whoop up" "the boys" against the meeting of Congress.

It seems to me that "general liberalization of the whole pension system" might be best effected by tacking on to the scheme of the National Pension Committee the plans of other classes of people who, while not having served in the army or navy, would like to reduce the surplus in the Treasury and secure an annuity to themselves at the same time. To that end, I hope you will find room for the clipping that summarizes the views of the Pension Committee.

A Veteran.

Washington, November 3, 1887.

LET THE BUGLES BLOW!

SOUND THE "ASSEMBLY"!

COMRADES, RALLY ON THE COLORS!

The National Pension Committee of the G. A. R. has formulated a part of the wishes of the veterans for an immediate liberalization of the pension laws into the following recommendations:

(1.) A pension of $12 a month to all men who served three months, and who are now physically or mentally disabled.

(2.) Continuance of pension of deceased soldier to widow or minor children; and if there be none, then to dependent parents.

(3.) All of the recommendations for increase and equalization of pensions for special disabilities made in his recent report by Pension Commissioner Black.

(4.) Increased pension for all the severer disabilities.

(5.) Pensions for the survivors of rebel prisons, substantially as presented in the bill of the National Association of Prisoners of War.

(6.) Increased Pensions for loss of hearing or eyesight.

(7.) A reënactment of the arrears law.

(8.) An equitable equalization of bounties, and a general liberalization of the whole pension system.

TEACHERS' AGENCIES.

To the Editor of The Nation:

Sir: To judge from the newspapers, the number of persons who profess to find positions for teachers in this country is increasing. I should like to hear some discussion of the question how this increase of middlemen affects the parties immediately concerned, teachers and their employers. One very rarely sees advertisements of schools wanting teachers; the advertisements are generally those of teachers seeking positions. And I am inclined to believe that heads of schools often pay no attention to these advertisements, but apply at once to a teachers' agency when they have a vacancy to fill. The agency may then recommend the same man whom they might have heard of through his advertisement. This is a matter of no consequence to the head of the school, who pays nothing in either case. But it makes a good deal of difference to the poor teacher. If he gets a position through an advertisement, he pays but a small sum, the cost of the advertisement. If he obtains an appointment through a teachers' agency, he must pay, besides his registration fee of two or three dollars, five per cent. of his first year's salary, or from forty dollars upward. This is a heavy tax on a class little able to pay it.

In many cases all the teachers' agency does is to furnish the addresses of candidates to the master of a school who is seeking a teacher. The whole business could be transacted just as well without this intervention. X.

November 4, 1887.

Notes.

It is proposed to establish a society for the study of Folk Lore, and in connection with it a scientific journal devoted chiefly to preserving the fast vanishing remains of Folk Lore in America, but also to the subject in general. Old English, Negro, Indian, Canadian, and Mexican Folk Lore is embraced in the scope of the first department. The membership fee, three dollars, will entitle one to the journal. Notice in regard to organization may be expected shortly. Subscribers will please send their names to the Temporary Secretary, Mr. William Wells Newell, 175 Brattle Street, Cambridge, Mass. At least one hundred more than those already obtained will be needed. Mr. Newell's name would of itself be a guarantee of the high conduct of this movement, but the circular of the projected Folk Lore Publication Society is signed also by Dr. D. G. Brinton, Prof. F. J. Child, Prof. T. F. Crane, and O. T. Mason.

From W. K. Morton, 27 High Street, Horncastle, England, we have received the prospectus of *Lincolnshire Notes and Queries*, a quarterly journal devoted to the antiquities, parochial records, family history, folk-lore, quaint customs, etc., of the county, edited by Ernest L. Grange and the Rev. J. Clare Hudson. This publication ought to possess an interest for a large body of Americans, particularly those of New England descent, as Lincoln contributed freely to the stream of colonial emigration.

Blank G of the American Society for Psychical Research (Committee on Experimental Psychology) seeks to collect "accounts of cases where one person has had some remarkable experience, such as an exceptionally vivid and disturbing dream, or a strong waking impression amounting to a distinct hallucination," concerning some other person at a distance "passing through some crisis" at the time. It may be had of the Secretary, Richard Hodgson, 5 Boylston Place, Boston, Mass.

A 'Hand-Book of Volapük,' by Charles E. Sprague, will shortly be issued by the author at 1271 Broadway. Mr. Sprague will hereafter conduct the Volapük Department of the *Office*, a commercial periodical, published at 37 College Place, N. Y.
